Perhaps the most valuable expression of opinion by an Indian politician on Lord Birkenhead's recent pronouncement is to be found in the speech recently made by Sir Tej Bahadur Sapru as Chairman of the United Provinces Liberal Association. Sir Tej Bahadur, having been a member of the Viceroy's Executive Council for some years, and having in addition served as a member of the Reforms Inquiry Committee, may be said to have had opportunities unequalled among his countrymen of watching the working of the Reforms and of realising the difficulties with which the Government is faced in bringing India to a stage where she will be capable of assuming complete responsibility for her own government. His opinions are therefore entitled to a maximum of respect. His verdict is that the Secretary of State's speech was a disappointing one, in which the advocate had got the better of the statesman. Lord Birkenhead had stated that the preamble of the Government of India Act was even now not incapable of realisation, but first of all the demon of suspicion must be expelled. But was his own attitude towards the partnership of British and Indians to which he made reference likely to expel the demon from the Indian mind when it was taken in conjunction with the official policy towards the question of the Indianisation of the Services? Lord Birkenhead had declared that he wanted to see among responsible leaders of Indian thought a genuine desire to co-operate with the British in working the existing constitution. But were not a number of Indian politicians already making a sincere endeavour to this end, despite the fact that in so doing they incurred the odium of a very considerable section of their own countrymen? Lord Birkenhead had praised the efforts of the Liberal Party in India, but his speech was not calculated to strengthen their hands, because he had given them no real lead. At the same time, there were signs that their opponents were gradually deciding that the path of co-operation with the Government was preferable to the

Digitized by Google

course of obstruction which they had followed in the past. This change of spirit was gratifying, but it was unsafe to place too much trust in it until its genuineness had been definitely proved. The Liberal Party must continue in their avowed policy of co-operation; for to adopt any other course would merely be to add another weapon to the armoury of their powerful opponents. At the conclusion of their deliberations the Association passed a resolution to the effect that it was in the best interests of India that all political parties should work the present system, in order to show the ability of Indians to work a more fully democratic form of government. No one can cavil at the terms of this resolution, but it is the manner in which the Liberal Party have in the past sought to carry their policy into effect that has been open to criticism. Their efforts to educate the electorate have been negligible, while the manner in which their representatives have been wont to champion their cause against the more violent oratory of the Swarajists has been weak-kneed in the extreme. There has been little or no sign of any constructive policy among their leaders, who rarely show the courage of their convictions in face of opposition, and there is much truth in the words of one of the English newspapers in this country which describes their programme as "in many respects merely swarajism smitten with pernicious anæmia."

The "Indian Sandhurst" Committee.

The statement made by Pandit Moti Lal Nehru, the leader of the Swarajist Party in the Legislative Assembly, on the subject of the reasons actuating his decision to serve as a member of the Indian Sandhurst Committee, is interesting in the light of Sir Tej Bahadur Sapru's remarks on the present change of attitude of extremist politicians. The Pandit declares that his only concern is to see whether he can, under the terms of reference, put the case on behalf of the people without hindrance after giving due weight to representations made on behalf of Government. The Skeen Committee is on a different plane from the Reforms Inquiry Committee, on which he had refused to serve as a member. In his opinion the addition of one Indian to the number of those capable of taking part in the defence of their country is worth more to the nation than the appointment of ten Indians as Governors of Provinces, and it is therefore the obvious duty of every Indian, to whatever school of thought he may belong, to help in increasing the number of such men as far as he possibly can.

The Sikh Settlement.

That the extremist elements among the Sikhs have no intention of letting the anti-Government agitation which has played havoc with the loyalty of the Sikh community in the last few years die down as a result of the settlement of the Gurdwara question, without a struggle on their part, has been shown by the vigorous campaign of misrepresentation which they have lately been fostering in Amritsar and the surrounding districts with a view to discrediting those Sikh leaders who have supported the passing of the Gurdwara Bill. The latter, however, have shown no lack of energy in countering this campaign, and there seems little doubt that the bulk of the Sikh community is on their side. That the irreconcilables have little or no support from other communities can be gathered from the following extract from the *Hindu*, a Lahore newspaper:—"The world at large knows that the Government has shown real magnanimity and leniency with the Sikhs. . . . We advise them that this is not the time to cast aspersions. They should now take full advantage of what they have obtained either through their own efforts or through the magnanimity of the Government. There is a new era opening in the Punjab, and everyone should try to help the province to progress. The fact is that the Akalis, by separating themselves from the National movement and spending all their energies in a sectarian movement, have been the cause of cooling down the enthusiasm of Hindus and the Mohammedans as well."

INDIAN EXCHANGE.

London, August 24.

The London market has remained very steady, round about 1/6⅛ for telegraphic remittances. During the week buyers have predominated at this figure, but sellers have been disinclined to meet them except at a sixty-fourth higher.

In Bombay and Calcutta rates have been nominally quoted at 1/6-3-32 with 7-64ths, available for near delivery without attracting any demand, buyers' ideas being 1/6⅛ for August, with a shade better for next month. September fixtures have been done in London at 9-64ths for the first ten days, and 5-32nds for the second half of the month. Forward rates have remained very steady, and some business has been reported in Calcutta and Bombay at 7-32nds for the cold weather months. Rates here on Monday showed no change, and the market is quiet but steady. In India, we learn, there is very little inquiry for Exchange, owing to dulness in the Import Markets, and the Government is reported to have bought from Banks a fair amount of cash T.T. at 1/6⅛.

Last week's statement of the Imperial Bank of India showed that there was rather more inquiry for money, as the trade demand indicated an increase of 30 lakhs. It is rather early in the season for the usual up-country requirements, but it is a sign that the movement is beginning.

The feature of the week has been the announcement made by the Viceroy of the Royal Commission on Indian Currency and Finance, and the names of the members appointed will, without doubt, be received with approval by the commercial community here and in India.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

The Position in Syria.

At a time when the French are faced with an awkward problem in Syria in the rebellion of the Druses, it seems strange to be commenting on the progress that has been made in that region under French auspices during the past two years. But the report on Syria, which has just been issued, and extracts from which will be found in another column in this issue, only takes us down to the end of April, and the difficulties with which the French have had to contend since then, while it would be foolish to minimise their gravity, are unlikely to have any prolonged effect on the economic position of the region, and, therefore, cannot be regarded as invalidating the conclusions set forth in the report. The writer of the report, Mr. H. E. Satow, H.M. Consul-General at Beyrout, indicates that the French have had a very considerable measure of success in promoting the country's economic development. The French have introduced certain changes during the period, but they have wisely left well alone as far as possible, and these changes have been neither far-reaching nor drastic. Signs are not wanting, it is pointed out, of a gradual return to normal conditions, and justify the hope that the country may ultimately enjoy a certain, if modest, prosperity. But if that expectation is to be fulfilled, it is obviously essential that settled conditions must exist; for no region can hope to attain prosperity if progress is every now and then to be interrupted by disturbances.

Syria's Commerce.

The statistics of Syria's trade in the last few years certainly lend colour to the view that the country is going slowly ahead. Last year the imports amounted in value to 796,634,770 francs, as compared with 560,477,393 francs for the previous year, while the value of the exports was 339,933,667 francs, as against 246,841,254 francs. Great Britain still has the principal share of the import trade, the figures being 139,375,411 francs, as compared with 120,603,499 francs for 1923, but the position cannot be regarded as satisfactory from our point of view, as other countries are increasing their trade with Syria much more rapidly than we are. Imports from France, for instance, rose from 81,135,544 francs for 1923 to 113,679,528 francs for 1924, while those from Italy rose from 57,228,498 francs to 77,866,966 francs. Great Britain has so far maintained her position as the chief supplier of cotton and woollen manufactures, but Syria is now taking most of her cotton yarn from India, Japan, and Italy. In cotton manufactures, too, we are experiencing competition, particularly from Italy, and it is significant to note the statement that, generally speaking, British goods are not holding their own against French, Italian, and Belgian competition. The exchange has, of course, been a very serious factor in this connection, and it is obviously a very difficult obstacle for our traders to overcome, but it is incumbent that everything possible should be done to maintain our position in this market, which has been for so long a very important outlet for British goods in the Near East.

Ignorance of Near East.

I have often had occasion to comment in these columns on the lack of knowledge of Near East markets displayed by the British business community. In the report on Cyprus which has just been issued (a review of which will appear in these columns next week) reference is made to this apparently national trait in the section dealing with the Cyprus Pavilion at Wembley. "Inquiries made by members of the general public" it is stated, "showed that in England ignorance of the past and present history of Cyprus is lamentably profound and widespread. Seemingly educated persons were to be found who could not place the Island within a thousand miles, on a map of the world, and some even suggested that the inhabitants might be black and savage. Every endeavour was made to correct elementary misapprehensions of this nature." I think that last sentence is delightful. Of course those to whom this paragraph applies are happily not numbered among the section of the community engaged in foreign trade, otherwise our trade returns would be worse than they are.

Suez Canal Traffic.

The figures for the Suez Canal traffic for the first-half of 1925 are most impressive and if there were only these statistics to go by it would be difficult to convince anyone that there is such a thing as a depression in shipping. The traffic for the six months amounted to 14,127,000 tons, an advance of 1,980,000 tons on the figures for the corresponding period of 1924, and if it is maintained at its present rate the figures for the year will be far above those of 1924 which were 25,109,882 tons. Shipping circles are now anticipating that in the early future there will be a further reduction in the Canal charges, which would be of great assistance to commerce.

The Future of Wembley.

The fate of the Exhibition buildings after October hangs in the balance. Before the Exhibition was opened it was quite taken for granted that the use of Wembley in the future would be as a permanent home for the British Industries Fair which besides being divided at first like Gaul into three parts and subsequently two, has had various homes in London before settling down in something like a permanent habitation at the White City. Later the suggestion has been made to transfer one or more of the Museums to Wembley or even some of the Government Departments. Now an offer has been forthcoming for the buildings from a syndicate which professes to keep the Amusements Park in existence and to build houses on the rest of the land. If that be the ultimate fate of Wembley many will regret it, but there is obviously no point in keeping the area as it stands without the possibility of it serving some useful purpose. And it will be decades before another Exhibition on the same scale is held in this country.

COMPANY NOTES AND REPORTS.

AFRICAN AND EASTERN.

The report of the African and Eastern Trade Corporation for the year ended December 31 last, states that the profit and loss account shows a credit trading result, after providing for the usual depreciation on stocks, of £471,049, which, added to £271,985 brought in gives an available balance of £743,034. After payment of the preference dividends for the year, amounting to £134,921, and making provision of £67,500 as follows—depreciation fund, £25,000; income-tax reserve, £30,000; superannuation fund, £10,000; and office furniture and fixtures, £2,500—the credit balance remaining is £540,613. In June last an interim dividend of 4 per cent. was paid on the ordinary shares, and the directors now recommend a final dividend of 4 per cent., less tax, payable October 1, which will absorb £110,371, leaving to be carried forward £319,870. The directors state that trade during the year has shown the gradual improvement forecasted in last year's report, and they have confidence in the prospect of a continued improvement during the current year. Meeting, Liverpool, August 28, at 12 noon.

LAKE COPAIS COMPANY.

The directors of the Lake Copais Company, have issued a circular to the shareholders giving particulars of the award in the arbitration between the Greek Government and the company. All the claims of the State have been rejected. On the other hand, as an indemnity, in respect of certain lands taken by third parties, in addition to the right mentioned in the next paragraph, the company has been awarded £60,000, payable on or before August 14, 1925, in cash. This will provide for the costs of the arbitration and leave a substantial sum towards the cost of drainage and development. The company has been granted additional rights for 99 years over the the waters of Lakes Copais, Likeri and Paralimni for the exclusive purpose of hydro-electric power. The company is entitled to a minimum rate of interest on the capital necessary for the hydro-electric concession. The participation of the State in the net profit arising from the concession is fixed at 40 per cent. of the net revenue, after providing for reserves and for 10 per cent. cumulative dividend and 2 per cent. per annum for amortisation on the paid-up share capital. The company has to offer for sale some 40,143 acres. The Government is granted an option, expiring on July 16, 1926, to purchase this land at £980,000, payable as to 10 per cent. in cash and the remainder in ten annuities carrying interest at 6½ per cent. If the State does not exercise this option, associations of local cultivators may be formed prior to January 12, 1928, with an option to purchase blocks of land prior to July 12, 1928, at prices which are to be fixed. The State has a further option, expiring on January 13, 1929, to purchase any block of land unsold at July 12, 1928. On the expiry of this last option, all lands unsold revert to the company in freehold.

MOTOR BUSES IN GREECE.

It is estimated that there are between 700 and 800 motor buses in actual operation throughout Greece at the present time (says an American Consular Report). The rapid growth and expansion of this form of transportation has been the most outstanding feature in the development of the Greek motor market during the last two years. The attitude of the authorities is very favourable, since other forms of transportation are wholly inadequate in many places. Practically all bus lines are owned and operated by private individuals or companies. Stand truck chassis are most in use; special bus chassis are not in general demand. During the last two or three months an increasing number of complete buses, including some large machines, have been imported. Athens, Piræus, Salonika, Patras, and three or four other cities offer the best opportunities for the development of bus transportation. Most of these are served by tramway lines, but the latter have been found inadequate. The chief handicap to the development of the market is the poor condition of the streets in this city, as well as the highways throughout Greece. On the other hand the lack of railway communications makes necessary the use of bus transportation in spite of poor road conditions.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Liverpool, September 8). (For passenger sailings and dates see advertisement.)

Anchor Blocklebank Line.—S.s. Holywell for Port Said, Colombo, Madras, and Calcutta (London, September 5).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, September 9).

British India Line.—S.s. Manora for Colombo, Madras, and Calcutta (London, August 29); s.s. Nirvana for Bombay and Karachi (London, September 12).

Cunard Line.—S.s. Pavia for Gibraltar, Oran, Algiers, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, September 5).

Ellerman "City" Line.—S.s City of Florence for Calcutta (Birkenhead, August 31).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 5); s.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 12); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 17).

P. and O. Line.—S.s. China for Bombay (London, September 4); s.s. Nagoya for Colombo, Madras, and Calcutta (London, September 5).

Prince Line.—S.s. Burmese Prince for Malta, Alexandria, Jaffa, and Haifa (London, September 12).

NAPHTHA IN YUGOSLAVIA.

Recent Discoveries.

As is well known, many districts in Yugoslavia, especially in the north, are rich in naphtha. The presence of these deposits was detected by Austro-Hungarian experts when the regions in question formed part of that Monarchy, and prospecting was begun before the War to determine the commercial importance of the discovery. Investigations were continued when the territories were incorporated in Yugoslavia and experimental work in deep boring is now being undertaken on a considerable scale. Moreover, a geological examination of the subsoil in the neighbourhood of the deposits is in progress, and it is stated that naphtha is also found in the older tertiary strata of these districts, which are very rich in oil. Deep borings carried out at Bujavitza in Slavonia, in the neighbourhood of Osijek, have given positive results, the presence of naphtha having been ascertained by borings to a depth of 396 metres (1,300 feet), at which depth inflammable gasses and naphtha escaped. These signs of naphtha were discovered in white layers of tertiary formation.

The discovery of naphtha springs at once attracted a number of people to the spot and considerable areas were occupied in the immediate neighbourhood and at a distance away where the geological conditions are the same as at Bujavitza. Special reference in this connection can be made to traces found in the immediate neighbourhood in Croatia, at Medjumuruju and in Slovenia. All the indication in these parts are strongly suggestive of naphtha, and its presence is established under identical geological conditions.

In Northern Bosnia there are also plenty of indications along the right bank of the Sava, where the presence of naphtha is to be expected in view of its appearance at Bujavitza, which belongs to the same basin, with similar geological conditions.

Borings in the Banat plain, the side of which slopes towards the Carpathians and which has between the Danube the towns of Bazjash, Vrshatz and Veliki Bechkerek, have established the existence of strata of the older tertiary period, although under more recent geological formations, corresponding to those in which naphtha has been found in neighbouring districts belonging to the same Panonian basin. Deep borings have also discovered indications of the presence of naphtha in the south-eastern part of the one time Panonian lake, which in all probability flowed out through the Danube Valley.

To turn now to other parts of Yugoslavia in which naphtha is also found. Many foreign and native experts in studying geological conditions and mountain formations have found indications suggesting naphtha in all parts of Yugoslavia, in Bosnia, Montenegro, Dalmatia and Serbia. The fact, well known for some decades, that naphtha has been discovered at Selenica in the neighbourhood of Elbasan in Albania, led mining experts to suppose that there must be other petroleum fields in the Balkans. The recent discovery of naphtha in Montenegro, coming on the top of the verification of the fields in northern Yugoslavia at Bujavitza tends to confirm this opinion. Experts have begun the study of these petroleum fields by seeking similarities in geological age and other geological conditions. The first results were obtained in Montenegro on the coast round Bar (Antivari), where the presence of naphtha was recognised in a narrow zone stretching north-west to south-east for a distance of about 30 kilometres. This field may be linked with the appearance of naphtha in southern Dalmatia round Budva, south of Kotor. Only here it seems that the naphtha is present in older geological beds of pre-tertiary period.

In Serbia districts where the presence of naphtha might be expected are chiefly found in the north, in the angle between the rivers Sava and Drina in the neighbourhood of the towns of Valyevo and Loznitza. Attention was first attracted to this region by the enormous beds of shale

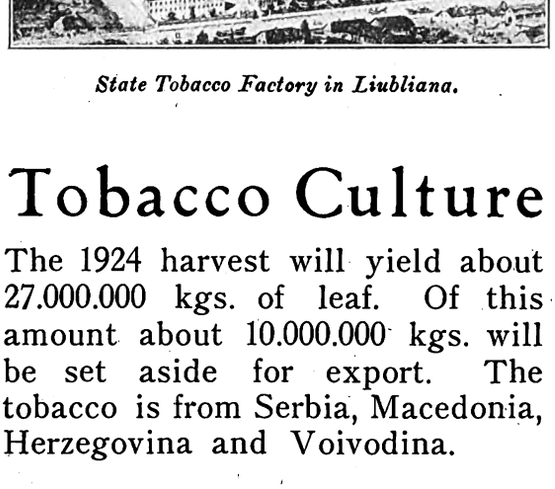
State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes



State Tobacco Factory in Liubliana.

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

The State Monopoly Administration, — BELGRADE —

and cementitious lias through which run a few strata of fissile paraffin schists, very rich in paraffin. In these tertiary beds, which belong to the oolitic period, especially those round Valyevo and Loznitza, mineral salts, brought by water from between the strata of paraffin deposits, are found on the part under Vidan. Here, moreover, there are characteristic remains of fossil plants and animals —*Fucoida Ostre*—and frequent traces of fresh-water fish —*Lensiscus* and *Gobius*—a few petrified colonies of micro-organic origin have also been observed. We may further point out that schist strata often alternate with sandstone. It is particularly interesting to observe the frequent appearance of gaseous bubbles in running and stagnant water in these districts; e.g., at Valyevo itself, at Paune and Toplitza, which are strongly suggestive of hydrocarbon compounds.

There is no doubt that it is of practical importance to know that the above-mentioned macro- and micro-organisms play an important part in the bitumisation of paraffin schists.

In view of these few facts alone which we have quoted, the presence of naphtha can be assumed in this part of Serbia. We have similar geological conditions in the neighbourhood of Vranya, to the south, at a place called Bushtrenya, where mineral tars are found on the surface. There is also a possibility of similar phenomena in the tertiary strata in the western Morava.

Unfortunately it has to be admitted that very little has been done in Serbia in this highly interesting territory, and that not a single deep boring has yet been made. The explanation must be sought in the lack of the necessary capital, but it may confidently be expected that before long the presence of these deposits both here and elsewhere will attract attention and that their exploitation will follow as a matter of course.

Some readers will doubtless be interested to know in broad outline the legislation relating to the working of subterranean oils and bitumens.

Mining Legislation.

The question of investigating and working these kinds of bitumens is definitely regulated by the Act of 1922. Before that date the need for a special law had not arisen. The main provisions of this Law relating to the investigation and working of mineral oils, gasses and bitumens are as follows:—

Art. 2. The Minister of Mines and Forests grants concessions for exploring and working the aforesaid products to persons and companies of Yugoslav origin.

Art. 3. These concessions for prospecting and working are granted for an area of eight square kilometres (3 square miles), where at most 100 such areas may be included in one concession so long as they form a whole.

Art. 4. Concessions for investigating are for a maximum period of five years, on condition that the investigator in the course of from one year to a year and a half completes the preliminary examination and begins the work of investigation. During the succeeding years the investigator is bound to continue the work without interruption.

By Art. 5. Four hundred dinars shall be paid in advance to the State Treasury for every area of eight square kilometres under investigation.

Art 6. Concessions for investigations and working are given by the Minister of Mines and Forests by special agreement in accordance with the provisions of this Act.

Art 10. Fifty hectares (123½ acres) will be granted for working purposes on the completion of an examination, and for sinking a bore hole, at which time according to Art. 13 twenty dinars shall be paid in advance for every hectare.

Art. 14. Besides the above-mentioned payments, the exploiter shall return 25 per cent. of his net profits to the State. If the exploiter is a limited company the State claims 25 per cent. of all fully paid shares, which percentage shall be guaranteed to the State in the event of the company's capital being increased.

Concessions for exploitations last fifty years.

Dragutin P. Stepanovitch.

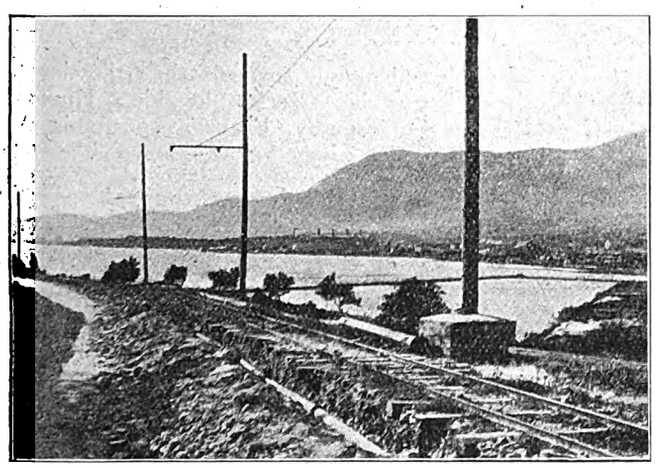
YUGOSLAV MARITIME POLICY.

Continued from p.150 (July 30).

On a coast which is, in a straight line, 700 kilometres (935 miles) in length, Yugoslavia possesses more than a hundred larger or smaller ports, and thus is in this respect one of the richest countries of the world. Only four of these ports, however, have to be considered as concerned with international traffic; these are Split (Spalato), Gruz-Dubrovnik (Ragusa), Shibenik (Sebenico) and Bakar. Yugoslav statistics still show the old harbour at Split as separate from the new industrial port of Vranyitz and the small harbour of Dubrovnik as separate from from that of Gruz. As soon as the Kotor (Cattaro) estuary is linked up with Serbia, it also will begin, as the fifth port, to take an active part in international trade. At present, however, it is of purely local importance.

Of the total number of incoming and outgoing ships in round figures, 30,000 out of 40,000 in 1921 and 43,000 out of 50,000 in 1922, came from and were destined for home ports, the remaining 10,000 in 1921 and 7,000 in 1922 came from and went to foreign ports. It should, however, be noted, as the number of ships does not matter much when compared with their tonnage, that by far the greater bulk of Yugoslavia's maritime traffic is from abroad.

There are practically no regular passenger services between Yugoslavia and foreign countries, with the single exception of Italy. The steamers employed for this Italian service belong to Italian and Yugoslav companies, and ply only in the Adriatic.



Cement Factories at Split (Spalato).

Connection with other foreign countries is supplied by occasional sailings, arranged for according to need. As the more expensive goods can also be sent by land, the sea routes serve only for bulky articles which, because of their low value per unit of bulk, need cheap transport.

The chief article imported is coal for cement factories, steamship companies, nitrogen factories and for the interior of the country; all other imports come in much smaller quantities. The articles exported include wood (timber), bauxite, cement, carbide, calcium cyanide, (artificial manure), horses and other live-stock.

On account of its cement industry Split is connected by a regular fortnightly service with the Far East and with South America, and by a far more frequent service with countries on the Mediterranean littoral. The ships on these services range from 4,000-8,000 tons.

The 40,000 ships using Yugoslav ports in 1921 included 6,800 sailing vessels and 33,500 steamers of a total tonnage of 5,500,000 tons (sailing ships 280,000 tons) with 7,000,000 tons capacity. Of these 35,000 or 88 per cent. flew the Yugoslav flag, representing 4,000,000 tons or 72 per cent. of the total tonnage. In 1922, 44,000 vessels, 88 per cent., representing almost 5,000,000 tons (71 per cent.) carried the Yugoslav flag. The Italian flag claimed 2,230 sailing vessels (one third of the total number) and 3,400 steamers with a total tonnage of 1,300,000 registered tons, or 24 per cent., in 1921, and 6,800 ships with 1,920,000 tons (27 per cent. in 1922). Great Britain, the third on the list, had in 1921 only 27 ships with a tonnage of 60,000, and in 1922 44 ships of 81,000 tons. After the British come other countries with unimportant amounts of tonnage, Germany, Greece, U.S.A., Brazil, Holland, Turkey, Belgium, Denmark, Norway, Roumania, Russia, Sweden and Egypt.

The effect of the War was still felt both in 1921 and 1922. In the last two years the complete statistics, when issued will show a considerable improvement; but it will not be until the opening of the new Lika Line connecting Split with Belgrade, Zagreb and Central Europe (to which reference was made in the last issue of THE NEAR EAST AND INDIA) has had time to exert its influence on Yugoslav trade that Yugoslavia will be begin to take her proper place among maritime nations.

YUGOSLAV EXPORTS.

The different parts of the Kingdom having been depleted of domestic products during the World War, Yugoslavia was forced, at the very beginning of its existence (December 1, 1918) to import even foodstuffs. To help on the reconstruction of the country and to supply the needs of her people during the first two years after the War, Yugoslavia favoured imports and put obstacles in the way of exports. In proportion as the reconstruction of the country progressed and the railway system was improved, the quantity of exports grew. However, the years 1921 and 1922 were not very favourable, and it was impossible to bring exports up to their normal level. It was not until the year 1923 that Yugoslav exports showed a notable improvement, thanks to a better harvest, to the reduction of the export duties, and to the improvement of railway communications. At last, in 1924, the country succeeded in obtaining a favourable balance of trade.

I.—RELATION TO IMPORTS.

The foreign trade of Yugoslavia has followed the course indicated below.

In millions of gold dinars (Swiss francs)

	1919	1920	1921	1922	1923	1924
Imports ...	712.2	746.9	538.1	452.3	493.4	578.5
Exports ...	164.0	284.6	321.2	259.2	477.9	671.2

The percentage relationship between exports and imports was as follows:

1919	1920	1921	1922	1923	1924
23.03	38.10	59.69	57.29	96.86	116.02

II.—ARTICLES OF EXPORT.

The principal articles exported during the last three years were as follows:

Name	Unit	1922	1923	1924
			Quantities	
Wood: (a) for building purposes	Tons	588,284	844,597	1,046,292
(b) for fuel	,,	112,750	351,903	508,797
Cereals: (a) Wheat	,,	24,576	96,458	172,401
(b) Other cereals ...	,,	5,122	3,644	36,499
Oxen, alive	Head	105,385	106,513	168,100
Eggs	Tons	13,382	17,241	20,129
Maize	,,	11,464	102,158	245,146
Meats: (a) Fresh	,,	16,901	19,406	17,183
(b) Meat products ...	,,	3,972	2,675	2,013
Copper	,,	5,279	5,748	7,605
Wheat flour	,,	22,717	38,241	59,075
Live pigs	Head	117,401	140,441	86,183
Live horses	,,	26,730	52,479	55,193
Cement	Tons	183,583	235,648	341,628
Prunes	,,	40,443	66,392	19,940
Hemp	,,	7,743	5,615	6,975
Beans	,,	7,452	12,813	32,259
Skins of wild animals	,,	129	172	201
Iron ore	,,	18,247	199,428	264,789
Lead in sheets	,,	5,386	7,675	9,370
Kashkaval cheese	,,	1,757	3,129	2,898
Small live stock	Head	173,818	387,452	387,020
Hops	Tons	876	2,303	1,278
Calcium carbide	,,	12,519	15,124	18,105
Charcoal	,,	34,069	34,887	57,691
Brown coal	,,	86,009	24,760	143,320
Lamb and goat skin	,,	1,083	1,824	1,676
Wood products	,,	34,177	19,352	9,018
Tanning extracts	,,	9,438	11,087	11,616
Fresh fruits	,,	2,129	23,334	11,659
Ammoniate of soda	,,		14,902	19,386
Herbs crushed and uncrushed	,,	2,640	2,523	2,412
Live poultry	,,	1,890	1,906	1,631
Various	,,	898,722	747,307	743,897
		2,213,881	3,025,914	3,915,700

It will be noticed that Yugoslav exports consist primarily in agricultural products, then in mining and industrial products. Industry in the country is still in its infancy, and the Kingdom, accordingly, has to import mainly industrial products.

III.—DESTINATION OF PRODUCTS.

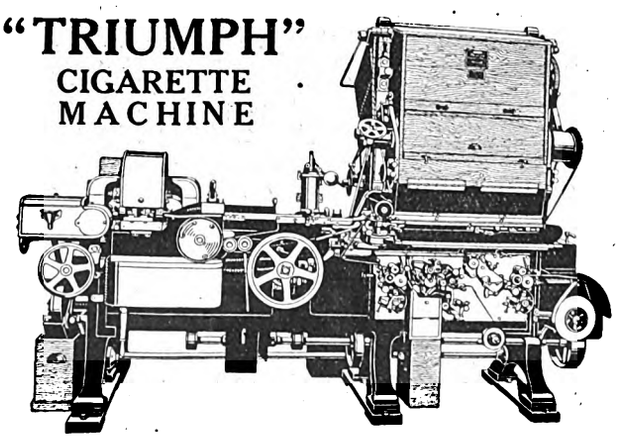
Exports are directed mainly towards the following ten countries: Italy, Austria, Czecho-Slovakia, Hungary, Greece, Switzerland, Germany, France, Roumania, and Great Britain. The list given below shows the total

UNITED
CIGARETTE MACHINERY
KNOWN AND USED THE WHOLE WORLD OVER.

Output 800-1,000 Cigarettes per — Minute —

For pasted or Crimped Cigarettes, round or oval, with gold or cork mouthpiece, printed in two colours or one colour and bronze.

"TRIUMPH" CIGARETTE MACHINE



WORLD'S RECORD

established on this Machine, equipped with the new GEAR DRIVEN STEEL-BAND CUT-OFF, dispensing with Belts, Chains, Cams and Circular Knives

215,000 OVAL GOLD-TIPPED CIGARETTES IN 3 HOURS.

This trial was carried out by one of our customers expressly to test thoroughly the construction, design and reliability of the "TRIUMPH" Machine.

	Millions of dinars
Building wood	43.8
Cement	19.5
Calcium carbide	17.1
Tannin	9.6
Eggs	6.7
Maize	5.9

The most natural distribution of exports among the different countries of destination, as well as that of imports among producing countries, will not be developed until after the construction of the Adriatic Railway, and when, by an arrangement with Greece, the exporting of goods through Salonika to the South is secured.

At the present moment central Yugoslavia and southern Serbia have no favourable and secure routes for the transport of their exports and imports. For this reason exports are at the present directed mainly towards the north-west and north by the railway lines leading in that direction and by the Danube.

J. P.

EXPORT TARIFFS.

The following changes were made in the tariff on goods for export under an Order, No. 34,410, dated July 14, 1925:

Tariff No. Goods	Duty: Dinars
1. Cereals:	
(a) Wheat	1.—
(b) Rye	0.50
(c) Maize	0.50
(d) Oats	0.20
(e) Barley	0.50

(Continued on page 266.)

2.	Dried beans	1.—
3.	Hay of all kinds	Free
4.	Sugar beet, fresh or dried	2.—
5.	Dried plums, not stoved	0.20
6.	Opium	65.—
7.	Horses and mares:	
	(a) Over three years (per head)	8.—
	(b) Three years old or less (per head) ...	4.—
	(c) Horses for slaughter, slaughtered horses not skinned (per head)	2.—

Note 1.—The export of pure-bred horses of English or Arab blood is only allowed with the previous permission of the Ministry of Agriculture and Waters.

Note 2.—Horses are considered as coming under heading (c) when they are of no use for any other purposes. The slaughter of these horses must be carried out under the supervision of the State veterinary surgeon.

8.	Sheep and goats alive, or, if dead, must be unskinned:	
	(a) Sheep, ewes and lambs	1.50
	(b) Goats and kids	1.—
9.	Horned cattle, buffaloes and oxen, alive or dead, but not skinned, as the exporter chooses:	
	either (a), per 100 kgs.	1.50
	or (b), per head	6.—
10.	Pigs: (a) Live—	
	(1) Up to 70 kgs., each	30.—
	(2) Over 70 kgs., either per 100 kgs. ...	9.—
	or per head	8.—
	as the exporter chooses.	
	(b) Dead, whole or in halves, per 100 kgs.	4.—
	(c) Fresh or salted meat	2.—
11.	Poultry:	
	(a) Alive	8.—
	(b) Dead	4.—
12.	Skins of domestic and wild animals, raw, salted, limed or dried, with or without hair:	
	(a) of horned animals, buffaloes, and oxen	
	(1) Raw salted or limed	60.—
	(2) Dried	65.—
	(b) Sheep and goat skins	16.50
	(c) Lamb and kid skins	16.50
	(d) Horse and pig skins	16.50
	(e) Skins of wild animals:	
	(1) Field-mouse and mole skins ...	50.—
	(2) Other wild animals, rabbits, etc.	150.—
14.	Animal hairs:	
	(a) Sheep's wool	80.—
	(b) Horse hair, mane and tail, tails of cattle, hare fur, and big bristles ...	120.—
15.	Feathers	8.—
16.	Bones and horns:	
	(a) Cattle horns	16.—
	(b) Bones with or without marrow ...	8.—
17.	Hemp ... ... —	Free

Note.—Hemp can only be exported through the Customs Houses of Subotitza, Bezdan, Maribor, Rakek, Jesenitze, Koprivnitza, Osijek, and the chief Adriatic ports.

18.	Flax stalks	4.—
19.	Oil-bearing fruit and seeds	8.—
20.	Scrap iron	8.—
21.	Old copper, zinc, tin, and their alloys ...	40.—
22.	Rubber waste	16.—
23.	(a) Rags, textile waste, waste paper:	
	(1) Unsorted	50.—
	(2) Sorted—(aa) woollen	1.60
	(bb) cotton, flax, hemp, and others	16.—
	(b) Waste paper	8.—
24.	Building wood: (a) Unworked; just cut or sawn:	
	(1) Chestnut, except for poles less than 4 cms. in average diameter	2.50
	(2) Oak, from 20-30 cms. in average diameter	0.75
	(3) Oak walnut, sycamore, hornbeam, ash, elm, of over 30 cms. average diameter	0.40
	(4) Coniferous trees of all kinds of over 20 cms. average diameter	1.25
	(b) Shaped or sawn, all sizes:	
	(1) Chestnut	4.—
	(2) Oak sleepers	0.60
	(3) Posts and beams of oak	0.60
25.	Factory equipment and spare parts, machines, apparatus, boilers, transmissions, safety bands, reservoirs, etc., of foreign make	8.—

Note.—The articles enumerated in Category 25 of the new tariff are exempted from Customs duty; they can be exported with the special permission of the Ministry of Commerce and Industry and the Ministry of Finance.

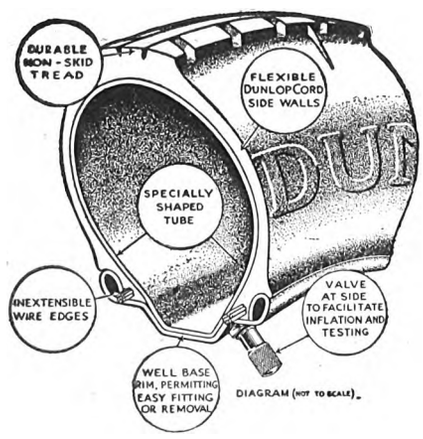
The best

BALLOON TYRES in the world-

DUNLOP

CORD BALLOONS

(wired or straight side type).



DURABLE NON-SKID TREAD
FLEXIBLE DUNLOPCORD SIDE WALLS
SPECIALLY SHAPED TUBE
INEXTENSIBLE WIRE EDGES
VALVE AT SIDE TO FACILITATE INFLATION AND TESTING
WELL BASE RIM, PERMITTING EASY FITTING OR REMOVAL
DIAGRAM (NOT TO SCALE).

Dunlop—the pioneer of the Tyre Industry—to day makes the best Balloon Tyre—and the *safest.*

The Dunlop Cord Balloon (wired-on type) is entirely independent of air pressure for its hold upon the rim—it will not accidentally leave the rim should the air pressure fall.

Apart from safety, the Dunlop Cord Balloon Tyre is the most *comfortable.* It is long-wearing, carries a perfect non-skid tread, and is standardised on most high-class British cars fitting low pressure tyres.

British Consular Reports

III.—SYRIA.

In a most interesting report which has just been issued on the "Trade, Industry, and Finance of Syria," Mr. H. E. Satow, O.B.E., H.M. Consul-General at Beyrout, deals with the position in the area under the French mandate for the two years down to April last. He points out that, while changes are to be recorded, they are, naturally, not far-reaching, and there are indications that the country is settling down to more normal conditions, and that it may later on enjoy a certain, even if modest, prosperity. We give the following extracts:—

Vigorous efforts, rendered more fruitful by the restoration of public order and the improvement of communications, are being made to win prosperity for the country by the development of a tourist-traffic and the encouragement of summer visitors In this direction the Lebanon especially has distinct possibilities.

As regards Beyrout, which is still the main commercial centre of the country, matters have now reached the point where merchants, freed from the burden of post-armistice stocks, can trade and order on the basis of actual requirements. The adverse trade balance continues, but it is an apparently normal phenomenon in the life of the country, and is reduced by invisible exports, the amount of which cannot easily be computed.

Even when the fall in the franc is taken into consideration, import and export statistics show grounds for optimism in foreign trade conditions. Imports into Beyrout in 1922, 1923, and 1924 respectively amounted to Frs. 381 millions, Frs. 352 millions, and Frs. 456 millions. Reduced to sterling at average rates, these figures become £6.9, £4.7, and £5.4 millions. The year 1924 is thus still below 1922, which was again considerably below 1921, but the sterling values are not exactly true for comparison purposes, as many of the imports concerned come from countries of depreciated exchange. The total imports rose from Frs. 560 millions in 1923 to Frs. 796 millions in 1924. Exports have also increased to Frs. 247 millions in 1923 and Frs. 340 millions in 1924.

The statistics seem to show that Syria, as far as the foreign trader is concerned, is recovering from the depression of 1922 which followed the speculation of 1921. Hopefulness seems to be common in business circles, where it is felt that conditions have become more normal during the last two years. The country has settled down to its new size, and commerce, though restricted, is conducted on sounder lines than in the early days of the occupation.

Imports.

Great Britain continues to be the principal supplier of cotton manufactures, madapolams, cabots, oxfords, and prints, but British goods are hard pressed by French and Italian competitors, especially the latter. Greys and white shirtings from Japan also sell well. The exchange has, no doubt, worked against the United Kingdom, but Italian expansion has also been favoured by good credit terms and by attractiveness and variety in colour and design, so that Italian prints and cotton flannels are in high favour for peasant costumes.

Great Britain before the war supplied Syria with large quantities of cotton yarn, but now the greater part of the yarn imported comes from India, Japan, and Italy. Cheapness and the good terms of payment offered seem to be the reasons for this change.

Considerable quantities of cheap cotton or mixture underwear from Italy have come on to the market, although Great Britain remains the provider of the higher grade woollen article. In hosiery, France is the chief supplier, Italy, Spain, and Japan contributing the cheaper varieties. Chemnitz hosiery has lost ground since the discriminatory tax was instituted against Germany.

In woollen manufactures Great Britain supplies the high-grade cloth, especially for men's suitings. In the medium grades France has the market, her articles being good and durable. Czecho-Slovakia returned to the market in 1924. She enjoyed considerable favour in Syria prior to the war, and the quality and cheapness of her goods will help her to regain it.

Practically all the silk imported comes from France, small quantities being contributed from Italy and Japan German imports of paper of all kinds have been hindered by the new tariff, and Czecho-Slovakia tends to take her place. Drugs come chiefly from Germany and France, although the imports of made-up medicines from Great Britain are considerable. About 250 tons of Marseilles soap reached Beyrout in 1924. It is said almosts to have ousted other brands. American toilet soap is common. In perfumery, toilet goods, and articles of fashion, France, as is perhaps natural, predominates.

The building trade has been active recently in Syria, and building materials are an important item of import. Wood comes in large quantities from the Black Sea and the Adriatic. Girders, sheet iron, iron bars and pipes are obtained principally from Belgium. France contributes most of the lead required, while much of the zinc comes from Germany, whose agents have been able to allow 15 per cent. off their prices in order to counterbalance the preferential tariff against them. Galvanised sheets are brought from Great Britain.

Damascus has made increasing use lately for the manufacture of native clothing of artificial silk furnished by Belgium, the United Kingdom, and Italy. In machinery a moderate quantity of tractors, hand ploughs and pumps have been supplied by the United Kingdom, which has also sent 60 motors varying from 10 to 60 h.p. During 1924 the motor-car market was busy. Six hundred Fords are said to have been imported in that period, 150 cars of other American makes, and 50 French and Italian cars. French cars are making a determined effort to enter this trade, which is a promising one, and one in which, unfortunately, British cars have so far made no appearance. Wood for fuel is dear, and the imports of coal have increased. It is said that the railways in 1924 consumed 32,000 tons of coal, while 19,000 tons were imported for other purposes.

The 30 per cent. tariff on German goods has had a marked effect, German imports falling from Frs. 29 millions in 1922 to Frs. 15 millions in 1924. As has been indicated above, however, some German manufacturers are making their prices competitive by offering clients a special reduction of 15 per cent. to counteract the increased duty. In this way a recent German estimate for a water-power installation was the cheapest made.

Exports.

The chief countries to which Syria exports goods (1924 figures) are, in order of importance:—Turkey, Palestine, France, Egypt, United States of America and Transjordania. The position of Turkey and Palestine at the head of the list in the place of France is striking. Aleppo exports wool, cotton, live-stock, hides, cereals, pistachio nuts, and other natural products. Damascus sends out wool, mainly to America in 1923, but with greater export to Europe in 1924; apricot seeds, dried apricots and apricot paste, mainly to Egypt, skins (90 per cent. to Czecho-Slovakia); guts, which are in increased demand in Central Europe, and liquorice. A small quantity of Damascus hemp was recently exported to Germany. Beyrout exports are fruit and vegetables, wool, skins, nuts, and miscellaneous provisions.

British Trade.

The imports from Great Britain amounted in value to Frs. 139,375,411 in 1924, the exports to Great Britain were valued at Frs. 12,934,609. The United Kingdom thus remains Syria's chief supplier, with between one-fifth and one-sixth of the total imports, but her goods are not holding their own against French, Italian, and Belgian competition. The key to the whole position lies largely in the exchange. British commercial prestige remains great. British goods have been imported regularly for a hundred years, and are known to be solid and reliable. British business methods, too, are respected. The drawback is that for a country like Syria they are often too rigorous. German firms have of late given little or no credit, but although a few British firms still give the same to old connections in Beyrout, they generally require cash or a percentage with order. A serious effort will have to be made if, in the face of very keen competition, the United Kingdom is to keep to the front. Frequent visits of manufacturers' representatives to study the requirements and tastes of the country, activity in appointing local agents and of following up opportunities, above all the adjustment of prices and qualities in order to compete with French, Belgian, and Italian goods, these are necessities in the advancement of British trade with Syria.

Transit Trade.

It has been the consistent endeavour of the French authorities to bring back to the middlemen of Beyrout, Aleppo, and Damascus this lucrative trade, so suited to their genius, which is not a transit trade in the true sense of the word, inasmuch as the *modus operandi* is to buy at a profit and to sell at a greater. With this purpose in view, conventions have been signed with Palestine and Transjordania for the mutual refund of duties paid on goods re-exported, and with Iraq in respect of goods passing in transit through either Syria or Iraq or through both countries in the case of articles of Persian origin or destination. In this connection should be mentioned the rivalry of the ports of Beyrout and Haifa, and the fact that imports to Syria via Haifa dropped from £2.347,600 in 1922 to £E.136,138 in 1924. The transit convention with Iraq is the sequel to the opening of the desert route to Baghdad, by which it is hoped that a considerable quantity of light and valuable articles, particularly French silks, toilet necessities, etc., will be directed towards Iraq and Persia.

Some measure of success has attended this attempt at development. Re-exports amounted in value to Frs. 78 millions in 1923 and to 98 millions in 1924. Aleppo, which before the war was the entrepôt for a large area of Eastern Anatolia which, by the Angora Agreement and the Treaty of Lausanne, has reverted to Turkey, has regained some of its trade, despite difficulties due largely to political considerations. In spite of the fact that the agreement concluded with Turkey is not fully working, progress has been made, as the export figures show, and trade is slowly finding its inevitable channels. At the moment of writing (April, 1925), the Kurdish revolt has again caused a setback.

It is also noticeable that Damascus has in the last two years obtained a hold on the trade of Transjordania and Northern Palestine, and the statistics substantiate this. The Syrian merchant benefits by superior organisation, and apparently imports in greater quantities and sells cheaper than his Palestinian counterpart. Damascus is, further, a centre upon which southern buyers draw for many peculiarly native articles which the southern regions have always consumed and still require, and this intercourse is tending to develop Damascus as a centre not only for local produce but for foreign imported goods as well.

Generally speaking, therefore, there is promise in the future of the transit and re-export trade, although the signs of growth are not yet definite. The next few years will show whether it is even in new conditions possible for Syria to become a middleman for Palestine and Asia Minor, and whether geographical conditions will allow such an expansion of commerce with Baghdad as is hoped for.

Business Methods.

Under the Mandate, as is to be expected, business connections with France are increasing. English, on the other hand, is widely known, and many firms, especially in Beyrout, either correspond or hold agencies for British firms. Few firms, however, except the larger ones dealing in textiles, are organised for direct relations with the United Kingdom. In cotton goods business is practically in the hands of "two-way" firms with a buying end in Manchester and a selling end here. Petroleum, motor spirit, etc., are also handled by "two-way" firms, but in this case the Syrian end consists of a special representative of the European or American corporation employing as his distributors a wide network of local native agents. During 1924 the Asiatic Petroleum Company has in this way established an independent branch in Beyrout.

(To be Concluded.)

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended August 13, state:—

Since our last report the futures market has been fairly active but prices have been weaker; the net changes on the week are the following: Sakellaridis 1.12 dollars down for November, 0.90 dollars down for January, 0.62 dollars down for March; Ashmouni 0.35 dollars down for August, 0.36 dollars down for October, 0.35 dollars down for December. This week's drop may be attributed to the weakness of New York and to the continued poorness of the demand from abroad for either prompt or new crop shipments. Last Saturday the following figures on the American crop were published: Condition 65.6, Estimated yield B/s 13,566,000 against 70.4 and 13,588,000 a fortnight ago. These figures were generally interpreted as bearish and provoked some speculative sales. Commercial houses have operated very little in the market, spinners interest in purchases being still almost nil. At the August 2 tender Crs. 1,750 dockets were issued. New Crop Upper Egyptian cotton has appeared on the market but contrary to past years' experience a heavy sacrifice on premiums had to be made in order to dispose of this cotton. This, naturally, has had a rather depressing effect on the Ashmouni Futures market. The week's receipts amount to Crs. 898 against exports Crs. 36,960; the stock stands at Crs. 329,381.

Spot: We have had another week of dull markets at Minet el Bassel. Demand from abroad continues poor and sales amount to about B/s 3,000 of which we estimate B/s 1,300 Sakel, B/s 1,700 Uppers and a few bales of Brown and Pilion. The first lots of new crop Uppers have made their appearance on the market but have not met with a ready demand and only part of them have been sold. They are very nice class cotton of fair staple but are no index to the quality of the Uppers crop.

Sakellarides: continues in very moderate demand. Such business as there is continues to be for F.G.F. and below, practically no interest being shown in the better grades. Spot parities are steady and without much change for the medium and lower grades but have eased appreciably for the better styles.

Ashmouni and Zagora: have been in fair request. A moderate business has been done, principally in the low and medium qualities. Spot parities have eased a lot for good and better, no doubt due to the imminent and actual new crop arrivals; for the medium qualities they are without change, but for the lower styles they have hardened somewhat.

Brown and Pilion: have met with only a retail demand. Spot quotations are easier for Good and better and without much change for the other grades.

White: is neglected and no business is reported. Spot parities are quoted much cheaper than last week.

Crop 1925: The rather favourable climatic conditions of the last few weeks coupled with a regular water supply have had good effects on the progress of the crop. There is nothing special to report on the attack of the pink boll worm which continues to be about normal. Picking has commenced on a restricted scale in Upper Egypt.

H.M. Consul-General at Beyrout reports that, under a recent Decree, the importation into Syria and Lebanon of dutiable goods by letter post is permitted by the local postal administration, provided that the packages bear a special green label, D3 or D5, as provided for by the Universal Postal Union, and are accompanied by a Customs declaration. The importation by letter post of goods having a commercial value which do not bear such a label is forbidden, as is also the importation by post as "samples without value" of goods which have a commercial value. The only samples admitted are those which have a none-commercial destination or are of small value and are small in quantity. A fixed clearing charge of 5 piastres (1 franc) will be levied on all packets.

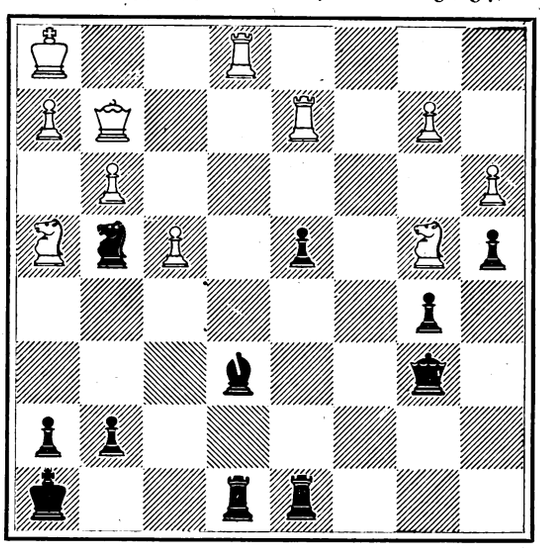
CHESS.

By "KARO-KANN."

At the time of writing it appears probable that Mr. H. E. Atkins, the holder of the British Championship, will be successful in retaining his title at Stratford-on-Avon. I indicated last week that I thought the result would largely depend on the game between Mr. Atkins and Mr. Yates. They met in the third round, and the game, which I give below, was fully worthy of the occasion. Defending a Ruy Lopez, Mr. Atkins gradually evolved an attacking position, and finished the game with a series of brilliant moves.

White, Mr. F. D. Yates; Black, Mr. H. E. Atkins. 1,P—K4, P—K4; 2, K Kt—B3, Q Kt—B3; 3, B—Kt5, P—Q R3; 4, B—R4, Kt—B3; 5, o—o, B—K2; 6, R—K, P—Q Kt4; 7, B—Kt3, P—Q3; 8, P—B3, Kt—Q R4; 9, B—B2, P—B4; 10, P—Q3, o—o; 11, Q Kt—Q2, Kt—B3; 12, Kt—B, Q—B2; 13, B—Kt5, Kt—K; 14 BxB, KtxB; 15, Kt—K3, Kt—B3; 16, Kt—R4, B—K3 (1); 17, P—Q4, K—R; 18, P—K Kt3 (2); Q R—Q; 19, P—K B4, B PxP; 20, PxQ P, PxQ P: 21, QxP, Kt—B3; 22, Q—Q2, P—Q4; 23, P—K5, Kt—K5; 24, O—Kt2, P—B4; 25, PxP (e.p.), KtxP: 26, Q R—B (3), K R—K: 27, B—Kt3, Q—Kt3 : 28, K—R, Q Kt—Kt5; 29, Q R—Q, P—O R4: 30, P—Q R3, P—R5: 31, B—B2, KtxB (4): 32, KtxKt, P—Q5; 33, Kt—Kt4, Kt—Kt5; 34, R—Q2,



Position after White's 34th move, R—Q2.

Kt—K6 (5); 35, Q—B2, B—B; 36, Kt—B3, B—Kt2; 37, K—Kt, Kt—Kt5; 38, RxR (ch.), RxR; 39, QxP (6), BxKt; 40, Kt—B2, Q—K3; 41, K—B, B—Q8; 42, Kt—Kt4, Q—K8; 43, K—Kt2, R—K7; 44, RxR, QxR (ch): 45, K—Kt, QxP (ch); 46, resigns.

(1) White's intention in playing Kt—R4 is presumably to establish a Kt at B5, but Black's reply, threatening P—Q4, frustrates it.

(2) Here P—Q5 might have been played. It would have cramped Black's position in the centre for a time.

(3) As it turned out, this move was wasted. Better would have been Q R—Q.

(4) Now, with an exposed King and without the Q B, White's position is precarious.

(5) At this point B—Q4 would have won brilliantly. If 25, RxR (ch), RxR: 36, OxB, R—K8 (ch); 37, K—Kt2, Kt—K6 (ch) and wins. There is no adequate defence to the move.

(6) This loses at once, but there was no move to save the game. R—K2 would lose the Queen, while Q—B would be followed by P—Q6 (dis ch), and then by R—K6.

Solution to end game No. 11:—1, P—B4, PxP: 2, K—Q4, P—B6: 3, KxP, P—B4: 4, PxP, PxP: 5, P—Kt5, P—B5: 6, P—R1 and wins, for Black cannot stop both Pawns, while White can stop the isolated Black Pawn.

H.M. Consul-General at Beyrout reports that a recent Decree increases the specific import duty on foreign "tombac" imported into Syria from 40 to 50 Syrian piastres per kilog.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen & Co., The North-West Tannery, The Empire Engineering Co., and the Nani Tal M.T. Co. These Firms, by pooling their resources and centralising control, form a corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LALIMLI PURE WOOL

Makers of the famous Lalimli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPORE WOOLLEN MILLS CO.,
CAWNPORE

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO.,
CAWNPORE

COOPER, ALLEN AND COMPANY

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.

Everything in Leather.

COOPER, ALLEN & CO.
CAWNPORE

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include:

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Jebel Druse Revolt.

Events in Syria continue to be marked by a perplexing uncertainty. Official French information is almost entirely restricted to denying the accuracy of reports received from other sources. French public opinion is frankly at a loss to understand the Government's attitude or, at least, General Sarrail's silence. In a war between two more or less equally matched belligerents there is much to be said for economy of information regarding the progress of military events; but in the case of the Druse rising, to withhold all information is to vest the movement with the importance that it is sought to deny to it. The past week has proved that, if there was any truth in the report of negotiations between the two parties, the first attempt to reach peace by agreement has broken down. On August 24 a detachment of Druses made an attempt to reach Damascus—thus much is tardily admitted by General Sarrail—but they were easily defeated, and with heavy loss. The French garrison in Sueida is still more or less closely invested. Reports of other engagements are current, but, whether the incidents recorded took place or not, they are unimportant in themselves, and merely indicate that the rising is not yet scotched. To hazard a guess, one must suppose that General Sarrail, finding that the African troops under his command are not equal to the task of suppressing the revolt without a further stiffening of French troops, prefers to remain on the defensive until he can deal effectually with the insurgents in a short and swift campaign. The Turks, it will be recalled, adopted the same strategy in the case of the Kurdish revolt. The outlook for the Druses is as hopeless as it was for the Kurds, and they have the same lack of cohesion and dislike for a sustained effort to cope with in any attempt to gain recruits. Their leader, Sultan Pasha el Atrash, is making a great effort to extend the rising throughout Syria. It would be a grave reflection on the French Government or General Staff, if he were to succeed before General Sarrail were in a position to take the field successfully against the Druses.

Mosul and Geneva.

This week the stage is set in Geneva for a settlement of the Mosul question. The Council of the League of Nations meets on Wednesday; Mr. Austen Chamberlain is Great Britain's chief delegate, the Turkish representative is Tewfik Rushdi Bey, who, according to report, comes armed with explicit instructions to do everything save honour Turkey's undertaking to accept the League's ruling. Propaganda of this description is inseparable from Oriental diplomacy. Not unconnected with it may be the official *communiqué* of the Turkish Government reporting a violation of the Turko-Iraqi frontier by five hundred "brigands" coming from the direction of Rowanduz. The first official announcement spoke of the brigands as being accompanied by Regular military forces, but this picturesque addition was omitted in subsequent issues, and presumably does not appear in the formal protests sent to the League of Nations and to the British Government. Recent history will show that, whenever Turkey is about to enter upon important negotiations, she has invariably to complain of an unprovoked act of aggression, calculated, if the world were inhabited solely by children, to win sympathy for herself and to create suspicion against the other party to the negotiations. In any case such "acts of aggression" justify or, at least, call for movements of troops to the debatable area. The brigands from Rowanduz, who ought really to be attacking Iraqis from sheer love of Turkey, have a still more familiar ring about them when it is known that British representations have been made quietly at Angora throughout the summer against the violation of the Mosul border by small Turkish detachments. The Council of the League of Nations, it is to be hoped, will prove less unsophisticated than were the members of the Commission of Inquiry sent to Mosul on their first appearance in the Middle East.

Bulgaria's Refugee Problem.

Attention may be directed to an article appearing on another page on the Refugee Problem in Bulgaria. Appeals on behalf of the Bulgarians are apt to meet with the remark that in the helping of late enemies the line must be drawn somewhere. Yet, apart from ordinary humanitarian reasons, it can be shown that assistance given to Bulgaria in the raising of a loan enabling her to make adequate provision for her refugees is a natural corollary to the Greek Refugee Loan, and its omission detracts from the full utility of the latter. The wisdom of setting South-Eastern Europe on its feet again knows, or should know, nothing about national boundaries. Behind the desire to relieve actual suffering among Greek or any other refugees should lie a constructive policy for enabling the peoples in that area to settle down to the practical details of reconstruction. The Balkan Peninsula will be unable to occupy in the European scheme of things the position to which its resources and the industry of its peoples entitle it so long as any of the old sores are left unhealed. The intention is that the Greek refugees should forget Turkey and help to build up the greater prosperity of Greece; it will be of no small advantage to the Greeks if the refugees from Greek territory now in Bulgaria are enabled to forget their past and to play their part in the rehabilitation of Bulgaria. Neither Europe nor Great Britain is asked to make a present of money to Bulgaria, but a refugee loan of two millions sterling on the lines of the Greek Loan would not only be a sound investment for subscribers; it would also constitute a material contribution to the peace and prosperity of the Balkan Peninsula.

"Repression" in Bulgaria.

Miss Susan Lawrence appears to have been employing the leisure afforded her by respite from Parliamentary labours in visiting Bulgaria, where, in her own words, she has "spent a little time in Sofia, collecting evidence, with regard to the repressions." Whether the Labour Party considered that the report of the Wedgwood mission required checking, or whether Miss Lawrence's errand is self-imposed, she does not state. She has embodied the results of her inquiries in a letter to the *Manchester Guardian*, and announces, on the strength of the evidence that she has collected, that she has "come to the conclusion that the Government are deliberately availing themselves of the horror caused by the Cathedral outrage to exterminate their political opponents." Now, a wise man who knows his Balkans will not blindly accept a brief for any person, party, or Government to the extent of guaranteeing that every day and in every way they will conform to British standards. Some warm-hearted Britons decided that they were quite safe in doing this in the case of M. Venizelos, but they have either learnt their mistake or have discovered that the Balkan Peninsula does not always want British standards. We do not challenge the evidence that Miss Lawrence has collected in Sofia, but merely the use that she makes of it. Without leaving London, she might have collected, a year or two ago, from the mouth of M. Raditch, far more damning evidence, on precisely the same familiar lines, against the Government of M. Pashitch; but, just as some good kind people in Great Britain were making up their minds that the Serbian treatment of the Croats could no longer be tolerated, M. Raditch—most aggravatingly—forms a Coalition Government with M. Pashitch.

British and Balkan Standards.

Miss Lawrence has overlooked the fact that in any genuinely democratic State government must be by the people for the people. In Bulgaria she finds that when a dastardly outrage was committed against the people and Government, both Government and people proceeded to defend themselves according to their own methods. There has never been any question about the irregularity —from the British point of view—of the people's methods. The Bulgarian Government admits the unfortunate fact, but claims that, as soon as was reasonably possible, it took charge of the situation and introduced more regular methods of dealing with the party responsible for the Cathedral outrage and with the Communist menace generally. Now comes Miss Lawrence, four months after the event, with the announcement: "I have statements which directly implicate the Government in six of these cases." The statements are to the effect that "these six persons 'disappeared' from a Government building and from the charge of the police," and these instances, with many others of beatings, woundings, and murders, compel Miss Lawrence to the conclusion that "the Government" are deliberately exterminating their political opponents, and the *Manchester Guardian* interprets Miss Lawrence's meaning by stating that "the Zankoff Government remains with a black record." Quite apart from the fact that, if the Zankoff Government were so acting, it would not be setting an entirely new precedent in the Peninsula, this sweeping condemnation would seem to require more evidence than Miss Lawrence has marshalled. For anyone knowing conditions in the Balkans would as readily hold the Baldwin Cabinet personally responsible for the irregularities in Major Sheppard's case as he would make the Zankoff Government responsible for police and other irregularities in Bulgaria. What Miss Lawrence apparently wishes to be inferred is that things would have been so different, if the Communists, who could perpetrate the Cathedral outrage, or the Agrarians had been in power instead of a Bourgeois Government. This, however, would not be so. It requires far more years of settled conditions and ordered self-government than any Balkan State has known for a people to remain unmoved under the provocation of the Communist outrage in the Sveta Nedelia Cathedral. The Bulgarian people, in common parlance "saw red"—town folk, village folk, minor officials, soldiers, police—and they acted according to their lights. A large section, of course, kept their heads, the Government among them; but the latter proceeded to deal with Communists as the great bulk of the nation, inspired by a firm belief in the greatest good of the greatest number, and by such democratic watchwords as the will of the people and government by and for the people, wished it to deal with them. By all means let Miss Lawrence point the Bulgarians to a better way, but she must not make it a party matter, or pretend that poor Communists are wholly blameless victims of injustice.

Palestine and the Zionists.

Critics of British policy and the Administration in Palestine will have followed closely, it is to be hoped, the proceedings of the Zionist Congress in Vienna. The view that the British Government in the exercise of its responsibilities in Palestine as Mandatory Power is wholly subservient to the Zionist Organisation is not shared by the members of that body. Dr. Weizmann was vigorously attacked for having failed to give effect to what it was held Zionist policy ought to be, and at the end of the debate he felt obliged to resign his position as the head of the Organisation's Executive. The main burden of Dr. Weizmann's defence was to the effect that he had done his best in the circumstances with which he was confronted, and that conditions in Palestine were an insuperable obstacle to the carrying out of the policy of the Zionist extremists. His contention, we believe, represents the facts of the case. Arab fears and non-Arab complaints against British policy have reference to a state of affairs at the beginning of the British civil régime which seemed to encourage the hopes of the Zionist extremists. The phase passed; the extremists are disappointed and angry; Dr. Weizmann and his more level-

THURSDAY, SEPTEMBER 3, 1925.

POLITICAL STABILITY IN GREECE.

Only ten weeks have passed since General Pangalos carried through his bloodless *coup d'état* and assumed the reins of power in Greece. To-day so much is political reconciliation in the air that there is a tendency to credit the new Prime Minister with phenomenal gifts of vision and statesmanship, from which too much may be expected. The truth is that, while politicians have wrangled, the good sense of the Greek nation has steadily asserted itself, and the people have begun of their own accord to bury the hatchet, which in the hands of the politicians had assumed such formidable proportions. For this state of affairs credit is due to the late Prime Minister, M. Michalokopoulos, who, in his eight months of office, although of pronounced Republican views himself, had contrived to prove to his political opponents that he could set the interests of the State above those of any one political party. M. Michalokopoulos came to grief politically over questions of foreign policy for which his Government was not primarily responsible; but it was no small testimony to the sense of the value of political restfulness which his régime had engendered that the Greek people took little notice of the military interference with politics and went on with their work. General Pangalos, it is true, has known how to administer a stimulus to the national desire for domestic peace. Starting with the advantage of his military position, with its implied or assumed aloofness from political parties, he has had less difficulty than his predecessor had in holding the balance equal between the rival camps. At the same time he has given expression to the popular weariness of politics by placing a limit on the protracted parliamentary discussions on the new Constitution, and has fixed a date for the dissolution of the Chamber, which showed signs of a desire to prolong its existence indefinitely. A third measure, the reinstatement in the services of officers removed for their political sympathies, has proved a still more practical contribution to the cause of reconciliation. To set a seal on this good work, a proposal has been made on behalf of the Moderate Royalists that all parties should agree loyally to accept the Republic and to work together for the common good for a fixed period of years, during which time the subject of the form of government in Greece shall be discussed neither by word nor in print, on the understanding that at the end of the period (five years is suggested) there shall be an equally frank and loyal reconsideration of the question in the light of experience in the interval. Whether these overtures will be reciprocated by the Republicans or will tend to confirm them in their fears that the Republic is in danger under General Pangalos remains to be seen. Unfortunately, if not unnaturally, moderate Republican opinion as represented by M. Michalokopoulos and M. Kaphandaris has withheld its approval from the Pangalos régime on the ground of its irregular seizure of power, and for this reason General Pangalos may be compelled to identify himself more and more with the Right. If he should do so, he may have occasion to realise that the ease with which he made his own "revolution" has put a premium on the practice in the eyes of other military commanders.

That the fears entertained on Greece's behalf at first of the Pangalos *coup de main* have not been realised offers no justification for a repetition of the irregularity. It is, in the first place, by no means certain that General Pangalos would adopt the same pacific attitude towards any challenge of his authority as M. Michalokopoulos did on June 25 last. The evils of the unconstitutional change were largely discounted by the absence of any challenge and by the indifference of the people as a whole. Yet it would be idle to suppose that Greece can indulge in the luxury of political instability entirely without detriment to herself. Although she may not be able to gauge the extent of the injury to her political credit abroad, she had in the present instance an illustration of the effect on her financial credit in the postponement of the second Refugee Loan. For reasons already indicated, the usually sensitive political barometer—the exchange rate—scarcely had time to react before the "depression" passed; but in the political sphere it is at least open to argument that the activities of the Minister for Foreign Affairs have been occasioned in part by the necessity of counteracting unfavourable impressions created by Greece's recent tendency to political instability. An agreement that would guarantee the republican system in Greece freedom from the risk of disturbance for five years would be invaluable to Greece; but, in view of the fact that under the republican régime she has had six Governments in a year and seven in eighteen months, what is also required is a fuller measure of stability for each successive Administration. From this point of view the reception accorded to the Pangalos Government is satisfactory; but the test will come when the Chamber is dissolved and new elections revive the political fervour of the country.

In these circumstances it must remain doubtful whether Greece has been well advised to direct popular expectation into international channels. The proposal for a Balkan Arbitration Pact is eminently sound, and it is natural that Greece should welcome such an easy method of escape from her present international difficulties; but in the event of the scheme's meeting with no support from Greece's neighbours, the nation may accuse General Pangalos, as he accused his predecessor, with the known results, of playing fast and loose with Greek prestige abroad, and the ground will be prepared for yet another political change. Greece, we believe, could afford to regard philosophically any international friction to which she may be exposed, in the knowledge that there are to-day in Europe too many forces at work against an actual breach of the peace to justify uneasiness on her part. In the meantime her major efforts could be directed towards consolidating the internal situation. General Pangalos's advent to power certainly postponed for the moment any further negotiations for a second Refugee Loan, which will become a pressing need early in the new year. By keeping popular attention fixed on home affairs—political reconciliation, economic development, and the inauguration of public works—the danger of disturbing the momentary lethargy of political parties would have been reduced to a minimum. As things are, the new Government has done much to make a new Loan possible; and it would be most unfortunate if, when the negotiations in London have to be concluded, any doubts should arise as to the stability of the Greek Government owing to the disappointment of national hopes in regard to the lead taken in the scheme for a Balkan Arbitration Pact. Perhaps the best thing that could happen would be that an understanding should be reached between General Pangalos and M. Michalokopoulos, which would allow the latter to give his support to the final drafting of the new Constitution, and so to discourage any elements in the country who would place party interests above those of the State as a whole.

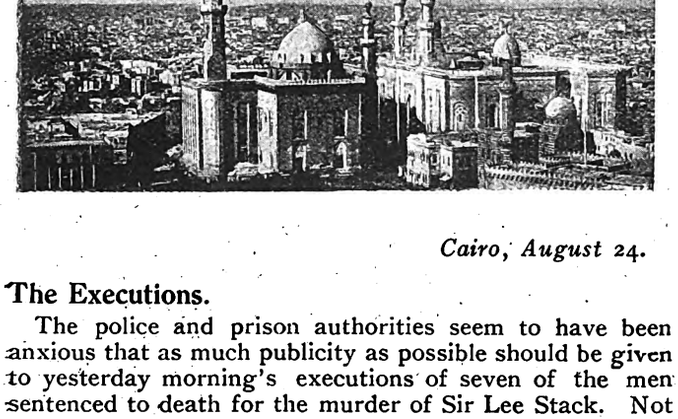
The Near and Middle East*

From Our Own Correspondents.



Cairo, August 24.

The Executions.

The police and prison authorities seem to have been anxious that as much publicity as possible should be given to yesterday morning's executions of seven of the men sentenced to death for the murder of Sir Lee Stack. Not only was the local Press invited *en masse*, but also, in the case of journalists who arrived after the first few hangings had taken place, a police officer supplied details of the manner in which the men concerned had met their deaths. The result has been that local journals have given their readers columns of description of the last moments of the wretched murderers. These, with the exception of Shafik Mansour, behaved with extraordinary fortitude, which it was impossible not to admire, however much one might regret that such courage and stoicism should have been employed to ends so evil. Some of the men made last moment speeches in which they appeared to glory in their crime and the fate that it had brought them, and two, at least, incited others to go and do likewise, while in every case the doomed criminals made reference to their religion in manner suggesting that they were the most pious of Moslems and, without actually saying so, suggested that, to Moslems, such deeds as theirs were easily pardonable, if not laudable. All this has been published *in extenso* in the Arabic Press and there is little doubt that it will have the effect of making the seven executed men appear, to youthful minds unbalanced like their own, in the light of heroes. Apart from this there seem to be serious objections, on the grounds of common decency, to such circumstantial descriptions of the last mortal moments of men awaiting the hangman's rope. To the admission of reporters no objection can be taken, inasmuch as it is in some measure a guarantee to the public of the proper carrying out of the executions; but it is to be hoped that, in future executions which attract much public interest, the authorities will issue merely a brief, undetailed statement and will insist upon the newspapers confining themselves to that statement.

The Ittehad Party.

More than the traditional grain of salt should be taken with the claims of Egyptian political parties to wonderful success in winning over their fellow-countrymen to the party point of view. The recently founded Ittehad Party has lately been making a great parade of its activities and declares that a large part of the public opinion which formerly was almost unanimously in support of Zaghloul Pasha has now been weaned from its old errors and enrolled in the Ittehadist ranks. Hitherto little importance has been attached to this campaign, because the Ittehad Party has had at its back all the resources of the Government, and with such machinery, it has always been easy, in Egypt, to create the appearance of popular enthusiasm. But, even discounting very heavily much of what has been apparently accomplished, on the grounds that there is always in an Oriental country a large body of floating opinion which changes its affiliations with every change of Government, seeking ever to be on the side that is for the moment in power, it is now clear that the Ittehadists have achieved something more than the appearance of success. At a political rally held last week in the north of Gharbia Province there was, so far as an impartial observer could tell, genuine manifestation of support for the party programme. Certainly the huge crowds which gathered to cheer the Ittehad speakers, and the notables of the district with whom private conversations were held, were not under the influence of any outstanding personality such as that which has been the driving force of the Wafd, for the Ittehad Party does not include a single notable leader of men. If it is to succeed, it must do so on its principles. Until recently, the traditional Egyptian method of employing the resources of the Administration to enforce adhesion to the Party and to collect money has been much utilised by the Ittehadists; but it seems that the [illegible] now realised the short-sightedness of this type of conscription. With the change, the fellaheen, who have kicked against being compelled to enrol under the Ittehad banner, may voluntarily subscribe to the new political faith.

Bad Language.

Egyptians from time immemorial have been shockingly prone to cursing and swearing. Lane, in his "Manners and Customs of the Modern Egyptians," remarked that Egyptian ladies of the best classes might be heard using language which would sound foul in the mouth of a Billingsgate fishwife. Nor have matters improved since Lane's day. On the least provocation one Egyptian will describe another as the child of unmentionable parents and beseech God to send down fire to shrivel up the other's house and all that it holds. But at last, it seems, a limit is to be put to the use of obscene abuse. The Azhar authorities have been horrified to discover that the—to them—worst oath of all, "God curse your religion" *(Allah yinaal deenak)*, is now in every mouth. Omnibus drivers hurl the imprecation at unwary pedestrians, while peasants working in the fields shout it to neighbours a hundred yards away. It is, in fact, as ubiquitous in Egypt as the convenient "Damn" in England, or, in a lower stratum of society, the conventional abbreviation of "By our Lady." The scandalised ulemas have made representations to the authorities, and from henceforth use of the forbidden objurgation within earshot of a policeman will risk for the offender a visit to the nearest caracol and the drawing-up of a procès-verbal. Anyone who has heard an Egyptian

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

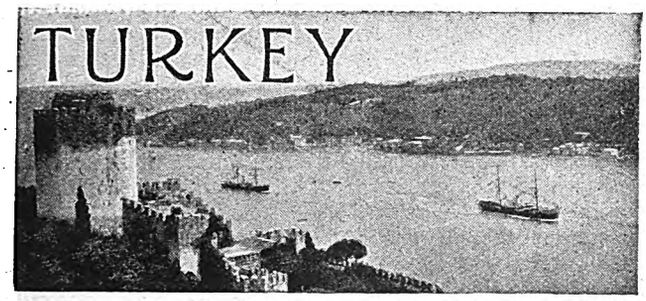
policeman describing the ancestry of a cabman who has failed to obey a traffic signal will agree that the local "cops" should at least be good judges of what constitutes bad language.



Constantinople, August 26.

The Mosul Question.

The Mosul question is, and will continue to be for some time yet, the subject of chief importance here. During the last fortnight Government circles at Angora have been seriously occupied with preparations for the dispatch of their delegation to Geneva to defend the Turkish cause. Tewfik Rushdi Bey, the principal Turkish delegate, and Djevad Pasha left Constantinople on Monday morning, protesting a perfectly pacific but determined attitude. Press and general opinion, while unanimous in approving the Government's decision and instructions to the delegation to refuse to consider the question of the Mandate and to go "all out" for the unconditional return of Mosul to Turkey, appear to have some strong conviction that, although their "right" will ultimately triumph, no definite settlement will be reached at the coming session of the League of Nations. Consequently it appears useless to hope for any improvement in Anglo-Turkish commercial relations, as the present uncompromising attitude of Turkey *vis-à-vis* commerce with Great Britain is undoubtedly adopted on account of this pending difference.

Improvements in Constantinople.

The changes and improvements likely to take place in Constantinople at the instigation of its Prefect, Dr. Emine Bey, appear to be limitless. The latest scheme contemplates the construction (again by a French concern) of a submarine tunnel connecting Europe and Asia at the points of Seraglio Point and Scutari. The value of such an undertaking, if it can be successfully accomplished, can hardly be over-estimated, for the tunnel would allow for the through transport of goods and passengers between Anatolia and Constantinople by train, and would do away with the unloading, ferrying across the Bosphorus, and reloading at Haidar Pasha. The necessity of such a tunnel has long been felt in the ex-capital, but up to the present no one in office has had sufficient enterprise to devote practical study to the question, and it is to be hoped that the project will not now be dropped.

Statues of the First President.

The ceremony of laying the foundation stone for the statue of the Ghazi, the first Turkish public statue, took place yesterday at Seraglio Point. The proceedings were of an original character, inasmuch as an eulogically inscribed parchment referring to Mustapha Kemal Pasha and describing his historical glories was locked and sealed in a metal coffer and placed under the foundation stone. The statue, when completed, will constitute an imposing sight at the entrance of the inner harbour, as its setting comprises a white-stoned edifice of a considerable size.

Smyrna has also decided to erect a statue in honour of the national hero.

Contraband.

Serious war is now being waged against contrabandists here, who exist in large numbers and operate on a very big scale. During the last week something like £T100,000 is reported to have been collected in fines and confiscations. The Customs and Police officials are devoting themselves to thorough and methodical searches of all ships and trains, and they were successful two days ago in detecting what appears to have been a regular contraband service carried on by employees of the Orient Express. Official reports state that the cupboards in the restaurant cars reserved for carrying, under seal, beverages which are served between specified frontiers have been found to contain large stocks of silks, tobacco, and cigarette papers, etc. Khedivial Mail Line and Lloyd Triestino ships, amongst many others, have also been found recently to be carrying contraband. The Customs officials of the present time can in no way be compared with the easy-going, unobservant (both wilfully and otherwise) individuals of the old régime.

Street Cries.

As is widely known, a great portion of the Constantinople residents' domestic purchases is made from street hawkers who begin their business activities at about 7 a.m. Nearly everything, from vegetables to dress suits, can be bought from these enterprising tradesmen, whose penetrating cries are considered by tourists (and only by tourists) as being extremely original and interesting. As a result of a recent order—now being strictly enforced—these hawkers are to use only Turkish when shouting their wares. Such a measure will doubtless either be the cause of many a housewife's despair at failing to purchase the necessities for dinner or will result in a raid on the Berlitz School of Languages.

PERSIA.

Teheran, August 3.

Mohurram Holidays.

All Government Offices have been closed from July 30 to August 7, for the annual Mohurram holidays, and everyone who can afford to has gone into camp on the slopes of the hills above Teheran. Despite this emigration of the better classes, the tenth day of Mohurram was celebrated with exceptional display and enthusiasm by the mass of the people. There was, however, no sign of fanaticism, and, thanks to the excellent police arrangements, everything passed off without incident. The Army participated in great strength in the procession, and the Prime Minister himself attended to watch the mourning ceremonies.

Celebrations of this nature are most useful in directing the minds of the people from other topics, and the usual rumours and grumblings cease altogether for the time being. It is, however, noticeable that the educated classes are avoiding more and more the celebrations, which, as a result, are now confined to the clergy and the masses. There are, indeed, many who openly deprecate the forms still celebrated in Persia, forms which are undoubtedly Semitic, and possibly pagan, in origin. The cutting of heads and beating by chains are known to have been customary at similar ceremonies in pre-Islamic times.

Miscellaneous News.

The shortage of water is becoming acute, and there is considerable anxiety regarding the wheat supplies of the capital. This shortage will not so much affect the capital now as next year, for which the supply has now to be stored. It has even become necessary to bring up supplies from Hamadan, although the cost of pack transport for grain from such a distance is prohibitive. Varamin and the normal sources of supply are this year a failure. The need of railway communication is more than ever obvious, as, should there be a similar shortage of water next year, whole areas might become depopulated.

The rapid increase in wheeled traffic in this country is now phenomenal, and it is marked by an increasing number of accidents. It is indeed only the skilled driver who can avoid them, as traffic control is still lacking. The average Ford is made to hold from six to eight people, and the number accommodated on bicycles is surprising to Western eyes. The German bicycle had a meteoric career to begin with, but is rapidly giving way to dearer but safer machines.

The French Minister and Madame Bonzon returned last week from a short trip to Enzeli. Their car was run into by a Ford car and seriously damaged, but to the great relief of their friends, they escaped unhurt.

The new Belgian Minister and Mme. Cuveler have just arrived and established the Legation up-country for the time being.

ALBANIA.

Tirana, August 27.

New Italian Minister.

Commendatore G. Cora has been appointed Italian Minister to Albania in the place of the Marchese di Durazzo. The latter's departure will be much regretted both by Albanians of all parties and by his colleagues, for he had won the sympathy of all who had come in contact with him. He deserves much credit, too, for re-establishing in Albania Italy's prestige and popularity, which had fallen very low at the time of his appointment three years ago. The new Minister, however, should prove a worthy successor. He has been especially chosen by Signor Mussolini with the object of consolidating the good relations now existing between the two countries: for he has been known as a broad-minded and true friend of Albania ever since the time when, attached to the Italian Embassy in London, he was occupied with the negotiations which led up to the recognition of Albania as a sovereign independent State and to the appointment of the frontier Commission by the Council of Ambassadors.

The news of his appointment, too, will be received with satisfaction in London, where he has many friends. After the ratification by the Albanian Parliament last spring of the concession granted to the Anglo-Persian Oil Company, Commendatore Cora's services were utilised in the negotiations between the company and the Italian Government—negotiations which have since been concluded in a manner calculated to insure a harmonious co-operation between the parties interested in the development of the oil resources of Albania. His appointment as Minister may, therefore, also be regarded as a witness of the desire of Signor Mussolini to maintain and intensify the good relations existing between Italian and British commercial interests in Albania.

Commendatore Cora is still a young man; but he has had a varied career. During the past year he has filled the post of Italian Consul-General at Munich. Before holding this appointment, he was Minister in Abyssinia. He has also held appointments in Teheran and in Washington, besides the one, already alluded to, in London.

The Holiday Dispersion.

The holiday season has been in full swing, and Ministers are dispersed to their homes, to the seaside, and on visits abroad. The President is at Durazzo enjoying the sea-bathing. He appears completely restored after his recent indisposition. The British Minister, Mr. Eyres, has gone to Corfu for his vacation; while Lt.-Colonel Stirling has been undertaking a prolonged tour of inspection of the Gendarmerie which comes under his charge.

CYPRUS.

Nicosia, July 28.

Neglected Industries.

The situation in Cyprus—so essentially agricultural—is such as to call for any addition that can be made to her small list of exports. Among the products of which far too little use is made are many plants, both wild and cultivated, from which essential oils can be profitably extracted. M. Gennadius, when Director of Agriculture, pointed out how much might have been done, and strongly recommended that practical steps should be taken to develop what would be a new and lucrative branch of agricultural industry. Little, however, has been done. In some parts, especially in the hills, the peasants distil water from roses, as well as from orange blossom and other flowers. This is much used at weddings, and on other occasions, for sprinkling guests, and so on. But the extraction of essential oils is hardly in its infancy. Suitable alembics and necessaries have been wanting. The Agricultural Department has recently done much to encourage enterprise in this direction, which calls for small outlay, and it is prepared to afford advice. Among the plants which grow wild, and of which good use could be made, are thyme, mint, and a species of lavender, while orange, lemon, rosemary, aniseed, origarrsom, and various aromatic plants could be largely utilised. The Agricultural Department has recently sent to England, besides citric acid, various samples of essential oils prepared according to its directions, and the matter has been taken up by some Cypriots. Efforts on a larger scale should certainly be supported.

Greek Teachers.

Our Greek community appears to be faced with a difficulty, which has perhaps not been unknown in Athens and Greece generally, viz., an excess of qualified teachers, considerably above requirements. The prospect of a large number of students from the highest schools for whom employment could not be found is rather serious; and it seems clear that the Boards of Education will have to consider carefully the question of limiting the number of those who are to enter the gymnasia and higher schools. Another matter that may, perhaps, cause some little trouble is that the number of those who go to Western Europe to study for the Bar and the medical profession is increasing so rapidly that it is not unlikely there may soon be

too many for island needs. In some cases, too, it may be that, in order to send boys or girls to universities, or for higher studies in Western Europe, sacrifices may be necessary in a family which would bear heavily on other members. A strong movement will probably be made to induce the Government and the next Legislative Council to sanction larger grants for education.

Fashions in Dress.

Greek ladies have not been behind others in adopting up-to-date costumes, and voices have been raised from time to time in the Greek community, especially against present fashions in short dresses and *décolletés* modes. The Press has joined in the protests. The Greek Central Board of Education has now stepped in, and has launched a circular calling upon school-mistresses and teachers both to dress modestly themselves, and to use all their influence with a view to checking the growing tendency to adopt what is regarded as unbecoming.

THE NEW ORIENT.

The *New Orient*, an illustrated American quarterly, contains in its last issue articles or messages from such men as Rabindranath Tagore, Abdul Kerim, Lothrop Stoddard, Count Alef de Ghizé, and its editor, Synd Hassain. In these and other articles is set out the aim of the paper—which is, not merely an exposition of awakening Islam, but a representation of Oriental life, from China to Morocco, to the American people.

NOTES OF THE WEEK

(Continued from page 272.)

headed followers recognise that things cannot be otherwise; the Arabs are either too obstinate to admit the altered conditions or too inexperienced to appreciate the change. In the meantime Palestine maintains the even tenour of its way, making steady, but not spectacular, progress. Lord Plumer has arrived in Jerusalem and taken over the duties of High Commissioner. An opportunity is thus given to the Arabs to reconsider their position, and it is satisfactory to know that there is a chance of effect being given to the wishes of the majority to co-operate with the Government on the basis of a temporary acceptance, under protest, of the terms of the Mandate.

Attack on a Desert Convoy.

The creditable record of two years' safe and regular service for passengers and mails between Beyrout and Baghdad held by the Nairn Transport Company, the pioneers of the Desert route, has been interrupted by a successful attack by Arabs on a convoy which left Baghdad on August 25. The attack took place thirty-four miles from Damascus; a lady passenger and two officials of the Company were wounded, and the raiders made off with a consignment of gold which was being carried by the convoy. Other attacks have been made on convoys using the northern route via Palmyra and Hit, but it was hoped that the southern route followed by the Nairn service, by avoiding the grazing grounds of Arab nomads, would be immune. The proximity of the attack to Damascus brings it within the sphere of France's trouble with the Jebel Druse, and it may have to be regarded as the outcome of the present unrest in Syria rather than as indicating any inherent insecurity in the trans-Desert route. One report states that the raiders were Druses. The interruption in the motor service to and from Baghdad was little more than a matter of hours. The service is far too valuable to Iraq to be dispensed with. The Royal Air Force enabled the Baghdad mails which could not cross the desert that day to catch the boat at Port Said, and steps were taken by the French authorities to ensure the safety of subsequent convoys on the Syrian side.

SEPTEMBER REVIEWS.

Although the September issue of *The Round Table* contains no article with an Eastern label it deals with a number of problems of world-wide importance at this time. Special reference may be made to the articles on "The Gold Standard" and "British Industry and the Future." The crisis in Morocco reaches beyond France and Africa, and its significance is well brought out in another article. This issue also deals knowledgeably with China and with the Security Pact.

In the *Contemporary Review*, Dr. William Miller has an article on "Greece since the June 'Revolution,'" in which he urges, very rightly, that more advantage ought to be taken of the favourable field for British capital offered by Greece. Mr. H. Charles Woods writes on Transjordan, which he has recently visited, and ends up on a rather pessimistic note. In "The Balance of Power in the Balkans" Mr. J. Walter Collins writes to the theme that "balance of power" is essential to peace in South-Eastern Europe. It is not quite clear, however, how the balance is to be obtained. He makes the interesting statement that "if Yugoslavia is willing to make concessions to the Macedonians, and this is not so impossible as many people believe, both pure Bulgarians and Macedonians will eagerly welcome an understanding, an agreement, or an alliance with Yugoslavia."

NEWS IN BRIEF.

Prince Georges Stirbey died recently in Paris, at the age of 97. He was born at Bucharest, was attached to the French Army in 1855, and was Minister for War in Wallachia in 1856. Subsequently he became President of the Roumanian Chamber of Deputies and in 1865 was Minister for Foreign Affairs.

Last month General Sarrail, the High Commissioner in Syria, and his staff were present at the marriage of the President of the Syrian State, which took place in the Government Palace, Beyrout. The guard of honour was formed by a battalion of Algerian Light Infantry and two squadrons of Spahis.

The French Academy of Colonial Science announces a competition for a prize of 12,000f. (£120), the object of which is to further the development of the Sahara. Competitors are asked to send in before October 1 next year a composition laying down a general policy, designed to cover a number of years, for the development of the Sahara region.

The strike of the majority of the crews of the Bosphorus steamers, which it had been announced would be carried out at noon on August 19, completely collapsed even before it was due to start, as the Government supplied naval ratings to man the steamers. Sailors turned out the intending strikers some hours before the strike was due to begin.

The Egyptian Royal Court Council, presided over by Abdel Aziz Fahmy Pasha, Minister of Justice and President of the Liberals, recently, with the approval of the Rector of the El Azhar University and the Grand Mufti, dismissed Mohammed Said Pasha from his post as curator of the estates of Prince Ahmed Seif Eddine, following an investigation of the accounts wherein there was a deficit of £E41,000 since 1920.

THE JEBEL DRUSE.

(From Our Jerusalem Correspondent.)

It is distressing to realise that French aeroplanes, while effectively suppressing the Druse revolt, are finally destroying masses of the best preserved monuments of the Roman occupation of Syria.

The Jebel Druse is the biblical Bashan. The region played little part in history until after the first Christian century, when Trajan, in 106 A.D., included it in his newly founded province of Arabia. From that time, until the Arab Conquest in the 7th century (or some terrible unrecorded earthquake, or, it may be, the Persian invasion of 611), it became the centre of a numerous and thriving Syro-Greek population. Remains of towns—travellers give the number as a hundred or more—built of the prevailing basalt, litter the western slopes of the mountains, the fertile plain, El-Nukra, the famous granary of Syria, and even the Lejah—that almost impenetrable region which is merely a cracked and rugged tract of cooled lava, some 20 by 25 miles in extent. Temples, churches, amphitheatres, mausoleums, and dwelling-houses—all most substantial and ornate—meet the eye in every direction. They are (or were) in such a fair state of preservation that travellers write of the sites as "deserted" rather than ruined cities; here two-thousand-years-old houses are to be found, complete with roofs, doors, staircases and shutters—all, even the very shutters, cut out of blocks of basalt. Inscriptions, mostly Greek, abound. The remains in Sueida and Kanawat are (or were) the mosts numerous and complete.

We hear of the region in Crusading times as a stronghold for Moslem refugees from Palestine; but during most of the Arab period until the coming of the Druses none lived there except a thin sprinkling of half-settled Beduin.

The Druse occupation of the Jebel Hauran (including the deserted cities and villages) began in 1711; their numbers have gradually been added to by further migration from the Lebanon, their former headquarters, until now they are supposed to number more than 70,000, more than half the Druse population; and they have secured such a hold on the mountainous area of the Hauran that the place is fittingly called by their name, and the Arab population exists there as "hewers of wood and drawers of water" only by grace of the Druses. With only a few occasional lapses into the ignominious position of tax-payers, the Druses have lived here an independent existence, and the richness of the soil has afforded them comparative prosperity.

In Turkish times there was a nominal Kaimakam, or Civil Governor, installed by the Porte at Sueida, with a handful of foot-police and a few mounted irregulars. But there were no Nizam or regular troops. There was the minimum of interference by the authorities, with the result that the Druses found peace and modest wealth.

There have been lurid interludes both in the Lebanon and the Jebel Druse; but it must be admitted that these have, on the whole, been by Government connivance rather than the fault of the Druses. It is interesting to remember that, after the Maronite massacres in 1860, when certain more fanatical elements of the Druses were involved, it was British intervention which saved the Druses from serious punishment by French troops. From that day the Druses have been staunch admirers of Great Britain. More recent history has increased their feelings of indebtedness to us. After the 1908 Revolution, the Turks decided to "constitutionalise" the Druses. The Druses preferred independence. Sami Pasha, the nephew of the Turkish Minister, Showkat Pasha, led a large force against the Jebel Druse; but, not having aeroplanes, he was helpless against the accomplished guerilla tactics of the mountaineers (whose single idea in the "town-planning" of their mountain home was never to allow the existence of any road by which more than one could pass at a time, and that only with difficulty). By treacherous means Sami Pasha inveigled the Druse chiefs out of their safe retreat on a pretence of negotiating terms. They were all put in prison; the eldest of the ruling clan el-Atrash, was executed at Damascus, and the next eldest, Yehia Atrash, only saved his life by a heavy bribe to the Turkish general. Yehia was exiled to Rhodes. The Turkish-Italian war broke out. The Italians captured Rhodes and released the Druse chief, who embarked on a British steamer. The Turks tried in vain to claim their prisoner when the steamer touched at Beyrout and Jaffa on its way to Egypt; but the British captain refused to give him up. So, too, in Egypt Lord Kitchener defended Yehia Atrash against all Turkish efforts to seize him, and at last compelled the Turks to allow the Druse chief to return to his people in the Hauran.

The history and teaching of the "secret sect" of the Druses have often been described. There is, perhaps, little now that is "secret" about them beyond their Thursday night religious meetings; and it is suspected that these are more, or as much, concerned with politics as with religious observance. Their religion (as seen from their religious books, quantities of which have found their way to European libraries) is, like that of the other Syrian sects, the Ismailis and the Nosairis, a result of the grafting of Islam on to a pre-Islamic, semi-Christian incarnation belief.

They are distinctly superior to their Syrian neighbours in physique and intelligence. Every English traveller who has encountered them extols their hospitality and staunchness; yet they have a reputation for treachery and cruelty to their enemies. Their Syrian neighbours accuse them of being hypocrites and time-servers, ever seeking privileges for themselves and cultivating the powers-that-be. It is true that not until the present revolt have they fallen foul of the French Administration. During the War it is alleged that they alone of the Syrian peoples voluntarily did service in the Turkish Army, and manned the Ezrak outpost. But in 1916 they forcibly repelled a Turkish force which came to commandeer the crops of the Jebel, and during the later years of the War they served as a sieve for the passing of men and information between Damascus and the Hejaz army.

There is still considerable obscurity surrounding the origins of the anti-French outbreak. The story locally current in many respects bears a disagreeably close resemblance to the betrayal of the Druse chiefs by the Turkish general in 1909. It is insisted here that nothing less than this could have goaded the Druses to their present desperate and hopeless course.

LAND REGISTRATION IN EGYPT.*

II.

It is apparent from the facts summarised in the preceding article that under the old chaotic system, or lack of it, of land registration in Egypt it was impossible to achieve the second principal merit of a properly conceived plan of title registration, namely, guarantee of rights. So long as any person may at any time acquire a right over any property without record excepting between the contracting parties, guarantee of rights is impossible. Even when registers are kept by date and name of contracting party, no property can be declared free of opposing claims, until lengthy researches have been carried out with regard to the previous disposal of rights between all persons who may have been interested.

The guarantee of rights was ever before the various commissions and sub-commissions set up to investigate land registration in Egypt, as one of the principal aims towards which their efforts should be directed. That the contemplated reform should include State guarantee of the title to land was the first principle laid down by the Commission of 1917-1921. Among their other recommendations were :—

1. That the new system should be introduced gradually, in one selected province to begin with, and subsequently extended over the whole country. The insufficiency of the existing staff and the time necessarily taken in training further personnel provided the principal reasons underlying this proposal, combined with the obviously wise suggestion that defects in the system which might reveal themselves could be eradicated before the scheme was extended to the whole country.

2. That revision of maps of a province should precede the introduction of the system in that province, the reason being that the old fiscal maps in Egypt were not sufficiently accurate for title registration purposes. In this connexion it may be pointed out that in 1921 the revenue survey of Egypt was rapidly becoming obsolete. For 55 per cent. of the country the then existing maps were out of date by periods ranging between 14 and 20 years. Moreover, there never had been in Egypt, despite the existence of a department termed the Cadastral Survey, a real cadastral survey in the strict meaning of the term, viz., a systematic mapping of the distribution and extent of landed property, accompanied by authoritative determination of limits and proprietors, and properly maintained to date. Since neither can property limits be mapped nor proprietory rights be recorded until the legal rights creating such property have been authoritatively defined, cadastral survey, in the strict sense, presumes, *ex-hypothesi* the concurrent determination of such rights, which must initially be performed *in situ*, and is so closely bound up with the technical survey operations of locating and fixing boundaries and interpreting earlier definitions of position that the combination of these field operations by suitable representation of legal authority on the spot at the time of survey is essential.

3. The Commission further recommended that the new maps should be on the scale of 1 :1,000 and should be based on a net work of permanent traverse.

4. That the method of registration of title, comprising a land book and complementary registers should be introduced at the earliest possible moment, and that the books should be of the loose-leaf pattern. (This had been strongly recommended by the Swiss Federal Land Registration Department, where the inconvenience of bound volumes of registers had been proved in actual practice).

5. The Commission further recommended that better systems of identification, both of real estate and its owners, should be instituted; that deeds should be executed on special embossed paper, to be on sale at the registration offices and that, for simple deeds, a stereotyped form of deed should be employed; that all deeds should be authentic, i.e., properly witnessed instruments received by a competent public official; that the attribution of authenticity should be entrusted to a special body of officials, under control of the Ministry of Justice; that photographic copying should be substituted for the tedious, costly and unreliable hand copying previously employed, the original document being retained by the registering office and photographic facsimiles given to parties; that the language employed in framing deeds should be French or Arabic; and that no real right should be established, transferred or annulled until the deed effecting the operation had been registered

6. In order to make the Land Book a complete record from the time of the system's inception, it was recommended that there should be some form of public declaration of existing rights and that such declaration should be subjected to the same verification as deeds registering transference of property or rights.

7. Further recommendations were that initial registration should confer no guarantee upon a transaction, which should remain opposable to third party claims for a period to be fixed. But such claims should be carefully inquired into both from a legal standpoint and by actual investigation on the spot, before acceptance, while an order by the Court should be necessary before any alteration could be made to the Land Book or the map.

8. It was also urged that the custody of the Land Book and its complementary registers, as also physical scrutiny of the proposed transaction, should be confided to the Survey. Further that the Land Book and the map should be open to inspection, at any time, by the parties to a transaction.

It was a particular aim of the Commission to evolve a system which, by its elasticity and capacity for adjustment to changing conditions should form a provisional and unguaranteed system of title registration, which could be gradually converted into a permanent and guaranteed system.

It is perhaps advisable at this point to describe the system of land subdivision in Egypt. The cultivable area of the country is primarily divided into 14 Mudirias, (provinces or counties) and six Mohafzas (Governorates). Further subdivision of rural areas is by markaz (police districts), nahya (village area) and hôd; of urban areas (within the city or town constituting the governorate) by qisms.

In the course of the reassessment of land tax (1895-1907) and revenue survey (1892-1907) the land comprising each village area was divided into sections called hôds, containing land of closely the same fertility and enjoying approximately equal irrigation, drainage and marketing facilities. Within the limits of each hôd the land tax is assessed at an even rate, this being the primary object of the subdivision. In theory hôds should be from 50 to 100 acres in size, the land being in one piece, the cultivated or cultivable area being as nearly as possible of one quality, while the system of irrigation must be uniform throughout the hôd.

In the well cultivated districts the hôds do in practice range in size from 50 to 150 acres, but in the semi-cultivated tracts fringing the Nile Valley and Delta, hôds as large as 10,000 acres occur, while hôds of from 200 to 500 acres are common. Under the conditions obtaining in these areas there is little to differentiate the quality of the land, while natural features of a type to facilitate subdivision are scarce or lacking. Large hôds of this type are necessarily provisional in character and are destined to be broken up as reclamation, irrigation and drainage advance.

The tax-hôd, when constituted in general conformity with the provisions set out above, forms an admirable penultimate unit of land for purposes of registration of title. Before hôds are utilised for this purpose it is, however, essential that they should, as far as possible, be finally constituted; if large, should at least be so drawn that they can be easily subdivided as development takes place. A high degree of permanence must characterize these subdivisions, as they constitute the basis of the nomenclature of location and reference adopted.

With the establishment of registration of title it is expected that hôds will gradually be divested of a fiscal character. Generally constituted from 14 to 25 years ago in accordance with conditions then obtaining and admirably adapted as an expedient for facilitating the

Digitized by Google

readjustment and collection of the land tax when initially bringing order out of chaos, subdivision of the country by permanent hôds must increasingly be recognised as too inelastic for purposes of periodic reassessment of the land tax. On the other hand, as the penultimate subdivision of land for purposes of registration of title, the hôd may be expected to acquire a new and lasting utility. The ultimate unit of land for purposes of registration of title is the property subdivision usually termed a parcel or plot. A plot may be of any size, provided it does not extend beyond the confines of the hôd or section containing it, but it has been found desirable, so far as possible, that plots should comprise natural subdivisions of the country and that they should not be intersected by marked topographical features such as paths or permanent water channels. It follows that contiguous plots may be combined under the same ownership, even within the same section or hôd.

First steps towards putting into operation the reform outlined in the recommendations detailed above were taken four years ago. The province of Menufia was selected for the experimental adoption of the scheme, and, after the triangulation of the Delta had been revised, a proprietory survey on 1:1,000 scale was undertaken in Menufia. The choice of this province was motived by the fact that it had been one of the first to be surveyed for revenue purposes, and also because the land is more closely subdivided than in any other part of Egypt. For these reasons Menufia was considered to be an excellent area in which to try out the system. Any latent defects were expected to reveal themselves. But the new survey was carried through without meeting unexpected difficulties, being completed in 1923 and the maps of the whole 373,000 acres were finished last year.

In April 1922, a Special Committee was set up to draft the necessary laws and, in general, to give effect to the recommendations put forward by the Commission of 1917 to 1921. Among its recommendations which have been put into practice were:—

That three new survey offices should be opened at Cairo, Minia and Sohag, while the Mixed Courts should establish special branch offices, which should be accommodated in the District Survey offices, to register "*sous seing privé*" deeds.

Two laws were also promulgated giving effect, though not in full degree, to the recommendations of the Land Registration Commission and thus forming the first attempt to put the proposed reforms into operation. The principal provisions of these laws, which became operative on January 1, 1924, were as follows:—

1. Making compulsory the registration of all deeds and judgments having the effect of constituting, transferring, modifying or cancelling any right connected with property. Failure to register the deeds deprived them of any other significance than as records of personal obligations between the parties concerned. Leases of more than nine years were subjected to the same stipulation.

2. Deeds presented for registration must give the names of the parties concerned, those of their fathers and paternal grandfathers, the name of the village, the name and number of the hôd and the number of the plot or plots as given in the Cadastral Survey maps, together with a description of the boundaries and the exact size of the area concerned.

3. The signatures or seals of the parties concerned must be legalised by one of the officials appointed by the Ministry of Justice for this purpose.

4. Provision was made for the registration in the Mixed Court registry of transcriptions effected by the Native Courts.

Instructions issued by the Ministry of Justice amplified the foregoing provisions by laying down that:—

1. Two photographic copies should be made of deeds presented for registration. The original deed was to be retained by the registering office and one copy filed. The other copy is handed to the party concerned. By means of the duplicate the survey informs the Mudiria or Governorate, in order that the changes in the Land Tax Register may be effected. Each of the parties concerned in a transaction has the right to a copy of the deed on payment of a small fee.

2. Nine additional branch registry offices of the Mixed Courts were set up at convenient centres throughout the country, exercising similar powers regarding registration of "*sous seing privé*" deeds to those enjoyed by the central registries of the Mixed Courts of Cairo, Alexandria and Mansura, the three Mixed Court centres.

A further instruction by the Ministry of Justice laid down that all deeds must be drawn up on specially embossed paper, on sale at the registering offices at P.T.5 per sheet.

This, in its broad outlines, is the system adopted up to the present time in Egypt. The concluding article will endeavour to show what degree of success has been achieved, and what modifications have suggested themselves in the light of experience gained during the first year's working of the reform.

THE REFUGEE PROBLEM IN BULGARIA.

Comparatively little has been heard of the refugee problem in Bulgaria. It has been overshadowed by Greece's larger disaster, with the more dramatic background provided for the long lines of refugees that fled or were expelled from Turkey, for there will have been five or more Greek refugees in Greece for every Bulgarian compelled to return to Bulgaria. The Greek problem, moreover, touched the Allies' conscience in view of the circumstances antecedent to the ill-starred invasion of Asia Minor, and not only has a substantial loan been forthcoming for Greece, but also practical assistance in organisation and supervision of relief measures. Bulgaria, on the other hand, has, in common parlance, been left to stew in her own juice. It was awkward for the Allied Powers to display much interest in the Bulgarian refugees, if only for the reason that they were fleeing or being ejected from Greek territory, and tales of hardship or persecution must have reflected on Greece. That aspect of the question, however, has now passed. It is unnecessary to inquire into the circumstances of their departure from Greece or Turkish Thrace. The problem as it exists to-day concerns only their presence in Bulgaria. From time to time references had been made in the Press to the pitiable lot of the refugees in Bulgaria and to the difficulties of the Government in dealing with the problem; but no attempt has been made, as it were, to marshal public opinion in Great Britain or any other country for a serious consideration of a serious position. Some help has been given, by the Red Cross Society, by the Save the Children Fund, but no attempt has been made to provide Bulgaria with financial assistance on the scale that the gravity of the refugee problem demands. Even in the case of Greece, it will be recalled, the help provided by means of a loan was in the nature of a sound business proposition: the reclamation schemes for which the refugees will provide the labour had long been recognised as promising a profitable return on the outlay, and thus offering adequate security for any expenditure under Government guarantee. Bulgaria, however, cannot point to any scheme on a large scale on which refugee labour might be mobilised with the promise of an immediate return of the money spent. The first need is to provide for the immediate wants of the people and, ultimately, to make them self-supporting; the State might make itself responsible for the repayment of the loan, but would not be so well placed as the Greek Government in offering collateral security.

An attempt to describe in detail Bulgaria's refugee problem has now been made by the Bulgarian Red Cross, which has issued a pamphlet entitled "The Refugee Question in Bulgaria" (Sofia: 1925), over the signatures of the Archbishop of Sofia, President of the Executive Committee for Refugee Relief, and Sotir Veltcheff, President of the Junior Red Cross. To English readers it will appear unfortunate that a document of this nature should have been utilised for propaganda purposes and for comments, from the Bulgarian point of view, on Balkan politics. What was wanted was merely a dispassionate statement of the problem with which Bulgaria found herself confronted, statistical information regarding the refugees and their requirements, an account of what had already been done

Digitized by Google

to meet their needs, and what yet remained to be done before the country could be free from the burden imposed upon it by the sudden influx of the refugees. The signatories of the Report have not been able to resist the temptation of dwelling upon Bulgaria's wrongs and sufferings from early times, and they have gone back twenty years for the genesis of a Bulgarian refugee problem. Yet the actual problem to-day is in itself serious enough to call for no garnishing. If Europe through the League of Nations or Great Britain, with or without the United States of America, is to come to the help of Bulgaria, it will be on the strength of present-day conditions and not from any desire to modify previously formed judgments on the criminal folly that ranged Bulgaria against the Allies in the Great War. A very much shorter Report would have served the purpose of the signatories better. If the object is to enlist European sympathy, it ought to be realised that such sympathy will be extended only to Bulgaria of to-day, and that there is no surer way of causing sympathy to be withheld altogether than to attempt to use it as an exoneration for past misdeeds. It is kind to Bulgaria to emphasise this point when the sole purpose of this article is to press Bulgarian claims for financial assistance in connexion with the refugee problem. The question is one of humanity, not politics; money is needed to save the lives of the refugees and to enable them to provide for themselves in the future, not in order to record a vote of censure on Bulgaria's neighbours or to endorse the doctrine that she is so much better than they are.

The figures given in the Report for the number of refugees who have entered Bulgaria in recent years is 260,000. Of these 200,000 are said to have come from Thrace and Macedonia, 20,000 from the Dobrudja, 30,000 from Asia Minor, and 10,000 from Western Bulgaria. As the figures relate to the end of 1924, it may be inferred that the numbers have been increased during the last six or seven months. The Macedonian emigrants, we are told, "are scattered throughout all Bulgaria in the cities and villages; the Thracians are found mostly in Southern Bulgaria and in the vicinity of Varna. The refugees from the Dobrudja are settled about Varna, Rustchuk, and Sofia. The Bulgarians from the lost areas in Western Bulgaria live around Sofia and Kustendil. There is not a city or village in Bulgaria without refugees and refugee quarters. Sofia is swelled almost beyond recognition by the refugees . . . the population of Philippopolis has doubled."

It would seem that it was not until the beginning of last year that any systematic attempt was made to deal with the refugee problem so as to prevent segregation in places already overcrowded. A definite plan of land settlement was then introduced, and from January 1, 1924, to March 1, 1925, 27,736 people, representing 6,746 families, were officially registered and allocated by the proper authorities. The Report goes on to speak of "the terrible misery to which a whole nation is being subjected." "With very few exceptions the refugees from Greek Thrace and Greek Macedonia who migrated during 1924 and 1925 arrived at the boundary with nothing but their clothing and furniture; they had no agricultural or other implements, no farm animals or food products and were exhausted in body and spirit." A severe indictment of the conditions under which they left Greek territory follows, but would have been better omitted in a document intended to lead to practical alleviation of Bulgaria's difficulties. "Two hundred thousand wretched, poverty-stricken people are waiting for the Bulgarian Government to provide them with houses, land, and work." Already 6,328 young orphans have been discovered among the refugees, and it is expected that the total figure may prove to be 8,000. The State is doing everything it can for the latest refugees arriving from Greece. All the new arrivals are held in quarantine for a while at the receiving points on the Greek boundary. The officials there inform the Ministry of the Interior by telegraph of the new arrivals, and the Ministry at once sends instructions as to what villages the refugee peasants are to be sent to and where the city refugees are to go. The county superintendents and the mayors of the cities and villages are required to find dwelings for the refugees assigned to their areas . . . committees collect money, food and clothing and distribute them among the refugees. . . . But the help so far given is utterly inadequate to meet the needs, one reason being that there was a very poor harvest in 1924.

The Report is not quite convincing in its estimate of the funds required; but there can be no doubt that the sum will be between one and two million pounds sterling. Even this amount, if Bulgaria is to be able to spend it to the best advantage and make useful and healthy citizens of the refugees, should be accompanied by another loan for general purposes to allow the country a chance to recover from the burdens that an unsuccessful war has placed upon it.

The need for a loan to Bulgaria is urgent, not from altruistic motives or because the Bulgarians, in spite of their War action, have retained a warm spot in English affections, but in the interests of the peace of Europe. A nation as sorely tried as the Bulgarian has been, surrounded on every side by unforgiving enemies, provides an easy forcing ground for Bolshevism and helps to delay the time when South-Eastern Europe can settle down to a united and happier existence.

LAND REGISTRATION.

This is a most satisfactory method of increasing a Government's Revenue without adding to the people's burden.

Land Registration gives land owners an indisputable title, and enables them to sell or borrow money on land with a minimum of time and trouble.

Purchasers of land are assured of their rights and can enter into possession without delay.

The work of lawyers is greatly facilitated.

Bankers can safely loan money on the security of registered land.

Governments can collect Land and Transfer Taxes without difficulty.

Officials are invited to write to us for free details regarding Installation and Equipment.

Book Reviews and Notes.

IMPERIALISM IN IRAQ.

"THE HEART OF THE MIDDLE EAST." By Richard Coke. London: Thornton Butterworth, 18s. net.)

It is the unescapable lot of the writer who wishes to tell the history of Mesopotamia from earliest to modern times to discuss the question of Britain's present connection with Iraq. Now this question is usually discussed in terms of the future. What will Britain gain from her present support of Iraq? Does it better ensure the safety of her Indian Empire? These, and problems like them, are those commonly preferred when the matter of Iraq is raised. But there is another side to the picture, and it is the great, and very rare merit, of Mr. Richard Coke (whose writings from Baghdad have previously been commended in these columns) to have viewed the British relation in truest perspective, to have seen, that is, that our present commitments in Mesopotamia are the legitimate and inevitable extension of activities that began there three hundred years ago. As he says, in a most instructive and sensible chapter upon "The Coming of the English":—"The capture of Hormuz in 1622, and the consequent political agreement with the Persian Government of the time, led inevitably to the invasion of 1914, and thus to the present situation to-day."

Having seen the necessity of historical vision in treating of Iraq, Mr. Coke sets himself with a will to tracing the course of Mesopotamia and of Iraq (Al-Gezirah and Al-Iraq) from earliest times. This he does with at least adequate accuracy, and one is particularly grateful to him for having avoided that in which his subject so abounds—dates. Of particular value is his emphasising of that swaying position of dominance between East and West, of the fate of Imperialism in Iraq. There is no space here, however, to follow his story of Roman-Persian rivalry, of the coming of the Arab, of the division of Islam into Shiah and Sunni communities (a division which is of greater importance in Iraq than anywhere else), of the golden age of the Abbassids (a comprehension of whose civilisation is still essential to all foreign Imperialists in Iraq), and of the coming of the Mongols and Turks, upon whose decline came back the European, but this time not the Roman, but the English. How in Iraq the English, venerated of the tribes, overcame the Germans, respected but of the towns, is one of the best things in that chapter, that we have already indicated as one of the best in the book.

Of Iraq's chequered history since the Armistice Mr. Coke is a critical but fair witness. He shows 1919 as the year of hope, and how that hope, in the collision between the attempt to allow to Iraq President Wilson's "absolutely unmolested opportunity of autonomous development" and Britain's need of retaining some control there as being her old "sphere of influence," was dissolved and buried itself in the rebellion of disillusion in 1920. This survey of recent history, in which he admittedly tends towards the native version, he rounds with the retirement of Sir Percy Cox, the principal creator of the new State under King Faisal. But he does not close his book until he has described in some detail the various peoples of Iraq, the organisation of the Executive, the money, waters, fields, and roads, health and education, industry and business, and finally, the social life of this Arab Kingdom.

Armed with this knowledge of how Empire after Empire came to and faded away from Iraq, Mr. Coke is far too judicious to hold out any absurdly roseate view of the Arab Kingdom. He sees clearly enough that without British support it could in no wise stand, stating clearly the probability of Ibn Saoud's succeeding King Faisal were there nothing but Iraqi Arabs to prevent it. Nor is he extravagant in recounting the commercial possibilities of the country. Three things, however, that affect the future of Iraq, he speaks on with certainty:—first, that the Arab national spirit (starting in the Wahhabi victories more than a hundred years ago) is a real and growing thing; secondly, that in the case of European Powers' failing to develop their Middle Eastern interests, the Turks may reassert themselves, if not to hegemony, at least to combination with Arab nationalism; and thirdly, that in fifty years' time the East may be as well equipped scientifically as the West. And of the British connection with Iraq he quotes with warm approval Sir Arnold Wilson's dictum that "our Eastern responsibilities will, so long as we remain an Empire, increase and not diminish." On this subject, indeed, Mr. Coke comes very new to embracing the doctrine, despised in some fashionable quarters of to-day, of "the white man's burden." For he writes:—"If the British Empire should collapse, or if the British people should suddenly withdraw from its self-imposed task, the world of the Middle East must immediately sink back into that chaos from which it has been the work of three centuries to rescue it. There is no present alternative . . . . The withdrawal of the British influence does not mean 'independence' or 'self-determination'; it means chaos, utter and complete, until some other Power arises to take up the burden thus thrown down. For there is not one single connecting link, one single unifying idea, between the myriad races and religions that form the jungle of the Middle Eastern world—except the actuality of the British Empire; upon that all the nations, all the foilties lean in common; it is the mortar which, surrounding and enveloping the bricks of every sort and shape, alone secures the building. Britain will refuse the extension of her Imperial task, will abrogate her responsibility to civilisation, only at the risk of forfeiting the tolerance and respect of her fellow workers in the world, and the approval of her God."

There are those who will enthusiastically follow Mr. Coke in his conclusions, and there are those who will diffidently dissent from them, but for neither type of student will it be possible to ignore the facts which he has marshalled in so lucid and intelligent a manner. For general purposes, his is incomparably the most useful book on Iraq that prefers the recent history of Britain's latest experiment in the Middle East.

HISTORY BEFORE THE EVENT.

"THE GREAT PACIFIC WAR." By Hector C. Bywater (London Constable and Co., Ltd.).

The great safeguard against war between the United States of America and Japan is the five thousand miles of Pacific Ocean that separate them. To overcome this difficulty and to provide the *casus belli*, Mr. Bywater has to make Japan seek refuge from a very grave situation at home by a declaration of war against a "popular" enemy. From this plausible beginning he carries his reader more or less convincingly through the two years' campaign, 1931-33. The initial successes go to Japan; the honours at the end remain with America. Everything that he describes might happen; much of it, one is confident, would not. This latter fact, however, in no way detracts from the merit and absorbing interest of the narrative, which is painstakingly accurate in its technical details. To everyone interested in the Far East and in world problems we would say emphatically: If you have a choice between "The Great Pacific War" and the most thrilling novel, choose the former without a moment's hesitation.

PERSONAL AND GENERAL.

TO-DAY
September 3, 1925 (New Style).
August 21, 1925 (Old Style).
Saphar 14, 1344 A.H., of the Moslem Calendar.
Ellul 14, 5685, of the Jewish Calenedar.

Prince Habeb Lotfallah arrived last week at the Ritz Hotel from Paris.

Lord and Lady Henry Bentinck are in residence at Underley Hall, Kirkby Lonsdale, Westmoreland.

Lord and Lady Edward Gleichen, who have been in residence at Forest Row, left this week for Scotland.

The King and Queen of the Belgians sailed last Friday from Marseilles in the s.s. Ranpura for India, where they are going on a private visit.

Field-Marshal Lord Plumer, the new High Commissioner for Palestine, and Lady Plumer, arrived in Jerusalem on August 25.

Zekiai Bey, formerly Secretary to the Turkish Embassy in London, has been appointed Secretary to the Legation in Warsaw.

Ilias Bey Vrioni has been appointed Albanian Minister to the Court of St. James. He has served two periods as Prime Minister of Albania.

Mehmed Bey Konitza, the late Albanian Minister to the Court of St. James, left London yesterday for the South of France.

Major and Lady Alexandra Metcalfe, who have returned to town from Scotland, will leave later in the month for India.

Lord and Lady Cable have returned to their residence in Grosvenor Square from Lyndridge, South Devon. They will shortly leave for Woodhall Spa, Lincolnshire.

Major-General Sir Louis Vaughan left London last Thursday by the P. and O. special train to embark in the s.s. Ranpura at Marseilles for Bombay.

Lady Wilson, wife of Sir Leslie Wilson, Governor of Bombay, left London last Thursday to embark in the s.s. Ranpura at Marseilles. for Bombay.

M. Titulesco, Roumanian Minister in London, who has been staying at St. Moritz, left last Thursday to attend the League of Nations Assembly in Geneva. He was accompanied by Mme. Titulesco.

Sir Walter Congreve, the Governor of Malta, left Tunis on August 26, whence he proceeded to London, on leave. During his absence Mr. W. C. F. Robertson, the Lieutenant-Governor, is administering the island.

Before returning to Egypt to continue the work of preserving the treasures of the Luxor tomb, Mr. Howard Carter will deliver a lecture at the New Oxford Theatre, Oxford Street, at 3 p.m., on September 11. The lecture, which will be entitled "The Tomb of Tutankhamen; From Ante-room to Burial Chamber," will be fully illustrated with lantern slides.

MODELS OF THE TEMPLES OF THE JEWS.

The Pro-Jerusalem Society is exhibiting in the Palestine Pavilion of the British Empire Exhibition the well-known Models of the Tabernacle in the Wilderness, of the Temples of Solomon and of Herod, and of the existing Dome of the Rock and al-Aqsa Mosques in the Temple Area. Explanatory addresses are given several times a day illustrative of Old and New Testament History.

Specimens of Jerusalem glazed tiles and pottery and of glass work made in the traditional manner at Hebron are on sale close by.

DOMESTIC ANNOUNCEMENT.

MARRIAGE.

JAMESON : WELLSTEAD.—On the 24th August, 1925, at St. James's Church, London, by the Rev. W. F. Webb-Bowen, James Alexander Jameson (of S. Persia) to Mrs. Jean Wilson Wellstead. (Iraq papers, please copy.)

THE WEEK AT HOME.

London, Tuesday Morning.

Conference of Modern Churchmen.

The time of reflection which we in this country are granted but once a year—it is commonly called the close season for political speeches—is now at an end, but its final days have been marked by notable contributions to the thought of the day, from the religious point of view in the Conference of Modern Churchmen at Oxford, and from the scientific point of view in the meetings of the British Association at Southampton. In comparison with the lectures given at these two assemblies, the words uttered or to be uttered this week by such men as Mr. Ramsay MacDonald, Mr. J. H. Thomas, the Earl of Oxford, Sir Arthur Steel-Maitland, and so on, are but of little consequence.

One of the most interesting papers read at Oxford was by a Staffordshire rector upon "Why we are Members of the Church of England." He attacked the subject in the full and hearty English fashion beloved of our forefathers. "Many of us would far rather be honest atheists than worship a God who, in more senses than one, is under the thumb of the Roman priesthood." And he went on to declare that the God of the Roman Catholic is different from the God of the Anglican. This, indeed, was putting the position of the Church of England on very high, if not dry, ground. It is difficult to estimate how widely such views are entertained by the majority of Anglicans, but there can be little doubt that this speaker was right when he declared that "if the Church of England submitted to Roman domination, it would mean that the main stream of English Christianity would pass to the Free Churches."

Those who question whether this question of the destiny of the Church of England is seriously exercising the thoughtful part of the nation need only spend a few days in our countryside examining the village churches: they will there find such traces of what is called "Anglo-Catholicism" as will probably surprise them.

Religion and Science.

Another important contribution concerned the evolutionary arguments for belief, which were contained in a paper read by a Cheshire vicar upon "What we Believe about the Nature of Man." He explained that the misery arising from the incomplete fusion of the incompatible elements which human nature had received at different stages of evolution, was evidence, not of a fall, but of a partial and precarious rise: Thomas Hardy's Jude was a creature of two worlds. But the point was: were there not this unrest, this dual nature of man, this tragedy, there would be no religion.

Here he touched a very vital point in modern popular philosophy: the reason of the existence of tragedy. This village rector appears to have explained in admirably just fashion that progress and degeneration alternated, and that the story of savagery, cruelty, and superstition was broken only because of the repeated and unfailing appearance of what he called "significant personalities," in whom we had Man *plus* God—in other words, and to the less sophisticated Christian, Saints.

Evolution and Design.

The reading world had hardly finished talking about M. Charles Henry's definition of the Immortality of the Soul (which seems to the uninitiated merely a complicated, mathematical way of arriving at the same goal as that which mystics of all ages have reached by direct means), than it was startled to see that Professor W. A. Parks had told the British Association that materialism cannot provide an adequate account of the wonders of Geology. Not only did he see design in evolution, but he saw no reason that the upward gradient should be discontinued.

Such an encouraging sign of the times as this would surely have been condemned by the mid-Victorian scientists as trespass. Modern scientists, however, are becoming the most modest of men, and the "scientific fact," so long revered of our anti-religionists, is now seen to be often the least certain of "facts." It is, in other words, becoming increasingly easy for the scientist to be religious, and the religious to be scientific—a state of affairs evidenced by two of the papers at Oxford and Southampton which I have noted.

English Fishing and Soviet Russia.

To one part of England, at any rate, the enormities of the Soviet Government of Russia have seemed decreasingly unspeakable: I mean the East Coast. Before the War, of course, the East Coast fishing industry depended largely upon the Continental market, and in the last few years it has been striving hard to regularise its position with Russia. Recently it appears to have had a certain measure of success—which, in view of the arrival of the herring season, is fortunate. Last week the first consignment of fresh herrings was caught off Flamborough Head, and in a week or so the harvest at Yarmouth and Lowestoft will be gathered. It is understood that the majority of the transactions have been made by the medium of the Co-operative Wholesale Society and Arcos.

Cricket.

Being temporarily disabled from playing cricket, I have been doing the next but one best thing in the world—reading about it. The last book issued on the subject is an anthology, compiled by Mr. Samuel S. Looker, and published by Messrs. Simpkin, Marshall and Co. at 3s. 6d. And it is very well worth the price. It is true that one misses several things, such as Francis Thompson's verses on the heroes of Lancashire, paragraphs by Neville Cardus (the "Cricketer" of the *Manchester Guardian*), A. H. J. Cochrane's immortal ballad about the man that snicketn the length ball, and other literature well known to the lover of the game. Nor do we find very much about the part that minor counties have played in the history of the game. One wonders whether the author is aware that Hertfordshire claims precedence over the Southern Counties in starting the game (the club of St. Albans, for example, dates from 1660); or that in 1799, Norfolk was strong enough to challenge the Rest of England, and that a sum of £500 was laid on the result?

But certain omissions every anthologist is bound to make. And this, one may say again, is a very charming little book. It is good to read again of the Oval match between Surrey and Yorkshire last century, which was played to a finish in such a light that the public lamps round the ground were alight ("The Lamplight Match"), or of the story of Morley, the Notts bowler, who always went in last, and (says Mr. P. F. Warner) "was so bad a bat that when he came down the pavilion steps the old horse used instinctively to walk over and place itself between the shafts of the roller," or of the parish clerk in Yorkshire who was also a notable umpire, and who once, going to sleep in church, woke up in time to utter his customary "Amen," only, drowsily to substitute for it a congregation-delighting "Over."

Indian Affairs.

PARTY JOURNALISM IN INDIA.

In all ordinary subjects of discussion, the preservation of an impartial spirit is the accepted aim of reputable journalism. Party politics are practically everywhere an exception: the good party journalist makes no pretence of impartiality. India has so far been outside the pale of party politics at Home; though there are signs, that it is impossible to ignore, of the coming of a time when this will no longer be the case. The journalist who addresses a British audience on Indian politics has, therefore, no excuse for departing from the strictest appearance of impartiality, even if the true pure quality itself is not always within his reach. But unfortunately the converse is not the case; Great Britian and the British connection are a party question in India, and the Indian journalist who addresses an audience of his own people on the subject approaches it in the most violently partisan spirit. He has other party questions as well, and very acute ones—such as Hindu versus Mohammedan, Brahmin versus non-Brahmin, and the like—in the discussion of which, exhibitions of party spirit cause no surprise to the British journalist, who is himself able to discuss them with complete impartiality, even if his attitude veils a state of more or less complete ignorance. But it comes as a decided shock to the British journalist who, in his attempt to preserve the proper atmosphere of impartiality, examines the files of the Anglo-vernacular newspapers of India, to find them apparently unanimously bent on inflaming anti-British passion on every possible occasion. And if this is true of the Anglo-vernacular press as, with few exceptions, it unfortunately is, it is even more true of the great majority of vernacular papers. One can but face the facts, and some of the facts are most unpalatable.

The most unpalatable of all is the constant suggestion of bad faith towards India on the part of Great Britain. The "exploitation" of India in British interests, and the "economic drain" of India's wealth to Great Britain that is represented as resulting from it, have been constant excuses for abuse of England for many years past: and these topics continue to be reinforced on every possible occasion Two of the burning questions that have recently been agitating Indian publicists are those of exchange and of the position of the cotton industry in Bombay. It is freely asserted that exchange has been "manipulated" by England in order to "cheat the Indian people in their receipts of rupees": and that the present slump in the Bombay mill industry has been deliberately engineered by a "well-concerted scheme for the ruin of the Indian cotton industry" in the interests of Lancashire. One prominent Anglo-vernacular newspaper, in advancing these arguments, describes the statement made by Sir Basil Blackett in his recent interview with the Indian Merchants' Chamber as "cloying humbug" and "sneering sophistry" delivered with "an unctuous leer," that will not succeed in deceiving any intelligent observer as regards the real facts. And a similar spirit seems to pervade every reference to the Englishman in India. The same paper speaks of the Indian Civil Service as "the corporation of mandarins who go on beating their own records in the world championship for salary grabbing"; while the demand of the European services in India for medical attendance for themselves and their families by doctors of their own race meets with the following comment: "We all know that Indian doctors who practice in England are not obstructed by coy conceits of racialism. Indian experts treat the scions of ducal families in England, but east of Suez the meanest sample of East End dregs finds himself bloated with prestige and propagating prejudices of national lucrativeness."

These are but samples, taken at random; the same sort of thing is to be found broadcast throughout the pages of Indian newspapers—not mere ephemeral "rags," but important organs that count their subscribers by the thousand. India is very largely a country of illiterates—a fact that forms the basis of one of the many charges brought against her present rulers—and only a small percentage of her people are able to read a newspaper. But every village contains a few literates, and it is no uncommon thing to see a crowd of Indian villagers sitting to listen to the reading aloud of a newspaper by one of the village literati. The reader picks out the spiciest bits to retail to his hearers, and it is only too often the case that these consist of abuse of the European and all his works. It is a well-known fact that, in India, no vernacular or Anglo-vernacular newspaper can command a wide circulation unless it abuses the Government; and, though the real meaning of this is only that the literate public who buy it approve of such writing, it also connotes the fact that this forms the only political pabulum of the far greater public who hear it. The Indian peasant is not anti-British: on the contrary, he not only trusts and respects the British official, but often regards him with real affection; but the constant stream of abuse that flows from the vernacular press cannot fail to produce deplorable results in the end. The Indian journalist and politician, though such a master of anti-British invective, is himself quite surprisingly thin-skinned. The mildest rebuke to an Indian "public man," or the most temperate attempt to controvert his views or his "facts," is invariably hailed as a "dastardly attack" on one of India's foremost and most devoted patriots. Is it any wonder, then, that the British journalist finds it more than difficult to preserve his impartiality when discussing political questions that affect Britons as well as Indians, or that he feels the hopelessness of appealing to Indian journalists to fight fair—themselves to make some sacrifices in the cause of that sympathy which they profess to expect from Englishmen and on which their high priest Mr. Gandhi relies as the foundation of his Dominion of India? Prominent Indian politicians are for ever declaring that India asks but a genuine gesture of friendship from England, and all will be well: surely it is not much to ask them, in return, to use their influence to extirpate the worst abuses from Indian journalism and so achieve a real advance in the direction of a more friendly atmosphere. As Parliamentary institutions develop in India, the Government of India will find, ranged against it, a properly organised Opposition and this will doubtless be supported by a regular Opposition Press; one can but hope that, when this does happen, the tactics of that Press will be widely different from those that now so greatly discredit party journalism in India. No one will demand the impossible, or ask for impartiality from an Indian party Press: but it is not too much to expect that its partiality will be not only honest but decent.

CURRENT TOPICS.

The New President of the Assembly.

Mr. Patel, the successful Swarajist candidate for the Presidency of the Legislative Assembly, has made a surprisingly good beginning. In his reply to speeches of welcome from all parties in the Assembly, he said that he had ceased to belong to any party, and asked the leader of the Swaraj Party to have a resolution passed, by that Party, absolving him from his obligations as a Swarajist. The Viceroy and Sir Frederick Whyte (the retiring President) had appealed for co-operation, and he now associated himself with that appeal. As an outward and visible sign of his previous convictions, Mr. Patel appeared in orthodox Khaddar dress and "Gandhi" cap which, before taking the Chair, he exchanged for the full robes of office, including the wig, of the President.

The transformation of the Vice-President of the Swaraj party, and leader of their extreme wing, from a militant Swarajist to a co-operator, is a striking sign of the times and may well be expected to exercise a powerful influence on the policy of his late Party. No less striking is a comparison of the present position with that existing a year ago, when, at the election of the Deputy President, most of the prominent politicians in the Assembly refused to stand because their election would involve a conditional surrender of party freedom. Mr. Patel has not only been a strong, indeed violent opponent of Government, but went so far as to signify his disapproval of its "Satanic" character by refusing, when President of the Bombay Municipality, to take part in the official welcome of the Viceroy to that city. The belief, already expressed in THE NEAR EAST AND INDIA, that responsible Indian politicians, in spite of the chorus of disapproval with which they greeted Lord Birkenhead's statement in the House of Lords, are beginning to realise the true value of the offer of friendly co-operation that it contained, is greatly strengthened by the weighty and statesmanlike speech of the new President of the Assembly.

Sir Frederick Whyte.

Sir Frederick Whyte, the retiring President of the Legislative Assembly, received a great ovation from the Members when handing over his office to his elected successor, Mr. Patel. All Parties united in praising his conduct in the Chair, and in expressing their gratitude to their first President for the high standard that he had set up and for his unfailing courtesy and impartiality. There can be no sort of doubt that Sir Frederick Whyte has been a great success as President of the Assembly: and that the selection of the man, whom India at first accepted somewhat doubtfully as an undistinguished ex-member of a brief Parliament, the reason for the choice of whom was not apparent, has abundantly justified the prescience of the man—whoever he was—who made it. It was no easy task to set the standard for a country entirely new to Parliamentary institutions, and Sir Frederick Whyte has set a very high standard indeed; that he has successfully done so is fully borne out by the attitude of his successor which not only constitutes a remarkable tribute to his own personality, but to that of Sir Frederick also.

Apart from his work as President of the Assembly, Sir Frederick Whyte has been prominent in a number of ways. He conducted the inquiry into the organisation of Diarchy in Burma, and rumour has it that he was a candidate for the appointment of Governor of that Province on the retirement of the last Lieutenant-Governor under the old régime. He has been a prominent figure in the Red Cross and St. John of Jerusalem organisations and in a semi-social and semi-political Society existing in Simla and Delhi known as "Les Amis de la France." In the latter capacity he has appeared in small French plays staged by the Society, with a success that caused his services to be sought by the Simla Amateur Dramatic Society. His name has been mentioned in connection with the Presidency of the Public Services Commission in India, the appointment of which is believed to be imminent: and it is permissible to suppose that his decision, to remain in India until October, has some connection with the possibility of such an appointment. But, whether Destiny is reserving further employment for him in India or not, there can be no question at all that the five years that he has already spent there have been of the greatest value to India and that he has made good use of a great opportunity, such as comes to few men in less exalted positions than those of Viceroy or Governor. Happy are those to whom it is given to do good work, and whose work lives after them: Sir Frederick Whyte has achieved the first, and all indications point to his achievement of the second also.

The Mill-Owners' Deputation.

The Viceroy's reply to the deputation of Bombay mill owners who waited on him on August 21 cannot have been palatable to them, though the cables describe it as "sympathetic." He said that the Government was pledged to the abolition of the excise duty when financial considerations permitted, but did not hold out any hopes of its early abolition. As regards the complaint of unfair Japanese competition, the most he was able to promise was that, if definite evidence of Japanese dumping were produced, the question would be examined: and suggested the stating of a case to the Tariff Board, for inquiry whether the cotton industry needed protection. He expressed the opinion that, if America produced a good cotton crop this year, one of the main troubles of the Indian industry would be ended: and remarked that the total amount of cotton cloth now placed on the Indian market was but slightly less than what it was before the War, though the price of cloth had doubled in the interval, so that the Indian market was now asked to absorb nearly double the value of what it had absorbed before the War.

In the mean time the mill owners, after considering the advantages of a reduction in wages, or working short time, as a palliative, have decided on the former, though it seems not unlikely that the latter may eventually be added as well. The actual saving that would result from the proposed reduction of 11½ per cent. in wages appears to be much too small to produce any real effect on the cost of cloth: and, in view of the very large stocks on hand in the mills, even a drastic use of the short time expedient would be long before it produced an appreciable effect, so long as present prices are maintained. The only possible means of competing with the alleged Japanese dumping is a large reduction in cost; and, as things are at present, there seems to be no possibility of this. The position is, indeed, largely the fault of the Bombay mills themselves—during, and immediately after, the War they made enormous profits, practically the whole of which were paid out in dividends without provision of a reserve against a period of depression such as has now supervened. However much this may detract from the sympathy that would otherwise be felt for the mill owners in their present difficulties, it does not alter the fact that the industry is face to face with an unexampled crisis, from which it is almost impossible to foresee a way of escape. A suggestion has been made that the abolition of the excise duty, when it is possible to effect it, should be accompanied by a corresponding reduction in the import duty on manufactured cotton goods; but this would leave the relative situations of Indian and foreign mills unimpaired, although it ought to lead to an all-round reduction in prices. If such a reduction were accompanied by discriminative action against the products of Japanese mills, it would lessen the severity of Japanese competition, which, after all, is not without its advantages, as tending to keep down the cost of cloth in India: for it is beyond question that the present troubles of the Bombay mills are due to the excessive prices of their products; since the Indian peasant, if he cannot get the commodities that he wants, at a price that suits his pocket, is an adept at managing to do without them. At the time when prices in England reached their maximum about a year after the War, the profiteers were defeated by a "purchasers' strike"—people refused to pay the prices asked and preferred to do without things that they would have bought if the price had been reasonable; and this attitude is, to all intents and purposes, what the cloth industry in India now has to face, on a much vaster scale. It has been calculated that, owing to the higher prices obtained for his crops, the Indian agriculturist is about

Digitized by Google

35 per cent. better off than he was before the War; but the lowest estimate of the rise in the price of cloth puts it at 170 per cent.; figures that show how great must be the reduction in price before there can be any reasonable probability of the peasant's purchases of cloth reaching anything approaching their pre-war volume.

India's Foremost Orientalist.

By the death of Sir Ramkrishna Bhandarkar, at the great age of 88, India has lost her foremost Orientalist. Bhandarkar was the first graduate of the Elphinstone College, Bombay, was one of the first Indians to enter the Indian Education Service, and was the senior honorary member of the Royal Asiatic Society. He was a fellow of Calcutta University, Ph.D. of Gottingen and Calcutta, and LL.D. of Aberdeen and Bombay. He was one of the founders of the *Indian Antiquary* and a voluminous writer on Sanskrit, while his "Early History of the Deccan," published in 1884, remains the unchallenged authority on its subject. He was selected to represent the Bombay Government at the first International Congress of Orientalists, which met in London in 1874, but was unable to attend it; and, in 1886, he represented his Province at the Vienna Congress of Orientalists. The Oriental Institute at Poona, opened by the Governor of Bombay in 1917, was erected in Bhandarkar's honour and named after him. He retired from the Indian Education Department over thirty years ago, but remained a member of the Syndicate of Bombay University, of which he was a past Vice-Chancellor and which he represented, for a time, in the Bombay Legislature, besides serving, on the nomination of Lord Curzon, on the Viceregal Legislature in 1903. He was created C.I.E. in 1889 and K.C.I.E. in 1911.

The Indian Currency Commission.

A strong spirit of opposition has been aroused, in the Legislative Assembly, by the publication of the names of the members of the Currency Commission. A motion for the adjournment of the House, to call attention to the composition of the Commission, was carried by a large majority: one Swarajist speaker declaring that Indian currency policy was notoriously dictated from England and that India had no confidence in the Indian members of the Commission, while another stated that it was the duty of Indians to boycott the Commission and to treat it as untouchable.

This is unfortunately an attitude only too familiar in India; where, if the next move proceeds according to custom, it may not unreasonably be expected that the Indian National Congress will constitute a Currency Commission of their own, composed of Indian "experts" in whom "India" professes to have confidence, to take evidence and present a counter report. Also in accordance with precedent, such a Commission would doubtless inform the Government of India of the fact of its constitution and would invite them to "lead evidence" before it. Government's only possible answer—to ignore the unofficial Commission and all its works—would be stigmatised as bureaucratic obstinacy and a refusal of that co-operation which they themselves expect from Indians.

Agriculture in India.

Commenting on that part of Lord Reading's speech to the Legislative Assembly that dealt with agriculture, the Bombay correspondent of *The Times* says that it is apparently proposed not only to bring the Imperial and Provincial Departments of Agriculture into closer co-operation with each other, but also to bring them into closer touch with the public: it may safely be said that to the Legislative Assembly, with its majority of politicians from the towns, the Viceroy's outline of what the State has done for agriculture came as a surprise. The Government of India and the Provincial Governments are not good advertisers; it is only in recent years that they have begun to appreciate the advantage of making their good works known, and they have still much to learn of the arts of publicity and of diffusing the results of their scientific experiments. The tendency in India is always to look to the Government for help, and this is nowhere more noticeable than in agriculture; but the enormous benefits that have been conferred on Indian agriculture by the work of the Agricultural Departments are not appreciated at anything like their proper value by the vernacular Press of India or by the townsmen who form the great bulk of its readers. The official review of agricultural operations in India during the past year estimates that there were, in 1923-24, over five million acres under improved varieties of crops originally isolated or evolved by officers of the Agricultural Department: and that the resultant annual increase in value to the crops of the country is not less than 3½ millions sterling. This great achievement is chiefly due to the Department's production of improved varieties of rice, wheat, and cotton: but its activities are not by any means confined to those important crops—so numerous are they that the most up-to-date methods of propaganda could scarcely take notice of them all, and this is perhaps the reason why the tremendous achievements of the Department are not more adequately appreciated by some of the critics of Government. The most important fact is that the good work already accomplished has won the confidence of the cultivator and paved the way for a further advance in the direction where, as is universally agreed, it is most urgently needed—towards the improvement of economic conditions in the rural areas.

Indian Foreign Trade During June.

The trade returns for British India for June show a further decrease in imports and a further increase in exports compared with the previous month. The value of imports of merchandise fell from 1,893 to 1,632 lakhs, and the value of exports rose from 3,258 to 3,310 lakhs. The net imports of treasure fell from 425 to 346 lakhs, and the visible balance of trade in favour of India was 1,452 lakhs, compared with 1,052 lakhs in May. The only imported article that shows a noticeable increase was sugar, which increased by 15,000 tons in quantity and 25 lakhs in value. There were noticeable decreases in the imports of iron and steel (41 lakhs) and of railway material (11 lakhs); the greatest decrease was in cotton piece-goods, which declined by 36 million yards in quantity and 167 lakhs in value. In exports, there was a fall of 96 lakhs in food grains and a rise of 82 lakhs in tea. The export of raw materials increased by 500 lakhs, chiefly in cotton and oilseeds, while raw hides and skins also showed an increase and wool a decrease. The total shipment of raw cotton was 80,800 tons, of which Japan took 37,300 tons, China 17,100 tons, Italy 5,400 tons, and the United Kingdom, France, Belgium, and Germany about 4,000 tons each. The shares of the United Kingdom, Japan, the United States, and Germany were respectively, in imports, 52, 10, 7, and 6 per cent., and in exports 18, 20, 9, and 5 per cent. The tonnage of vessels entered into British India and cleared outwards with cargoes from and to foreign countries and British Possessions remained practically the same as that of the previous month, the former showing a slight increase and the latter a slight decrease.

Madras Irrigation Project.

A fourth great irrigation scheme must be added to the three mentioned by Mr. Pilcher in his third article on "Indian Markets and British Producers," noticed in our issue of last week. This is the Metur-Cauvery project, which was inaugurated by the Governor of Madras last month. This is one of the largest projects of the kind ever undertaken. The dam will be 200 feet high and over 6,000 feet in length, the lake formed by it being 100 miles in circumference, with a capacity of 93,500 million cubic feet. The project includes the construction of a main irrigation canal 88 miles in length, and the improvement and extension of the existing Vadaver Canal in the Cauvery delta. The works, which are expected to be completed in ten years, will improve the existing fluctuating water supplies to the present delta irrigation of over a million acres and will extend irrigation to 300,000 acres at present unprotected, while it is expected ultimately to bring under irrigation a further area of about the same dimensions. The cost of the project is estimated at about 4½ millions sterling, and it is expected to produce a revenue of 7½ per cent. on the capital expenditure

Imperial Wireless.

Construction has already begun at the British end for the connection of Great Britain and India by wireless, on the Beam system. The British transmitting station is located near Grimsby and the receiving station at Winthorpe, near Skegness; while the Indian stations are to be at Poona and Dhond (45 miles east of Poona) respectively. Under the contract, the British stations are to be completed in May 1926: and a number of engineers of the Marconi Company have already arrived in India to superintend the erection of the stations there.

There is already a fairly complete network of wireless stations in India, though they have not so far been much used for commercial traffic. Atmospheric difficulties are at present very troublesome, particularly in the monsoon period; but it is hoped that the Beam system will be found to go some way towards minimising them; and the opening of the Imperial station in India, on this principle, may perhaps lead to its extension to the internal system. There is a widely held belief that wireless is destined to supersede cable communication; but, as far as it is possible to foresee eventualities, this is unlikely to be the case, at any rate for a long time to come—cables and wireless will remain complementary to each other. In the War, the British Empire reaped an enormous advantage by the strength of its position in regard to cables, since it held both ends of so many of them and was therefore able to send secret cipher messages without fear of their being tapped en route; whereas wireless sends out its messages to the wide world, for any receiver within range to pick up at will. One of the advantages claimed for the Beam system is that it will reduce the possibilities of unauthorised reception of such messages. The general public, who know nothing about ciphers except that they exist, are strong in their belief that almost any cipher system is insoluble; whereas the fact is that the most skilfully arranged code is susceptible of solution, provided only that the expert solver is able to obtain sufficient material: and this is what the use of wireless telegraphy tends to give him.

INDIAN EXCHANGE.

London, August 31.

We have had a very quiet week in the London market, with no perceptible change in rates until Friday. Business on this side has been very restricted, with few orders, so that the strength in the market has come from India. Last Friday, Calcutta cabled that the market was firm at 1s. 6⅛d. for telegraphic, chiefly due, we understand, to selling orders from other quarters; and banks and others, in order to satisfy their requirements, had to sell to Government. In the beginning of the week purchases by Government were made at 1s. 6⅛d.

Towards the end of the week the rate was raised to 1s. 6 5-32d., and cable advices from Calcutta on Monday intimate that Government would not buy lower than 1s. 6 3-16d. It is difficult to understand the reason for this sudden firmness in exchange, but it has been stated that it may be due to further purchases of cotton in India by Japan in consequence of the Shanghai market being closed. We do not think that this is the only reason, as the principal demand has arisen on the Calcutta side, and money movements in connection with the jute crop have, no doubt, contributed.

So far as reports go, the monsoon appears to be satisfactory, and, as it may be reasonable to assume that normal crops will be gathered, it may be as well to consider how much higher the rupee is likely to go as we approach the height of the season. Last year at this time, T.T. rates were quoted 1s. 5¼d., and they gradually advanced to 1s. 6d. by the end of the year, but did not rise much beyond that point.

In view of the shrinkage in imports into India, it is probable that Government may be called upon to provide finance on a very much larger scale than hitherto, and the question which merchants have to face is whether the Government will stand up to the full extent of the calls to be made upon it on behalf of exporters. If they decide to do so, can they be relied upon to keep the rupee from soaring?

CORRESPONDENCE

PROVINCIAL AUTONOMY IN INDIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Coles Pasha's interesting article in your issue of August 20 advocates the breaking up of the existing Provinces into homogeneous States, on a racial and linguistic basis; and that each of these States should, to begin with, have a Parliament of its own, to which, when it had passed out of an initial state of tutelage, should be added a Senate or Second Chamber. Such States would owe allegiance to a Central (Federal) Government which would deal with Imperial questions, they themselves completely controlling their own State questions. In his speech at the opening of the Legislative Assembly at Simla the Viceroy asked whether even the most ardent friends of provincial autonomy really contemplated the existence of nine or more—perhaps many more—separate Sovereign States in India. This is, apparently, what Coles Pasha's article does contemplate; and he adds to the suggestion of a number of British Indian "Republics," the outline of a scheme for eventually bringing into line with these Republics the native Indian Monarchies, by the extension of the limits of some of the existing ones, and the creation of new ones, who would, he hopes, in time, from the force of the example of the British Indian Republics contiguous to them, become Constitutional instead of Absolute Monarchies. The cost of the existing Provincial Governments is already very heavy; and the proposal, not only to increase their number, but to make them all in time bi-cameral, would entail prohibitive expenditure. As an example of the increased cost already incurred under the Reforms, one may instance the Province of Assam. Under the old régime, Assam was governed by a Chief Commissioner and, I believe, three Secretaries and Deputy Secretaries, and its governance was, even then, hardly a whole-time job for its Chief Commissioner. It now boasts a Governor, two Executive Councillors, and two Ministers, with, I believe, seven Secretaries and Deputy Secretaries.

I venture to suggest a different solution of the idea of Provincial Autonomy, by an extension of the principle of semi-autonomous sub-provinces, of which the existing example is Sind, which is ruled, under the orders of the Government of Bombay, by an official whose title is the Commissioner in Sind. So far from increasing the number of Provinces, I think that their number should be reduced, and that India should be divided into five Provinces—North, South, East, West, and Central—omitting Burma, whose destiny seems likely to lie apart from that of India, with which her only link is the accidental one of (rather inaccessible) contiguity. These Provinces would, in the main, follow the boundaries of the Punjab, Madras, Bengal, Bombay, and the United Provinces respectively; the actual adjustment of boundaries being made on racial and linguistic lines. Each of these Provinces would be made up of a number of sub-Provinces, each of which would be ruled by an official—who might be designated Lieutenant-Governor—on the model of the Commissioner in Sind. For instance, the Province of Bengal would consist of five sub-Provinces, or States—Western Bengal, Eastern Bengal, Bihar, Orissa, Assam; each of which would elect its own representatives to the local "House of Representatives" of Bengal. The Lieutenant-Governors would be either Englishmen or Indians, with a Chief Secretary who would be either an Indian or an Englishman; and the Chief Secretary would act as adviser to the Lieutenant-Governor, in much the same way that the Resident in an Indian State acts as adviser to the ruling Prince; so that the form of Government in the British-Indian States would approximate to that existing in the native Indian States.

This is, of course, only the rough outline of an idea which does, however, I believe, offer a better chance of successful elaboration than that recommended in Coles Pasha's article. I believe it would meet the demand made by Indian politicians for increased responsibility, and would meet the British objection that this can only be granted on condition that Indian politicians are content to learn to walk before they try to run.—Yours, etc.,

Kew, August 27. C. CAPPER.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 17.

Ministerships in the Central Provinces.

Sir Montagu Butler, in his speech at the opening of the present Session of the Central Provinces Legislative Council, made a strong appeal for co-operation. After referring to the progress which had been made during the previous sitting and the steps which had been taken by Government to meet the wishes of the Council, he said that he had hoped to lay before them a demand for Ministers' salaries; but, from statements in the Press, it appeared that the present policy of the Swarajists was to harness the political future of the Central Provinces to that of Bengal. It was for the Council to judge whether the Province had had so much political education in the past as to be able to afford to neglect the present opportunity for gaining political experience, and if they did not want to administer the wide range of transferred subjects, the responsibility was entirely their own. The Governor has since interviewed the leaders of the Swaraj Party and invited them to accept portfolios; he has been met with a firm refusal. The Extremist Press make much of the rejection, which they attribute to Lord Birkenhead's speech, but the *Times of India* throws an interesting sidelight on the situation in its statement that rivalries and jealousies in the Swaraj ranks are at the root of the decision. Whatever the cause, the result is an unfortunate one; public opinion is slowly but surely veering round to a saner view of things political, and the outcome of the present Swaraj tactics will probably cause the dissolution of the Council, and a fresh election, when it is problematic whether the Swarajists will be able to claim the honours.

A Swarajist Setback.

The Swaraj Party has been engaged during the week in making elaborate preparations for the opening of the session of the Bengal Legislative Council, and these have been considered of such importance as to bring Pandit Motilal Nehru to Calcutta. The main item of business has been the nomination of a candidate for the post of President of the Council, and it has savoured of the deliberations which preceded the election of Mr. Sen Gupta to the Mayoral chair. Motilal Nehru was of the opinion that a Mohammedan should be elected, and his views were endorsed by Sen Gupta, who patronisingly remarked that, if a Mohammedan were not elected, this section of the community might think that their claims were being overlooked, particularly as there were indications that the Corporation would decide on the exhumation of the body of the "saint" in the New Market, a decision which would go against their feelings. The main consideration was that there should be some *quid pro quo* for his own election to the Mayoralty. Ultimately it was decided to adopt Dr. A. Suhrawardy as the party's nominee. The Presidential election took place yesterday, with Kumar S. S. Roy (Independent), Dr. A. Suhrawardy (Swarajist), and Khan Bahadur A. Salam (Mohammedan Liberal) as candidates for the honour, which carries with it a salary of Rs.3,000 per month. The first ballot eliminated the name of the last mentioned, who secured only eight votes out of 128, and in the subsequent poll Kumar S. S. Roy defeated the Swarajist candidate by the narrow margin of six votes. The significance of the Swarajist defeat lies in the severance of the Independents from the Extremist ranks, and as such is the first real protest which has been made against the return of the Swarajists to an anarchical policy; it will be interesting to see what further surprises the present session of the Legislative Council has in store.

The Mohammedans.

Mr. Sen Gupta's hopes for Hindu-Moslem unity are threatened with a disappointment. It will be recalled that almost a year ago a (Christian) beggar who was held in reverence by the Mohammedan butchers, died in the Market premises and was buried there with the knowledge of the Deputy Mayor and the then Chief Executive Officer. After several meetings of the Corporation it was decided to brick up the grave, which is in a passage-way, and refer the Corporation's position for the opinion of the Advocate-General. This has now been received, and is to the effect that the body can legally be exhumed; the Corporation, which is largely Hindu in its constitution, is faced with the problem of exhuming the body and offending Mohammedan susceptibilities or, alternatively, of allowing the body to remain, in direct contravention of the provisions of the Municipal Act. This item of business was on the agenda of the meeting held last night, but an acrimonious discussion, which arose in regard to the Bill for walling up the passage, prevented a decision. It is evident, however, that Mohammedan Councillors do not intend to allow the body to be removed without a fight: and it is stated that a general letter of resignation has been prepared and signed by seven out of the fifteen Mohammedan Councillors to be submitted in the event of the Corporation contravening their wishes. The Corporation have power on their side, and it remains to be seen whether their sense of municipal duty will be strong enough to outweigh the risk of a political breach.

Markets.

Business this week has again been restricted by holidays and there are no features to report in any of the markets. Jute is weaker but gunnies have kept approximately to last week's levels with few inquiries; the market for piece-goods remains dull but slightly steadier in tone. Tea sales for the better qualities have been satisfactory, with the poorer descriptions showing small declines. The London tea market has reacted on the offer of the new season's crop, but this may be accounted for in part by the report that stocks at the end of July this year exceeded those at the same time last year by about 22 million pounds.

The Share Market has been inactive in almost all departments; jute shares, after being steadier, eased at the close, the more speculative section showing an appreciable drop; a small inquiry for coal shares prevails, but no interest is shown in Teas and Cottons. Government Securities remain firm. Money continues very easy and at nominal rates, with few borrowers. Exchange is very firm.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, August 14.

The Bombay Stock Exchange.

There is a good deal of agitation on the question of Government legislation, which has been brought forward again as the result of the so-called financial crisis of May.

The Stock Exchange handles its ordinary and legitimate business of investments adequately enough. The volume is, however, very small. The total capital of the Joint Stock Companies of Bombay is not large; a great proportion of it is held by the managing agents, and, allowing for the permanent holdings of small investors, the balance available for circulation is inconsiderable. This is recognised in the rather similar market of Calcutta, where the business is almost entirely in the hands of a few firms of very high standing.

In Bombay, while the small investor cannot complain of the market that is made for his securities, the whole business is overshadowed by the enormous amount of speculation that goes on in the shares of fifteen or twenty specified mill concerns. Forward selling is on such a reckless scale that, on several occasions, a Bull ring has found itself the possessor of two or three times the total capital of a company for a given settlement. These operations are naturally confined to small groups of professional speculators and their hangers-on, and do not in any way affect the main interests of the City; but the recurring profits and losses of the various gangs do, no doubt, lead to a serious dislocation of business. A strong committee could put an end to it all, either at the outset by calling upon the broker to explain his action in selling a proportion of the capital of the company which it was obviously beyond his power to deliver, or by letting things take their

Digitized by Google

course and expelling defaulters at the first sign of their failure to deliver.

So far from this being the case, the Bears are protected by a rule of the Stock Exchange which empowers the Committee to declare a corner at any time, and to fix a settlement rate without regard to the price to which the market has been forced by the Bulls. This power, which is by no means infrequently put into force, gives in itself very great freedom to Bear raiders; and both sides are further encouraged by the knowledge that, in the event of serious trouble, they will be allowed to make any composition they like with their creditors without in any way endangering their standing as members.

Sir William Atlay, two years ago, presided over a Committee to inquire into the working of the Stock Exchange. The Committee made, in effect, the very mild recommendations, that the rule for the protection of Bears should be eliminated, and that members should not be allowed to enter into compositions with their creditors. These recommendations were ignored, and all went on the same until another financial crisis took place in May.

In consequence of that, Government has offered the Stock Exchange a charter involving the abolition, or at any rate the very strict control, of the rule empowering the Committee to declare a corner at discretion. The Committee has apparently made a counter-offer to Government, that it would be more satisfactory all round if a new rule were introduced freeing a broker from all responsibility for the default of his principal: a suggestion which is believed to be unique in the history of Stock Exchanges. Whether forward operations in shares really deserve the attention of Government is a doubtful question. It is nothing but a gambling game, played by professionals under their own rules, and the public is allowed to cut into it whenever it likes. It has very little more effect on the trade or finances of Bombay than the operations of Lord Hastings and Mr. Chaplin over Hermit's Derby had on the City of London. Lord Hastings' bankers no doubt found the situation an unpleasant one, and certain people in Bombay are reported to have been inconvenienced by the May settlement. But that is the total effect of these recurring periods of financial crisis.

To stop sheer gambling in any form is notoriously one of the most difficult things that a Government can attempt; and this particular kind of light-hearted and irresponsible gambling is so well suited to the genius of Bombay that it will, no doubt, persist, in one form or another, almost indefinitely.

Only the standing of Stock Exchanges throughout the world is so high, and the reliability of their members so unquestioned, that it is a pity that in Bombay alone the functions of the Stock Exchange should be so nearly related to those of a bucket-shop.

SIMLA LETTER.

(From Our Own Correspondent.)

Simla, August 13.

Lord Reading's Return.

On August 8 Lord and Lady Reading returned to Simla after more than three months' absence from India. They were preceded by a few hours by Field Marshal Sir William Birdwood, the New Commander-in-Chief, who had arrived in Bombay with them in the Narkunda, which took the opportunity of showing what she is capable of on special occasions, by completing her journey in one day less than usual. As a result of these arrivals, the headquarters of Government have reverted to a degree of official normality which they have not known since the beginning of the hot weather. Although, to all outward appearances, the administration of India has proceeded as usual during the temporary Viceroyalty of Lord Lytton, it is hardly surprising if the final decision in many of the major problems which confront the Government has been held over until Lord Reading's return. The period of the Legislative Assembly's session is always the busiest of the year in the Secretariat as a whole, but it is probable that, in consequence, the period of the session which opens on August 20 will prove even busier than usual.

Communal Tension.

The Mohurram celebrations have passed off without any serious incidents, although the period of the festival has in many places been one of grave anxiety for the local authorities. The extent to which communal feelings are aroused on these occasions is best exemplified by the events which occurred at Panipat, a small town not far from Delhi, at the beginning of August. At the end of July the situation had become so strained that the local officials had thought it advisable to take security for their good behaviour from several of the leading firebrands belonging both to the Moslem and Hindu communities. In spite of this precaution, on August 1, when the Mohurram procession was moving through the streets of the town, it found its way barred by a hostile crowd of about a thousand Hindus. This crowd had been smuggled into the town in small parties from the adjoining villages, apparently with the connivance of the Hindus residing in the town; and the fact that it was armed with loaded staves, pitchforks, and other weapons showed that its members were intent on making trouble. With the procession were a number of Moslems armed in a similar manner, and, when the two parties approached one another, there was nothing but a handful of police to prevent a clash. The local authorities on the spot, both British and Indian, acted, however, with promptitude and firmness; the small body of police charged the Hindus and drove them headlong out of the town, where they dispersed to their homes; and the Moslem procession was able to continue on its way. Thus ended a situation which at one time looked extremely ugly, and there can be no doubt that, had the police failed to get the Hindus on the run, a serious riot would have taken place, which might well have been followed by looting and incendiarism on a large scale.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

International Debts.

It is a commentary on the economic effects of the War that now, nearly seven years after the Armistice, the question of the settlement of obligations arising from the struggle should still hang like a cloud over the Allied countries. The British policy after the Armistice was to cancel all debts between the Allies, but unfortunately the attitude of America rendered that impossible, and the settlement that we made with that country was of the most onerous description. Opinions will always differ as to the advisability of that hasty agreement, but it has been made, and so long as it stands it ties our hands in regard to agreements in regard to our European debtors. Hence while it has been an odious task for us to negotiate at all with France in a matter which we would much rather have wiped out, and while we have made every possible concession in the circumstances, provision has had to be made for the payment of £12,500,000 annually for a period of 62 years. It is small compared with our payments to America, but France has still to negotiate a settlement of her obligations to America, and as it does not appear that our generous treatment of our Ally has had any effect in the United States other than to create a feeling of irritation, it would seem that France cannot look for any leniency in that quarter. Our terms with France are dependent on those made with America, so that it may well be that she too in the end will find herself faced with annual payments not much below those which we have to make. If, as one must assume, America treats all her debtors in like fashion, those Near Eastern countries which are intimately concerned in the question of the settlement of War debts will also suffer. Great Britain and the other countries concerned may, and quite conceivably will, be able to stand the strain of these prolonged and heavy payments, but it needs no emphasis that the effect of having to make them will be to hamper enterprise and generally to retard the recovery from the effects of the War. And it is a moot point whether America will find the receipt of her numerous payments from Europe an unmixed blessing.

Near Eastern Fairs.

It is impossible not to be struck by the number of fairs and exhibitions of one kind and another that are due to take place in the Near East in the near future. In the second half of this month Belgrade is to hold its second international sample fair, while from September 21 to October 21 there is an oil-well equipment exhibition at Bucharest. Then in October there are the international fair at Salonika and the Palestine and Near East exhibition and fair at Tel-Aviv, while in the new year there is to be an agricultural exhibition at Cairo. This does not exhaust the list of Near Eastern exhibitions and fairs (two are in progress at the present time, the Chisinau general and sample fair and the Liubliana international sample fair), but those I have mentioned indicate very plainly the great scope that now exists in this direction for British traders who want to enter the Near Eastern markets. In recent fairs in Yugoslavia there has been a marked increase in the British representation, and it is to be hoped that what is done in this instance will apply to all, for these fairs afford one of the best openings for displaying goods, a fact of which it has long been evident that our trade rivals are well aware.

The Cotton Position.

This season we have had, if anything, rather more than the usual number of shocks with regard to the supply of cotton, but most people are by this time getting quite innured to the fluctuations in the position. A few weeks ago it seemed almost certain that the American crop would be short, but the intervening period has seen a great change, and now it appears probable that there will be an ample supply of cotton this year to meet requirements, provided, of course, that the world demand for piece goods does not suddenly develop on a great scale, and that contingency is, I think, remote, though there is no doubt that the demand will grow steadily. The latest American report indicates a crop very considerably in advance of the corresponding forecast last year, and, as a record acreage has been put under cotton, the conditions would have to be very unfavourable for the yield to be at an unsatisfactory level. There is still a considerable period to elapse, and the crop may yet be adversely affected by the weather, but, in view of the acreage and the present indications, we are more justified in anticipating a really large crop. From Egypt, too, the news is satisfactory, and, as the Empire production this year will show a very marked advance, it would seem that at the moment there need be no undue anxiety with regard to Lancashire's supplies. With the next year or two over safely, this country will stand in a much stronger position, and from now onwards it will certainly be true to say that each year that passes will make the fluctuations in the American crop of less account. But the fact that the outlook as regards Empire cotton production is improving so rapidly ought not to be allowed to lure us into a feeling of security. There can be no real safety until we are within measurable distance of being independent of America for our supplies, and to bring that about calls for redoubled efforts.

Egyptian Cotton.

Representations have frequently been made by the Fine Cotton Spinners' and Doublers' Association regarding the need for the maintenance of the high-class character of Egyptian cottons and for the prevention of the mixing of types and the introduction of foreign substances when the cotton is being shipped. The Egyptian Minister in London has recently written to the managing director of the Association, stating that the matters in question are receiving the earnest attention of the Egyptian Government. They have under consideration, he states, drafts of legislation which they intend to enact to put an end to the complaints mentioned. "I am also to say," he adds, "that several schemes have already been recommended to the Egyptian Government which will have the result of stopping any possibility of mixing foreign substances, such as jute, hemp, or dry leaves of various plants, with the cotton exported. Among the schemes under examination is the institution of a permanent committee which will supervise the process of ginning and the export of cotton."

The Future of Wembley.

The most interesting idea that I have seen put forward so far with regard to the future of Wembley is that it should be made the home of the cinematograph industry in this country. Few of the new industries that have sprung up in recent years have grown more quickly than this one, and few promise to be of more importance in the future. Unfortunately, as I have had occasion to emphasise so often in these columns, Great Britain has been unable up to the present to hold her own in this industry against foreign competition. Apart from the economic aspect, it is vitally essential that the British viewpoint should be adequately presented to the world through the medium of the films, and it would be far from unfitting if when the Exhibition ends the buildings and grounds were to be utilised for a determined attempt to place the British film industry on a sound basis.

African and Eastern.

A very interesting survey of the position and prospects of the African and Eastern Trade Corporation was given at the general meeting by the Chairman, Mr. J. H. Batty. He pointed out that during the past year the market prices of West African produce here remained steady and at a comparatively high level, and the increased quantity produced and the prices ruling have put more money into circulation, which has had a satisfactory effect on trade. The improvement in the general trade there has greatly assisted the company's cotton mills, and it is anticipated that they may soon be working at full capacity. The outlook is satisfactory. The indications up to the present foreshadow a further improvement in profits in the ensuing year, provided conditions remain normal.

Greece's Progress.

The report of the International Financial Commission on the Greek loans under its control for the year ended December 31, 1924, is, on the whole, a most hopeful document. The gross yield of the assigned revenues was 1,459,107,717 drachmæ and £19,547 in 1924, against 970,215,690 drachmæ and £104,232 for the previous year. There was thus an increase of 488,922,027 drachmæ and a decrease of £84,865, the net increase being roughly 47 per cent. There were special causes, it is true, which contributed to this remarkable increase. In the first place, a difference of fourteen days between the two years, owing to the change of calendar, made a difference of 4 per cent. in favour of 1924. In the second place, the additions to the price of salt and the tobacco duty, which were imposed in the course of 1923, brought about a great increase in the revenue from these sources. Thirdly, the increase in the Customs receipts, which represents alone two-thirds of the total increase, is to be attributed partly to the growth in spending capacity of the country and partly to causes which must be considered as temporary. The greatly increased excess of imports over exports was largely due to the efforts of importers to increase their stocks in view of the impending higher tariff. But, making adequate allowances for these various special circumstances, the report shows that Greece is enjoying a marked degree of prosperity, and it is obvious that, given satisfactory conditions, the country should continue to go rapidly ahead.

Expansion of Revenues.

The revenues subject to plus-values in favour of the old gold loans amounted to 110,604,205 drachmæ, against 98,609,889 drachmæ in 1923. The distribution of the sums, with the addition of the interest on redeemed bonds, has permitted the payment to the holders of the old Debt of 97 per cent. of the full interest on the 4 per cent. loan of 1887, and of 86 per cent. on the other loans, against 85 and 74 per cent. respectively for the preceding year. The service of the Debts subject to the control of the Commission absorbed altogether in 1924 the sum of 595,435,698 drachmæ and £65, against 668,564,650 drachmæ and £347 in 1923. The better rates of exchange were largely responsible for this improvement. Thus the average rate for purchases of sterling, which constitute the greater part of the remittances for the service of the external debt, was 256.24 drachmæ, against 298.19 drachmæ in 1923, and there was also an improvement in the average rate for remittances in francs.

Transit Trade.

It will be seen from the report on Syria, further extracts from which are given elsewhere, that the French have made a special effort to restore the transit trade of Beyrout, Aleppo, and Damascus. Special conventions have been made with neighbouring countries for the mutual refund of duties paid on goods re-exported, and these steps have resulted in some measure of success, and it is possible that, in the course of time, there may be a considerable development of the transit trade. Attempts are being made also to

encourage the growth of a tourist traffic. It may be mentioned in this connection that last summer there was a record influx of Egyptian visitors. Mr. Satow states that Syria and the Lebanon can never hope to excel in industry, and such industries as there are must be content to cater for special local needs. But in its silk cocoon production, as a summer resort, and as the starting-point on the overland route to Persia and possibly beyond the Lebanon has assets of value. COMMENTATOR.

CYPRUS IN 1924.

A Satisfactory Year.

If Cyprus has experienced some economic vicissitudes since the War, the Island had not much cause for dissatisfaction with conditions in 1924. In the report for that year* which has just been issued it is pointed out that 1924 was noteworthy as marking a general improvement in trade conditions and in the Island's prosperity after the depression of the post-War period. For the first time, in fact, since 1924 the Island had a favourable trade balance. The exports amounted in value to £1,271,399, while the imports totalled £1,243,356, there being thus an excess of exports over imports of £27,983. For 1923 the respective trade figures were £893,733 and £1,072,573, so that it will be seen how vital a change has taken place in the trade situation. The causes of the marked expansion of the export trade are to be found in the demand for livestock abroad, principally in Greece, and the good prices obtained for carobs. There was further a great increase in the export of minerals, particularly iron pyrites. It will be noted that imports, too, showed a significant tendency to expand, indicating that the purchasing power of the population is increasing. In this connection the report states that there is no reason to apprehend that over-importation has taken place as in the years immediately following the War.

From what has been said, it will be gathered that the year was a good one for agriculture, on which, of course, the Island depends, and this was the case except as regards cereals, which made a poor showing. The yield of barley was particularly indifferent, while the other crops generally were below the average. Both as regards quantity and quality the carob crop was very satisfactory, and excellent prices were obtained for this commodity. Raisins also gave a good yield, and met with a good demand. The wines and spirits trade showed an encouraging revival, and it is stated that the prospects generally in this industry are much brighter than they have been for some time. There was an increased yield of silk cocoons, and satisfactory prices were readily obtained for the crop. The cotton crop, however, was disappointing. There was a larger area under cultivation, but the production was seriously affected by the ravages of diseases. There was an excellent orange crop, and generally the year was most favourable for fruit and vegetables.

A particularly satisfactory feature of the trade of the year was the improvement in the volume of trade between Cyprus and the other parts of the Empire. The value of the Island's imports from the United Kingdom and other parts of the British Empire was £516,365, or 41.53 per cent., as compared with £392,139, or 36.6 per cent., for 1923. On the export side the position is not quite so satisfactory, though here, too, trade with the Empire predominates. The value of the exports to the United Kingdom was £301,504, or 23.71 per cent., and to other parts of the Empire £12,169, or 0.96 per cent. The figures for the United Kingdom show an increase on the previous year of £89,000, but the percentage remains about the same. It is to be regretted that, apart from the United Kingdom, the Empire has not in the past been a purchaser on a large scale of Cypriot produce, but it may be hoped that the participation of Cyprus in the British Exhibition at Wembley will go far to remedy this. As a matter of fact, it is quite certain that it will. A *raison d'être* of the Exhibition is to bring the various parts of the Empire into touch with one another, and the excellent display of Cypriot products before buyers from all parts of the Empire will in due course have its effect on the trade returns.

Turning to the revenue of the Island, it may be noted that the position in 1924 was more satisfactory than had been anticipated. The local revenue amounted to £593,318, or £48,692 in excess of the original estimate. Adding the grant-in-aid from Imperial funds, there was a total revenue from all sources of £643,318, as against £642,389 for 1923. The expenditure totalled £535,870, and including the payment of £92,800 in respect of the Cyprus share of the Turkish debt charge, the total was £628,670, as compared with £675,499 for the previous year. There was thus a balance of £14,645, as against an excess of expenditure of £33,110 in 1923. This favourable result was due to the trade revival, and to the strict control over expenditure. It is interesting to give the figures for revenue and expenditure from the British Occupation in 1878 to the end of last year. They are as follows:—

Revenue.		Expenditure.	
Collected locally ...	£13,273,956	Current	£10,499,481
Grant-in-aid ...	1,747,085	Turkish Debt Charge	4,304,134
	£15,021,041		£14,803,615

Over this period the Island therefore had a surplus of £217,426, and, given progress in the development of agriculture, favourable trade conditions, and the increased outlets that will result from the Exhibition, it is to be anticipated that in future years the Island will show increasingly favourable results.

Position at June 30, 1925 published in conformity with Article 8 of the Statutes. Banking department, liabilities: share capital (300,000 fully paid shares of £10 each) £E2,925,000; Reserve fund: statutory reserve £E1,462,500; special reserve £E901,875; current, deposit and other accounts £E13,579,540; Egyptian Government £E20,090,105; Sudan Government £E141,703; Mixed Tribunals £E1,762,213; bankers account £E593,142; cheques and bills payable £E301,322; sundry other accounts £E752,555; £E42,509,955. Assets:— Government securities and securities guaranteed by the Egyptian Government £E27,866,334; sundry securities £E315,509; advances on merchandise £E665,874; advances on securities £E1,972,419; advances otherwise secured £E399,563; sundry other advances £E1,009,815; bills of exchange £E2,041,736; local bills discounted £E398,370; buildings and furniture £E230,973; money at call and at short notice £E780,000; bankers accounts £E4,533,595; sundry other accounts £E166,071; cash: notes £E1,577,301; gold £E41,397; silver, nickel, etc., £E510,998, £E2,129,696; £E42,509,955. Issue department: Notes issued £E32,300,000. Gold £E3,339,576; *British Treasury Bills £E12,810,424, £E16,150,000; Securities: Egyptian Government securities and securities guaranteed by Egyptian Government £E420,262; British Treasury Bills and National War Bonds £E15,729,738, £E16,150,000; £E32,300,000.

*By the authority of the Egyptian Government these Treasury Bills are deposited in lieu of Gold (See Journal Official of 30th October 1916).

The output of the Anglo-Egyptian Oilfields for the week ended August 28 was: Gemsah, 18 tons (last week 21 tons); Hurghada, 3,295 tons (last week 3,323 tons).

Sir Marshall Frederick Reid, a director of the Anglo-Egyptian Bank and the National Bank of India, left £41,177.

The traffic receipts of the Suez Canal from August 22 to 28 amounted to 3,670,000 francs, against 3,340,000 francs for the corresponding period last year.

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended August 20, state:—

Since our last report the futures market has been rather active, but prices have been again weak; the net changes on the week are the following:—Sakellaridis, 1.03 dollars down for November, 0.68 dollars down for January, 0.25 dollars down for March; Ashmouni, 0.70 dollars down for August, 0.57 dollars down for October, 0.72 dollars down for December. Straddling operations have continued, although on a more restricted scale than of late, and consisted of sales of Sakel in our market against purchases of Sakel in Liverpool. The Ashmouni market has shown a good deal of activity this week and October is now quoted at a discount of 13.35 dollars under November Sakel, whereas this difference was 16.81 dollars a week ago. America has been in the Upper Egypt market for a few hundred bales of medium grades and the Continent for the better grades new crop cotton. Fresh arrivals from the southern districts of Upper Egypt are now daily appearing on the market, but although demand for this cotton is still very moderate, the fall in the basis has been checked as holders do not show much anxiety to sell. The difference between October New York and October Alexandria remains at about 7.72 dollars; we do not expect much change in this difference for the time being; however, should the present paucity of demand continue, the weight of the arrivals may later in the season narrow the difference inasmuch as the reports on the extra staple American crop are so good. The available stock in Alexandria has now reached the low figure of Crs. 294,246; it consists mostly of cotton of medium and inferior grades, about 30 per cent. being Sakel and 70 per cent. Ashmouni, etc. The week's receipts amount to Crs. 6,285 against exports Crs. 41,420; the stock stands at Crs. 294,246.

Spot: Minet el Bassal, though showing some slight improvement over last week's demand from abroad, is still a quiet market and sales amount to about 4,000 B/s, of which we estimate 500 B/s Sakel, 3,300 B/s Uppers, and 200 B/s Zagora. Rather more interest has been shown in Uppers than for some time past, but the demand for Sakel is down at practically minimum.

Sakellarides: A poor business has been done and such demand as there is has been for low and medium qualities. With the exception of Fair and Fully Fair, which are steady and inclined to harden, spot differences are generally considerably easier.

Ashmouni and Zagora: A good business has been done in all grades. Spot differences are rather dearer for Fair and Fully Fair, unchanged for Good Fair and Fully Good Fair, but distinctly cheaper for Good and better which are now appearing in increasing quantities as the new crop cotton arrives on the market.

Brown, Pilion, and White: Are neglected and no business is reported. Quotations are nominal. Spot differences for Brown and Pilion are firm for the medium grades and easier for the high grades. For White they are generally rather easier.

Crop 1925: The reports received point to a quite normal progress of the crop, this being especially the case for Upper Egyptian and the varieties other than Sakel planted in the Delta. As regards Sakel, although it has recouped a great part of its initial delay, it cannot, however, be said as yet that the condition on average is as good as that at the same time last year. The pink boll worm attack is developing, but the proportion of bolls attacked is either equal or less than at the same time last year. Some fogs are reported but caused almost no damage.

TEXTILES.

IF you wish to obtain your Textile goods from England at the lowest possible prices, communicate with K. JEBARA, 25, Princess Street, Manchester. (Established 1887).

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended August 29 states:—The fall in the price of American raw cotton which commenced at the beginning of August, and which had a brief interruption last week, has been resumed, and, so far, Manchester's expectations in this connection are being fulfilled. In the long run, of course, it cannot be doubted that lower prices will mean a larger business, but the effect at the moment is to make prospective buyers wait until they think the bottom has been reached; that many will wait too long is almost certain, but in the meantime the effect of this caution is to keep business here very quiet.

Yarn.—There is nothing of interest to report regarding this section. Buyers are following a hand-to-mouth policy, but owing to short time and local holidays the output seems to be farly well cleared. The mills in Oldham will be closed for the whole of next week, and some of them probably for a longer period. In Egyptian counts business has been very meagre. All round quotations are a little lower on the week, though again probably not to the full extent of the fall in raw cotton.

Cloth.—A somewhat lifeless condition of affairs has prevailed. India appears to be doing very little towards securing the supplies which she usually requires in the autumn, and it is hoped that a much larger business will shortly develop for that market. The same remarks apply also to Egypt. The state of affairs in China is, of course, quite against a large trade being done and, under the circumstances, the number of contracts which have been placed is considered satisfactory. The home trade remains quiet.

Raw Cotton.—The report of the American Agricultural Bureau published on Monday last gave the condition of the crop as 62.00 per cent., and the estimated yield at 13,990,000 bales. These figures were approximately what had been expected and had no special effect on quotations. Attention was given to the fact that the amount of cotton ginned up to August 15 was 578,000 bales as compared with 135,901 bales last year, so that it is evident that the crop is maturing early. There is a feeling that the Bureau makes a practice of under-estimating rather than over-estimating the total crop, and throughout the week prices have shown a falling tendency. During the week the Egyptian Government have issued a statement to the effect that the area of cotton planted is 1,924,000 feddans as compared with 1,787,000 feddans last year. The amount under Sakellarides shows an increase of approximately 300,000 feddans, or a little under 40 per cent. Closing quotations yesterday were as follows:—American Middling, 12.60; Egyptian Fully Good Fair Sakellarides, 28.65.

Mr. J. L. Rieu, Commissioner in Sind for the past six years, left Karachi last Thursday evening for England on three months' leave. His successor, Mr. P. R. Cadell, is due to arrive at Karachi during this month.

Yussuf Hikmet Bey, the former Chief of the Political Section of the Turkish Foreign Office in Angora, arrived in Belgrade on August 24. He paid a visit to M. Nintchitch, the Yugoslav Foreign Minister, as the unaccredited representative of the Turkish Government.

An attempt was made last Saturday morning to wreck the Simplon-Orient express which left Bucharest the previous evening. Several rails near Turnu-Severin had been removed, with the result that the engine and seven carriages ran off the line. No one was injured.

British Consular Reports

III.—SYRIA.

(*Concluded.*)

Trade Methods.

In the smaller ways of business the best means to adopt is to appoint a local representative from among the numerous body of commission agents in each commercial centre. It is advisable that a British firm looking for orders in Syria should, if possible, send out a representative to inquire into local conditions, and personally choose an agent to suit his requirements. British firms may, if they cannot send out a representative, arrange for a local agent by corresponding with consular officers, a method followed in a number of cases during the two years under review.

Keen local competition, which rarely allows more than 5 per cent. profit on any sale of manufactured goods, has restricted gambling, though it encourages the temptation to risk when one of the European exchanges takes a downward plunge. Credit, generally speaking, is said to be good, though carefully watched by the banks. The restriction of credit by the banks to firms of undoubted standing has made for financial soundness.

The harvest of 1925 is said to promise well, and there are various features connected with the economic life of the country which may perhaps justify a mild optimism as to the commercial outlook for 1925 and 1926.

Industry.

The Lebanon has only one industry of any importance, the rearing of silkworms, and the exportation of cocoons, silk, and silk waste. In a less degree this industry obtains in the Antiach district and at certain places on the coast.

The industry appears to be advancing, and this is all the more satisfactory in that after the war there were grave doubts whether it could be revived. There had been great destruction of mulberry trees, and there was a serious shortage of labour.

The total production of fresh cocoons in 1924 amounted to 2,800,000 kgs., which was an excess almost 600,000 kgs. on the previous year, of 300,000 kgs. over the estimate made at the beginning of the season and well over 50 per cent. of the pre-war production. According to official statistics, the exports in 1924 were as follows:—Cocoons, 232,700 kgs.; silk, 127,900 kgs., and silk waste, 115,000 kgs. The main increases were in cocoons and silk waste. A necessary word of warning has, however, had to be given by the authorities, who were perturbed by the fact that it was found difficult to sell the Lebanese silk sent to France. They have pointed out that, while competition from artificial silk is not likely to prove harmful, methods are being everywhere improved so that, until more modern methods of silk production can be introduced into the Lebanon, producers would do well to concentrate on the export of cocoons. The presence in France of unsold stocks of native silk has been due to the careless way in which it had been prepared.

There is a scheme to erect in the neighbourhood of Beyrout a factory for making scent, and good results are forecasted. Many of the local flowers are highly scented, and, given reasonable care, plants like the sweet-scented geranium and the jasmine thrive abundantly.

In Damascus the local textile industry shows little sign of recovery. It is hoped to develop this trade with Iraq now that communications have been improved, but the chances of recovering the important Egyptian market are slight. Egypt began during the war itself to manufacture goods previously obtained from Syria, and many Damascus artisans have emigrated thither.

Tanning at Damascus is usually conducted on a family basis, but a modern factory equipped with machinery from France and Germany is being set up. The Damascus dyeing trade, which is also conducted on a family basis, has declined with the textile industry. The rope industry, although provided with an excellent raw material, cannot compete with the European machine-made article. The brass and inlaid woodwork of Damascus are well known. The exports in 1924 were valued at £125,000, and increased by 25 per cent. as compared with 1923.

Aleppo is not a district which possesses any industrial organisation of note. Such industries as it possesses in the main cater for local requirements.

An Agricultural Country.

The whole country is essentially agricultural, and its future prosperity is undoubtedly bound up with the development of agriculture. The authorities have awakened to this fact, and efforts to improve conditions are discernible. Thus, in the State of the Great Lebanon, a decree has just been issued creating an agricultural bank which will take over the assets of its Turkish predecessor, and will be in a position to make advances to cultivators and to provide livestock, seed-corn, agricultural instruments and fertilisers. Further, in the same State, agricultural councils have just been created of which the mission is to further in every way the prosperity of agriculture. One other step in advance deserving notice is that the authorities have this year done away with the farming out of the tithe, and intend to collect it themselves. The average paid during the last four years is to be taken, and this amount will be demanded from the villages, the inhabitants being left free to collect the required amount proportionally among themselves. It is understood that this system will be maintained for five years, and that the tithe tax will then be abolished and replaced by something more equitable and less open to abuse.

The mass of the Lebanon is too rugged and mountainous for cereal production. The only part of it of any importance for grain-growing is the Bekaa plain, where certain drainage works have been carried out. The really important districts are those of Aleppo, where the use of

tractors for ploughing is on the increase, and Damascus, including the Hauran. These large areas are suitable for grain growing, but much land is still either partially developed or quite undeveloped. The land tenure system is still very faulty. Wealthy landowners may possess as many as a hundred villages. These are worked, if at all, on the "metayage" (profit-sharing) system, and the peasant is little better than a serf.

The Damascus district is cereally self-sufficient, and in good years exports considerable quantities of grain. The 1923 harvest was good, and permitted of a considerable cereal export. Its successor was, however, so bad that the export of grain was forbidden. The same conditions obtained in the Aleppo area. While the prospects for the 1925 harvest are somewhat uncertain, it is now clear that the harvest will be much better than at one time seemed likely. Early climatic conditions of an unusual type at one time threatened disaster, but unexpectedly heavy rains in April saved the situation.

A good deal of wool is produced in the Aleppo district. The sheep move slowly down from Kurdistan to the coast in the winter, and are shorn in Syria. The severe winter caused heavy losses both of sheep and of camels.

The 1924 olive yield was estimated throughout the country to be about 35 to 40 per cent. of a normal crop. Nevertheless, prices were, on the whole, below the average. It is hoped, and timely rain has given some reason for the hope, that the 1925 yield, which cannot, however, yet be estimated with any close accuracy, may be about 50 to 60 per cent. of a normal one. The bulk of the crop is consumed locally. Some excellent fruit is produced, and more should be done to stimulate production and export. Damascus is famous for its apricots, which are exported, in the form of dried fruit and paste, mainly to Egypt. The respective quantities exported in 1925 were about 700 tons of fruit and 100 tons of paste at £40 and £100 per ton. Apricot kernels are also exported, and in 1924 Germany was a large customer. The amount exported was smaller, but prices were higher. Damascus also produces excellent grapes. The oranges of Sidon and Tripoli are good. Before the war Tripoli oranges used to go to Constantinople and South Russia. This season some 50,000 cases were sent to England. Unfortunately, little that is efficacious has been done to stamp out the scale diseases with which many of the local orange and lemon trees are affected. Unless measures are taken soon, a potential source of wealth will be lost to the country. Banana plantations round Beyrout and Sidon yield a palatable fruit. They were badly damaged by the severe winter.

Syria has in Egypt an excellent market for her fruit, a fact which has recently been realised by the authorities. At present only sea transport is available, but when, in course of time, Tripoli and Beyrout are linked up with Cairo by rail via Haifa, the export of fruit should be much developed.

Cotton-Growing.

The possibilities of cotton-growing are here, as everywhere, attracting attention. Cotton has for years past been grown in the region of Idlib, in the Aleppo district. Its cultivation is reported now to be interesting the best class of landowners. This cotton is exported via Alexandretta. In 1924 the amount so exported was 1,190 metric tons, valued at 700,000 francs. Of this, Italy took 436 tons and the United Kingdom 322 tons. A further 132 tons were exported via Beyrout and Tripoli. The erection of a ginning factory on European lines and under European supervision is now contemplated, in the hope of solving the difficulties arising from a lack of proper standardisation of the staple. Experiments are being conducted in various parts of the country as to the kinds of cotton which can best be grown. They are considered to have given promising results. In the Damascus and Hauran districts the prospects of successful cotton cultivation are of the slightest.

A certain amount of tobacco is grown in the Lebanon, but the most important district of cultivation is the State of the Alaouites. This produces two kinds of tobacco, known respectively as Abouriha and Shekelbent. The former kind goes mostly to the United Kingdom, which in 1924 took 6,918 bales out of 7,963. The other kind is used by the Tobacco Régie, which in 1924 took 300 tons. The 1924 Abouriha export was in excess of that for 1923 by 1,081 bales. Cultivation is increasing, and the 1925 crop should exceed that of 1924 by 30 per cent. During the past year there was much discussion as to whether the Régie should continue in a modified form or be entirely abolished. No decision has yet been taken.

Motor Transport.

The use of motor transport is increasing in the north, and the motor lorry from Aleppo is reputed practically to have killed the camel caravan trade, while the service on the Alexandretta road, maintained mostly by Fiat lorries, is of growing importance. Between Beyrout and Damascus, on the other hand, by reducing its freight rates by one-third in 1923, the Damas, Hama et Prolongements Company has practically put a stop to the road-conveyance of goods between these two towns, a traffic which had assumed considerable proportions.

The native population has taken very kindly to the use of the motor-car. According to the last statistics available, the number of cars in use in the country is 2,428, of which 1,509 are Fords, while there are about 140 motor lorries and trucks. In general American cars are most in favour, and after them come some Italian makes. The trans-desert services which link up Iraq and Persia with Syria have become established facts. It is worth recording that between the months of February and October, 1924, inclusive, 2,417 passengers travelled from Baghdad to Damascus, and 4,235 from Damascus to Baghdad. The largeness of these latter figures is due to the fact that during August, September, and October many pilgrims returning from the Hedjaz made use of the overland route. Neither the summer heat nor the rains of winter have put a stop to the traffic, and in February, 1925, 136 cars with 403 passengers travelled in either one or the other direction between Baghdad and Damascus. It is gratifying to recall that the serious development of this route is due to British enterprise.

There has during the past two years been little road-making in the Damascus area. The greater part of the road from that city to Homs is now, however, metalled, while various tracks have been arranged so that they can be used by motor-cars in dry weather. Aleppo has not as yet much in the way of roads. The one to Alexandretta carries a good deal of motor traffic, but that to Hama is in an abominable state. The Lebanon is, on the other hand, surprisingly well provided with roads, although, despite continual repairs, their surfaces often leaves much to be desired. The absence of good road material affords an excuse, but not a sufficient one. Under the existing system of contracts the work is often scamped.

Arrangements are being made for a re-union of the members of the British Salonika Forces on Sunday October 4. Those taking part will muster on the Horse Guards Parade at noon, and after a short service will march to Whitehall to place a wreath on the Cenotaph. This will be followed by a re-union dinner at the Drill Hall, Westminster, at half-past one.

General Sir Ian Hamilton, who has recently been visiting British graves at the Dardanelles, was robbed of a large sum of money while returning across Macedonia in the Simplon-Athens express. The money was in the pocket of his coat, which was hanging up in the compartment, and it is supposed that during the night thieves had reached the coat through a window that had been left open.

Near East Markets.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended August 15:—

The arrivals of sultanas on the Smyrna market since the opening of the season are estimated at 205 tons, and the sales to date are put at 190 tons. The closing prices, London/Liverpool, are: Alpha, 81s. Beta, 75s. The crop is about ten days late. New fruit only commenced coming to the market this week, and quantities are as yet restricted to the growths of only one or two districts as represented by types Alpha and Beta.

Market conditions are firm. Prices are maintained, as supplies are inadequate to the demand. The weather prevailing is favourable for drying conditions, and if it continues shold benefit the general run of the quality of the crop.

For the week ended August 22 Messrs. Giraud report as follows:—The arrivals of sultanas are estimated at 790 tons, and the sales to date are put at 650 tons. The closing prices per cwt., c.i.f. London/Liverpool, are: Type 13, 63s.; type 14, 66s.; type 15, 70s.; type 16, 75s.; type 17, 80s. The volume of arrivals is gradually increasing. Prices are at a high level, and the business coming in is limited. The market, however, is steady, there being an insufficient weight of fruit on dealers' hands to influence a decline.

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

Teheran, July 25.—There is no change to report. The market is even quieter than of late, owing to the approaching Moharram holidays.

Haifa, August 8.—The grain market has been active this week. Offers have been rapidly absorbed, so that prices remain very firm. At the close there was a new advance, and prices were generally firm.

AGRICULTURAL SITUATION IN INDIA.

An official report on the situation at the end of July states:—

The monsoon was sufficient in parts of Bombay and Madras, Bihar, East and North Bengal, Assam, parts of United Provinces, Central Provinces, Hyderabad, Punjab, hilly tracts of North-West Frontier Province, Burma, Central India, and parts of Rajputana. In Orissa, owing to the excessive rain in early part of monsoon, considerable damage was done by the flood. Excessive rainfall in April and May did some damage to the early rice and jute in Assam. There was excess rainfall in two districts of Lower Burma, in Bundelkhand and Baghelkhand, in Central India, in East Punjab, where sowing was retarded, and in East and North Bengal, where some damage was caused in certain tracts. More rain is needed in the eastern talukas of Deccan Karnatic, in Bombay, Northern and Central Districts of Madras Presidency, especially Madras Deccan, Sind, West Bengal, North-Eastern District of the United Provinces, one district of Central Provinces, parts of North-West Frontier Province, Baluchistan, parts of Rajputana and Western India States. Standing crops are generally fair everywhere. The condition of jute is fair in East and North Bengal, but poor in Assam. In Bengal the area under jute increased by 6 per cent. The sugar-cane crop is exceptionally good in United Provinces. Economic conditions are generally fair except in North Baluchistan. Fodder and water are generally sufficient. The condition of cattle is satisfactory except in two districts of Upper Burma and in four Rajputana States where some cattle disease exists. In Bengal, the price of jute has risen considerably. In Assam, the price of rice ruled fairly high, but is now lower. In the Punjab the price of wheat was higher than last year. In Hyderabad, the price of staple food grains continued high, and in North-West Frontier Province prices were considerably higher than last year. Elsewhere prices generally were steady or show downward tendency. The general economic outlook is hopeful, on the whole.

THE SALONIKA SKIN MARKET.

Macedonia and Thrace produced approximately 500,000 lambskins, 300,000 sheepskins, and 180,000 kidskins during 1924. The quality of these skins, however, was not as good as that of the 1923 production (says an American Consular Report). During the year approximately 100,000 lambskins of Yugoslav origin were imported into this market. Some very small lots of skins from old Greece reached the Salonika market. All of the production of Thrace and Macedonia and the quantity which reached here from Yugoslavia were exported, with the exception of 25,000 to 50,000 short sheepskins used by the local tanning industry. The quality of the skins produced in 1925 is excellent and, according to dealers, is above that of the previous five years. On account of the low prices this season for wool, woollen skins are in small demand.

ENGINEERING TOPICS.

Olympia Motor Show.

At the forthcoming Olympia Motor Show Dunlop's exhibits include high pressure cords in beaded edge and straight side types, balloon cords for existing rims, and the Dunlop balloon cord of the wired type, for use with Dunlop well-base rims. Another tyre at this stand will be the "Warwick"—a tyre manufactured throughout at Port Dunlop, and introduced to provide a "quality" British cover at the low selling price of 45s. Users of 30x3½ covers have here a cover with an efficient non-skid tread design, and the capacity for good hard service. The method of fitting and removing the Dunlop cord balloon of the wired type will be demonstrated by experts on the stand. In addition to tyres there will be on show the company's range of wheels, including wire, steel, artillery and disc types. Dunlop accessories—including the new jack and foot-pump for use with balloon tyres—will also be exhibited. The foot-pump is fitted with a second barrel which gives a flow of air during the return stroke of the pump.

At the forthcoming Olympia Cycle Show one of the chief features at the Dunlop stand will be the new Dunlop cord reinforced cycle tyre—a newcomer which takes the place of the Dunlop cord heavy. This new tyre carries an exactly similar tread design to the Dunlop "sports" motor cycle tyre which was so prominently associated with the long list of Dunlop successes in the T.T. and other spectacular events. In the range will also be found the Dunlop cord, Warwick cord, Cambridge cord, and Clipper speed covers, the latter one of the popular tyres with the "light machine" brigade, and much in evidence among all club members. Path racing tyres—including the Dunlop tubular sprint, will be on show, and for the motor cyclist there will be the Dunlop "sports" tyre already mentioned. This tyre is, of course, of the wired-on type, used in conjunction with the Dunlop well-base rim, ensuring ease in fitting and removal. For the first time the Endrick patent wired-on cycle rim also appears at this stand, Dunlop's having acquired the patent and sole manufacturing and selling rights. It will be seen in bright, plated, and imitation wood finishes, and in two sizes—26x1¼ and 26x1⅜. The very narrow section used enables caliper brakes to be fitted with ease. A wide and comprehensive range of accessories will also be found on the Dunlop stand—including belts, fasteners, punches, outfits, pumps, levers, connections, repair materials, and so on.

Company Meetings.

AFRICAN AND EASTERN TRADE CORPORATION, LTD.

Thirty-seventh Annual General Meeting.

Mr. J. H. Batty (chairman of directors), presiding over the annual ordinary general meeting of the African and Eastern Trade Corporation, Ltd., in the Banqueting Hall of the Exchange Station Hotel, Liverpool, on Friday, referred to the great loss the nation, and West Africa in particular, had sustained by the death of Lord Leverhulme. He also referred to the recent death of Sir George Goldie. The past year, Mr. Batty said, had been one of unprecedented events in West Africa, notably the visit of H.R.H. the Prince of Wales, which had done an enormous amount of good in cementing the goodwill and confidence of West Africans to the Mother Country. The good result of the visit will remain throughout this generation. During the year West Africa had suffered many losses in personnel—the transference of Sir Hugh Clifford from Nigeria to Ceylon, Sir Donald Cameron to the Governorship of Tanganyika, Mr. W. F. Gowers to the Governorship of Uganda, and the retirement, through ill-health, of Sir Harry Moorhouse.

Referring to the general trade of West Africa, Mr. Batty said: The revenue of Nigeria for 1924 exceeded £6,700,000, being £12,000 above the previous record in the boom year of 1920. The total value of trade amounted to £27,640,740, an increase of over £4,000,000 on the previous year. The exports from that colony also show a marked improvement, and easily exceed previous figures. There were 78,000 tons of ground nuts shipped last year, being 21,000 tons above the previous record year of 1918 and 56,000 tons higher than in 1923; 16,000 bales of cotton, as against 11,000 bales in 1923; 37,000 tons of cocoa, as against 32,000 tons in 1923; 127,000 tons of palm oil, as against 99,000 tons in 1923; and 262,000 tons palm kernels, as against 223,00 tons in 1923.

There have been indications lately that the market for Shea nuts has been broadening, and if this should prove to be the case it will doubtless encourage the natives to give further attention to this produce, of which there are almost unlimited quantities available throughout Northern Nigeria and the Northern Territories of the Gold Coast.

During the past year the market prices of West African produce have remained steady and at a comparatively high level. The increased quantity produced and the prices ruling have put larger sums of money into circulation, which has had a beneficial effect on trade. Provided we have no industrial strikes and conditions in England gradually improve, with affairs on the Continent steadily returning to normal, prices should remain somewhere near the present level, and so encourage the natives to increase production and further stimulate trade.

As regards oil concessions, the boring operations have been stopped as there have been no indications encouraging enough to continue drilling.

They would be interested to hear that the company was now running a monthly steamship service to and from West Africa. A new steamer, the Nigerian, had just been launched on the Clyde this month, and was expected to commence her maiden voyage in October. This vessel had been specially built for the trade and fitted with the latest appliances.

The trading results for the year, after making provision for all bad and doubtful debts, depreciation on stocks and maintenance of all plant and properties at home and abroad, amounted to £471,048 11s. 4d., an increase of £28,695 14s. 3d. on last year. When addressing them a year ago he mentioned that the improvement indicated in 1923 had been maintained in 1924, and to some extent this is reflected in the account before them. The increase shown was really larger than appeared on the surface, as in both 1922 and 1923 accounts the results included substantial amounts from E.P.D. adjustment, whereas this year there had been no contribution from this source. The indications up to the present foreshadowed that the profits for the ensuing year should show a further improvement, provided conditions—industrial and political—remain normal for the remainder of the year.

In conclusion, the Chairman moved the adoption of the accounts and report. This was seconded by the vice-chairman, Mr. R. B. Miller, and unanimously adopted.

A final dividend on the ordinary shares of 4 per cent., less tax, was declared, making, with 4 per cent. interim already paid, a total dividend for the year of 8 per cent.

The retiring directors, Messrs. T. Rowland Hughes, H. C. Hutchinson, J. Pickering Jones, and M. H. McNeill were unanimously re-elected, and the appointment of Mr. Oliver V. C. Hoare as a director in the place of the late Mr. E. A. Beazley was confirmed.

A sum of £4,000 was voted as directors' fees.

The auditors, Messrs. Harmood Banner and Son, were reappointed.

A telegram of congratulation was sent to Sir Graeme Thomson, the newly-appointed Governor of Nigeria, and to Sir Hugh Clifford one of appreciation of his long services to West Africa.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

NEWS FROM ALL SOURCES.

Egypt imported typewriters during the first three months of this year to the value of £E9,358.

The Greek Minister of Finance controdicts the reports about a fresh note issue, and says the Government is even going to withdraw notes to the amount of 80,000,000 drachmæ from circulation (says a Reuter message).

The Greek Government has decided to establish a special bourse for currency dealings in order to prevent speculation.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended August 10 amounted to £E8,471, making the total from April 1 £E98,482.

The launch took place in August at the Clydeholm Shipyard, Whiteinch, of Messrs. Barclay Curle and Co., of the single-screw awning deck steamer Nigeria, which was built for the African and Eastern Trade Corporation, Ltd.

The Sudan Building and Agricultural Co., Ltd., has been registered with a capital of £500,000, in 200,000 seven per cent. Preference shares and 300,000 Ordinary shares of £1 each. The objects are to acquire and develop buildings and agricultural lands, and to carry on business as importers and exporters and merchants. An agreement has been made with the Societe Immobiliere et Agricole du Sudan and others, to acquire the commercial business of Messrs. Stamatopoulo Brothers, and other properties and rights in the Sudan. The directors include Sir Edward Goschen, Bart. (Chairman), Sir Sayed Ali Mirghani, K.C.M.G., K.C.V.O., and Colonel E. A. Stanton Pasha.

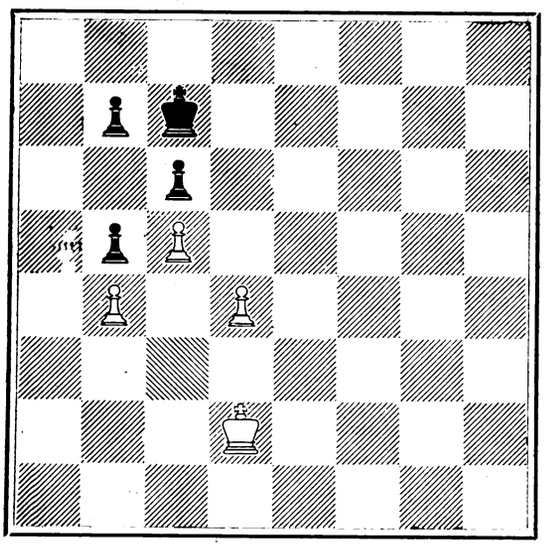
CHESS.

By "CARO-KANN."



PROBLEM No. 12.

White to play. What result?

As I anticipated, Mr. H. E. Atkins has succeeded in retaining the British Championship at Stratford-on-Avon. He had a very close struggle with Mr. F. D. Yates throughout; and it is interesting to note that his score is higher than in the case of any of his previous victories. 8 or 8½ normally wins; once, if my recollection is correct, 7½ was enough. This time Mr. Atkins has scored 9½, and with that remarkable score is 1 in front of the second. It is his ninth victory, and one can well imagine the record he would have put up if he had not retired some years before the War. As it is, were he not to win again, it will probably be generations before his record is surpassed, if, indeed, it ever is.

I give this week two more games from the Championship. The first is between Mr. H. E. Atkins (White) and Mr. W. Gooding (Black). 1, P—Q4, P—Q4; 2, P—QB4, P—K3; 3, Kt—QB3, Kt—KB3; 4, B—Kt5, B—K2; 5, P—K3, O—O; 6, Kt—B3, QKt—Q2; 7, R—B, P—B3 (1); 8, Q—B2, Kt—K5; 9, BxB, QxB; 10, B—Q3 (2), P—KB4; 11, O—O, Q—B3 (3); 12, Q—K2, K—R; 13, K—R, P—K Kt4 (4); 14, BxKt, BPxB; 15, Kt—Q2, Q—R3; 16, P—B3 (5), PxKBP; 17, KtxP, P—Kt5; 18, Kt—Q2, Kt—B3; 19, K—Kt, B—Q2; 20, P—K Kt3, QR—K; 21, R—B4, P—K4; 22, PxP, RxP; 23, Q—B2, Q—Kt4; 24, R—KB, R—Kt2; 25, P—K4, PxBP; 26, KtxP, R—QB4; 27, P—K5, resigns.

(1) This move suggests the intention to bring about the stonewall formation.

(2) Obviously not KtxKt, PxKt; 11, Q—P, for then Q—Kt5 (ch) with the better game.

(3) An indifferent continuation. Better would be Q—B2, leaving the square at B3 for the Kt. But whatever is played, Black has the worse game, being backward in development.

(4) Before doing this it would have been better to have played Q—R3 and then Kt—B3, but then the hostile Kt at K5 would make it a most difficult matter to develop the B.

(5) The way in which Mr. Atkins handles this position is beyond praise. From the beginning to the end he gives Black no chance.

The following game was played between Mr. F. D. Yates (White) and Mr. T. H Tylor (Black): 1, P—K4, P—K4; 2, K Kt—B3, K Kt—B3; 3, Kt B3, Kt—B3; 4B—Kt5, B—Kt5; 5, O—O, O—O; 6, P—Q3, BxKt; 7 PxB, P—Q3; 8, R—K, B—Kt5; 9, P—KR3, B—R4; 10, P—Q4, PxP; 11, PxP, BxKt; 12, PxB, K Kt—R4; 13, P—K B4, Q—R5; 14, BxKt, PxB; 15, Q—Kt 4, Q x Q; 16, P x Q, Kt—B3; 17, P—K B3, O R—Kt; 18, B—R3, K R—Q; 19, Q R—Kt, Kt—Q2; 20, R—Kt3, P—Q B4; 21 P x P, KtxP; 22, BxKt, PxB; 23, K—B2, RxR; 24, BPxR, R—Q7 (ch); 25, R—K2, RxR (ch); 26, KxR, K—B; 27, P—B5, K—K2; 28, P—B4, K—Q3; 29, K—Q3, P—QR3; 30, K—B4, K—B3; 31, P—K5, K—Q2; 32, KxP, K—K2; 33, K—Q5, P—Kt3; 34, K—K4, K—B; 35, PxP, resigns.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen & Co., The North-West Tannery, The Empire Engineering Co., and the Nani Tal M.T. Co. These Firms, by pooling their resources and centralising control, form a corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LALIMLI PURE WOOL

Makers of the famous Lalimli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPORE WOOLLEN MILLS CO., CAWNPORE

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO., CAWNPORE

COOPER, ALLEN AND COMPANY

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.

Everything in Leather.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The League and Mosul.

The Council of the League of Nations, as was to be feared, has not adopted a very heroic attitude towards the Mosul problem. After hearing statements and replies from the British and Turkish delegates, it has appointed a Committee to report on the subject; in other words, a committee to report on the Commission's Report, as well as on any other evidence that may be presented to it. This procedure is, perhaps, inevitable, but it leaves room for an almost indefinite postponement of the final decision. It is the fashion in many quarters to talk of the difficulty and delicacy of the Council's position; but why a solution of the problem in accordance—to use M. Briand's words—with "the superior interests of justice" should prove embarrassing to the League it is not easy to see. Only a wrong decision or an evasion of the issue can harm the prestige of the League; a definite settlement, supported by clear-cut arguments and pronounced with conviction will go far to strengthen the League's position. A compromise is out of the question; the problem does not lend itself to one, the Turks are resolved not to have anything to do with one. The Council should, therefore, deliver the judgment that its intelligence prompts, and leave the consequences to take care of themselves.

The Protagonists at Geneva.

When the Council came to deal with the Mosul question, the spokesmen of Great Britain and Turkey were invited to state their respective cases. Mr. Amery, by common consent, made a brilliant and effective opening for Great Britain. He reaffirmed the British promise to abide by the decision of the Council, and declared that Great Britain was prepared to carry out her mandatory responsibility on the present lines, in other words, to continue her co-operation with the Iraq Government after the expiration of the existing Treaty, but the British Government would not bind itself to the period of twenty-five years suggested by the Commission. Summarising the Commission's conclusions, he drew from them clear and definite support for the British claim. Tewfik Rushdi Bey was obviously handicapped by the weakness of the Turkish case. Before Mr. Amery had spoken, he had read out a formal protest against the alleged violation of the Brussels frontier line by British aeroplanes and against alleged aggressive action of British warships in Turkish territorial waters. Mr. Amery's reply was a prompt and convincing denial of the Turkish accusations; Rushdi Bey had no reply and had to content himself with reserving the right to raise the question again later. In the afternoon, on the subject of the Mosul frontier, he was equally unhappy. He had to avoid the Commission's conclusions, which are not favourable to Turkey, and relied for his arguments on some of the members' half-formed impressions or on passages torn from their text. Finally he denounced the mandatory system and declared that the League Council would only vindicate justice if it restored Mosul to Turkey. On the following day the two representatives spoke again; Mr. Amery replied to the Turkish arguments, but Rushdi Bey does not appear to have had much to say and declined to reaffirm the promise given by Fethi Bey that Turkey would abide by the decision of the League. The sub-committee of three—the representatives of Sweden, Spain, and Uruguay—was then appointed; it is not anticipated that this Committee will be in a position to report to the Council before the end of this week.

Great Britain's Attitude.

In spite of, literally, frantic efforts on the part of a section of the Press to stir up public opinion against British policy in Iraq, there are many indications that the sound common sense of the nation asserts itself in this question and that the British public as a whole refuses to be stampeded by a Press campaign of monotonous and undignified reiteration. Both the present Conservative Government and the late Labour Ministry have carefully investigated the Iraq question and satisfied themselves that

Digitized by Google

Great Britain is adopting the only policy consonant with her interests and with morality. The Liberal Party stands committed to a policy of withdrawal to Basrah, adopted more or less on an expression of opinion of Lord Oxford alone, in which it has not shown sufficient interest to reconsider, still less to reaffirm. Naturally the British public has no desire to throw money away heedlessly or needlessly; but when it has shrieked at it by the penny Press that already two hundred millions sterling have been sunk in Iraq, its business instincts prompt it to ask itself what is the best way of getting back some return on that expenditure. Clearly by scuttling out of the country now Great Britain will lose the whole of that money; by staying at a moderate annual cost, there should be some chance of recovering some part of the outlay, unless the genius of the British race is dead. So much for the beating by the terrorists of the big financial drum. When it comes—in the same Press—to the conjuring up of the bogey of war, with harrowing paragraphs of the horrors of the campaign, "British soldiers dying like flies," and so on, British public feeling can only be one of nausea and contempt. Were it otherwise, there would be much to be said for withdrawing not only from Iraq, but from every other part of our overseas Empire.

Britain and Iraq.

There will, no doubt, be some people whose misgivings have been aroused by the controversy over Mosul. They have no desire to see Great Britain involved in trouble with Turkey, and, believing that nothing turns out quite so badly as it is expected to, they would purchase good relations with the Turks at the expense of Iraq. Mr. J. L. Garvin, in the *Observer*, makes himself the exponent of these views. It is curious to find that such a shrewd observer of, and well-informed writer on, world affairs should have been reduced to so many dubious arguments in support of his contention. Mosul, he writes, "is the very model of a mouse-trap, and we are asked to walk into it." This is quite untrue. If we must have analogies, Mosul, that is to say, the present frontier, is a high brick wall dividing the Iraqi garden from the Turkish estate. The British and Iraqi gardeners have planted the garden right up to the wall and have even used its southern aspect for useful products that will not grow to the north of the wall. They are neither asking nor are they being asked to walk anywhere or into anything; it is the Turks who are demanding to have the wall demolished and are claiming a large part of the planted garden. Nor are we more impressed with the suggestion that Moslem India, after all that has happened in the Turkish Republic, will be more favourably disposed towards Turkey's rulers, whose religious zeal is at least suspect, than towards Iraqis, who are Moslems without the taint of free-thinking, even though they be divided into Shiahs and Sunnis. Again, Mr. Garvin likens Mosul to Chanak, with which it has nothing in common. If epigrams must prevail, it could more accurately be termed an Air-Gibraltar for the future highway of the Empire's air communications. Britain does not want to hold it for herself, but it should remain in friendly hands. Throughout two columns of unconvincing argument, there is no question in the *Observer* of the Iraqis. Grudgingly it is allowed that Iraq is to be protected for three years; thereafter, it is to be dismembered and thrown to the Turks. The abandonment of a single man in Khartoum was a crime and a disgrace to the Government responsible for it; what will be said of the betrayal of a whole nation who have pinned their faith to Great Britain, however much they may desire to be responsible for their own administrative machinery?

The Turkish Attitude.

Sooner or later the advocates of the scuttle policy come back to the strangest of strange arguments (in a British mouth): Turkey wants Mosul, therefore she must have it. They are impressed, not to say terrified, by Turkish insistence on the subject. A Turkish threat or "warning" is held over our heads, and we are bidden to tremble and obey. It is obvious that these people know nothing of Eastern methods of negotiation. If they knew more about present-day Turkey, they would realise that the Turks care nothing about Mosul in itself. If opportunity were given them to negotiate about Aleppo or Mecca, they would stage the drama with equal effect. They do not want to lose the opportunity of a *quid pro quo* for the Mosul vilayet; that much is true. Moreover, they were nervous about the effect of part of Kurdistan remaining outside Turkey; but they have now taken the measure of their own Kurds, and are indifferent to what happens to other Kurds. Turkey is not going to war with Great Britain over the Mosul vilayet. If a bad frontier is made, lending itself to Turkish incursions, raids there will be, until the major interests of Turkey compel her to resume friendly relations with Great Britain. An Iraq, on the other hand, deprived of British moral protection will be a gratuitous incentive to Turkey to reverse the verdict of the Great War and to flaunt her contempt for the League of Nations. Only a charlatan or an ignoramus will in one and the same breath pay homage to the League of Nations and advocate the abandonment of Mosul to Turkey. By all means let Turkey be admitted as a partner in the Mosul oilfields with Great Britain, France, the United States, etc.; but let us not be fearful of doing the right thing by Iraq.

The Jebel Druse Revolt.

The same uncertainty regarding the course of events in Syria persists as a result of the reluctance of the French authorities to take their countrymen into their confidence. Reports of the surrender of the Sueida garrison are current, but are not to be believed until further confirmation is received; news of a further mishap to French troops must also be disbelieved. As in Morocco the French Government has had to place Field-Marshal Pétain in charge of the campaign, so in Syria General Gamelin has been sent out to take command in the field, under General Sarrail. In both theatres the danger is that the natives will be able to hold their own until the winter season sets in, when France will be compelled to keep large forces under arms and so incur expenditure that is liable to be resented strongly at home. Moreover, the longer the Druses and the Riffis hold out, the greater the risk of their movements spreading to surrounding regions. There can be no doubt of France's capacity to master both, but General Sarrail was clearly late in appreciating the significance of the Druse rising.

Roumania's Land Laws.

In the midst of weightier matters that are occupying the attention of the Council of the League of Nations an episode in which Roumania played the chief part may be overlooked. A petition had been submitted to the League by Hungarian colonists in the Banat and Transylvania,

BULGARIA'S REFUGEE PROBLEM.

In spite of its full agenda, it is to be hoped that the Council of the League of Nations now in session at Geneva will find time to give consideration to the problem of Bulgaria's refugee population. Official statistics give seven hundred thousand, or fourteen per cent. of the population, as the number of refugees in Bulgaria. Of these, however, a little more than a third will have entered the country since the War, the greater number from Macedonia and Thrace, with possibly forty thousand from the Dobruja, Asia Minor, and territory in Western Bulgaria now ceded to Yugoslavia. Included in this quarter of a million refugees will be a number of *emigrés* who entered Bulgaria under the auspices of a Mixed Greek-Bulgarian Commission according to the provisions of a special Convention attached to the Treaty of Neuilly. This Commission was appointed to supervise so-called voluntary emigration between the two countries, and those who took advantage of its services could have their properties valued and count on receiving eventually payment for them, although only ten per cent is actually paid in cash. Even if their hopes in regard to the remainder suffer some disappointment, these *emigrés* will have reached Bulgaria with some money, whereas the refugees, whose numbers must be nearly two hundred thousand, will have none. In the case of the earlier refugees, those who arrived shortly after the end of the War, there can be no doubt that they found themselves welcomed as agriculturists in an agricultural country where the density of population has never been excessive, and did not have much difficulty in settling down in their new surroundings. The financial situation of Bulgaria was at that time fairly bright; no reparations were being paid, and the national currency had not seriously decreased in value. A certain amount of assistance, therefore, would be given to the new arrivals. Unfortunately for the country, the financial situation steadily became worse as the refugee tide increased in volume. The rural population was inclined to look askance at the newcomers, who were for the most part without funds, and, although the Government made sporadic efforts to alleviate their lot, the full gravity of the problem was not at first appreciated. The independence and self-reliance of the Bulgarian stood the refugees in good stead, but was powerless to make effective headway against the accumulation of hardship, privation, and impaired health which the refugee tide at its flood represented.

For the first time last winter the necessity of a more comprehensive scheme for dealing with the refugees was recognised by the Government, in the face of the danger of many of the refugees becoming tools in the hands of Communist agitators. Bulgaria, it must be remembered, is a poor country; the total amount of paper money in circulation works out at only thirty shillings per head. Although various societies have been at work relieving distress—the Bulgarian Red Cross, with its soup kitchens and orphanages, the British Save the Children Fund, with a small agricultural settlement scheme, the American Red Cross, with monetary donations—their efforts, even when supported by Government grants and Bank loans, were quite inadequate to meet the situation. The wider streams of foreign charity that flowed for Russians, Greeks, and Armenians, have, for one reason or another, not been tapped for Bulgaria. It may be that she has lacked the necessary political and social influence in Western Europe, or the fact that she has not cried out has led to the belief that she has no refugee problem worthy of attention. The time, however, has come when, in the interests not only of Bulgaria, but also of Europe as a whole, this problem must be dealt with on comprehensive lines.

The Bulgarian refugee problem is not as formidable as the Greek. A constructive relief scheme would have to make provision for from 150,000 to 200,000 refugees. There should be no question of charity, in the form of money doles. What is required is a plan which will enable the refugees to become productive, self-supporting citizens. Nearly all are by profession agriculturists. They are eager and able to work, but they lack the necessary tools and machinery. Foreign firms who produce agricultural implements are not able to sell large quantities of their goods in Bulgaria owing to the difficulty of obtaining prompt payment. Some arrangement might be made by which foreign firms send their goods on credit, and receive in return a guarantee by the competent body dealing out relief. A further need is housing accommodation. The conditions in the refugee area in Eastern Bulgaria are, we believe, deplorable. Hygienic arrangements are practically non-existent, and the flimsy structures which barely keep out the hot summer sun are quite powerless against snow and rain during the winter. An adequate housing scheme would have to provide some twenty thousand well-constructed habitations. Irrigation work may also prove necessary. The vast majority of the refugees are installed in the Philippopolis plain and in the country along the Black Sea coast. The land in these districts is rich, but the Philippopolis plain suffers from lack of water, while along the coast there are big tracts infested with malaria. These undertakings must naturally rank after the other needs of the refugees, but they play their part in any scheme for dealing with the problem on large and economic lines. It is estimated that a sum of two million pounds sterling will be required to afford Bulgaria adequate relief from the refugee incubus that now weighs upon her, and for this amount it may be supposed that the Bulgarian Government would be willing to give the necessary guarantee, provided that the financial terms of the loan were not too onerous. No one acquainted with the actual conditions in the country can doubt that external aid in one form or another is essential to a solution of Bulgaria's refugee problem. In view of the fact that the Greek Loan has been placed on an international footing, it is desirable that the League of Nations should do the same in Bulgaria's case.

The Near and Middle East*

From Our Own Correspondents.

Jerusalem, August 29.

The New Regime.

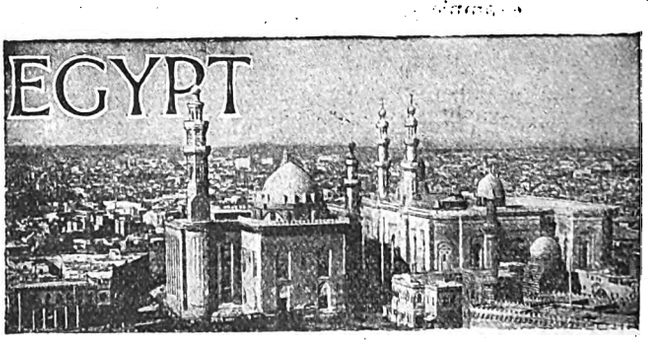
Lord Plumer is at last with us, the Samuel régime already seems a thing of the distant past, and everyone is holding himself alert to see what this new phase in Palestine's history is going to bring forth. The local Arabs—and many of the Jews are much the same— are beginning to mark minutely the new High Commissioner's every step, smile or frown: it is not part of their oriental political training to learn that an official may be only a piece of mechanism in a system and not necessarily the maker or marrer of the system. A flood of "open letters to Lord Plumer" is pouring out from the local Arab Press, consisting of welcome heavily diluted with advice and groans about the iniquities and burdens endured in the past. A refreshing exception is the *Mirât esh-Sharq*, the organ of the (comparatively) moderate "National Party." In the course of a long "open letter" in English, extending over four columns, it says: "We would not have the British public (of whose interest in the people of the Holy Land, we are gratefully aware)—we would not have them withdraw their sympathy from us in the belief that we 'have forgotten nothing and learned nothing.' We have learned much: we will readily forget much. More: we wish the date of your Excellency's arrival in our country, August 25, 1925, to mark a landmark in the so-called 'Arab problem' of Palestine. From this day we wish our attitude toward the officials of the Mandatory Power to be openly recognised and known as one that cheerfully discards grievances and habits acquired in past years, that cleanses from our minds all bitterness aroused by real or supposed injustice and misjudgments of the past." It then goes on to say that the great majority of the Arabs of Palestine are willing temporarily to shelve the Balfour Declaration controversy and to work wholeheartedly in co-operation with the Government provided only that the Government will re-open negotiations with native Palestinian leaders as to the possibility of making some slight modification in the "Order in Council" which covers the Constitution of Palestine. It is impossible to estimate exactly how true is this paper's assertion that it represents the bulk of Arab opinion, yet it is a noteworthy step to find some Arab opinion preparing to accept, more or less, things as they are as a basis for Arab politics.

Attempt at Arab Unity.

But Arab opinion is still far from having reached a common mind. Since the news of Lord Plumer's appointment Arab leaders have worked hard to beat out a common policy and to show a united front in (as they imagined) the completely new circumstances to be introduced by such a completely different High Commissioner. But these efforts seem to have borne no fruit.

The Jewish Attitude.

The Jewish attitude is mostly that of "wait and see." They are rather more alive than are the Arabs to the fact of the non-absolutism of whoever may be High Commissioner, and of the presumable permanence of Great Britain's policy. But they are not quite happy with the change from their smiling co-religionist (on whom, to some extent, they always felt that they could bring some degree of pressure in the shape of patriotic and religious appeal) to a highly placed military official who, they feel, will by his very nature and training lack all sympathy with their ideals and be totally unmoved by any pressure they may be able to bring to bear. Some of the Jewish leaders are pointing to what the Arabs have gained by their combativeness and opposition: they recommend their people to take a leaf out of the same book and by steady and persistent complaint recover little by little what (they claim) as a result of their mistaken complacency has been wrongfully withheld from them by the ex-High Commissioner's faint-hearted methods in applying the precise provisions of the Mandate. In this respect they point to the non-granting of waste Crown lands, excessive limitation of Jewish immigration, and other minor matters such as lack of financial support of Jewish education and (alleged) discrimination against Jewish officials and the Hebrew language. A symbol of the rise of this spirit of combativeness is the resurrection to active public life of Mr. Vladimir Jabotinsky as a power in Zionism. He was elected as a delegate to the Fourteenth Zionist Congress at Vienna by a new party in Palestine, which calls itself "the Revisionists," pledged to bid for much higher Jewish claims in the "National Home."



Cairo, August 30.

Cairo Fatiguing.

Every day and in every way Cairo, at this tail-end of the summer, becomes more and more depressing. The worst of the heat is over, but infinitely more disagreeable than the hot dry desert winds that sweep the capital from May to July is the sticky, clammy humidity that now, with the Nile at full flood, makes life extremely trying. Alexandria has the reputation of being damper and nastier than Cairo in August and September, but, for weeks past, not only has the normal daily temperature (92 deg. F. to 95 deg. F.) of the capital been considerably higher than that of the seaside town, but also the relative humidity, ranging between 72 per cent. and 84 per cent., of Cairo has been much the greater. In such weather clothes cling and all effort, mental or physical, becomes burdensome

Athletic enthusiasm flags, and the only popular diversion is to motor out along the Mena road towards sunset and enjoy the slightly drier and fresher air blowing across the desert. Everybody who can get away is away in Europe, business is practically at a standstill, and the sole opportunities for amusement are offered by *rechauffé* cinema films of the year before last.

Stagnation.

Political activities are as stagnant as all others: with the Premier and half the Cabinet absent in Europe, the Government is merely marking time until the autumn, and newspapers are hard put to it to fill their columns. Even criminals, if recent statistics are to be trusted, are suffering from the general lassitude, for law-breaking of every kind has shown a marked decline of late. Alone of the community, doctors, such of them as are not away on holiday in Europe, are busy, for this heavy, damp warmth breeds flies, germs and sickness, and sore throats, influenza colds, typhoid and dysentry are rife. Undertakers, too, should be happy, for during three weeks of the past three months the number of deaths in Cairo has exceeded the total of births. This fact has caused much comment and alarm in the local Press, and, indeed, it is somewhat remarkable. Without being in a position to say that never before since statistics have been published have the capital's departures exceeded the arrivals, I can certainly affirm that, apart from the time of the influenza epidemic shortly after the War, the present summer is the only period in recent years when there have been more deaths than births during three weeks out of twelve. he mortality is, of course, largely infantile, the rate for which is, at this time of year, always very high, due mainly to gastro-intestinal troubles, which, again, are traceable chiefly to deficient and defective milk supply. Buffalo milk is largely used by the poorer classes in preference to the more expensive cow's milk, and buffalo milk, with its high content of very undigestible casein, is poor stuff for babies at the best of times. When it has been liberally adulterated with unfiltered and probably infected Nile water, and then exposed for a few hours to the attention of innumerable flies, come thither to refresh themselves after hot and toilsome hours on street rubbish heaps, the "milk" becomes about as wholesome and nourishing an article of food for children as would be rat poison. Hence the very high percentage of the city babies of Egypt who never live to celebrate their first birthday anniversaries.

Gifts for Waifs and Strays.

The good example set by King Fuad in giving £12,000 for the establishment of a naval training school for waifs and strays has not been without its effect on others, for now Prince Amr Ibrahim has come forward with the offer of his steam-yacht, the Sakaria, for the school. The Sakaria is a very trim craft of 350 tons burthen, for which the Prince paid £15,000 and, although a private yacht may need considerable refitting to make it suitable for a training school, the committee appointed by His Maiesty to proceed with the scheme is evidently convinced that the conversion is practicable, for it has advised that Prince Amr's offer should be acepted. Prince Amr (who is, strictly speaking, a nabil, not a prince) is a son of the late Prince Mohammed Wahid ed Din, and is not likely to feel the loss of the Sakaria very keenly, as he owns two or three other yachts, besides having an income of over £25,000 a year.

Retirement of Mr. Bury.

Mr. L. E. Bury, of the Ministry of Public Works, is retiring from the Egyptian Government service to take up the appointment of Adviser to the Iraq Ministry of Public Works, a post offered to him some months ago, and which he has now definitely accepted. Mr. Bury, who was at Eton and Trinity, Cambridge, has had twenty years' service in the local Irrigation Department. He is a very capable official, whose work has not been confined to routine channels. Indeed, during a considerable portion of his service he has been on special missions of one kind or another, the most recent of which was that of Mr. Dupuis, to whom Mr. Bury was personal assistant during Mr. Dupuis' investigation of Nile problems. During the War Mr. Bury was appointed as Deputy Director of Inland Water Transport, in which capacity he was awarded the C.B.E. It is a striking tribute to Mr. Bury's qualities that, in spite of his good fortune, he is exceedingly popular with fellow officials of the Irrigation Department.

Sofia, September 2.

The Government's Position.

On returning from Rila Monastery, where he has been spending the holidays, Professor Zankoff gave an interview to a local Government newspaper in which he strongly denounced the activities of certain politicians who had been advocating a change in Government. M. Zankoff declared that there was no necessity for any changes in the Cabinet, and that what Bulgaria required was a strong and stable Government.

The Prime Minister's words are generally interpreted as a sign that he is going to resist to the last any attempt which may be made to change the personnel of his Ministers. It will be highly interesting to see how Professor Zankoff's attitude will react on the Government and on himself. There is one current of opinion which maintains that in openly giving battle to his critics the Premier has considerably strengthened his position and will probably be able to remain in power, along with his present companions, for another year. A different opinion prevails amongst another section of political observers, namely, that M. Zankoff, in refusing to allow his Cabinet to be reconstructed, has jeopardised his own position, which formerly was not in any danger. Time alone will show which view is correct.

Bulgaria and Turkey.

After a prolonged visit to Angora, M. Simeon Radeff, the Bulgarian Diplomatic Representative at Constantinople, has been unable to come to any agreement with the Turkish Government regarding matters outstanding

between the two countries. It is, of course, officially announced that negotiations have not been broken off, nor even adjourned, but if one reads between the lines one can see that Turks and Bulgarians are not yet going to conclude a Treaty of Alliance, an event so frequently predicted by certain London newspapers. If the truth be known, neither country is very keen to get back to normal relations because neither minds very much about the other. Turkey has got her hands quite full enough in Asia Minor, while the same remark applies to Bulgaria with her neighbours. No doubt in time some kind of Treaty of amity will be signed, but there are absolutely no indications of any real Turko-Bulgarian friendship. Very probably M. Radeff will soon hand over his task to someone else, as he has been appointed Minister to Washington, and is shortly expected to take up his new post.

British Warships at Varna.

Two units, H.M.S. Frobisher and Dragon, belonging to the first cruiser squadron of the Mediterranean fleet arrived at Varna on August 30, and will remain for eight days. It is four years since any British warships have anchored in Bulgarian waters and Varna is delighted at their visit. Rear-Admiral Waisdell, whose flagship is the H.M.S. Frobisher, fired a royal salute on entering Varna in honour of King Boris, who is at present residing at Euxinograd Palace. This week the Admiral has been received in audience by the King, whilst a gala dinner, in the King's honour, will probably be given on the Frobisher. The officers and men of the two ships have played football matched against local teams, the most important match being won by the Bulgarians by two goals to love. After leaving Varna the warships will proceed to Constanza.

Miscellaneous News.

The Bulgarian Delegation of the Annual Assembly of the League of Nations will consist of the Foreign Minister, M. Kalfoff, and the former Ministers M.M. Michael Madjaroff and Danailoff.

Miss Helen Wilkinson, Labour M.P., for Middlesborough, has just paid a short visit to Bulgaria.

CYPRUS.

Nicosia, September 1.

Death of Irfan Bey.

The Turkish community has suffered a great loss by the death of one of its most active and prominent members, Irfan Bey. For many years he has been the most able of the Ottoman members of the Legislative Council, as well as member of the Executive Council. He also held with ability the office of Turkish Delegate of *Wakf* in the Department which administers Moslem properties dedicated to religion and charitable purposes. In this he co-operated zealously with successive British delegates. He was very energetic in the Legislative Council. He strenuously opposed the efforts of the Greek members to intrude political aims into debates, and—with the Moslem colleagues—supported measures which had for their object the progress and welfare of the island, and which were often opposed in a spirit of pure obstruction which culminated in late years in a foolish withdrawal of Greek members from the Council.

The funeral service, at the Ayia Sophia Mosque, was attended by a large number of Moslems, by ex-King Hussein, the A.D.C. of the Governor, the Chief Secretary, and heads of Departments. By permission of the Government he was interred in the precincts of the *Yéni Jami* (New Mosque), as he had desired.

Water Supplies in Cyprus.

Not is there often a lack of water for irrigation, but in many places a supply of drinking water is deficient both in quantity and quality. In many villages the women have had to toil daily to more or less distant springs, or wells, in the latter case bringing turbid supplies drawn in leather buckets. In some villages, even where Moslem inhabitants largely predominate, only muddy water can be obtained except in houses where it is filtered in porous jars. Since the British occupation praiseworthy efforts have been made, not only in towns but in many villages, where, often after much wranging and opposition, it has been decided to bring in a good supply by iron pipes. A great change has been brought about, and the value of an adequate and pure supply is very generally recognised. Strange to say, in the capital, Nicosia, the water supply has often been the subject of complaint. It has sometimes been due to the contamination in the channels of supply; sometimes to the distribution, quantity, etc. A Water Board is charged with the duty of maintenance and distribution, but it does not seem to have fully grappled with all its difficulties. This year again there are much grumbling and dissatisfaction, on account of a shortage in the hot season. It seems desirable that all obstacles should be resolutely faced, and that, whatever the cost, the supply should be placed on a footing worthy of the city which is the capital of the island and contains the largest population.

(Continued from page 302.)

complaining against the treatment that they had received under the Roumanian Land Reform Laws, and implying that the Roumanian Government was failing in her duty to minorities. The reply of the Roumanian Government was given by M. Titulesco, Minister to the Court of St. James's, who in a trenchant *exposé* of the scheme of land reform, which had been carried out throughout the length and breadth of Greater Roumania, had no difficulty in convincing the Council that not only had no regulations been applied in the case of the colonists that had not been enforced everywhere else, but that the Roumanian Government had actually decided to distribute as a free gift the sum of seven hundred gold francs among the colonists, with a view to helping them over a time of difficulty which was being experienced by the whole country. M. Titulesco's address appears to have made an exceedingly favourable impression on the Council.

The Attack on the Desert Convoy.

Mr. Stephen Bentley, who was in charge of the Nairn motor convoy from Baghdad to Beyrout, which was attacked on August 26 at a spot 34 miles from Damascus, has, we regret to learn, died from the wounds that he then received. Mr. Bentley was well known in connexion with the Desert Mail Service and was highly esteemed by passengers on the route. Being in charge of the convoy, he would naturally be bringing up the rear, and it is significant that, while the other cars escaped with two passengers slightly wounded, Mr. Bentley drew the worst of the attack on himself.

LAND REGISTRATION IN EGYPT.*

III.

Before discussing the results of the first eighteen months' working of Egypt's new land-registration system, the lessons learned and defects discovered during this initial period, it will be well to re-state briefly the position. Since January 1, 1924, registration of transactions in real estate has been compulsory; deeds must be drawn up on specially embossed paper, sold by the Survey offices, and must be drafted in the manner laid down, furnishing all information which may subsequently be required for identification purposes; photographic copying of deeds has been substituted for cumbrous and sometimes inaccurate hand copying; and the Survey Department has opened over sixty inquiry offices in convenient centres all over the country, to assist vendors and buyers in their transactions. This, shortly, is the part of the reform that has so far been given the force of law.

What has not yet been done, but remains an essential preliminary to the functioning of a complete system of land registration, is:—

(a) Making compulsory, through some form of public declaration, the registration of existing rights over land;

(b) The institution of a body of officials, under the control of the Ministry of Justice, to scrutinise and ascribe authenticity to deeds, as a necessary complement to the task, which the Survey Department has been fulfilling since January 1, 1924, of verifying the description of the property referred to in deeds submitted for registration and of guaranteeing, after verification, that the deed exactly identifies and describes the land in question.

It will be appreciated that, until the existing machinery has been extended and developed so as to enable it to perform the above-mentioned two essential functions, it will be impossible for the Egyptian Government to give one of the most important advantages of land registration, namely, guarantee of title.

Without compulsory statutory declaration, applicable to all landed property, such property will only come under notice of the registering officials, and will, therefore, only secure entry in the Land Book and complementary registers, if and when there is a transference of a right in that property. So that several decades might elapse before the Land Book would become complete.

Until the completion of the reform by the introduction of the regulations just mentioned, the Land Book and kindred registers can have no official value. But, in anticipation of the full scheme being put into early operation, the Survey Department, simultaneously with the initiation of compulsory registration of translatory deeds, introduced into its machinery the three registers which will form the basis of the complete system, namely, the Land Book, the Register of Proprietors, and the Register of Charges on Property. The revision of the triangulation of the country was undertaken; the proprietory survey begun in new areas, and, as mentioned above, inquiry offices attached to all District Survey offices to assist applicants in precisely defining property to be registered. A delay of six months was granted, as an incentive to property owners to register, for the registration of previously executed deeds at a reduced fee of 2 per cent., instead of the normal 5 per cent. *ad valorem*.

Procedure in a Land Transaction.

Before discussing to what extent these innovations have justified the hopes which accompanied their introduction, it will be as well to describe exactly what happens when two typical Egyptian peasants carry through a deal in land. The description applies to Menufia Province, where, as previously explained, the reform is being put into more complete operation than in any other province.

Every province is divided into cadastral sections, and in each section is located a Survey detachment, with one or more survey officers and the necessary assistants. The owner of the land and the would-be buyer notify the survey officer of the section in which the land is situated, or, if more convenient, the local district Survey office, that the sale is intended. The notification gives all the details which the parties themselves are able to supply. The notifications are entered in the register of the local Survey office and dealt with in rotation. The official in charge of the most conveniently situated Survey detachment is instructed to proceed to the property involved, and, in the presence of the owner, intending buyer, any neighbours who are available, and the Omda or Sheikh of the village, the tract concerned is measured and delimited by means of beacons placed at the corners. A document is drawn up by the Survey official giving the location, boundaries, etc., of the parcel of land to be sold. This document is signed by the surveyor, the parties to the transaction, the Omda or Sheikh, and the neighbouring landowners, and is then sent to the local Survey office, where the description and area are checked with the 1 : 1,000 map of the district. The parties are then instructed to present themselves, on a named day, to complete the formalities of sale.

Arrived at their local Survey office, they pay P.T.5 for a deed form, printed on the embossed paper already mentioned. If they are able to fill up the form themselves, they are at liberty to do so, and the clerk in the inquiry office will give them every assistance in the task. But if, as is more probable, they are unable either to read or write, the clerk will write the deed for them, without fee. This service is very frequently utilised, and is satisfactory from every point of view, ensuring not only that the deed shall be in proper form, but also that a standard quality of black ink, the most suitable for the subsequent photographic reproduction, shall be used. The draft deed, giving all information necessary for the identification both of the property concerned and of the parties to the transaction, is then returned to the buyer of the land, who takes it to the office of the Mixed Courts official attached to every District Survey office, to carry out the legal formalities and collect the fees connected with the execution of deeds of sale of land. The fee of 5 per cent. of the value of the land is paid, a receipt being given, and the parties sign, or attach their seals to, the deed, the signatures being authenticated by the registration clerk.

The deed is then sent to the photographic department, which makes two copies, one of which, together with the original, is sent to the central registry of the Mixed Courts, in Cairo. The other copy is given to the buyer.

The normal delay between the date of notification by intending parties to a transaction and the signing of the deed, on completion of all formalities, is five or six days. But this period is only necessary for the transaction which involves a plot of land's first appearance in the registers. Once the identification and measurement of the plot have been recorded, any subsequent transaction concerning the same area can be completed within a few hours.

Building up the Land Book.

Although, as pointed out above, the Land Book will have no official value until the complete reform has been put into operation, the Survey Department has, since the inception of the scheme on January 1, 1924, entered every registered transaction in the Land Book, the Register of Proprietors, and the Register of Charges. The entries are made from the photographic negatives, which are filed in the District Survey Offices. Although the records thus made have at present no legal recognition, they will afford valuable evidence in the event of future disputes regarding ownership of registered land. Moreover, the nucleus of a complete Land Book is being built up. Special maps are kept in each District Survey Office, and whenever a plot is registered for the first time it is coloured yellow on the map, so that, at a glance, it can be seen whether any particular plot has been registered or not. It is interesting

to see, after only a little over eighteen months, how large a total area has already come within the cognisance of the —as yet—unofficial records. But the most important feature of the work is, perhaps, the training it is giving the Survey officials. When the time comes to establish the registers as an essential and unquestionable record of land tenure, there will be a large trained staff ready and competent to undertake the work.

The Land Book is a 250-page volume of the loose-leaf type, one village to each volume, each plot having a page to itself. Eventually, it is anticipated, there will be one volume to each hôd. The Register of Proprietors is arranged on the basis of one Markaz to each register, and is on the small loose-leaf book system. The Register of Charges is a loose-leaf volume of 500 pages, kept by unit of property, designed to record the details of charges on land for which there is no room in the Land Book, where only the main features of the often very numerous and complicated charges can be entered.

The working of the present system having been thus briefly sketched, it is useful to examine the results hitherto achieved.

The Results Accomplished.

Making registration of deeds compulsory has not, it may be admitted, resulted in parties to deeds invariably feeling themselves compelled to register. There is abundant evidence that the drafting of occult deeds, to which it was hoped the law stipulating that no right could be transferred without registration would put an end, is still widely practised. This results from a variety of causes. The admittedly very high registration fee of 5 per cent. *ad valorem* is, doubtless, a deterrent from registration to many purchasers of property. Others, well able to afford the fee, hope that its recent increase from 2 to 5 per cent. may prove to have been only a temporary measure. They are, therefore, waiting to register their property after the expected reduction has been made. It is possible, also, that many peasant landowners, accustomed to the transference of land by the simple consent of the parties concerned, have not yet appreciated the new principle introduced by the recent law. It is further conceivable that a simple-minded peasant, having in his possession a deed of official-looking stamped paper, in itself a more legal-looking document than anything to which he has previously been accustomed, thinks it good enough for him, and refrains from the further and expensive formality of registration. That this attitude accounts for the failure to register a large number of deeds seems to be indicated by the fact that in 1924 the Survey of Egypt printed and sold 331,846 sheets of specially embossed paper, of which only 105,489 were registered. These represented 40,873 deeds, and on this basis, after taking account of the number of sheets which might have been spoiled, destroyed, or lost, and allowing for stocks held by lawyers and banks, it is estimated that over 80,000 *sous seing privé* deeds were executed in 1924, but not registered. From other sources it has been established that only one out of every four deeds executed in 1924 received registration.

As against this unsatisfactory state of affairs, there is the encouraging fact that the first three months of the present year showed a marked improvement on the similar period of 1924. Indeed, during the first quarter of this year the total number of registrations—19,404—exceeded that of the first seven months of 1925. There is, therefore, ground for hoping that, even without the introduction of the second part of the reform, the public would gradually come to regard registration as an essential part of any transaction in land. A buyer who fails to register his purchase exposes himself, of course, to serious risks, should he at any time in the future have to establish his title, but in very many cases, and not alone of peasant farmers but also of Europeans, the purchaser, when he has confidence in the integrity of the vendor, prefers to run the slight risk of complications in the future rather than pay the heavy 5 per cent. *ad valorem* registration fee. In such cases all that is done is for the parties to get "*date certaine*" of their documents in the Mixed Court registry, or merely have their signatures legalised, on payment of a small fee, by the Native Courts or the Mekhemas Sharia. By a curious inconsistency the Mixed Courts still give "*date certaine*" to deeds which, legally, must be registered under the law enforced on January 1, 1924, and it has been ascertained that out of 62,879 deeds given "*date certaine*" last year, no fewer than 39,749 ought to have been registered and have paid the 5 per cent. fee.

Without investigating all the minor deficiencies which eighteen months' working has discovered in the present system, and many of which are peculiar to Egypt and Egypt's multiplicity of legal jurisdictions, it may be said that, while the present partial system of land registration has not given quite the results which had been hoped of it, it has afforded valuable experience, and has reinforced the arguments, enunciated by the 1917-1921 Commission on Land Registration, and adhered to ever since by all the officials concerned in the work, that the reform can only become fully operative and fully beneficial when it is a complete system, embracing registration of title with State guarantee. This postulates that all deeds should be authentic, that a corps of officials should be formed to undertake the work of scrutinising deeds and ascribing authenticity, and that the Mixed Courts, Native Tribunals, and Mekhemas Sharia should not give "*date certaine*" or legalise signatures to deeds susceptible of registration unless and until registration is effected.

The full reform might already have been put into operation in Egypt were it not that this country's exceptional international status and the obligations undertaken in virtue of the Capitulations render the introduction of any new legislation affecting foreigners and their property rights a matter of great difficulty, which can only be carried through with the consent of all the Capitulatory Powers. The institution of the Land Book as the basis of title to property and the investing of the Land Book and its complementary registers with the qualities of absolute guarantee, not opposable by any third party, is a reform so sweeping that several more years may well elapse before agreement by all the interested parties has been reached.

EX-KING HUSSEIN AND GREAT BRITAIN.

[We reproduce below a copy, sent to us by the late King of the Hejaz from Cyprus, of the letter which ex-King Hussein has directed to the British Prime Minister.—ED.]

To His Excellency,
The Right Honourable Stanley Baldwin, M.P.,
Prime Minister of England.

Your Excellency,—On the pretext put forward by Ibn Saoud that I turned Maan and Aqaba into two military ports I was requested by the British Government to leave Aqaba and was taken away from my country and my people.

In order to avoid any possibility of misunderstanding, and not to place the British Government in an invidious position with Ibn Saoud I was compelled to comply with the request of your Honourable Government, however severe and harsh.

Telegrams purporting to emanate from London and recently published in the Egyptian Press state that I am in Cyprus as a prisoner of war. Such false statements cause much anxiety to my people at home and to my friends. I am consequently addressing your Excellency with a view to clearing the situation and in the hope of coming to some understanding.

May I remind your Excellency of the contents of the letter addressed to me by your Foreign Office as follows:—

"As the Sultan of Nejd has prepared troops to attack Aqaba for the sole reason that your Majesty and the Government of the Hejaz have made Maan and Aqaba two military ports and as the British Government is re-

Digitized by Google

sponsible for the public security of Palestine and the eastern part of Arabia, including Maan and Aqaba under our Mandate, we beg you to leave Aqaba in three weeks time."

Notwithstanding the fact that the statements of Ibn Saoud concerning the turning of Maan and Aqaba into military posts were absolutely false, I left Aqaba in order to continue on terms of good friendship with your Honourable Government. Neither myself nor the Hejaz Government have at any time made Maan or Aqaba military ports, or taken from them any one soldier to take part in the war again Ibn Saoud. The ports were used for the transport of volunteers who offered their services of their own free will to help in the defence of Jeddah and the Hejaz Railway.

I earnestly desire that your Honourable Government should cause an official inquiry to be made into the facts in order to convince themselves as to the truth of my statements. It was a most unjust proceeding for your Honourable Government to require me to leave my country owing to a tissue of false statements by Ibn Saoud, he at the same time being permitted to carry on his operations without let or hindrance, even to attacking Mecca, taking the lives and fortunes of the people, committing acts of rape and destruction in the Sacred City of the Mohammedans and on the neighbouring Arab tribes, who have a right to look to the British nation for protection, help, and sympathy against such wanton acts.

If your Excellency considers I am in any way guilty of any act, I am willing to accept personally, without complaint, any penalty that may be imposed on me, but I wish it to be clearly understood that my actions have always been governed by sincerity and faithfulness to the British Government and the British people.

It has always been my most fervent desire for the sake of my country and the United Kingdom as an allied country, to put into operation the articles of the Treaty agreed upon between your Honourable Government and myself, and in virtue of which I made so many promises to the people and tribes that gathered round me in the Great War, suffering all the hardships and losses which follow in the track of so great a conflict, faithful in our allegiance to the British Empire through the dark days when the Dardanelles were evacuated and Kut el Amara and Paris were in eminent danger. During that anxious time your new friend Ibn Saoud was living a happy and secure life, regarded by all as our mutual enemy. If such significant facts as these can possibly be forgotten by the British nation, history at least will perpetuate them to serve as a lesson to the small nations.

Kindly permit me to bring to the notice of your Excellency the intense surprise expressed by the Arab tribes that it should be possible for Ibn Saoud to raise so considerable an army unassisted, for the purpose of attacking the Hejaz. The completely crippled condition of Ibn Saoud after his reverses in the Great War is still fresh in the minds of the Arab people. It will be remembered that during the Great War he was attacked by Ibn Raschid and was defeated in the famous attack on Gourab. This defeat was completed at Koweit, when Ibn Saoud escaped leaving in the hands of the victor all he possessed in men and munitions. At that time Ibn Saoud requested my help, and I at once dispatched my son Abdullah with the necessary number of troops. They arrived after the complete defeat of Ibn Saoud and protected him from any new attack by Ibn Raschid. After staying for one month in the famous village of Shaara, my son and his troops compelled Ibn Raschid to return back to the limits of his own country.

In order to make clear to your Excellency and the British nation the ideas and aims regarding the Arab nation for which I have always earnestly strived, I give you below the text of a letter which I addressed to Ibn Saoud and sent to him by his delegate who came to Mecca in 1340 at the head of some 7,000 pilgrims.

"To His Excellency Ibn Saoud.

"I pay to you my compliments and my respects. It was a great pleasure for me to receive the letter you kindly sent to me by your delegates el Sheikh Massaed Ibn Swalem, and his friends. I was delighted to receive them and I thank God for the information they gave me concerning your good health.

"I thank you sincerely for the kind expressions concerning myself contained in your letter and I pray that God will reward you and that He will help both of us to act in the right way and make both of us the best of men.

"I grieve to think of the past, of the troubles and trials which the nation has suffered and which is so well known to all, but such has been the will of the Almighty. Under all conditions I assure you, Abdel Aziz, that you will always find in me the same faithful friend who will not change with circumstances or situations, as my nature does not alter.

"That which I have explained to your Sheikh Ahmed Ibn Thenian will continue to be my firm principle, as my pre-eminent desire is for your happiness and prosperity and that of all the Arabs, and I swear to you by God who created Heaven and Earth and all that in them is that this is my one and only aspiration, and to secure this end I am prepared to hand over to you the country and the power with the greatest of pleasure if the misfortune and suffering of the people, which has been experienced in the past and in all probability will be experienced in the future, will thereby be alleviated and avoided.

"I have explained fully to your delegate Sheikh Messaed Ibn Swalem all my hopes and aspirations. All that I have said to him is the most sincere truth, from which I will never depart and will never desire or dream of anything but the prosperity, happiness and greatness of the Arabs.

"I am perfectly in accord with you that time does not permit of further experiment and we must work sincerely for the nation's good.

"I pray to God that He will lead us both in the right way and that He will guide our efforts to bring forth the most good for the country and the people.

"With my sincere compliments to you."

Unfortunately for all of us Ibn Saoud did not deign to reply to this letter.

In view of all that has happened I approach your Excellency in my previous capacity as King of Hejaz and a true and honest friend and ally of the British nation with the request that your Honourable Government should take such steps as are compatible with the honour and dignity of Great Britain to protect the Arab nation from the continuance of the disturbances which are a sore trial to my people and can only terminate in the utter ruin of the country, the continuance of which is in complete contradiction to the declaration of His Excellency the High Commissioner of His Majesty the King of England, who in his letter addressed to me dated August 30, 1915, expressed the great desire of His Majesty and his Honourable Government for the progress of the Arabs and their acquiring their previous prosperity and independence, stating that the interests of the Arabs would be considered as those of the British Empire; with other expressions full of sympathy and friendship, causing us to unite in strong allegiance to the British nation and to fight against our own people.

If it is any offence to remind your Excellency and your Honourable Government of these facts, it should be considered justification that I gave up the throne and agreed to live in a small corner of my country in the hope that by so doing it would enable the British Government to avoid the destruction of her old friend the Hejaz.

With regard to the Mandate referred to in your letter from your Foreign Office, I refer your Excellency to the communication addressed by his Excellency Field-Marshal Lord Allenby to the Arab Government on this subject dated October 20, 1918, copy of which you doubtless have on his files.

With reference to the decision of the League of Nations which you mention, it has never been heard that the people of the eastern part of Arabia, Maan and its dependencies, have ever been consulted, and such consultation is the fundamental principle of the Mandate.

In spite of all that has been said and of any discussions, if the British Government has any special interest in occupying any part of the world they are powerful enough

Digitized by Google

to do it openly, without opposition and without recourse to methods which will result in human disaster.

I send your Excellency cordial greetings. May God guide you in your deliberations and may the peace and prosperity of the Arabs be assured by your wise and sympathetic intervention.

(Signed) Hussein Ibn Ali, late King of Hejaz.

Nicosia (Cyprus), August 22, 1925.

AN APPEAL FROM MECCA.

[We have received from a correspondent the following translation of an article that appeared in *Al Mokattam* of August 20. It is a message which reached the Cairo journal from Mecca, having been sent by "Mohammed Effendi Rustem, Chief Secretary of the Royal Party, Mecca"; and it is stated that copies of this message have already been submitted to the Foreign Offices of all Moslem States.—ED.]

THE MECCANS AND THEIR NEIGHBOURS APPLYING FOR THE SUCCOUR OF THE MOSLEM WORLD.

To the Moslem World.

Peace be unto you and God's mercy and blessings.

Owing to this disastrous war, which has affected everybody and everything, and especially owing to its prolongation, the people of the Hejaz—in other words, the inhabitants of Mecca and of its suburbs, and the Bedouin—are completely destitute. They are compelled, therefore, to transmit this message to their Moslem brethren in order to supply them with the following information.

1. The inhabitants of Mecca and of its suburbs are greatly dissatisfied with the inhuman and cruel treatment meted out to them by the Nejd Government and by the Army of Occupation. Dissatisfaction is due to the facts given below:—

(a) They (the Government and the Army) consider our creed to be foolish and vain. They adopt queer systems of dogma inconsistent with those laid down in the Quran and in the Traditions. Both the Quran and the Traditions are interpreted by them (the Wahhabis) in such a manner as to support their dogmas and opinions.

(b) They force us against our will to follow their beliefs.

(c) In a very insulting way they scourge everyone whom they find smoking.

(d) The Sultan's representatives who are put in charge of the administration of the Hejaz are an ill-tempered, capricious, and ignorant type of official, whose one maxim is "Might is Right."

(e) The present Government has made a proposition to the local traders and financiers for the raising of a loan, and the proposal is being forcibly carried out, so that any goods or merchandise in this territory are confiscated by the Government.

(f) All necessary war provisions are being obtained from this territory.

(g) They (the Government and the Army) have demolished all the Religious Sacred Places which Moslems have greatly respected and honoured.

(h) They have no regard for the personal liberty of a man's private life.

(i) They have already exhausted all the local cash (moneys), which is exchanged for the new beaten coins of Sultan Ibn Saoud, and these coins have been put into currency.

(j) They ill-treat and keep under surveillance any person against whom any charge is made, without inquiry into such groundless charges.

And these are only a fraction of the complaints made by the population of the Hejaz against the present Government of Nejd.

2. The Hejaz being an independent State, the above-mentioned treatment considerably affects the rights of the Hejazis.

3. The Hejazis support with all their might the measures taken by the Government of Jeddah.

4. The Hejazis publicly declare that they desire never to renounce acknowledgment of King Ali as their lawful Sovereign.

5. Declarations made by the Sultan Ibn Saoud, or by his deceiving followers, can never be considered as indicating the free opinions of the people of Hejaz. The deprivation of our liberty and the practice of coercion upon us are measures commonly taken against us by the present cruel Government.

We, the people of the Hejaz, submit this information in the full confidence that in sympathy our Moslem brothers will consider our complaints carefully, and, mindful of our afflictions, hasten the deliverance of the inhabitants of the Holy Land.

(Sd) Mecca's Young Men's Ethical Association.

(Sd) Mecca's National Association.

(Sd) Mecca's Liberal Party.

On Behalf of all the inhabitants of Mecca, of its Suburbs, and Bedouin.

THE IRAQ "PLEDGE."

Rarely can a political question have been subjected to such gross and deliberate misrepresentation as that of Great Britain's relations with Iraq. The statement regarding an evacuation pledge appears to have been started, or at least was recently revived, in the *Daily Mail* of August 31. It was there stated:—

"Mr. Baldwin stated on May 3, 1923, that we were to withdraw from Mesopotamia after an interval which will terminate three years hence, on August 6, 1928."

On September 4 it was stated:—

"The proposed policy of the Government is a direct breaking of a pledge. We are pledged under a treaty . . . to evacuate the country in another three years."

On September 5:—"We have given a pledge to retire from the whole region in August, 1928."

The allegation of a "pledge" is echoed and improved upon by all newspapers that take their views and facts from the *Daily Mail*, until it becomes in the *Evening Standard* "a protocol, definitely reducing the mandate *(sic)* from twenty to four years." Mr. J. L. Garvin apparently repeats the misstatement in the *Observer* of September 6 in the words:—

"Mr. Baldwin, when Prime Minister for the first time, engaged to terminate this commitment within three years from now."

The reference in the *Observer*, it must be admitted, is not clear. Mr. Baldwin was Chancellor of the Exchequer, and not Prime Minister, on May 3, 1923. On that date he announced in the House of Commons the Government's new policy in regard to Iraq. He stated that "in order to obviate the inconvenience of introducing amendments into the body of a Treaty already signed, it had been decided to bring about the necessary modifications by means of a protocol," and he proceeded to read the text of the Protocol, which runs as follows:—

"It is understood between the High Contracting Parties that notwithstanding the provisions of Article 18, the present Treaty shall terminate upon Iraq becoming a member of the League of Nations and in any case not later than four years from ratification of peace with Turkey. Nothing in this Protocol shall prevent a fresh agreement from being concluded with a view to regulate the subsequent relations between the High Contracting Parties; and negotiations for that object shall be entered into between them before the expiration of the above period."

Not a word was said about evacuation, and it is obvious that the last sentence of the Protocol, if it does not definitely preclude evacuation, rendered any pledge to that effect impossible at the time when Mr. Baldwin was speaking.

The Greek Government is to sell by auction the furniture and other contents of the Archileion, the Royal Palace in Corfu, built by the Empress Elizabeth and acquired by the former German Emperor, Wilhelm II.

PERSONAL AND GENERAL.

TO-DAY

September 10, 1925 (New Style).
August 28, 1925 (Old Style).
Saphar 21, 1344 A.H., of the Moslem Calendar.
Ellul 21, 5685, of the Jewish Calendar.

The Gaekwar of Baroda returned to London last week from France.

Ismail Sirry Pasha, the Egyptian Minister for Public Works, arrived in London last week from Cairo.

Field-Marshal Viscount Allenby and Viscountess Allenby are spending the early autumn at Stanley, Perthshire.

Sir Montague Barlow has left England for Ceylon and Malaya, and hopes to return to London *via* India before Christmas.

The Egyptian Minister in London, who for the past month has been staying in Paris, is now staying in Lausanne.

Sir Edward and the Hon. Lady Grigg will leave London to-day for Marseilles to embark in the Mashobra for Kenya Colony.

Viscount and Viscountess Willingdon left London for Geneva last Saturday. Lord Willingdon is representing India at the Assembly of the League of Nations.

The Greek Minister left London last Friday for Paris. M. Mélas, First Secretary at the Legation, will act as Chargé d'Affaires during the absence of the Minister.

Sir Alfred and Lady Mond returned to London on September 2, from the Continent, and left the following day for Melchet Court, where they will remain until September 12.

M. Pashitch, the veteran Prime Minister of Yugoslavia, has recovered from his recent indisposition, and, having completed his cure at Evian-les-Bains, is expected to return shortly to Belgrade.

King Faisal, who is at present staying at 6, Prince's Gate, South Kensington (the residence of Mr. E. S. Kadoorie) intends to leave London within the next week or two for Vichy, where he will take the cure.

The following have been appointed members of the Governing Body of the School of Oriental Studies (London Institution) for a further period of five years: Sir J. P. Hewett, Mr. P. J. Hartog, Mr. A. B. Keith, Mr. E. J. Rapson, and Mr. D. G. Hogarth.

The Maharajah of Jhalawar, who is making an extended tour for the benefit of his health, arrived at Southampton last Friday morning in the White Star liner Ionic from New Zealand. After a short stay in this country he will return direct to India.

Colonel C. G. Liddell, C.M.G., C.B.E., D.S.O., who for the past two years has been Deputy Administrator of the British Empire Exhibition, has resigned his position at Wembley, and is rejoining his regiment—the 1st Leicestershire—which is at present stationed at Ismailia, in Egypt. Colonel Liddell sailed for Alexandria last Friday.

The marriage took place on September 1, at St. Mark's, Surbiton, between Captain C. C. Stuart White, R.E., elder son of Mr. C. A. White, late Chief Engineer and Secretary to the Government of Behar and Orissa, Indian Public Works Department, and Mrs. C. A. White, of Stevenage, and Miss Audrey Rose Dickson, daughter of the late Dr. T. H. Dickson and Mrs. Dickson, of Surbiton, and granddaughter of the late General Sir Arthur Howlett, K.C.B., Indian Army. The Rev. A. R. F. Hyslop officiated, assisted by the Rev. W. B. White and the Rev. C. D. Moore (uncles of the bridegroom).

M. Venizelos, the Greek statesman, and Mme. Venizelos are spending the summer in Switzerland.

Kemal Bey, First Secretary at the Turkish Embassy, returned to London last Sunday evening from Paris.

General Gamelin, who has been appointed General Officer Commanding the French troops in Syria, left France on September 7 and will take the place of General Michaud, who has been recalled to France.

The marriage arranged between the Rev. Cecil John Grimes, Chaplain, Indian Ecclesiastical Establishment (Bengal), and Caroline Blanche, third daughter of Mr. G. B. Bowen, D.L., J.P., and Mrs. Bowen, of Llyngwair, Pembrokeshire, will take place to-day, at Nevern Church.

The engagement is announced of Lieut.-Colonel E. F. Norton, Royal Artillery, to Joyce, younger daughter of Dr. William Pasteur and Mrs. Pasteur, of Tunbridge Wells. Colonel Norton took over the command of last year's Everest expedition, when General the Hon. C. G. Bruce fell ill. He was one of the first three to reach the 27,000 ft. level in the 1922 expedition.

M. Zamados, the retiring Greek Minister in Belgrade, left there last Thursday for Athens. The Greek Government has appointed as the new Minister M. Polichronidos, who formerly held posts in London and at The Hague.

CORRESPONDENCE

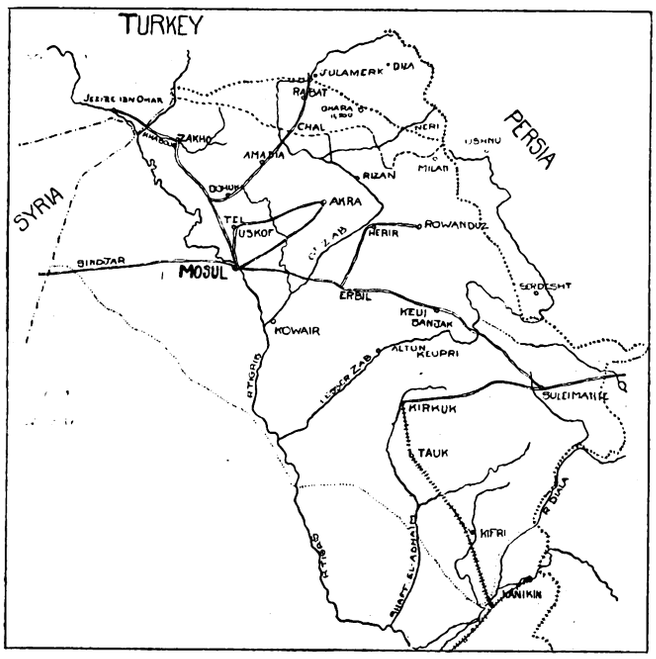
The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

THE MOSUL REPORT.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Examination of the Report of the Iraq Boundary Commission shows that the Commissioners have failed to appreciate two most important factors affecting the relative strategic values of the "Brussels line" and the line claimed by the British Government for the northern frontier of Iraq.

In Part Three of the Report, Chapter I. (dealing with Geographical and Ethnical Arguments), Section 1, A, we read that the Commissioners "were not able to verify in detail the practicability of the roads and passes mentioned" (in the frontier area between the Khabur River and the Persian frontier). This, no doubt, accounts for the incorrect impressions received. Yet there follows the misleading statement: "In any case the valley of the Zab is recognised as being practicable for the passage of quite large bodies of mountain troops." The reference is to the valley of the Greater Zab River, north of Amadia. The



The Mosul Vilayet as claimed by Turkey. The Brussels Line is shown passing through Chal; the frontier claimed by Great Britain passes through Julamerk and Neri.

road through this gorge is little better than a series of tracks from village to village, and, owing to deep snow and constant avalanches, is used only with the greatest difficulty, even by the inhabitants of this region, during the five or six winter months of the year. Under the most favourable weather conditions for movements of troops, an army, if *opposed* by a small force in these wild mountains, would find the route impracticable.

The Commissioners make no further observations regarding the nature of the passes from Turkey to Iraq lying between the Greater Zab Gorge and the Persian frontier except in Chapter IV. (dealing with Strategical Arguments), where they state that "there is no doubt that the line proposed by the British Government is an excellent strategic frontier. . . . The extremely mountainous area between this proposed northern frontier and Lakes Van and Urmia does not lend itself to the concentration of troops; the approaches from this region to the disputed territory (the Mosul Vilayet) consist entirely of roads or tracks which are difficult in summer and totally impassable in winter. A Turkish army intending to invade Iraq would not concentrate in this region where the communications are so difficult. . . ." This is not consistent with the previous reference to the Zab valley, and shows that the Commissioners are lacking in clearly formulated opinions on this subject.

In the same chapter they refer to "the impossibility of securing lateral communications" in the mountain area; and in Chapter VI. (General Conclusions) they state that "the frontier claimed by the British Government is a very good one. Towards the south, any of the successive mountain ranges might be used as a line of delimitation. The 'Brussels line' is as suitable for this purpose as the frontier proposed by the British Government; the ridge to the south of Zakho, Amadia, and Neri offers the same advantages. . . ."

This shows (a) that the Commissioners have paid insufficient attention to the importance of the fact that the mountains between Neri and Diza Gavvar are, as they point out, closed by snow for four or five months during the year, and, in summer and autumn, passable for troops only with the greatest difficulty; and (b) that they have completely ignored the trough of low-lying country which extends from Zakho to Amadia and Rowanduz and is always passable for troops.

This depression forms a most important lateral line of communication for Iraq, but, in the hands of an enemy, would, at all times of the year, form an easy route for troops marching from the neighbourhood of Zakho to the turbulent areas east of Apra and the south and south-west of Rowanduz. There are no similar valleys either to the north or the south.

The value of the route in question is fully appreciated by the Turks. In the spring of 1923 the Turkish force operating in the Rowanduz area was completely cut off by snow from its base at Diza Gavvar. The commander at Rowanduz, therefore, despatched Haji Abdul Latif, a rebel Kurd, to Amadia to eject the Iraq police stationed there, supporting him with a detachment of troops, with which it was intended that the town should be occupied. There can be no doubt that this move of the Turks was preliminary to an effort to open direct communication between Rowanduz and the Turkish forces at Jazirah ibn Omar. Some initial success was achieved by Abdul Latif, but the situation was saved by Mar Sergius, Bishop of the Jelu Assyrian clan, who, with a small party of his henchmen, drove the enemy from the town.

The Zakho-Amadia-Rowanduz depression is one of the most important topographical features in Northern Iraq; and its existence refutes the argument that the various ranges between Mosul and the Hakkiari highlands would form equally "safe" frontiers. While it can be of no use to the Turks except in offensive operations, it can be secured definitely for Iraq only by assignment to her of the whole area claimed by the British Government.—I am, etc.,

"A MOSUL RESIDENT."

THE FATE OF MEDINA.

Last Saturday, September 5, was observed as a day of mourning throughout Persia owing to the report that the Wahhabis of Ibn Saoud had bombarded the Tomb of the Prophet in Medina. The Sultan of Nejd, however, has replied to King Fuad's message of inquiry that his followers are respecting every place on Medina holy to Moslems.

The Bulgarian Sobranye met again on September 1, but will probably adjourn to-day until the middle of October.

The Egyptian Government has confirmed the decision of the Religious Court in dismissing Sheikh Abd-el-Razek from the position of *alim* (professor of religious jurisprudence).

Rear-Admiral A. K. Waistell, commanding the First Cruiser Squadron, entertained the King of Bulgaria to luncheon last Friday on board the cruiser Frobisher, which is lying at Varna.

His Beatitude the Lord Photios, Patriarch and Pope of Alexandria, died at Zurich on September 5, at the age of 72. He had stopped there on his way back from the Conference of the Churches at Stockholm in order to meet the Greek school-teachers now in Switzerland.

THE WEEK AT HOME.

London, Tuesday Morning.

Trade Union Congress.

The Trade Union Congress which met at Scarborough yesterday owes the importance which everywhere is now being given to it to two points of discussion: the future relation of British Trade Unionism with the international movement, particularly with Russian organisations, and the future position that the Congress should occupy in the industrial life of this country.

These two matters are not, moreover, disconnected, for they are subjects both dear to the hearts of the Left. Socialist working men in Great Britain do not see Russia as workingmen of countries closer to Moscow see her, and sympathy with her present endeavours is still a real thing; nor is it a matter of grief to many of them that the recent dispute over the mines was postponed owing to economic rather than to political pressure. In other words, there are grounds for believing that there has in recent months been a trend, not to Communism indeed, but at least to sympathy with the Left. Whether this trend has been sufficient to make the Minority Movement important from other than the vocal point of view remains to be seen. Personally I should imagine that the bulk of the Congress will still cling to the old, limited ideal of Trade Union functions; but without doubt there has since the fall of the Labour Government been a tendency to develop rather the industrial side than the political side of the Trade Union movement. At the present time the General Council of the Trade Union movement regards the activities of the Labour Party with a certain amount of possibly not ill-founded suspicion.

On the whole, however, one does not anticipate any startling decisions from this Scarborough Congress. Mayfair will probably still sleep well rather than fitfully.

The Coal Commission.

After what seems to have been an unconscionable time—in the terms of the subsidy, it cost from one to two million pounds—the Government has at last appointed a Commission to inquire into the Coal Industry. Four men, interested in the industry neither from the employers' nor the employees' side, have been chosen, to give a unanimous opinion; and, generally speaking, the selection of them has been widely approved. Very few papers have chosen to question the impartiality of Sir Herbert Samuel, Sir William Beveridge, General Lawrence, and Mr. Kenneth Lee.

At the same time, the names of the Commission have not pleased everybody, although no one has emphasised quite so quickly as Mr. A. J. Cook, the miners' Secretary whose threats are alternately derided and dreaded by the meticulous, the fact that whereas Capital is well represented on the Commission, Labour finds no place. However, there is nothing but to hope for the best from a body whose recommendations must at least command respect from the majority of the population.

The Seamen's Strike.

The unofficial strike of the seamen who refuse to accept the reduction of £1 a month from their wages appears to have been invested with more importance than it really merited. What is important is, not that these men struck, nor that without very much difficulty the shipping companies were able to circumvent the strike, but the character of the intimidation that has been practised upon the strikers. It does seem that men wishing to be loyal to their Union and to go down to their ships have been having a thin time at the hands of the strikers on the docks—men who assert that the ship-owners are making large profits, and that, therefore, wages should not be reduced.

It is rather the Imperial aspect of this matter than the domestic one that is troubling our authorities, for representatives of that very patriotic Union, the National Sailors' and Firemens', have suffered much continually abroad.

Liberalism and Prohibition.

Politics at the moment are rather a dead and unsociable topic, but one cannot resist recording the reported intention of the Liberals next autumn to launch a campaign with local veto as the rallying cry; it is even being said (by those who do not like them) that their ultimate intention is to advocate Prohibition for the whole nation.

There may be something in the rumour, for modern Liberals are capable of almost any folly that would curtail the liberty of man. As a move to capture the old Nonconformist vote and also the votes of a number of women married to incomplete abstainers, it holds out the prospect of immediate advantage. But whether it can be sincerely made, whether the brilliance of certain Liberal speakers may be more the result of their own convictions on the subject than of the fact that they have been unable to accustom themselves to drinking water neat—these are, perhaps, indiscreet questions. But it really is so very, foolish to attempt to deceive people on this matter of drink.

The Limitation of Population.

It is so commonly and despairingly assumed, both in public writing and in private conversation, that the numbers of our unemployed (which, by the way, have increased since the Conservative Government superseded the Labour Administration, although not because of this change) are directly connected with what we are pleased to call our over-population, that it was pleasant to see a Liverpool don, Professor A. M. Carr-Saunders, stating last week bluntly that "at present we had no means of finding out if we were under or over populated," and that "no judgment could be made whether our present unemployment was due to over-population or not."

At the same time this professor dispelled the ignorant belief that since the earliest times the population of the world had gone on increasing, and that the possibility of over-population had only recently come about. Limitation of population had always been practised, but with regard to methods of limitation we were very much in the dark. One would have liked to see this lecture reproduced in full, for it is obvious that this provincial don knew far more about his subject than do the Birth-Control publicists who so bespatter our daily Press with their muddied thoughts.

English Trees and their Usage.

A hundred years or so have passed since Lord Collingwood could tell to English gentlemen their duty, for the sake of the country's Navy, of casting an acorn into every hedge, or when Cobbett could write of the larch and the fir as being fit only for burning. For the truth now is that the oak, so beloved and revered of generations of Englishmen, is, temporarily at any rate, taking a back-seat. Neither by private person nor by Government is the oak any more being planted. Instead of our ships wanting oak, our aeroplanes now need ash. Instead of oak beams in construction (though they are still often used), girders and concrete are being used. It is very sad, this retreat of oak; but the merchants have ordained that the larch, the Scotch fir, the Douglas fir (which at

the moment is all the rage, particularly in Norfolk), the ash, the beech, the willow, even the sycamore, shall take precedence over what one imagines is the oldest of English trees.

"The oldest of trees!" So at least one could think when seeing the reverent care with which the ruined giant oaks in places like Hatfield Park are guarded. Moreover, while these gnarled old growths are being zealously preserved, it is comforting to reflect that birds will carry the seeds whither they will, and that oak easily thrives. I know a field in Hertfordshire which, from being a lone field some few years ago, is now become an oak plantation. Similarly with the elm: it is really proof against the fashions of the worthy afforesters.

The Approach of Winter.

Rudely and with as much disconcertingness as ever winter rushed at us over the week-end. Of course we are used to tricks like this, but to be switched from the height of summer to almost wintry conditions within a week, with no sort of autumnal transition period, made many people so sulky that they promptly caught colds, and, instead of battling out of doors against the elements to see what they were really up to, they shivered in front of premature fires in their drawing-rooms.

From a gentle westerly breeze, the wind swept round many degrees to the north, so that snow fell in places, and almost everywhere there were frosts at night. On the East Coast, particularly, the combination of the September tides with the Nor'-Wester so piled up the seas as to give serious trouble to the unwary visitors. In Yorkshire and Norfolk and Kent a good deal of damage was done; and the hinterland of the Essex coast will surely suffer if the wind holds to the N.W. Acres and acres from the Humber to the Thames will be drowned.

The End of County Cricket.

In such a time it was fitting that county cricket should end—"fine burying weather for such a game," as some one has said. The cricket of 1925 was always interesting, and the country championship table did not lie, as it sometimes does, when it engineered Yorkshire into top-place. For Yorkshire were without doubt the team of the year. There was an Australian tenacity about their game, and the reproach of dull batting, which in previous years had been not undeservedly made on them could this year never be preferred. Next to them most people would have placed Middlesex, but on the system of points both Surrey and Lancashire were shown to be well ahead of the Metropolitan eleven.

The most encouraging feature of the season—apart from the marvellous cricket of Hobbs—has been the emergence of such young cricketers as Hammond, Larwood, Clark, Sibbles, Wensley, and Santall. It is true that very few of these will be sufficiently developed by next year to help to beat the Australians, but their rise certainly makes us hopeful of the next English visit to Australia.

The Foundling Hospital.

The threat to the Foundling Hospital estate to which I referred some weeks ago has now materialised, and it has been officially stated that a new syndicate, Foundling Estate, Limited, has bought the district for a million and a half pounds. Bloomsbury, which will be profoundly altered by this fact, seems to be very sad about the change. It had for nearly two hundred years taken to its heart the foundlings, to whom Handel gave performances of "The Messiah," Hogarth and Gainsborough pictures, and of whom authors like Blake and Dickens wrote in such glowing terms. And not only the Foundling Hospital, but old Bloomsbury places like Brunswick Square and Mecklenburgh Square are included in the transaction.

The Portland Estate Sale.

Another large region of London which is to change hands, and, eventually, no doubt, to change its character also, is that part of the Portland Estate which lies east of Regent Street. Lord Howard de Walden is selling to the Audley Trust Company, which, I believe, is mainly concerned with business property, forty acres that lie between Oxford Street and Euston Road. It is an odd, unfashionable part of London that abounds in little markets and curiosity shops, and of recent years it has been invaded by the motoring industry. Architecturally, the fine St. Margaret's Church is the only building which one can think of as having become part of London. The possibilities of its "development," as the tendency to commercialise land is nowadays called, are to be gauged from the fact that the sum given for the property is twice as much as that for the Foundling Estate.

The Fruit Crop.

A few weeks ago I noted here that the heat-wave—how long ago it all seems!—had severely prejudiced the prospects of the fruit crop. Since that time, we have had the copious rains of August, which, at any rate for apples, have improved matters. Still, the estimate even for them is 15 per cent. below the average. Of dessert varieties the most successful are Worcester Pearmain, James Grieve, Blenheim orange, and, of course, Cox's pippin. But as for such inferior things as plums and pears and damsons, the crops are very poor.

From the fructual point of view, the pomologist is easily the happiest man of the year.

Barnet Fair.

Barnet Fair, the creation of the Plantagenets, and once the chief horse fair in England, to which dealers from the Continent and even more distant countries eagerly came, is now but a shadow of its historical self. This year, it is true, there were plenty of horses and cattle and ponies and sheep, from all over the country, and from Wales and Ireland, but its chief potential attraction lay in the pleasure fair, which is still, I believe, the most considerable in England. Even this, however, failed to attract the numbers who before the War used sparkingly to throng there, and the explanation would seem to be that fair are an anachronism in our age.

But they have always been dying out, ever since we started talking of "progress." Change how they will—and they are fundamentally changed, from what is bought and sold to what is eaten and drunk—there is some inexplicable element of life in the old fairs. In a subtle (and wholly regrettable) way they appear to change with the age: Barnet this year even suffered the reproach of being respectable. Possible this was the result of the growth of the suburbs, but more probably of the dying out, since 1914, of that strange medley of contortionists, sword-swallowers, jugglers, pugilists, and so on who used to practise their art upon a world not yet disillusioned.

Indian Affairs.

THE INDIAN MEDICAL SERVICE.

Lord Reading, in his speech at the opening of the Legislative Assembly, when pointing out that recruitment for various Indian services by the Secretary of State had already ceased, so that Indian Ministers would now be able to start building up their own Provincial Services by new recruitment that would be in their own hands, said that the principle of establishing Provincial Medical Services had been accepted, subject to certain conditions that were still under consideration. It appears to be thought, in some quarters, that he meant by this that the Indian Medical Service is to be Provincialised; but this, of course, is not the case. The Lee Commission recommended the absorption of the Indian Medical Service by the Royal Army Medical Corps, but this proposal has not been accepted; it has been decided that the Indian Medical Service shall continue to exist as a military service, some of whose members will be lent to the civil administration: the officers so lent forming a reserve for the military service. That is to say, the civil medical service in India will be Provincial, and recruited in India, but will continue to include a number of military medical officers recruited by the Secretary of State. In his statement in the House of Lords, Lord Birkenhead explained that these officers would usually be employed in posts dealing with research and teaching; while special arrangements would be made to ensure that European civilian residents in India, and their families, received medical attendance from European medical officers. For many years past, Indians have been admitted into the Indian Medical Service and have served in it on the same terms as their British confrères: a fact which, until quite recently, produced a curious anomaly—in that the bluest blooded and most important Indian Prince could only be an honorary officer in the Army, while any Indian who could pass the necessary examinationn, no matter what his birth or breeding, could obtain a permanent commission in it by membership of the Indian Medical Service. The Indian Army List, for instance, showed all officers of and above the rank of Lieutenant-Colonel, combatant and non-combatant alike, in separate lists: and the names of a number of Indian medical officers appeared in those lists; while the names of the Princes and noblemen who held honorary rank appeared separately, in a special list of their own. Until the recent admission of Indians to combatant commissions on the same footing as British officers, this was a cause of considerable heart-burning.

When Mr. Montagu was in India, he referred, in one of his speeches, to the fact that the Indian Medical Service was a key service in India: and extremist Indian politicians were quick to realise the truth of this description. They interpreted it to mean that, if the European medical official could be got rid of, all the other European officials would disappear also: since the European felt the need of medical attendance by men of his own race, not so much for himself as for his wife and daughters: and, if he felt that he could not get it, would refuse to bring his family to India, which would mean that, in most cases, he would refuse to stay there himself. In the case of large non-official communities, such as commercial men in the large towns, or planters, the disability would not be felt, since they could afford to maintain European doctors of their own—in the great days of indigo, the Behar planters had their own medical men, and no doubt have them still: but the European officials, who, except in a few large centres, are a scattered community, would be unable to provide themselves with European doctors. Having once realised the position, extremist Indian politicians set themselves to make the most of it: they concentrated their attack on the Indian Medical Service and tried all means to get the number of Indians in it increased, in hopes that, as the percentage of Indians grew larger, European medical students would feel less and less inclined to submit themselves to the chances of an Indian career. The campaign has been largely successful: and at present very great difficulty is experienced in finding the requisite number of British medical officers to keep the European complement of the Service filled. A recent issue of the *British Medical Journal* says that the Secretary of State has only made thirteen appointments to the Indian Medical Service during the past year, and these all on a five years' contract system—a system which, in the opinion of the journal, is open to many objections. It says, indeed, that, until the facts are known and completely discussed, it will be inadvisable for a British-born medical man to become a candidate for the Indian Medical Service otherwise than on a short contract, if the objections to that system can be prudently set aside. The *Lancet*, on the other hand, is less pessimistic: it says that India definitely requires European medical assistance, not only for the care of the European population, but for the maintenance in the country of the spirit of modern medicine: and holds that there is still a fine future before the Indian Medical Service—"those who enter the Service now, no less than the pioneers of medicine in India a century and more ago, will have before them a great constructive task. The early energies of the Indian Medical Service of the future may have to be devoted, apart from their definitely official duties, to the education of the community through qualified Indian doctors."

The Legislative Assembly has just carried, against Government opposition and by a substantial majority, a resolution recommending that from 1926 all recruitment for the Indian Medical Service should be by open competitive examinations held simultaneously in England and India. At first sight, this resolution looks harmless enough, since it merely extends, to the Indian Medical Service, a principle that has already been accepted in the case of the Indian Civil Service; but the conditions are, in fact, quite different. Recruitment in England by the ordinary methods, for the Indian Civil Service, is certainly not brisk, but it has never ceased entirely and has lately shown a decided improvement; but it would appear, from the figures given by the *British Medical Journal*, to be non-existent in the case of the Indian Medical Service; so that, if effect were given to the Assembly's resolution, it seems likely that the result would be that the candidates offering themselves for examination would be exclusively Indian. This would lead to a state of affairs that, though it would doubtless be welcomed by the extremist Indian politicians who have grasped the meaning of Mr. Montagu's remarks about a key service, cannot possibly be faced, as it would be disastrous to the true interests of India. The outlook at present is not encouraging; but it is certain that means must be found—and it is equally certain that they will be found—to remove the atmosphere of suspicion that is now, in England, enveloping the Indian Medical Service. It may well be hoped that the appointment of the Indian Public Services Commission, which has for some time past been announced as imminent, will engender the confidence that is now so conspicuously lacking. It is to be hoped, in addition, that the conditions, stated by Lord Reading to be still under consideration, will not long remain so: and that the publication of the full official proposals of the Government of India will reveal a future for the Indian Medical Service that will justify the Council of the British Medical Association in revising their present attitude of disapproval and in once again advising young medical men in England to offer themselves for what is, perhaps, the most important of the Indian services: if only for the reason that it is the key service on which depends the continued existence of all the other European services in India. If, as is greatly to be hoped, such advice is then given, it will, of course, only be given on the recommendation of the men on the spot—the British members of the Indian Medical Service now serving in India; who, as a whole, are inclined to take a gloomy view of the prospects of their Service. A recently published letter from a distinguished ex-member of the I.M.S. who, since his retirement some years ago, has lately become a regular Indian

Digitized by Google

"globe-trotter," said that his experience, in what he rather quaintly described as his last "tour" in India, does not support this view; but it is, none the less, unfortunately only too certain that it exists. The authorities, both at the India Office and in India, are fully alive to the imperative necessity for its removal: so that it may confidently be expected that their decision, when it is announced—and the earlier the better—will be a source of satisfaction to those now serving, and of incentive to others to follow in their footsteps.

CURRENT TOPICS.

The Steel Industry.

The Indian Tariff Board's report regarding the grant of supplementary protection for the Indian steel industry recommends a bounty of eighteen rupees (twenty-seven shillings) per ton on seventy per cent. of the total weight of steel ingots manufactured each month, subject to a maximum of ninety lakhs of rupees (£675,000), during the eighteen months from October 1, 1925, to March 31, 1927. The Board expresses the opinion that the increase in Customs revenue due to the existing Steel Protection Act is likely to have exceeded the bounty payments by 24 lakhs of rupees (£180,000) by the time the latter would cease, under its recommendations: so that it does not recommend any increase in the present Customs duties on steel.

The Government have notified their intention of moving a resolution in the Legislative Assembly on September 10, in reference to the Tariff Board's recommendations; the resolution reduces the amounts recommended to a bounty of twelve rupees and a maximum of sixty lakhs for the eighteen months. In the meantime, the Indian iron firms have entered a protest against alleged "dumping" of pig iron on the part of the Tata Steel Company; who, they assert, have made use of their favoured position in the matter of steel to undersell their Indian competitors in the matter of pig iron by quoting it for export at a price that would otherwise be actually below cost. Advanced Indian political opinion is, in general, in favour of high protective tariffs: but this "by-product" of the Steel Protection Act has somewhat shaken the belief in the general efficacy of protection.

The Government also intend, on the same day, to move a resolution imposing a protective import duty of one anna (a trifle more than one penny) per pound on printing paper containing less than 61 per cent. of mechanical wood pulp, and on all writing paper. This is in accordance with the recommendation of the Tariff Board, except that the latter also recommended a loan, or guarantee of debentures to the extent of ten lakhs, towards the purchase of machinery for the Bamboo Pulp Company: as to which the Government resolution is silent.

Power Driven Plant for India.

Sir Alfred Chatterton, late Director of Industries, Madras, draws attention, in a letter to *The Times*, to the belief (mentioned in Lord Reading's speech at the opening of the Legislative Assembly, and already noticed in THE NEAR EAST AND INDIA in its comments on that speech) that Indian agriculture must continue to depend on cattle for its motive power. He points out that larger units of power, than it is possible to obtain from the use of cattle, are essential to the efficient conduct of a number of agricultural operations, such as the lifting of water for irrigation, draining of waterlogged land, deep ploughing, and the preparation of crops for the market, the most important of which is the crushing of sugar cane. As regards the first of these, he states that there are in India sixteen million acres irrigated by wells, but that there has been no increase in wells since the beginning of the century, not because of any lack of water, but because of the increased effective cost of cattle power. Many new wells have been sunk, but at least an equal number have been abandoned where the conditions rendered water lifting by cattle an uneconomic undertaking. As regards the last, he repeats the constantly emphasised fact that India grows, but—owing to wasteful methods of extraction with cattle-driven mills—does not produce enough sugar for her own needs, and imports from half to three-quarters of a million tons yearly. The recently created Departments of Industries have done a great deal to encourage the use of power-driven plant, and India now imports thousands of oil engines and hundreds of suction gas plants every year; but the cost of such machinery is a charge that only a few landowners can meet. A rapid increase in the wealth of India will simplify many of its political problems, and this, in Sir Alfred Chatterton's opinion, can only be brought about by a more extensive use of power and power-driven machinery; for which the most practical solution would be the standardisation of plant. The motor trade has shown what can be done by mass production and the establishment of "service" stations: if the Indian authorities would prepare standard specifications, on which manufacturers could undertake mass production, there is little doubt that the result would be a remarkable increase in the use of mechanical appliances in India, with a corresponding increase in her wealth.

There have been several indications that firms in the United States are alive to the great possibilities of India as a customer for machinery: and, as the United States have been the pioneer of mass production, it is not unlikely that American manufacturers will turn their attention to the problem, especially now that it has been stated by one who speaks with authority. Co-operation between the various Indian Governments and British manufacturers, and between the latter *inter se*, ought not to be impossible: and should result in retaining for Great Britain the very great field for the provision of agricultural machinery that undoubtedly exists in India.

Illicit Firearms.

The amazing outrage on the East Indian Railway, in which an armed gang held up a train, shooting one of the passengers dead and wounding two others while they robbed the guard's van, has drawn attention to the ease with which firearms can be obtained for illicit purposes in India. The provisions of the Indian Arms Act are, on paper, reasonably stringent; but those who suffer from them are, in the great majority of cases, respectable persons, chiefly Europeans, who have contravened them from ignorance or carelessness; the illicit possessor of firearms never seems to find any difficulty in arming himself. The number of shops in India that are licensed to sell arms and ammunition is legion, and their methods in the sale, and more particularly in the storage, of firearms are certainly very casual; but it is not, as a rule, directly from them that armed desperadoes equip themselves. Such gangs seldom use rifles, their weapons usually consisting of shotguns and revolvers or pistols. Supervision over all except the latter is reasonably complete, since the smuggling of so large an object as a rifle or shotgun is not an easy matter: it is not by any means an uncommon thing to find that a shotgun, captured by the police in the course of illicit use, is a properly licensed weapon, though the licensee is a different person from the actual wielder. Sometimes the latter has obtained it by theft, the real licensee having omitted to report the loss, generally in the hope of avoiding trouble: but cases are not unknown in which it has been found that the licensee had lent his gun to a bad character, doubtless with perfect knowledge of what the latter wanted it for: sometimes out of an easy-going kind of good nature, sometimes for fear of the consequence to himself that a refusal might entail, sometimes even on the promise of a share in the resulting loot.

In the matter of revolvers and pistols, however, the case is very different. Licences for these are sparingly granted, and only on payment of a considerably higher fee than in the case of shotguns, while the successful applicant for a licence has to satisfy the authorities that he has good reason for the application. It is therefore much more difficult for the desperado to obtain a pistol or revolver by theft or on loan and he has, as a rule, to rely on the smuggler. It is not difficult to smuggle a small object like an automatic pistol, and there is plenty of evidence of the existence of an extensive trade in smuggled pistols

Digitized by Google

and revolvers. It is a trade that offers large profits, and one that it is extraordinarily difficult to put a stop to: it is not too much to say that practically every vessel arriving in India from Continental and Far Eastern ports is suspect, and isolated seizures are frequently made; but there is every reason to suppose that these represent but a small portion of the illicit weapons actually introduced. The debased currency of so many Continental countries renders the game a very paying one, especially in view of the fancy prices that are obtainable in the event of a successful coup; while a vessel offers endless facilities for the concealment of small objects such as pistols. It is obviously impossible to make a thorough search of every foreign vessel entering an Indian port: and, in practice, the Customs officials have to depend almost entirely on special "information received." A more prevalent, and even more lucrative, smuggling trade is that in illicit drugs; but, in that case, "information" is more freely given, owing to the high rewards that follow detection, based as they are on the value of the commodity. The actual value of a pistol is small, and the reward for discovery is therefore necessarily small also; but the serious possibilities of the traffic are fully recognised, and arrangements have recently been made to increase the rewards for successful attempts to frustrate it. As regards the difficulty of the actual discovery, it is enough to quote a case that occurred a year or two ago, when the Customs officials, on receipt of what they considered certain information of the presence of illicit cocaine on a foreign vessel, had to shift 400 tons of bunker coal before they found it. It is obvious that a search of this kind can only be undertaken on a certainty: and the probability of being presented with such a certainty varies directly with the value of the consignment and the consequent amount of the reward for successful detection.

Compulsory Military Training.

A Committee, appointed last year by the Calcutta University Senate, having reported in favour of some form of physical exercise being made compulsory in all schools affiliated to the University, the Senate has passed a resolution to that effect, and has requested Government to make arrangements for the inclusion of compulsory military training in their curriculum. The demand for physical training was based on a realisation of the poor physique of the average Bengali student: and that for military training on the widely held view that the future of India as a self-governing State demands ability on the part of Indians to provide for their own defence. The resolution was not adopted without opposition: one speaker pointing out that the demand for military training, which would certainly be distasteful to many parents and students, was likely to prejudice acceptance of the idea of physical culture.

It is not to be wondered at that this movement should have originated in Bengal; for, of all the peoples of India, Bengalis are those who have been most often twitted with cowardice, an aspersion that they deeply resent. The hero worship of Bengali revolutionaries, in which even Mr. C. R. Das joined, is due to this feeling: Mr. Das' public approval of the "patriotism" of the murderer of Mr. Day was a popular move that earned for him a great deal of admiration, even though some of the more sober Bengali politicians found it necessary to express their disapproval of it. About a year ago, there was an epidemic of laudatory articles in the Bengali Press in honour of a revolutionary named Jotin Mukerji who, after committing several murders, was rounded up by the police and shot dead, after a stout defence, during the revolutionary troubles of seven or eight years ago. These articles specially acclaimed Jotin as one who had disproved the charge of cowardice that had been brought against Bengalis as a race: and, though they distinctly suggested that it was up to the present representatives of young Bengal to follow in his footsteps and thus to show that his courageous example had not been wasted, it is permissible to believe that, apart from the desire for revolutionary incitement that was so prominent in Bengal a year ago, the articles were largely inspired by a genuine feeling of pride that the "cowardly" Province could have produced so noted and so desperate a ruffian.

In the War, Bengali politicians were insistent in declaring that Bengal only awaited a word from Government to produce a legion of warriors who would sweep the Turks and Germans from the field. When it was decided to raise a Bengali regiment for service in Mesopotamia, the poor response by the youth of Bengal was explained to be due to the failure of Government to make the right sort of appeal—among other demands, it was urged that the Regiment should receive special treatment in the matter of pay and prestige, and should be regarded as a corps of gentlemen volunteers instead of ordinary enlisted men. But the small number of men who did enlist were extolled in the most extravagant manner: even so ordinarily level headed a man as the late Sir Surendranath Banerjea permitted himself to declare publicly that, after three months' training, the Bengal battalion had proved itself superior to regular British troops. However, the complete and hopeless failure of the battalion in Mesopotamia, though of course never admitted by the politicians, in reality made a deep impression on them; they realised that the military spirit was entirely wanting in the average young Bengali, and the present resolution of the Calcutta Senate is certainly due to that realisation: they recognise that, if that spirit is to be inculcated, it can only be done by catching its object young.

The Bengali prides himself on being the intellectual leader of India; but it is now beginning to occur to him that, in the self-governing United States of India whose advent he envisages, the intellectual leader will stand but a poor chance of surviving unless he has something more tangible than his intellect to fall back upon. In this particular instance, then, though the proposal for the military training of young Bengal is part of the general desire of Indian politicians to see India able to provide for her own defence, the immediate objective is less that Bengal should be able to take her part in the general defence of the country than that she should be able to provide for her own defence against more virile neighbours within the confederacy. It is not only the extremist Indian politician of to-day who professes to look forward to the early disappearance of the British soldier and the British officer from India: "the Commonwealth of India Bill," in its provision for an Indian Defence Committee who shall notify the British Government of the moment when the Indian Cabinet will be prepared to take over all the machinery of the defence of India, shows that politicians of more moderate views are of the same way of thinking; but neither of them are blind to the fact that Indian Defence includes defence against internal as well as external aggression: and the Senate's resolution shows that Bengal has grasped its full implication. In their heart of hearts, the Bengal politicians know quite well that the ideas of the Government of India about the defence of the country are quite different from theirs, and that there is no chance of Government's agreeing to the proposal for compulsory military training in the schools; not only are they well aware of this fact, but in truth they are glad of it—the resolution is only a political manœuvre, to show the other races of India how terrible the Bengali might be if he really set his mind to it: and it will doubtless end, as so many resolutions in India do, in the solemn denunciation of Government for its refusal to give effect to a legitimate national aspiration.

Swarajist Demands.

A telegram from Simla says that the Swarajists and Independents have agreed on the form to be taken by the non-official amendment to the Government resolution on the report of the Reforms Committee in the Legislative Assembly. The official resolution recommends the adoption of the Majority report, with some modifications in detail; that is, the maintenance of the existing constitution together with such amendments as may be necessary to remove defects in its working. The following is the summary, as telegraphed by Reuter, of the terms in which it is expected that the amendment will be presented:

That his Majesty's Government shall make a declaration that the Governor-General in Council shall be responsible to the Indian Legislature and have power to appropriate money for Indian expenditure, extraordinary power being vested for a limited time in the Secretary of State to appropriate money for military, foreign, and political

Digitized by Google

expenditure and for meeting debts and liabilities.

That the Council of the Secretary of State be abolished, the Secretary of State to occupy a position like that of the Colonial Secretary of State.

That there be no nominated members in either the Central or Provincial Legislatures, members to be elected on a wider franchise.

That the principle of responsibility should be introduced in the Central Legislature in regard to all subjects, except military, foreign, and political, for a fixed number of years, and that the dyarchy be replaced by a unitary form of responsible government, subject to residuary control by the Government of India with reference to inter-provincial and All-India matters.

The motion also urges steps for the nationalisation of the army within a reasonable and definite short time, and adds that after a fixed number of years the Indian Legislature should have power to amend the Constitution.

The resolution will urge that steps be taken to constitute a convention or round-table conference representative of all interests, and place a scheme for consideration before the Assembly and then submit it to the British Parliament to be passed in the form of an Act.

Ibn Saud and Medina.

The reports that have reached India of the bombardment of Medina by Ibn Saud have caused great excitement among the Mohammedans: and the Khilafat leaders, particularly Shaukat Ali, are in a difficult position. At the time when Indian pilgrims were preparing to leave for the Haj, Shaukat Ali was a declared partisan of Ibn Saud, in whose services to Islam he expressed unbounded confidence. The returned pilgrims spoke with no certain voice; some declared that Ibn Saud's arrangements for the pilgrimage had been excellent, while others asserted the reverse. The statements of the latter were brushed aside on the ground that they were "agents" of King Ali, Ibn Saud's rival; but the circumstantial reports of the bombardment of Medina are discounting the attempt to make out that all is well in the Hedjaz. On receipt of the news in Bombay, Shaukat Ali was the object of an angry demonstration and only escaped assault owing to the intervention of the police. He is now advising his excited co-religionists to "await authoritative news from Jeddah" —a rather curious suggestion since, before the departure of the pilgrims for the Haj, he refused to accept the Jeddah reports (which advised its postponement) on the ground that they emanated from tainted sources. Shaukat Ali, and his brother Mahomed Ali, have announced their readiness, if the report of the bombardment is proved to be true, to take the first available steamer to the Hedjaz in order to fight against Ibn Saud—a promise that almost makes one hope that the news is true. A local representative of Ibn Saud declared, at Bombay, that the report of the bombardment of the prophet's tomb was entirely untrue and that the bombardment had been solely directed against King Ali's troops on the outskirts of Medina. In this connection, it is worth remembering that, in the War, excitement was raised in India by a report of the bombardment of Nejef, in Mesopotamia, by British troops. It was proved that the only foundation for this report was the fact that, in the course of an engagement in the neighbourhood, a single shell had hit the wall of the town at a place far removed from the shrine itself; but this was declared to be no answer to the charge, since the whole vicinity was sacred, and damage to any part of it was constructively damage to the whole. The followers of Ibn Saud are of the Wahabi sect—a sect of reformers who carry their antagonism to idolatry to the pitch of declaring the veneration of any object—even so sacred an edifice as the tomb of the Prophet—to be idolatrous; so that Indian Mohammedans may be forgiven if they fear that the news is not only true, but something less than the real truth.

The Calcutta "Saint's" Burial.

The dispute about the burial of the "saint" in the New Market at Calcutta has advanced one more stage towards solution. It will be remembered that the man, who was a professional beggar, claimed by the Mohammedan butchers as a co-religionist, but apparently really a Christian, died in the Market precincts and was buried on the spot where he died: the Mohammedans claiming that this was a religious necessity—it was also asserted that he had exerted such miraculous powers that it was found to be a physical impossibility to move his body. An official of the Calcutta Corporation permitted the burial to take place under *force majeure*—to quote his own words, his "attitude became one of convenience." As the grave was in one of the passages of the market, and obstructed traffic, it was decided to wall up both ends of the passage: and this was done, at a cost of Rs. 1,250. The Calcutta Corporation, in passing the bill for this expenditure, explained that the rate was three times the usual charge, but that they could get no contractor to undertake it for less, in view of the probability of his men being assaulted by the butchers. The Corporation have now decided that, if the Mohammedans do not, in the meantime, themselves exhume and remove the body, the Corporation will do so on the expiry of two months—exactly a year since the burial took place: with the result that the Mohammedan Councillors quited the chamber in a body. It looks as if the contract for unwalling the passage and exhuming the body is likely to be a more dangerous, and therefore more expensive, job than that for walling it up.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 20.

The Turn of the Tide.

The Autumn Session of the Legislative Council opened unauspiciously for the Swaraj Party in the defeat of their nominee for the chair, and the business which has been transacted under Mr. S. Roy, who was approved as President by Lord Lytton, has given indications of a break-up in the Extremist ranks. The first item of business was the Dacca University Bill, and Hindu opposition to the measure took the form of amendments calculated to delay the passage of the Bill. On being put to the vote, however, these were lost and the original Bill was passed without a division. The Council then conceded a number of supplementary demands by Government under the heads of Forests, Registration, Irrigation, General Administration of Justice and Jails, involving a little more than a lakh of rupees. Divisions were forced in several of the issues, but Government carried the majority throughout. The subsequent proceedings were much of the same nature, and in no major point has Government sustained a defeat. The atmosphere has cleared considerably, and divisions indicate an impartiality hitherto unknown in the political history of the Reforms in Bengal. The turn of the tide is of more than usual significance, and is mainly due to the tension which exists in the Swaraj Party between the Hindus and Mohammedans, which has made the latter to throw in their cause with Government in divisions. This has been expected for a long time; the Hindu-Moslem Pact was a flimsy and artificial bond and it was realised by all that there could never be real unity between parties of so widely divergent views. The rupture dates from the time when Gandhi interfered in the politics of Bengal after the death of C. R. Das; his tactless public references to his fruitless search for a worthy Mohammedan to fill the Mayoral chair wounded the feelings of the entire Mohammedan community. The Moslems received a further insult at the hands of Sen Gupta when he broadcasted his reasons for the desirability of electing a Musalman to the chair of the Council, and it is not surprising that the Mohammedans lost faith in the party whose leader had demonstrated his total lack of understanding and general incapacity as evidenced in his advocacy of a reversion to anarchical methods.

The New Market Burial.

Whatever hopes there may have been of a reconciliation between the two parties were shattered when the Corporation decided to exhume the body of the so-called

Digitized by Google

saint, referred to in the last issue. This was brought about by Swaraj votes, and, as the *Statesman* says, "It is the nemesis of a political aggregation such as was the Swaraj Party that it should have shattered itself in dealing with a matter regarding which it has taken a proper, if somewhat timid, course." It has been apparent from the beginning that the Corporation would ultimately be forced to remove the body, and it has been equally well known that this decision would cause the collapse of the Hindu-Moslem Pact; the late Mr. Das realised this and used every artifice to delay action or if possible evade the issue, and in doing so earned the criticism of the European community and, after his death, the indirect censure of his own party. The attitude of the Mohammedans is an unreasonable one; it has been proved that the beggar was not a co-religionist, and even had he been, the Koran gives no justification for his being worshipped or treated as a saint, and yet the Mohammedan Councillors, who are of the more educated class, have sided with their fanatical brethren of the New Market, one of them going so far as to state that the resolution amounted to "Zulum" (tyranny). It is difficult to forecast what this will lead to, but it is safe to say that, if the uneducated butchers, who demanded the burial in the first instance, oppose the removal of the body in a fit of fanaticism, the Swaraj Corporation alone are to blame in allowing the scandal to have gone so far. Prompt action at the outset would have obviated all difficulties.

The Liberals.

A meeting of the Council of the Liberal Federation of India, held last Sunday, deliberated for more than two hours on Lord Birkenhead's speech and, after passing an elaborate resolution expressing grave dissatisfaction at the pronouncement, recommended that the advice offered by the minority of the Muddiman Committee should be accepted and steps taken to place the constitution of India on a permanent basis. They further agreed that the Reforms, despite any imperfections there might be, should be worked to the best advantage of the country and they deprecated the policy of indiscriminate obstruction. It would appear that at least one section of public opinion in India is approaching the great political problem from the correct angle; but, while the Liberal Party are to be congratulated upon the piety of their aspirations, if they desire to take the fullest advantage of the unique opportunities presented by the political situation of to-day, they must not be content with mere resolutions; a policy of action is required, and the Liberals could not do better than to take a leaf out of the book of their Swaraj friends. Whatever faults the Extremists may have, it would be impossible for their sternest critic to lay a charge of slacking at their doors. Not content with a programme designed to appeal to the masses, they have diffused an energy into the dissemination of their doctrines which has proved infectious, and to this as much as anything is due the degree of popularity they have attained. The seed they have sown has taken deep root and the task confronting the Liberals will be no sinecure, for in spreading their creed they have first to undo the mischief which the Swaraj Party has made. The time is ripe for action, and it is hoped that the Liberal Party, who can do so much for India, will not shirk its responsibility. Although a break has appeared in the ranks of the Swarajists, it must not be assumed that the movement will fade away; there are too many interested parties behind its workings to permit of this.

Markets.

The jute maket closes quiet, with a certain amount of forced selling at rates below last week's levels; neither jute nor gunnies show signs of any appreciable drop owing to the sound position still reported from up country, where the rates quoted are one rupee per maund in excess of those obtaining here. This week's tea sales have been satisfactory with regard to the good qualities, which have fetched normal prices for this period of the season, but the general tone has been weak in sympathy with the London market. Piece-goods remain dull and show no signs of any revival in interest, which should set in at the end of the month in anticipations of the Poojahs.

The general trend of the share market at the close is downward, jutes being most affected in this respect; holders have shown no actual keenness to dispose of their shares but selling orders are hard to place, with a resultant lowering of prices. Coal shares have attracted a little more attention and close steady; slightly more interest has been displayed in cotton shares, but the weakness of the commodity has had a depressing effect upon tea shares. Gilt-edged stocks show no tendency to depart from the general feeling and are on offer at lower levels without attracting buyers.

Money continues easy, and even the demand from the jute-growing districts does not appear to have affected the position up to the present. Exchange has remained at the previous level throughout the week.

CORRESPONDENCE.

PROVINCIAL AUTONOMY IN INDIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Nobody has yet succeeded in telling us what is the exact meaning of Provincial Autonomy in India. To take any continuous geographical area, to partition it off by arbitrary boundaries into sub-divisions, and then to give the sub-divisions autonomy in such matters as customs, through railway lines, control of the great rivers, post and telegraph facilities, diplomatic relations with and defence against the outer world—this is of course unthinkable. Municipal autonomy, however, extended in every practicable way, is a perfectly legitimate and attainable ideal.

Drafting a federal constitution is rarely a useful exercise, until the country is ripe for federation. This cannot be said of India at the moment; and I do not therefore propose to follow Coles Pasha and Mr. Capper in their most interesting forecasts of India's composition in the days when provincial autonomy becomes a practical proposition. They have done valuable service, however, if they will allow me to say so, in drawing attention to the unsuitability of the present provincial system in British India as a training ground for Dominion status in the country. Our provinces have grown up in the same haphazard fashion, and for much the same reasons, as the growth of British rule. They do not represent homogeneous racial, linguistic or cultural areas; but merely combinations of districts which were made for administrative convenience, and which in several cases have now lost even that attribute.

They are also far too large. One of the complaints most often heard against the new electoral system is that the people show little interest in the elections. How that interest is to be evoked is another quesion; but at any rate it cannot be expected to be an interest in a provincial sense. The Uriya cares nothing about the domestic affairs of the Behari; nor the Canarese of the Sindhi; nor the Jat of the Purbya; and yet each of these pairs is unequally yoked under one provincial government, and is invited to vote on its combined problems. Vitality in popular government cannot, in the present position of the Indian masses, be looked for unless the unit of government is an area which posseses the maximum of common interests and, if possible, a common language. The linguistic bond is not everything, as we see in some of the states in Europe to-day; but on the whole it seems more likely than any other connexion to be the cement of India's future administrative units.

The development of the political talent of India points in the same direction. A certain number of its leading men show themselves capable of the wider imperial outlook, and would naturally attach themselves to the questions which must, for a very long time to come, be the care of some sort of a central government in the country.

Digitized by Google

The others, and the vast majority, have a habit of mind which will best be utilised by applying it to local affairs. One of the issues therefore to which the Parliamentary commission of 1929 will certainly have to address itself will be the propriety of fixing smaller areas of legislative and administrative activity than those now operative. The cost will, as Mr. Capper points out, be greater than that of the old autocratic régime, which after all was one of the cheapest things of its kind in the world. But political development is not to be had for nothing; and it is always well to remember the fact, for example, that Oudh is as big as Switzerland and three times as populous, or that Bihar is bigger than Portugal and four times as populous.

Whatever therefore may be the ultimate constitutional form of the provinces, and whatever may be their relation with the monarchical Indian states which lie imbedded among them, my conviction has always been that the future constituent parts of a federated India will be different from the present provinces, and in most cases smaller. Our administrative arrangements are such that sub-division will never offer difficulties of the first magnitude; re-grouping after that will be a process of natural evolution. And in the process there may come a settlement, with a fuller knowledge than we now possess, of the deeper question whether our parliamentary and electoral models are those which India can best employ in working out her own political future.—I am, etc.,

MESTON.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The suggestion of Mr. C. Capper in your issue of September 3 regarding provincial autonomy in India naturally provokes speculation as to the future political map of India. He advocates an extension of the principle of semi-autonomous sub-provinces on the analogy of the position of Sind within the Bombay Presidency. Now one of the results of the 1919 Reforms seems to have been the promotion of a provincial patriotism, though this at times has taken a parochial turn. It would appear that the tendency of those classes which form the great majority of the existing legislative bodies in India is to make the existing administrative areas fissile; but the factors which tend to cohesion must not be overlooked. For example, there is the common use of the English language in the exchange of ideas; then there are the increased facilities for communication, and the increase in the number of All-India gatherings for political, economic and social objects; and there is the aspiration to convert the geographical entity of India into a real national unity.

It may be of service to examine the map of India at three outstanding periods in its history: at the end of the fourth century during the golden age of the Hindu dynasty of the Guptas: at the beginning of the seventeenth century when the Moghul Empire had been divided into fifteen provinces; and at the beginning of the twentieth century under the British. An examination and a comparison reveal the areas of administration which are common to all three periods. Such areas should for ethnic and linguistic reasons have some chance of permanence. We find that Sind is a unit in each case; likewise, Berar, the Gangetic Delta and the country of the Five Rivers (the Punjab). Thereafter, comparison breaks down.

It is not an unreasonable expectation that, when responsible self-government is extended, there will be a regrouping of provinces on the basis of race and language. When that time comes, it is possible that the present somewhat unnatural combination of Bihar with Orissa may be broken; that the North-West Frontier Province may not be inviolate; and that the Madras Presidency, which labours under distinct linguistic disabilities, may have to submit to partitions similar to those of the thirteenth and sixteenth centuries. But, whatever the future may have in store in the way of redistribution, I venture to doubt whether any unit, when constructed, will be content with anything less than full provincial autonomy.—I am, etc.,

VOYAGEUR.

London, September 7, 1925.

INDIAN EXCHANGE.

London, September 7.

In our review of the rupee market last week, we raised the question as to whether the Indian Government could be relied upon to meet market requirements there, and thereby check any tendency for the Rupee to rise beyond a reasonable figure. We were not aware at the time that the matter had been receiving the attention of the Government, and it is rumoured that they have intimated unofficially that they are prepared to make purchases of sterling to a fairly large extent, and expect to be in a position to meet any demands which may be made upon them.

This may be accepted as a very satisfactory pronouncement from the mercantile point of view, but it would appear that the markets in Calcutta and Bombay are not without their doubts, as business has been done during the past week for delivery December-February at 1s. 6¼d.

The London market has been quiet but steady, round about 1s. 6 3-16d. to 1s. 6 7-32d. and business has been done off and on during the week at the higher rate. We heard of a few offerings of rupees at 11-64ths, but they found ready takers and the volume of business which has passed at this level has been trifling.

A moderate amount has been done for forward at 1s. 6 7-32d. for November in this market, and we learn that some business has been done in Calcutta early this week at 1s. 6 9-32d. for delivery December-January.

Inquiries are again being made with regard to bullion, and in view of the good crop prospects, consequent on the satisfactory monsoon, there can be little doubt that India will again be in the market for both gold and silver, later on, probably to a fair extent. Much of course, depends upon the rainfall during the next ten days, and cable advices to hand indicate that it has been very scanty. This may account for a quieter feeling here on Monday, with exchange inclined to be on the easy side, although there was very little doing.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

The General Outlook.

The various amalgamations which have materially widened the scope of Barclays Bank, which will henceforth be identified, under one and the same Chairman, Mr. F. C. Goodenough, with Barclays Bank (Dominion, Colonial, and Overseas), in which the Colonial Bank, the Anglo-Egyptian Bank, and the National Bank of South Africa have been or are about to be embodied, have not depressed its outlook on British trade conditions. In its Monthly Review for September there is indeed a splendid and convincing note of challenge to the pessimists, which deserves to be widely studied. Although the general trading situation is still far from satisfactory and although definite signs of a revival are disappointingly delayed, the outlook, it states, is not without some hopeful features. Conditions on the Continent, in spite of inevitable vicissitudes, are becoming more stable, and the evident determination to effect a settlement of the difficult problem of inter-Allied debts should result in the removal of one of the principal uncertainties in Continental Budgets. In addition, the greater stability in foreign exchanges, the distinctly more favourable harvest prospects throughout the greater part of the Continent, and the satisfactory progress of the monsoon in India are encouraging factors.

British Trade Aspects.

The writer of the Monthly Review of Barclays Bank complains of the tendency to concentrate on the adverse conditions affecting British trade, rather than to view the position as a whole. In consequence, the outlook is often regarded with an unjustifiable degree of pessimism, and it is even suggested that Great Britain has lost her ability to compete in world markets. Great Britain, being more dependent upon external trade than any other country, is to a greater extent affected by the temporary disorganisation of overseas markets and, therefore, has felt the effect of the War with particular severity. Another factor detrimental to British trade and directly connected with the War is the competition resulting from the depreciated foreign exchanges and the artificially low costs of production of certain competitive countries, who, in one form or another, are still having recourse to inflation, a wastage of capital resources, the evil effects of which will inevitably recoil upon the heads of those who have recourse to it. Sooner or later, the purchasing power of the world will be restored, and currency and exchanges will be stabilised. In the meantime, British trade suffers, but the real reason for surprise is that it has not suffered a great deal worse. There seems no reason, continues the writer in the "Monthly Review," for the assumption that Great Britain has lost its reputation for the quality of its products, or that with the gradual return to normal conditions throughout the world and the consequent increase in international trade as a whole, British manufacturers will not obtain their proportionate share of such increase.

The Only Sound Policy.

If the optimism of the writer quoted above is shared by British manufacturers, it follows as a natural corollary that special attention ought to be paid by them to keeping a footing in markets where for the moment they cannot hope to do any large amount of business, but of whose potentialities there can be no doubt. Optimism in regard to the Near and Middle East is certainly justified by all the signs of the moment. Relative stability of exchange in contrast to previous fluctuations has been attained in a marked degree in South-Eastern Europe; harvest conditions are good, and there is a steady improvement in purchasing power which is reflected in the selection of goods of better quality. A sentence in a letter published last week from our Teheran correspondent was instructive: "The German bicycle had a meteoric career to begin with, but is rapidly giving way to dearer but safer machines." The same story comes from the Balkans in the case of textiles and other goods, and often the difficulty of obtaining British goods is lamented. It is a healthy sign, too, that attention is beginning to be paid to the payment of War debts. There will, no doubt, be much protestation and bargaining; but it matters not how small a payment is fixed. The thing that counts is that a start should be made, and it will be found a wonderful stimulus to the self-respect of the nation concerned. To revert to the necessity of keeping these markets "warm" for British goods; various methods offer themselves:—

Make sure that samples or catalogues are available in each country.

Advertise, at least to the extent of saying where these samples or catalogues are to be found.

Make use of Exhibitions and Samples Fairs.

The British Industries Fair.

It is good news that the Government is according a special grant to the British Industries Fair for the purpose of making the Fair's usefulness more widely known. Now, if ever, is the time for a special effort to attract the foreigner to the Fair; even if he cannot do much yet in the way of buying, let him come over to see for himself of what British industry is capable. I am thinking, naturally, of the more distant parts with which this journal is identified. It ought to be possible under the ægis of Commercial Secretaries in the Balkans to have meetings of those in their respective countries interested in the main industries represented at the Fair and to invite them to select one of their number to pay a visit on their behalf to the Fair, in part or wholly as the guest of the British Government. The intention would be that these delegates, even if they were not empowered to give orders for individual firms, should see the Fair and report to the different trades in their own country their impressions of British goods. It can hardly be doubted that orders will follow either at the next Fair or during the course of the year. A start might be made with one or two industries. For an outlay of from five to six hundred pounds it should

Aviation in the East: A Suggestion.

Air-Marshal Sir Sefton Brancker, Director of Civil Aviation, and representatives of Imperial Airways, Ltd., have arrived in Egypt, where preparations will be made for the inauguration next year of an air service between Kantara, on the Suez Canal, and Karachi. This route, it is to be expected, will form the trunk line of a network of air services throughout the Middle East, for the greater the number of feeder-lines, the better the commercial prospects of all the services. There seems no reason, therefore, why steps should not be taken simultaneously to form aviation centres both in Palestine and Iraq. At first there may not be much scope for regular services, although it would be thought that a service from Beyrout or Damascus could be run to link up with the Kantara-Karachi service at whatever spot in Palestine or Transjordan will be selected for a halting ground. The time, however, is surely approaching when in countries of slow or difficult communications there will be a demand for aeroplane flights, as there is now for motor services. There must be many visitors to Palestine who would avail themselves of air trips to Damascus, Palmyra, Petra, and other places, if the charges were not prohibitive. It should, therefore, be a commercial proposition for a company to maintain air services between Syria and Palestine, in connexion with the Egypt-India route, and to keep a small "fleet" of aeroplanes available for special trips as required. The scheme at least is worth investigation. In conjunction with it could be run a local aero club, on the model of the new clubs in England, where instruction in flying can be given to members. Similarly in Iraq a commercial aerodrome in Baghdad would maintain services with Persia and keep aeroplanes for special journeys to Ur, Mosul, and other centres.

Smyrna Rediviva.

Smyrna, we know, is by no means as dead as fire and fate at one time seemed to intend that it should be. Trade has steadily improved, but it has remained somewhat of a mystery why, in spite of much talk, nothing should have been done for the rebuilding of the city. The explanation is given in the Report on the Economic and Commercial Conditions in Turkey by Colonel H. Woods, British Commercial Secretary in Constantinople. Quoting the British Consul-General at Smyrna, he points out that, after the work entailed in the new planning scheme had been entrusted to a French engineer, who was responsible for most of the town planning in the French zone in Morocco, numerous difficulties had been raised in connexion with the adoption and application of the scheme. It appears that before the fire the unbuilt area, comprising street, public squares and gardens, amounted to barely 14 per cent. of the total area of the town, whereas the new plan proposes to increase it to 55 per cent. The authorities, in order to cope with the expenses of the application of the plan, are anxious to increase to 34 or 35 per cent. the levy now fixed at 25 per cent. that they are entitled to make on all real property destroyed by the fire. It is mainly this question and the modification to the original plan that it entails which has delayed rebuilding operations. As soon as the plan, as finally modified, is approved, building operations will be taken in hand.

Iraq Railways.

Iraq has been penalised by the uncertainty ruling over her northern frontier, even if no doubt regarding the Iraq-Britain relationship exists outside the British penny Press. In the meantime, however, while discussions run their course at Geneva, it is satisfactory to know that the Iraq railway system is gradually being overhauled and placed on a sounder footing. South of Baghdad the railway was essentially a military line, paying little or no attention to commercial requirements; to the north it had followed the Tigris through sparsely populated land to Samarra to form part of the German Baghdad Railway. The task before the Railway Administration in civilian hands was to bring the railway system into closer touch with traffic routes and the country's needs. In the case of the stretch between Baghdad and Mosul it was decided to scrap the line that had been laid as far as Samarra (or Shergat) and to build the Mosul line by way of Kifri and Kirkuk, where it would tap rich agricultural land. The new railway, branching off from the Khanikin line, was opened for passenger traffic to Kirkuk on August 31. Work on the section bzetween Mosul and Kirkuk has been in progress for some time, with a view to providing employment for tribesmen whose crops had been ruined by drought and locusts. With the completion of the line to Mosul that vilayet will be more closely linked than ever with Baghdad.

Turkey's Budget.

In the matter of fulness of detail the preparation of Turkey's Budget leaves nothing to be desired. The one anomaly is the way in which it is left, so to speak, in the air, without any attempt being made to balance revenue and expenditure. Thus last year expenditure was estimated at £T140,433,369, and revenue at £T129,214,610; but no statement, apparently, has been forthcoming to explain the position with regard to actual receipts and expenditure. This year the draft Budget showed expenditure estimated at £T162,288,942, and revenue at £T145,306,978. The Assembly set to work on these figures and modified them, so that expenditure was estimated at £T183,932,727 and revenue at £T153,046,854, but followed this up by passing two laws which provided that economies to the extent of £T16,980,000 should be effected, and that the increases in the salaries of State officials should not come into force until the month of June. Even so, there will remain an unmet deficit of £T13,000,000, which appears the more incongruous when the Budget Commission in its Report calls attention to the quota of taxes per inhabitant in Turkey as compared with other countries. If the figure of 12,500,000 inhabitants, it states, is accepted as the population of the Turkish Republic (the estimate would seem to be very much in excess of the actual total), duties and taxes collected in 1924 would represent but one gold Turkish pound plus a small fraction. When adding to the general revenue of the State the revenues collected by vilayets and for municipal taxes the annual quota does not exceed £T1.50 (gold) per inhabitant. Similar quotas in other countries are given as follow:—Great Britain, about £T16 (gold); France, about £T7; Austria, about £T8; Germany, about £T4; Italy, about £T3.50; Balkan States, about £T3.

A Futures Market for Empire Cotton.

The opening, last week, of a futures market for Empire cotton on the Liverpool Cotton Exchange is a distinct landmark in the history of Empire-grown cotton. Apart from the Sudan, several of our African Colonies are paying special attention to cotton, but their efforts have been handicapped by the lack of a regular market, such as has existed for the American and Egyptian product. Empire cotton-growers will now have the advantage of knowing beforehand what prices they can count upon for their produce, and the grades of cotton will be standardised for the protection of buyers and as an incentive to the growing of the best cotton for the British market. A futures market will inevitably act as a great stimulus to the trade in Empire-grown cotton.

Land Registration.

I would call attention to the series of articles on Land Registration in Egypt, which is concluded in this week's issue. It is hoped that the practical experience of Egypt in this matter will be of help to other Governments confronted with similar problems. Throughout the Near and Middle East much is waiting to be done in the matter of registration and in the overhauling of methods of keeping accounts and statistics. Let those responsible see to it that a start is made on sound lines, and that the system adopted is accurate, simple and, as far as possible, foolproof.

COMMENTATOR.

TRADE AND CONDITIONS IN SMYRNA.

A report from the Acting British Consul-General at Smyrna, quoted in the *Board of Trade Journal*, on economic conditions in the Vilayet for 1924-25, states that:—

Atmospheric conditions were unfavourable during last winter, as a severe and prolonged drought prevailed from October to March. The rainfall averaged four to five inches, as opposed to 20 inches recorded in normal seasons. Rain fell during the spring, but in insufficient quantities. Some damage was caused in June by heavy rains, and hot north winds in July forced the fruit and at the same time withered the protecting leaves. Estimates of the crops have in consequence been continually lowered.

Sultanas.—Although the actual acreage of fruit-bearing vines is larger than in 1924, the most recent official forecasts published by the Agricultural Department assess the production of vineyards this year at 29,000 tons, as against 48,000 tons in 1924 and 38,000 tons in 1923. Last year's crop was, however, abnormal. The smaller yield is due to the atmospheric conditions mentioned above and to the lack of proper attention to the vines, there being no specialists to supervise cultivators. The quality of the fruit this year promises to be good. Last year the United Kingdom received 13,000 tons; 30,000 tons went to the Continent, mostly to Germany.

Figs.—The yield of figs for the past two years was above the average, which fact may have affected the yielding capacity of the trees. A shortage of male figs in the Balajik and other of the principal fig-producing districts, which was only in part remedied, caused early estimates of the crop to be below the average. The worst fears have been realised, as many of the male figs dried up owing to the unusually small rainfall and the hot north wind of July, thus preventing the transfer of pollen. The actual crop to be anticipated is not yet known, but the Agricultural Department estimate placed it at 17,000 tons, as against 25,500 tons in 1924 and 23,000 tons in 1923.

Cereal Crops.—The prospects for the cereal crops are good. There is a large increase in the acreage actually sown, and crops are strong, healthy, and abundant. The most reliable estimates obtainable give the expected barley crop as follows:—Menemen district, 2,000 tons; Magnesia district, 1,000-1,500 tons; Alashehr district, 3,000-4,000 tons; Panderma and Pergama, 3,000-4,000 tons; Meander Valley, 2,000-3,000 tons; and Highland plateaux, 20,000-30,000 tons. This latter figure is estimated by some at 50,000 tons, and a recent tour of inspection by officials of the Aidin Railway Company tends to confirm this, as the actual harvest waiting for transport facilities is said to exceed pre-War dimensions. Even in the event of this crop not being brought into Smyrna at once, the total yield will not be under 30,000 tons, of which 25,000 tons should be available for export.

The crops of wheat are reported to be in excess of those of barley. Approximately 45,000 tons are said to be available, which represents a ten months' supply for the town of Smyrna. This leaves a deficit of 10,000 tons, which will have to be obtained from abroad.

The horsebean crop is officially estimated at 10,000 tons, but the quality is very poor, owing to the drought, and it is anticipated that only 2,000 sacks will be available for export. The white maize crop is stated to be barely sufficient for local needs, while the yellow maize crop is estimated at 15,000 tons, leaving 5,000 tons available for export. It is not expected that there will be any oats available for export, although more was sown this year than in previous years. The rye and millet crops are small, while as regards chickpeas between 5,000-6,000 sacks are expected to be available for export. The haricot beans produced are insufficient for local needs.

Industrial Products.

Cotton.—The crops in this district for the past two years amounted in 1923 to 11,500 bales (2,100 tons), as compared with 32,000 bales (nearly 6,000 tons) in 1924. The high prices ruling in 1923-24 encouraged sowing on a large scale, the more so as the tobacco crop of 1924 yielded very unremunerative results to farmers. The absence of skilled labour and the smaller outlay of capital needed have further caused cultivators to turn their attention from tobacco to cotton. In the Smyrna district, according to the Agricultural Department, 40,730 dunums (=9,239 acres) are under cultivation. The prospects of the crop for 1925 are therefore put down as at least 50,000 bales (8,500-9,000 tons). The weather has been favourable, and the quality promises to be good. Cotton seed is dependent on the amount of cotton grown. Local industries are capable of absorbing 10,000 bales, and it is anticipated that 35,000-40,000 bales will be available for export.

Valonea.—The supply of valonea gathered depends on the demand. There was a heavy carry-over of the 1922-23 crops of about 15,000 tons, which remained up-country and came into Smyrna mixed with the crop of 1923-24. Some 35,000 tons were collected from the 1924-25 crop, all of which have been disposed of, leaving stocks prac-

tically depleted. There are 1,000 tons left in stock in Smyrna and 5,000 tons in the interior. The valonea crop is apt to be neglected owing to the higher wages offered by tobacco and cotton cultivators. The new crop, not available until October, is estimated to-day at about 40,000 tons. The total amount of valonea shipped from Smyrna this year was 44,000 tons.

Olives and Olive Oil.—This year a very small olive crop is expected, and it is not expected that there will be a surplus available for export. The oil crop for 1924 amounted to about 30,000 tons, a quantity considerably short of the estimates, due to lack of labour, delay in gathering the olives, and the destruction of most of the oil refineries by the retreating Greeks in 1922.

Tobacco.—The tobacco crop for this year is not yet entirely harvested. It is expected to produce less than last year, possibly about 17,000 tons, but the quality is said to be superior. The 1923 crop amounted to approximately 12,000 tons and the 1924-25 to 20,000. Last year's crop has almost all been purchased; export begins about the middle of September. America and Germany are expected to be the chief purchasers, the latter paying much higher prices for low grade qualities and demanding in return long terms of credit.

PROGRESS IN THE SUDAN.

Special interest attaches to the Report of the Central Economic Board of the Sudan Government for 1924-5, which has just been issued, inasmuch as the period which it covers has been marked by rapid progress with important projects for developing the country. The year in question, in fact, saw the Sudan on the verge of rapid economic development; and the glimpse that the report gives of a country enjoying considerable prosperity, with trade returns gradually improving, enables one to obtain a clear idea of what the position of the country is likely to be now that the Makwar Dam is in operation, and now that it will be possible to increase cotton production out of all proportion to what it has been in the past. Viewed in this light, the Report, which takes us down to May of this year, is, in a sense, a landmark between the old Sudan and the new that promises to become, under the judicious guidance of the British Administration which has already achieved such great things for the country, one of the most prosperous regions in an Empire which can show many such tributes to its beneficent rule.

The most important events of the year are summarised in the opening chapter of the Report. First mention must be given to the progress made with the Makwar Dam and the Gezireh Canalisation Scheme, enabling the cultivation of 100,000 acres annually with cotton. Another event of outstanding importance was the completion of the railway to Kassala in the spring of 1924. The line, which has been constructed primarily to enable cotton-growing in the Gash Delta, will, it is believed, have a most satisfactory influence on the production of other commodities besides cotton. It is contemplated ultimately to link up the line at Kassala with the main line over the Makwar Dam, which will give a shorter way to the sea from the central and western Sudan. Reference is also made to the extremely satisfactory results of the campaign for the increase of the cultivation of rain-grown cotton, and it is stated that it was largely owing to the increase in the production of this kind of cotton that the export of cotton rose from 28,056 bales in 1923 to 46,074 bales in 1924. Another notable development mentioned is the formation of a company by the Sudan Government to carry out the necessary extensions at Port Sudan to cope with the continual increase in traffic. How the shipping has grown in recent years can be seen from the following table:—

	British.		Foreign.		Total
	No. of Vessels.	Tonnage.	No. of Vesssels.	Tonnage.	Tonnage.
1913	—	527,845	—	194,025	721,870
1923	456	1,768,603	153	496,772	2,265,375
1924	513	1,940,266	186	582,963	2,523,229

The figures for last year were a record for the port both as regards the number of vessels and the tonnage, and it is obvious that the progress of the country will find a reflex in future years in the rapid growth of the shipping using the port. Finally, reference is made to one more event of particular significance, the formation of a company for the construction and management of works of public utility at Khartoum, Omdurman, and Khartoum North. The development of cotton production in the Sudan has drawn attention to the country as a field for investment, and it is to be anticipated that this company will prove the forerunner of a number of other notable enterprises.

The figures for the external trade of the Sudan given in the Report are for 1924 and for the first quarter of 1925, and these have been supplemented in the monthly reports of the Central Economic Board. The trade statistics of the Sudan up to the end of May have already been dealt with in detail in these columns, and it is only proposed to refer them briefly now. The value of the total trade in 1924 was £E9,562,000, as compared with £E7,790,000 for 1923, and was, in fact, the highest recorded except in the boom year, when the total was £E12,657,000, which can be ruled out for purposes of comparison, owing to the inflated prices of commodities. 1924 saw a marked increase in the value of public imports, which rose from £E2,974,000 to £E3,655,000, and of exports, which rose from £E2,562,000 to £E3,542,000. The figures for the first five months of 1925 show that this process has continued, that the value of the exports is increasing at a far more rapid rate than that of the imports, that in all probability the value of the external trade this year will easily exceed £E10,000,000 and that there will be a trade balance in favour of the Sudan. All of which is exceedingly satisfactory, the more so when it is borne in mind that only next year will the great schemes of development begin to exercise a really important influence on the situation. It is equally gratifying that Great Britain has the chief place both as regards the Sudan's imports and exports, the percentages of the total trade for the first five months of this year being 37.4 and 64.5, respectively; but one would like to see the percentage of the import trade larger than it is.

LLOYDS BANK LIMITED. HEAD OFFICE: LONDON, E.C. 3.

Capital Subscribed - £71,864,780
Capital Paid up - £14,372,956
30th June, 1925
Reserve Fund - - £10,000,000
Deposits, &c. - - £338,371,355

EASTERN DEPARTMENT:
77, LOMBARD STREET, LONDON, E.C. 3.

LLOYDS BANK now has the following Offices in INDIA, BURMAH and EGYPT, and can offer special facilities to merchants and others for transactions with those countries. It issues Drafts, Mail and Telegraphic Transfers and Letters of Credit, negotiates and collects Bills of Exchange, conducts Exchange operations, and transacts Banking and Agency business generally.

INDIA & BURMAH.—BOMBAY, CALCUTTA (2 Offices), KARACHI, RANGOON, DELHI, SIMLA, RAWAL PINDI, MURREE, SRINAGAR (Kashmir), GULMARG.

EGYPT.—ALEXANDRIA, CAIRO, TANTA, BENHA, MEHALLA KEBIR, BENI SUEF, FAYOUM, MINEH.

Full particulars can be obtained from any of the Bank's Branches.

Digitized by Google

ROUMANIAN EXCHANGE.

It is announced from Roumania that, as from January 1, 1926, one-third of the receipts from the Luxury and Turnover taxes and from the State's participation in the profits from petroleum production and the earnings of the National Bank will be set aside for the gradual cancellation of the note issue with a view to assisting the stabilisation of the leu. This decision marks a further step in the realisation of the Bratianu Government's programme for the general improvement of Roumania's economic position. An agreement was recently arrived at between the Government and the National Bank by which the former undertook to establish a sinking fund for the note issue made by the Government, and from this fund the Bank was to be repaid within a period of from fifteen to twenty years.

EUROPEAN SUGAR.

A record sugar production is anticipated this year in Europe. The area under beet cultivation is returned at 5,201,000 acres, an increase of 63,000 acres over the 1924 area, and the harvest is estimated at 7,395,000 short tons as compared with 7,149,000 in the previous year. In this connexion, however, it may be noted that in certain countries the sugar content of the beet shows a diminution of 2 per cent. over last year's figure. Russia is mainly responsible for the increase, with 1,185,000 acres under cultivation—an increase of 338,000. The next largest producers are Germany (907,000 acres), Czecho-Slovakia (751,000), France (511,000), and Poland (437,000). It is noticeable that Great Britain figures on the list with 59,000 acres as compared with 22,000 acres in 1924 and an estimated production of 70,000 short tons as compared with 27,000 in 1924. Italy, Yugoslavia, and Spain are the only countries showing any considerable decreases in the area under beet, the three countries having this year between them 442,000 acres instead of 701,000 last year. From another source it is learned that a serious crisis has overtaken the Italian sugar industry, eighteen factories out of 53 being idle, owing to the inability of Italian sugar to compete with the imported product. Between August 1, 1924, and June 30, 1925, over a million hundredweight of foreign sugar was imported into Italy.

ROUMANIAN LOAN OF 1922.

The British Overseas Bank announce that funds for the payment of the coupon due October 1, 1925, on the bonds of the Roumanian Four per Cent. Consolidation Loan, 1922, have been duly lodged with them by the Roumanian Governmnt.

PORT FUAD.

Details are now published of the agreement between the Egyptian Government and the Suez Canal Company for the construction of Port Fuad, east of the Canal opposite Port Said, on the site of the depôts and workshops erected during the War and now the centre of new salt works. Port Fuad will cover an area of 300 acres, of which the Egyptian Government reserves to itself 15,000 square metres for State buildings, and administration will devolve on the Suez Canal Company until such time as the extension of the city allows a special institution similar to the administrations of Ismailieh and Port Tewfik. The Suez Canal Company undertakes to advance, without interest, all the necessary funds for the construction of roads, drainage, etc., the outlay to be recovered from the sale of grounds and buildings, and by letting.

The net tonnage of traffic passing through the Suez Canal during the first six months of 1925 was 14,127,000 tons. This constitutes a record, showing an increase of 1,080,000 tons over the corresponding period of last year, and is only 400,000 tons lower than the whole tonnage of traffic for 1924. The postal navigation is the largest ever seen during six months, the increase being chiefly in English, Dutch, and German mails.

GREEK COMPENSATION TO ALLIED NATIONALS.

Under the heading "Convention regarding compensation payable by Greece to Allied nationals in respect of action by Greek authorities in Turkish territory while under Greek military occupation," the following official notice has been published:—

The collection and investigation of British claims falling under this Convention is now nearing completion, and his Majesty's Government hope to be able to present the claims to the Greek Government in the near future.

It is desirable that the whole of the claims should be submitted together to the Greek Government, and British claimants who have not yet submitted details of their claims under this Convention are therefore warned that it is essential that full particulars of such claims should be in the possession of his Majesty's Government before October 31, 1925. Any claims which have not yet been sent in should be sent forthwith to the Reparation Claims Section, Finance Department, Board of Trade, Great George Street, London, S.W. In the case of claims not lodged with the Reparation Claims Section before October 31, 1925, it will be necessary for claimants to approach the Greek Government directly.

Only claims put forward by persons able to establish their British nationality will be considered by his Majesty's Government, and claimants are reminded that the only claims to which the Convention applies are those in respect of losses and damage suffered after June 1, 1921, as a result of Greek action, as defined in the Convention, in Turkish territory under Greek military occupation.

ALBANIA'S NATIONAL BANK.

The Albanian National Bank was founded in Rome on September 2 in accordance with an arrangement reached under the auspices of the League of Nations. The capital stands at 12,500,000 gold francs, of which 2,600,000 has now been paid up. Of the total share capital a foreign group, comprising mainly of Italian, Belgian and Swiss financiers is responsible for 51 per cent.; the remainder it is hoped to raise in Albania. The new bank will issue notes and coins, and will act as the Government Treasury.

FOUADY.

On September 4 the Egyptian Minister of Agriculture presided at a meeting of notables at Kafr-es-Zaiyat at which Mr. Parachimonas's new variety of cotton was formally named "Fouady," after King Fuad.

BRADBURY, WILKINSON & COMPANY, LIMITED.

NEAR EAST MARKETS

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated September 1, state:—

Currants.—The uncertain tendency which characterised the markets was due in a large measure to the prevailing cheap c.i.f. quotations for new crop fruit, which awakened a natural desire on the part of holders to liquidate their remaining stocks before shipments of the 1925 crop arrived, and this was scarcely calculated to stimulate buying activity. We have to record a most disappointing month's trading, with a distinctly bearish sentiment, which has certainly restrained operations, and a policy of extreme caution has reigned. The principal business centred round Pyrgos, 29s. to 30s.; cleaned varieties, 34s. to 36s.; Gulf, 35s. to 38s.; Vostizza, 42s. to 43s.; fine shade dried, 47s. to 52s. Quotations:—Pyrgos, 29s.; Amalias and Patras, 32s. to 36s.; Gulf and Panariti, 35s. to 40s.; Vostizza, 42s. to 50s.

New crop.—A little business is reported in cleaned Amalias and Patras 34s. to 35s. 6d. c.i.f., and in shade dried Vostizza 53s. to 57s. quay terms. Cables received from Greece announce that the Government has fixed the retention act in kind, and that the export tax continues as during the past season.

Australian.—With the realisation that prices demanded for this growth did not bear relation to those asked for Greek fruit, business became very difficult. A re-appraisement was decided upon, and at the reduced figures a slightly better trade was possible at 35s. to 42s. for parcels of attractive appearance, but those of inferior grade and poor colour are difficult of sale.

Sultanas.—Smyrna are practically cleared, few ordinary sold at 60s.; fair to good, 66s. to 70s.; fine, 76s.

Owing to the drought the estimates of the 1925 crop are being constantly reduced, and the latest forecasts give the yield as 25,000 tons, against 52,000 last season. Reports of the high prices paid in Smyrna for the first arrivals, viz., 65s. to 80s. c.i.f. presage a season of high figures.

The strong news from Smyrna has had a very stimulating effect on the Australian growths, and with practically no other stock here, these have met with an active inquiry at advancing prices, the latest sales at 70s. showing an advance of 4s. per cwt. Fine coloury grades are scarce, and were keenly competed for up to 75s., one exceptional lot realising 85s.

Figs.—Reports of a short crop in Smyrna have resulted in raising the values of genuine naturals to 27s. c.i.f.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT,
Indian Government Vouchers accepted.

Passenger sailing dates:—

*ELYSIA, Sept. 11.	*OLYMPIA, Nov. 13.
*CIRCASSIA, Sept. 29.	*SCINDIA, Nov. 27.
CALIFORNIA, Oct. 14.	*MASSILIA, Dec. 11.
*CASTALIA, Oct. 27.	*ELYSIA, Dec 29.

*First class passengers only. Specially low fares.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL Oct. 14. MARSEILLES Oct. 20. All 1st and 2nd class state rooms are fitted with Punkah Louvres and with Fans. This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ending August 29:—

The arrival of sultanas on the Smyrna market since the opening of the season are estimated 2,060 tons as compared with 8,000 tons for the corresponding period in 1924. Estimated sales are put at 1,930 tons, as compared with 7,000 for 1924. The closing prices are:—Types 12, 59s.; 13, 62s.; 14, 65s.; 15, 68s.; 16, 73s.; 17, 80s. per cwt. c.i.f. London/Liverpool, the corresponding prices per 100 kgs. c.i.f. Hamburg/Amsterdam/Trieste being 69, 72, 75, 78, 82, 88 florins respectively.

The market is steady, with firm undertone. Shippers have been operating with reserve. There appears to be little desire on the part of consumers to pay the present level of prices. Dealers, however, are resisting decline. Small arrivals give strength to the position.

CYCLE AND MOTOR CYCLE SHOW, 1925.

The opening ceremony in connection with the Eleventh Cycle and Motor Cycle Show, organised by the British Cycle and Motor Cycle Manufacturers' and Traders' Union, Ltd., at Olympia, on September 21 next, will be performed by the Rt. Hon. L. C. M. S. Amery, P.C., M.P., Secretary of State for Dominion Affairs and Secretary of State for the Colonies.

COMPANY REPORT.

DIALA COTTON.

The statutory report of Diala Cotton Plantations states that the number of shares allotted is 400,000, all of which are allotted for cash, and 10s. has already been called up on each share. Cash received in respect of 400,000 shares issued wholly for cash is £198,655. Preliminary expenses have absorbed £40,739, payment on application for 50,000 shares of £1 each—Eastern Irrigations, Ltd., £2,500, purchase consideration paid to Eastern Irrigations £25,000, plant and machinery £2,056, office furniture and fixtures £5, and payments less receipts on revenue account £9,517, leaving cash at bank £118,837. Preliminary expenses, including underwriting and overriding commission, are estimated as follows:—Capital duty and registration fees, £5,400; underwriting and overriding commission and brokerage, £16,587; advertising and printing prospectus, fees, legal charges, postage, etc., £19,919; total, £41,906.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Liverpool, September 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—M.v. Malia for Port Said, Colombo, Madras, and Calcutta (London, September 19).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, September 23).

British India Line.—S.s. Domala for Colombo, Madras, and Calcutta (London, September 26); s.s. Merkara for Bombay and Karachi (London, September 25).

Cunard Line.—S.s. Phrygia for Gibraltar, Oran, Algiers, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, October 10).

Ellerman "City" Line.—S.s. City of Hong Kong for Calcutta (Birkhenhead, October 1).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 12); s.s. Vedamore for Galatz and Braila only (Liverpool, September 30); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 17).

P. and O. Line.—S.s. Rawalpindi for Bombay (London, September 18); s.s. Novara for Colombo, Madras, and Calcutta (London, September 19).

Prince Line.—S.s. Burmese Prince for Malta, Alexandria, Jaffa and Haifa (London, September 12); s.s. Egyptian Prince for Malta, Alexandria, Jaffa, and Haifa (London, October 3).

The Bibby Steamship Company, it is announced, have placed on order with the Fairfield Shipbuilding and Engineering Company, Glasgow, for a second motor passenger and cargo vessel of about 10,000 tons register and of 8,000 horse power.

NEWS IN BRIEF.

The King and Queen of Roumania arrived at their summer residence at Sinaia last Thursday.

Boy Scout organisations in Bulgaria, which have been in existence for scarcely a year, have been holding their first "jamboree" in Sofia.

It is reported from Sofia that the Bulgarian Government is contemplating the early concellation of all import prohibitions at present in force.

Sir Thomas Ward, Chief Consultant to the Diala Cotton Plantations, formerly Inspector-General of Irrigation in India, arrived in Baghdad last week.

The Crown Prince of Roumania is to preside at the conference of the International Aeronautical Federation, which meets in Prague on September 19.

The convoys of the Nairn Transport Company between Beyrout and Baghdad are now running as usual, escorted over part of the distance by the French Camel Corps.

A serious explosion occurred on September 2 at the State Powder Factory at Dudesti, Roumania, in which one man was killed. Part of the works were blown up, but the machinery was undamaged.

The Greek Government has instructed M. Caclamanos, Greek Minister in London, to proceed to Paris to negotiate with a French financial group regarding the buying back of the shares in the Salonika-Ghevgheli Railway.

Information was last week received at the Board of Trade from the British Minister at Sofia that quarantine has been imposed on ships arriving from Constantinople on account of an outbreak of plague at that port.

The new P. and O. mail steamer, Rawalpindi (17,000 tons), after a series of successful trials in Belfast Lough on September 3, left for Tilbury. She is due to start on her maiden voyage to India on September 18.

During the three months ending June 30, Bulgaria exported 10,500,000 kilograms of cigar and cigarette tobacco, valued at 670,000,000 leva (about £1,000,000), as compared with 3,300,000 kilograms, valued at 160,000,000 leva in the same period last year.

The correspondent of the *Pioneer* at Meshed in Persia reports the observance last Saturday as a day of mourning because of the bombardment of Medina by the Wahabis. The great mosque was draped in black and the people, numbering 7,000, who were present at the Mosque, were clothed in black. The bazaars and offices were closed.

EXHIBITIONS IN THE NEAR EAST.

PALESTINE AND NEAR EAST EXHIBITION.

In connexion with the "Palestine and Near East Exhibition and Fair" to be held at Tel-Aviv from October 4 to November 7, British manufacturers of machinery, agricultural implements and producers of chemical fertilisers and raw materials are invited to avail themselves of an excellent opportunity for bringing their goods to the notice of Palestinian traders.

AGRICULTURAL AND INDUSTRIAL EXHIBITION AT CAIRO.

In the Agricultural and Industrial Exhibition to be held in Cairo from February 20 to March 6, 1926, under the patronage of King Fuad and under the auspices of the Royal Agricultural Society of Egypt, the Agricultural Section will include all branches, and the groups in the Industrial Section will comprise engines and motors, agricultural implements and machinery, transport for agricultural produce, and modern types of farm buildings and methods of construction suitable for use in Egypt.

Intending exhibitors should make application before October 15, to the Director, Royal Agricultural Society, P.O.B. No. 63, Cairo. A copy of the Regulations and further particulars regarding both the Tel-Aviv and Cairo Exhibitions may be consulted at the Department of Overseas Trade (Exhibitions and Fairs Division), 35, Old Queen Street, London, S.W.1.

OTHER EXHIBITIONS.

Belgrade.—Second International Sample Fair (Sept. 15-30).

Gorna-Orechovitza (Bulgaria).—Samples Fair (Sept. 17-27).

Bucharest.—Oil Well Equipment Exhibition (Sept. 21-Oct. 21).

Salonika.—International Fair (October).

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ending August 27, state:—

Since our last report the Futures market has been fairly active prices being somewhat easier; the net changes on the week are the following: Sakellaridis, 1.20 dollars down for November, 1.24 dollars down for January, 1.20 dollars down for March; Ashmouni, 0.45 dollars down for October, 0.28 dollars down for December. The week opened with rather weak sessions, but, on rumours that the Government may enter the market, if prices were pushed lower, short covering ensued causing part of the drop to be recouped. There is nothing concrete about the Government intentions; however, if ever the Government decides to support the market, we do not think it will be justified to commence purchasing on the basis of the present level of prices. We consider the position judged on its present data somewhat bearish; the demand from abroad is small and the growing crop is doing well and promising a production larger than last year, the same forecast applying to American long staples and other competing growths. Despite the continued decline of New York, Ashmounis have been rather steady; the market is at present somewhat narrow and as the Continent has been buying some new crop cotton, this has sufficed to hold up prices.

On the 24th inst. the following figures on the American crop were published by the American Bureau: Condition 62.00, estimated yield 13,990,000 B/s against 65.6 and 13,566,000 B/s a fortnight ago. These figures although considered as bearish have not had any effect on our market.

The week's receipts amount to Crs. 22,614 against exports Crs. 22,308; the stock stands at Crs. 294,552.

Spot: Minet el Bassal has been a quiet market this week and sales amount to about 3,850 B/s of which we estimate 300 B/s Sakel, 3,500 B/s Uppers and 50 B/s of other varieties.

Sakellarides: has been in very poor request. Such little business as there is has been mostly for medium and low grades. A few bales of high grades have changed hands, but the demand at present is at its lowest point. Spot parities are much cheaper for Fully Good Fair and better, unchanged for Good Fair and somewhat firmer for Fully Fair and below. Quotations are, however, nominal.

Ashmouni and Zagora: have been in good demand and all styles have been dealt in Except for Fully Fair and below, which are rather dearer, spot differences are without much change.

Brown and Pilion: A few bales of Pilion have been done, but quotations are entirely nominal as supplies of these growths are practically exhausted.

White: is neglected and only a few bales have been been done. Quotations are nominal and generally easier.

Crop 1925: Reports from the Interior are satisfactory. A distinct improvement is apparent in the Northern districts of the Delta. Some fogs have been reported, but the damage has not yet been ascertained; we do not think it is serious.

The Ministry of Agriculture has published the following figures relative to the acreage of the different varieties of cotton planted during the current and preceding seasons.

	1924/25. Feddans.	1923/24. Feddans.
Sakellarides	1.128,946 ...	872,624
Ashmouni	270,842 ...	796,362
Zagora	338,578 ...	
Pilion	72,799 ...	49,960
Afifi and Assili	8,384 ...	22,271
Other varieties	54,833 ...	46,626
Total	1,924,382 ...	1,787,843

In our opinion the above figures are short of the reality especially as regards Ashmouni and Zagora: we estimate the acreage of the latter at about 600,000 feddans and the total acreage for Egypt at about 2 million feddans.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank, for the week ended September 5, states:—

There has been little change in the position of this market during the past week. Inquiry has been on a somewhat more extensive scale, but actual business still lags far behind it. Nevertheless, there is still a strong feeling that this inquiry is the expression of a real commercial demand, which is only waiting for the moment when there appears to be a prospect of stability in prices.

The weakness in raw cotton continued during the early part of the week; but this was partially recovered before the close, and confidence that an even lower range of values will shortly be reached, although still the predominant feeling, is not so strong as it was recently.

Yarn.—A more cheerful tone has prevailed in this section. The Oldham holidays have led to considerable reductions in stocks, and naturally spinners are trying to make the most of the fact. Inquiry has been on a fairly good scale and, in the early days of the week at any rate, some of the benefit of cheaper raw cotton was again retained.

In Egyptian Spinnings there is nothing of interest to report. The cheaper qualities move off fairly well, but for the finest counts demand is very poor.

Cloth.—Here also there has been a broadening of inquiry, but actual transactions are still by no means satisfactory.

Business for India has not attained large proportions, and China has not operated to the same extent as recently, although a few transactions have been put through. Demand from the Near East has not expanded but, in view of the good accounts from these regions regarding their crops, developments are expected.

In one or two localities Manufacturers' Associations have been discussing the question of organised short time for the weaving mills; but no decisions have yet been come to, although it is understood that the subject is to be further considered.

Raw Cotton.—Actual business in Liverpool continues to be of small dimensions. The week has been chiefly interesting by reason of the inauguration on September 1 of the new "futures" contract for "Empire and Miscellaneous Growths" of cotton, under which virtually all classes of cotton except certain qualities of Egyptian can be hedged. To be tenderable under this Contract cotton must be equal to Strict Low Middling American. A number of operations have taken place at prices approximately ½d. per lb. below American.

The reports from the United States regarding the growing crop have not been quite so favourable as recently, but on the other hand, it is maturing early and the beginning of its movement in bulk is undoubtedly weighing upon prices. A further official Bureau Report is due for publication on Tuesday next.

The news from Egypt continues satisfactory and prices in this section are again reduced. Fluctuations have not been so wide as last week. Closing quotations yesterday were as follows:- American Middling, 12.51: Egyptian Fully Good Fair, 27.95; the corresponding figures for last week being 12.60 and 28.65.

EGYPTIAN TRIBUTE LOANS.

The Egyptian Tribute Loans have recently been quoted at 76 for the 4 per cent. and 68 for the 3½ per cent., a higher figure than they have reached for two years. Last June, it will be remembered, the Mixed Tribunals gave judgment against the Egyptian Government's contention that it was no longer bound to pay interest on the bonds: but an appeal was lodged by the Government and the case is expected to come before the higher Court in October.

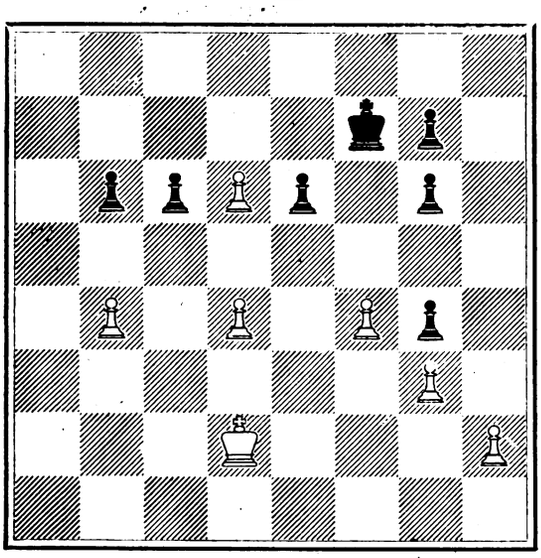
CHESS.

By "CARO-KANN."



PROBLEM No. 13.

White to play. What result?

Solution to Problem No. 12:—1, K—K3, K—Q2; 2, K—B4, K—K3; 3, K—K4, K—B2; 4, K—B5, K—Q2; 5, K—K5, K—B2; 6, P—Q5, PxP; 7, KxB, P—Kt3; 8, PxP, KxP; 9, K—Q6, K—R3; 10, K—B5, K—R2; 11, KxP, K—Kt2; 12, K—B5, K—B2; 13, P—Kt5 and wins, for White now has the opposition. If 1, . . . P—Kt3; 2, PxP, KxP; 3, K—K4 and again wins by virtue of the opposition, taking it direct by K—K5 if Black plays K—B2 and indirectly by K—B5 if Black plays K—Kt2.

I see that the suggestion is made in a contemporary that the British Championship Tournament should be thrown open to foreign competitors with a view to strengthening British chess. It is suggested that six of the twelve players should be foreign masters, the highest British representative to hold the British championship. While it is quite possible to make out a good case for the idea from some points of view, I am quite sure that it would never obtain general acceptance, and personally I should regret such an innovation. After all, it is not as though there were no opportunities for meeting foreign masters in this country. It is usually the case that one or two play at the minor congresses that are held each year. And it may well be asked whether the brief practice obtained is so beneficial as to justify altering the British Championship. What has happened with regard to other games hardly suggests that it would be.

STEAUA ROMANA.

Information has been received by the Steaua Romana (British) from the Steaua Romana Company of Bucharest that Well No. 4 at Ceptura has come into bearing with a production, under control, of about ten tons an hour. The bringing in of this well is said to be of the greatest importance, as it proves a large proportion of the extensive block of 1,500 acres held by the company on the Ceptura anticline. Steaua Romana production during August amounted to 26,380 tons.

The Board of Trade announces that information has been received from the British Minister at Sofia that quarantine has been imposed on ships arriving from Constantinople on account of an outbreak of plague at that port.

It is stated the "Société Francaise de T.S.F." has been granted a concession for wireless telegraphy in Turkey. The contract provides for the erection, within twelve months, of a station at Angora as well as repairs to the existing station in Constantinople.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

GREECE.

The Nauplia Harbour Committee invites international tenders for the reconstruction work to be carried out in the harbour, which consists of:—(1) The deepening by seven metres of the greater part and by four metres of the other part of the harbour. (2) Restoration and extension of the existing pier. 3) Restoration of the mole. The cost of the work is estimated at approximately 8,000,000 drachmæ. Tenders should be submitted under sealed envelopes to the above committee by November 1. Any further particulars and plans are obtainable at the offices of the committee at Nauplia.

EGYPT.

Linen, Etc.—The Egyptian Quarantine Board, Alexandria, invites tenders for the supply of various goods required for the equipment of the Tor reception station, including bed, table and toilet linen, woollen coverlets, mosquito nets, bentwood coatstands, chairs (Vienna type), mirrors, hospital screens, iron bedsteads and crockery. September 30. (D.O.T.)

Machinery.—The Controller, Technical, Industrial and Commercial Education, Sharia Qasr el Aini, Cairo, invites tenders for machinery required for the Engineering and Carpentry Sections of Cairo Model Workshops, Boulaq, Cairo. October 10.

Motor Boats.—The Egyptian Quarantine Board invites tenders for (a) two motor-boats (petrol driven), (b) two petrol-driven ocean patrol motor-boats (vedettes automobile). October 30. (D.O.T.).

Lorries.—The Director General, State Domains Administration, Savoy House, Sharia Qasr el Nil, Cairo, invites tenders for the supply of two lorries. October 5.

Electrical Installation.—The Ministry of the Interior, Savoy House, Cairo, invites tenders for the supply and installation of an electric power station and distributing system for the town of Minieh. The contract comprises the supply and installation of diesel-driven generator sets and cables, etc. October 1. (D.O.T.)

Sewage Pumping Machinery.—The Director-General, Main Drainage Department, No. 2, Sharia Abbas, Cairo, invites tenders for the supply, erection and delivery of sewage pumping machinery, comprising 3 large and 1 small Diesel engines and 3 large and 1 small centrifugal pumps, complete with auxiliary plant. November 2.

ROUMANIA.

Railway Crossings.—The Roumanian Railway Administration (Economat) invites tenders for the supply of railway crossings. September 22. (D.O.T.)

Surgical and Medical Instruments and Appliances.—The Prisons Department of the Ministry of the Interior, Cairo, are inviting tenders, to be received up to noon on November 3, for the supply of surgical and medical instruments and appliances. Firms interested in the supply of instruments and appliances manufactured in the United Kingdom can obtain particulars upon application to the Department of Overseas Trade (Room 53), 35, Old Queen Street, London, S.W.1.

THE SUDAN.

Dynamo, etc.—The Inspector General of Irrigation, Sudan, Khartoum, invites tenders for the supply and erection of a dynamo, wiring and fittings for an installation of electric light and fans at Gebel Aulia in the Sudan. October 1.

NEWS FROM ALL SOURCES.

The National Bank of India has declared an ad interim dividend for the half-year ended June 30, 1925, at the rate of 20 per cent. per annum, payable September 16, free of tax.

The Ottoman (Smyrna-Aidin) Railway Company has placed an order, says *Modern Transport*, with Messrs. Beyer, Peacock and Co., Ltd., for a locomotive of the Garrett patent articulated type, which will be the heaviest and most powerful ever built for the Near East.

The Commercial Bank of the Near East has declared an interim dividend at the rate of 6 per cent. per annum, less tax, in respect of the half-year ended June 30 last on all shares issued on or before that date. The directors have decided not to issue half-yearly balance-sheets, but only to issue an annual balance-sheet. The dividend a year ago was at the rate of 8 per cent. per annum, less tax.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen & Co., The North-West Tannery, The Empire Engineering Co., and the Nani Tal M.T. Co. These Firms, by pooling their resources and centralising control, form a corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LALIMLI PURE WOOL

Makers of the famous Lalimli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPORE WOOLLEN MILLS CO., CAWNPORE

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO., CAWNPORE

COOPER, ALLEN AND COMPANY

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.

Everything in Leather.

COOPER, ALLEN & CO. CAWNPORE

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include:
Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Geneva at Work.

The Sub-Committee appointed by the Council of the League of Nations to consider further the question of the Mosul frontier in the light of the Commission's Report has been hard at work, and, it is anticipated, may be in a position to report to the Council at the end of this week. In the meantime Turkey and her organs in the British Press have been equally hard at work. The Turkish Government, however, while obviously grateful for the support accorded to it from unexpected quarters, appears to be sufficiently well informed regarding British politics not to place too much reliance on anti-Cabinet propaganda in English newspapers. Since the Sub-Committee started its deliberations, the Turkish Delegation in Geneva has made a fresh bid for a plebiscite in the Mosul vilayet. The suggestion, it will be recalled, was carefully considered by the Mosul Commission, which stated in its Report that it approached the subject with a strong bias in favour of it. Investigation on the spot, however, speedily convinced the Commission that a plebiscite was entirely out of the question, and it is unlikely that the League of Nations will be inclined to reopen the subject in Geneva, even on the strength of the picturesque suggestion that the plebiscite should take the form of a flag day. The Turkish Government does not appear to have pinned much faith in this move, as almost immediately after the suggestion was put forward, it occupied itself with a scheme of reform for the Eastern vilayets of the Republic, clearly intended to meet possible misgivings at Geneva regarding Turkish treatment of the Kurds. These and later manœuvres, designed to whittle down the extent of the Turkish territorial claim, can hardly avail to distract the Sub-Committee from a judicial inquiry into the real merits of the case.

Turkey and Mosul.

In a matter of this sort there is a great deal of common sense in Turkey, which would have had an opportunity of manifesting itself, if the Turks had been left to themselves; but in view of the attitude of certain London newspapers it is difficult to see how the Turks, labouring under obvious limitations, could act otherwise than they are doing. Anyone with knowledge of modern Turkey knows that it is an axiom of Turkish republican policy that the Turks are well rid of the Arabs. This fact in itself conditions Turkey's real attitude on the Mosul question, although it will not affect the natural desire not to have the firm hold on the Kurds weakened by the existence of Kurds across the border more favourably placed than those in Turkish territory. There is also an equally natural longing to benefit financially from any oil to be discovered in the Mosul vilayet. On the other hand the bed-rock foundation of the new order in Turkey is a sincere desire to make good, to avoid international complications, and to have time to show the world what the Turks can do for themselves and by themselves. In these circumstances there was ample room for an understanding between Turkey and Great Britain on the Mosul question; but time was wanted, because Angora was distinctly "*difficile*," it had an uneasy conscience in any dealings with Great Britain, and there was a certain amount of international intrigue from quarters that ought to have acted more loyally to Great Britain. Things, accordingly, drifted, until it was a question of Turkey's having to make the best of her case *vis-à-vis* the League of Nations. At this stage, fresh help was forthcoming from two quarters, from Communist Moscow and from a section of the British Press. Turkey is nothing if not game for a diplomatic fight.

Turkey's Backers in Britain.

The support given in this country to Turkey in her controversy with Great Britain is of two kinds: there is the anti-Government Press, whose attitude on any given subject need be no more than the personal attitude of two

Digitized by Google

individuals, and there is a small body of opinion which on this particular subject is able to collect under one pro-Turk umbrella pacifists and die-hards *et hoc genus omne*. Unfortunately this small body imagines that it is rendering a service to both parties to the controversy by advocating a complete surrender to Turkey's claims. On this point they ignore the fact that Turkey's first instinct was sound, and that, if she is to make good, she must confine her efforts strictly to Turkish territory and not weaken herself by trying to rule subject populations, whether Arabs or Kurds, to any greater extent than may be absolutely inevitable. The value of the attitude of the anti-Government Press may be gauged from its tactics, than which nothing could be less British; for this reason, as Turkey will find, its support means nothing to her, beyond additional discomfiture. After discovering that the invention of an alleged British pledge, that was never given, has misfired, the anti-Government Press has fallen back on the dignified task of frightening the British people into submission by the threat of Turkey's overwhelming military strength and will to war. There must be smiles in Angora, where something is known about military matters. Turkey, we are asked to believe, is preparing for war against Great Britain for the possession of the Mosul vilayet. It took her two or three months to prepare, within her own frontiers, an expedition to round up a few rebellious Kurds; but for the conquest of the vilayet two or three weeks, and half the number of men required to dispose of Sheikh Said, will suffice. An eager scribe makes the Turks a present of the very best newspaper strategy. They must cross the Brussels Line at once, in flagrant violation of their undertaking to the League of Nations, and for fear of being seen by inconvenient British airmen they must travel by night and hide by day. Most unkindly, no advice is given them as to what to do with their transport when the passes are blocked with snow for five months, or what to do when the night-travelling twos and threes collect in large numbers on the plains below and are exposed to British aircraft. Moreover, unless the Kurds are constant readers of the anti-Government British Press, the Turks may want to know to what extent the ordered progress of new Turkey is likely to be interrupted by its having to keep Kurds and Arabs in submission. Panama hats, not steel helmets, are the order of the day in Turkey, for all the egging-on of the Bolshevists and their *pro hac vice* allies in the British Press.

The Financial Aspect of Mosul.

There remains the financial side of the arguments brought to bear on the British association with Iraq. Any slogan that holds out "relief of the burdens of the British taxpayer" cannot fail to appeal to many people at this time, and if all the misstatements regarding the expense of Iraq to the British exchequer were true, there would be much to say for any policy that would have the effect of doing away with that particular expenditure. But what are the facts? Iraq, in regard to civil administration, is self-supporting. British expenditure on the country has been reduced to four million sterling annually; but half that amount is in connexion with Air and other services, which would have been incurred elsewhere in any case. The real cost to the British taxpayer, therefore, at the present time is two millions sterling a year, with every prospect of a steady reduction, if Iraq can continue to rely upon the British connexion. An attempt has been made to make capital out of the Hilton Young report, on the ground that it showed Iraq's finances in a parlous condition and advocated increased taxation. Iraq's difficulties, however, are common to most countries as a result of post-War conditions. The time has come, or rather the present moment has been fixed as the time, for coping with her War indebtedness; simultaneously she is in urgent need of a loan to enable her to develop her resources. The Financial Mission adopted the sound view, from the point of the British taxpayer, that it will be far more profitable to help Iraq to lay the foundation of substantial surpluses in the future than to try to-day to snatch small contributions towards the liquidation of her indebtedness at the expense of keeping her permanently beggared. Naturally this aspect of the question is one that calls for wise heads and long views; the lucubrations of the propaganda Press are as useful as their incursions into the military sphere. They also overlook, among many others, two important facts: first, that Iraq in a few years' time will be playing to our Air communications the same vital part as Egypt plays to our sea communications; and secondly, that already, before the development of Iraq has been taken seriously in hand, British trade with the country amounts to three-quarters of our trade with Turkey.

A Ministerial Crisis in Egypt.

Divergences of opinion have manifested themselves in the Egyptian Cabinet over the case of Sheikh Ali Abdel Razek, whose recent "excommunication" by Al Azhar for spreading heretical doctrines carried with it dismissal from Government service. The Minister of Justice, Aziz Pasha Fahmy, refused to give effect to the ban on the outspoken alim, and was summarily dismissed from his office by the Prime Minister. Thereupon two other Ministers, members of the Liberal Constitutionalist Party, handed in their resignations, and they have now been followed by Ismail Pasha Sidky, Minister of the Interior, who has telegraphed from Paris his resignation from the Cabinet. Here are, accordingly, all the elements of a first-class Ministerial crisis, which is much to be deprecated at the present time. The contention of the Liberal Constitutionalists, who form with the Ittehadists, or Unionists, the Coalition Government, is that they have been continually subjected to cavalier treatment in the Cabinet, and that the abrupt dismissal of one of their number, the Minister for Justice, without the reference of the matter to the Cabinet as a whole, was irregular and an intolerable slight on their party. Sidky Pasha, who is regarded as one of the ablest men in the Cabinet, does not belong to the Liberal Constitutionalists, but ranks as an Independent; his defection must prove far more awkward to Ziwar Pasha than that of the Ministers of Justice, Agriculture, and Wakfs. Unfortunately a split between the Unionists and the Liberals, if persisted in, can hardly fail to open the door to the Zaghloulists, and the return of the latter to power would threaten far more complications in Egypt than Great Britain is anxious to contemplate at the present time. One can only hope that the good sense of the two parties will avail them to heal the breach before it becomes too wide. The Prime Minister has filled up the gaps in his Cabinet, but it remains to be seen whether the Liberals will side with the Zaghloulist Opposition, and bring about the fall of the Ministry.

The Syrian Desert Motor Service.

Misfortune has again overtaken the plucky Nairn Transport Company, which refused to be put out of its stride by the fatal attack on a convoy not far from Damascus on August 26. On September 8 a convoy of four cars without passengers, which had left Baghdad the previous day were attacked by raiders, eighty miles from Damascus. The leading car managed to escape, and on its arrival in Damascus the French authorities sent out an aeroplane and troops in motors to the assistance of the remaining cars. The drivers of the latter, however, reached Damascus in one of their own cars,

THE ROLE OF THE DANUBE.

Europe has no more prominent highway than the Danube River, navigable for sixteen hundred miles, and capable with the completion of the hundred-mile long Rhine-Main-Danube canal—a project first mooted by Charlemagne—of providing a smooth-water passage from the North Sea to the Black Sea. The rôle of a highway is to promote trade and not to hinder it; but the Danube is not fulfilling its function these days. Trade on its broad waters is languishing; it has not yet reached half the pre-War average, and there are heart-burnings among the riparian States. Yet these conditions can hardly give cause for surprise. Before the War there were six reparian States, three of whom were Great Powers; the European Commission of the Danube exercised authority below Galatz, and Austria-Hungary, under a mandate of the Berlin Conference, had charge of the conservancy of the Iron Gates. More important still, the whole of the middle Danube basin was united under the Dual Monarchy in a single customs area, which had its outlet to the Adriatic Sea through the ports of Trieste and Fiume. The Peace Conference broke up Austria-Hungary into seven different States and brought about a general economic dislocation of the Danube area. There are now three Customs barriers, where none existed before, between Czecho-Slovakia and the Adriatic. Until recently the situation created by the political redistribution has tended to occupy the attention of the new States to the exclusion of economic considerations; but, as the novelty of the former wears off, the economic aspect of the new order begins to assert itself. For administrative purposes the Versailles Treaty revived the European Commission of the Danube, with membership restricted to Great Britain, France, Italy, and Roumania, for the section below Galatz, and for the river above Galatz to the head of the navigable waters at Ulm provided for an International Commission composed of two representatives of German riparian States, one representative each of other riparian States and one of each of non-riparian State represented in the future on the European Commission of the Danube. The definitive statute of the Danube was drawn up in July 1921, and there is no reason to suppose that the International Commission will not be ultimately as successful as the European Commission has been in the past; but the improvement of trade conditions in the Danube does not come within its sphere.

Four years ago the League of Nations appointed an American shipping authority, Mr. W. D. Hines, to apportion Austria-Hungary's Danube fleet among the Successor States. In response to the general misgivings over the economic outlook the League recently invited Mr. Hines to examine conditions on the Danube and to report to it on the subject. Although the official text of his report has not been made public, there appears to be no uncertainty as to the general trend of Mr. Hines's findings. Naturally he calls attention to the universal stagnation of trade, and in particular to the reduced export of grain from Yugoslavia and Roumania; but there are other conditions militating against trade on the Danube. As Mr. Hines euphemistically expresses it, most of the Danubian States have not yet overcome the difficulties of the early stages of State organisation. He received numerous complaints about injustices connected with frontier examinations. Among the technical obstacles to river traffic is the lack of suitable accommodation in the Danubian harbours for foreign ships; at many places, too, the river is full of sandbanks and is not fit for navigation. The latter point suggests that the International Commission has not yet advanced very far in its labours. It is one of its duties to draw up a general programme of public works for the improvements of the waterway on the basis of proposals submitted by the riparians, and also to control, and, if necessary, to modify the annual programmes of the riparian States for current works of maintenance in their respective sections. The basic trouble, however, must be the splitting up of an area meant to be a single economic unit, or at most two or three, into no less than seven Customs-guarded States, and, at the same time, the creation of an equal number of competing steamship companies, in the place of the one or two that existed before. So seriously does Mr. Hines regard this latter factor that he is credited with the proposal that the different companies should merge themselves into a single organisation under foreign control, pooling the fleet which he himself partitioned among the several claimants four years ago.

The creation of a single Danube navigation company, we fear, must remain for the present a counsel of perfection, which an imperfect world is not likely to see materialize. The most than can be hoped for is that the riparian States will realize that their joint and individual interests call for an immediate cessation of the petty jealousies and restrictions which are no less a hindrance to trade because one at a time they may not loom large enough to form the subject of official complaint. It would be well, if the experience of Austria-Hungary, who exploited to such good purpose the Danube trade with an outlet on the Adriatic, could be taken to heart by the Balkan States and become an additional incentive to an economic alliance, with Salonika as its port on the Ægean Sea. In this matter political and economic considerations so overlap one another that there may be some doubt as to whether it will be simpler for an economic understanding to precede a political *rapprochement* or whether the latter is an essential preliminary. For our own part we should prefer to see the different countries devote their attention to an economic pact first. Political agreement calls for hard and fast phrases embodied in documents, the drafting of which presents occasion for interminable wrangling. An economic pact is a matter of business; it can, if discreetly drafted, avoid political pitfalls and allow the signatories to concentrate their whole attention on their material prosperity. The objections to the Greek proposal for a Balkan Arbitration Pact could hardly have been levelled against a scheme for an economic agreement, based on an offer to make Salonika serve the interests of the four contracting parties. The proposal would have been a definite step in promoting the prosperity of the Peninsula, whereas the suggested Arbitration Pact has been rejected by Yugoslavia as a device to thwart her urgent requirements. Some of the difficulties against which the trade of the Danube is now struggling will pass, but the advantages to be derived from an economic understanding between the Balkan States, with or without the other riparians, will be all the greater when the trade of the Continent as a whole improves. Both British and French capital is interested in the Danube trade, and it would be a welcome service to South-Eastern Europe, if these "foreign" interests undertook the task of bringing the different States together, with a view to joint action for coping with an unsatisfactory condition of affairs. Several economic treaties *à deux* have been made between certain of the States, but the time has come for substituting a project on a large scale for the limited objective which these smaller pacts had in view.

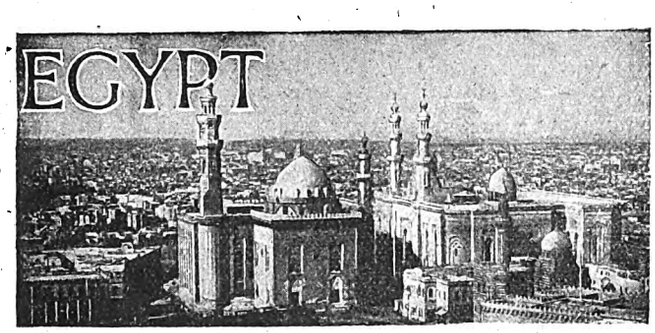
The Near and Middle East*

From Our Own Correspondents.



Cairo, September 9.

A Minister's Dismissal.

The long-gathering political storm has burst, and if there is little surprise at that event among those who know what has been going on behind the scenes during recent months, there is none the less general astonishment at the manner in which the break has come. For it is long since a Minister was dismissed from office, and never, I believe, has that step been taken in normal circumstances. Ismail Pasha rid himself of members of the famous Mixed Ministry to which he had taken so strong a dislike by the simple expedient of appointing successors and bidding them go betimes next morning to their Ministries and there take possession of the Ministerial chairs before the arrival of their occupants of the previous evening. The Khedive Tewfik ejected a Minister of War judged guilty of corruption, but these are the only instances recorded of Egyptian use of the Sovereign's powers of dismissing his Ministers. In Abdel Aziz Pasha Fahmy's case, so little surprise is there at his going that wonder is rather expressed that he has remained for so long. A man of personality, not to say obstinacy, and uncompromising opinions, he made himself so prominent, in the spring of 1923, as a defender of constitutional liberties, that it has been considered astonishing that he could have subscribed to so many of the present Government's actions so clearly opposed to both Abdel Aziz Pasha's own former pronouncements and to the policy of the Liberal Constitutional Party, of which he is the President. Members of that Party, now that the die has been cast, explain the apparent inconsistency of their principles with the actions of the three Liberal Constitutional Ministers, Fahmy Pasha, Mohammed Ali Pasha, and Tewfik Doss Pasha, by saying that, hitherto, these Ministers have deemed it better to sink their own opinions and personalities rather than, by an open breach with their Ittehad allies, give encouragement to the common enemy in the Zaghloulist camp.

Zaghloulist Benefit.

The explanation is plausible enough, and it is certain that the latest development must have made the old Wafd leader, patiently and silently awaiting a turn of fortune's wheel, smile quietly to himself. For if anyone is to benefit from a split in the Government's forces, it will surely be Zaghloul Pasha. Nobody else seems likely to gain much—certainly not the Ittehad Party which, despite its recent efforts and the progress which it has undeniably made, is yet far from strong enough to stand alone. The breach was bound to come sooner or later, for between the Ittehadists, who, at heart, are not enthusiasts for Parliamentary government, and the Liberal Constitutionals, who, despite their acquiescence, for the sake of "downing" their old enemy, Zaghloul Pasha, in the very questionably constitutional second dissolution of the Chamber of Deputies and in various other experimental policies of an undemocratic nature, are essentially pro-parliamentarians, there are fundamental differences, which were sooner or later bound to cause a split. But the split, if Tuesday's meeting of the Liberal Constitutional Party confirms it by insisting upon the resignation of Doss and Mohammed Ali Pashas, will seem to have come a good deal too soon. Hassan Pasha Nashaat, the all-powerful scene-shifter of Egyptian politics, without whose knowledge very little happens these days, has been so remarkably successful in his often very daring policy hitherto, that one hesitates to predict that he has this time made a mistake. But if the surprising latest development may acurately be attributed to his influence, it would seem—although nothing more than a very logical completion of his recent policy—to have arrived much before its time.

Aerial Activities.

The opening up of the Syrian Desert to motor transport seemed to have sounded the death-knell of the aerial mail service maintained by the Royal Air Force between Cairo and Baghdad, though that service was never intended to compete with the Nairn venture, being primarily a pilot-training affair. In any case, the present trouble in Syria has emphasised the value of the R.A.F. service, for the suspension of the trans-desert motor services has meant that a large amount of mail normally carried by motor-car has now been dispatched by aerial courier. An extra aeroplane had to be dispatched this last week, and it is probable that the service will have to be doubled until the restoration of normal conditions in Syria makes it possible for the Nairn company to resume operations.

Apart from the mail, the Cairo-Baghdad route has been in the news much during the last few days. The Imperial Airways Survey party, including Colonel Birchall and Lieut.-Colonel Minchin, has been here, and has now gone on to Palestine, while General Brancker has flown direct to Baghdad also, in connection with the Kantara-Karachi service. Other flying developments in the near future will be the setting-off of Squadron-Leader Conyngham and his companions on their flight to Kano and back, on D.H.9 machines, a flight which, if successful, should do something to give British aviation a share in the long-distance flying honours which have lately gone chiefly to pilots of other nationalities.

ALBANIA.

Tirana, September 10.

The Murder of Gurakuqi.

The only recent events concerning Albania that seem worthy of chronicling this week have both occurred in Italy.

*Und-r this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Digitized by Google

First, the trial took place at Bari last week of Ubaldo Stamola, the murderer of Louis Gurakuqi, the Catholic leader opposed to the present régime, who was shot outside a café in Bari shortly after his flight to Italy. It should be remembered that Gurakuqi was the outstanding presonality of the Opposition, a much abler politician than the ex-Premier Fan Noli, and one who possessed a much more intimate knowledge of his countrymen. Hence grave suspicion was entertained that his assassination had been directly inspired by the authors of the recent *coup d'état* in Albania with the object of removing their only really effectual opponent. In Latin countries it is difficult to get a jury to convict an assassin who is a foreigner, whose victim is a foreigner of the same nationality, and against whom no evidence is forthcoming that his motives were either personal or selfish. Ubaldo Stamola's acquittal therefore can hardly cause much surprise. No evidence, indeed, was forthcoming that the assassin was an agent of the present Albanian Government. The defence consisted in evidence to the effect that the assassin was a degenerate though not insane; that the crime was altogether unpremeditated, and that the shots that killed the ex-Minister of Finance were due to uncontrolled spontaneous resentment, when, after obtaining an interview with him with a view to procuring some means of livelihood, Stamola was offered help only on condition of his returning to Albania to act there as a political agent or spy on behalf of the Opposition against the present régime. There being no evidence sufficient to undermine this line of defence, an acquittal was inevitable, however strange this may seem to those used only to British methods of justice.

Great resentment is felt at the result of the trial among the colony of exiled politicians in Italy, who are trying to make out that the acquittal is due to instructions of the Italian Government, desirous of avoiding anything which might injure the good relations existing between Italy and the President of Albania. Such speculation, however, may be regarded as entirely unjustified and unjustifiable. The accused was acquitted by an independent jury in accordance with the usual practice in similar cases—and, it should be added, the Italian Judiciary has a very high reputation for independence and incorruptibility. Whether or not it may be true that as a matter of fact the assassination was indeed ordered by superior authority is another matter. Those who know the Balkans are at liberty to draw their own conclusions. It should be noted, however, that not one shred of evidence was forthcoming to this effect.

The National Bank of Albania.

The other event of importance, is the formal constitution of the new National Bank of Albania in Rome in the presence, among eminent personages, of Senator Volpi, Italian Minister of Finance; of M. Lipohova, Albanian Minister; of M. Antonevitch, Yugoslav Minister; and of Signor Alberti, of the Credito Italiano, the principal foreign shareholder.

Forty-nine per cent. of the capital is Albanian, as already announced in these columns. The remainder of the shares are, in the final result, divided between the Credito Italiano, the Banca Commerciale Italiana, the Serbo-Albanian Bank and a Swiss and a Belgian group. The first managing director is to be Signor Raimondo de Liguoro of the Banca d' Italia. The control of the bank's policy will in effect remain for the first few years at any rate largely in the hands of the Credito Italiana, who are responsible for the scheme materialising. The new institution will act as the Albanian Government's Bank and will have the monopoly of the note issue. Its headquarters will be at Tirana.

ROUMANIA.

Bucharest, September, 1.

The Agricultural Chambers.

The chief event of recent occurrence which bears a certain political significance, though in reality it is not a political event at all, has been the election of members of the Agricultural Chambers, the creation of which bodies was reported upon in a recent letter.

The elections proved a signal success for the united Opposition, who obtained 43 votes as against 26 for the Liberals. This has caused great public excitement, and it is predicted with more conviction than ever that the present Government cannot last much longer.

It is interesting to note that it was in the Old Kingdom that the majority of the Opposition was the highest, i.e., 20 to 11, whilst in Transylvania, the home of the National Party led by M. Maniu, the figures were only 11 to 10; in the Bukovina they were 6 to 4, and in Bessarabia 6 to ?. General Averescu's party only had five votes altogether—which does not augur well for the fulfilment of the hopes of General Averescu that he will be chosen successor to the Liberals, although no doubt he would be the one preferred by them.

The Chambers' Functions.

The Chambers of Agriculture are to be organised on lines similar to the Chambers of Commerce and are to act as advisory bodies to the Government on matters appertaining to agricultural legislation. Ultimately there is to be one Chamber for each rural district, but in the meantime a smaller number will be founded. Each will have on its Board the Agronomical adviser of the district, certain of the local Government officials, and a certain number of the agriculturalists of the district.

Liberals and the Peasants.

The election results are commented upon by the Press as indicating the feeling of the peasants, who formed the majority of the electors, that the economic policy of the Liberal Government is unfavourable to agricultural interests. Nothing, they consider, has been done to encourage agricultural production; rather, on the contrary, agriculturalists have constantly had to struggle against all kinds of vexatious restrictions, low maximum prices and excessive export taxes, etc., both for grain and cattle.

One of the chief obsessions of the Liberals is that Roumania must be made self-supporting, and to this end they have concentrated rather on the development of her industries, most of which have their centres in Transylvania and the Bukovina. This in itself would be a good thing, but it is a pity that so large a party element enters into all their activities in this direction, and if industries are to be nurtured at the expense of agriculture, which after all, must always be the main source of Roumania's wealth.

The Liberals' term of office expires in February next, and the prophecies of their fall from power, which have been repeatedly made during the last two years, are now being freely indulged in. Many seem to think, indeed, that the Government will fall before the end of the year.

General News.

A much needed reform has been introduced by M. Tancred Constantinescu by his decision prohibiting the employment of women and children for underground work at the mines.

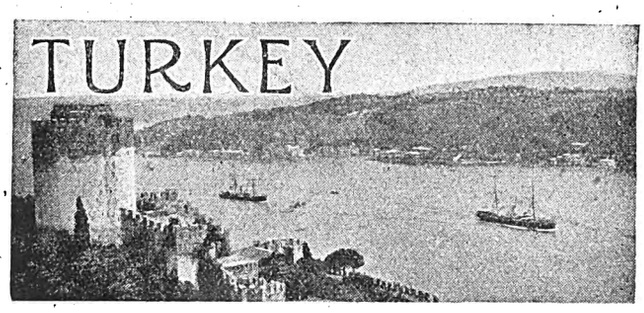
At the end of August a meeting was held in Bucharest and Sinaia of representatives of the Little Entente Press with a view to fostering friendly relations between the countries belonging to the Little Entente.

A terrible gale visited certain districts of Roumania last week. In Brasov it attained such a violence that whole roofs of houses were blown off and the air was full of fragments of tiles, branches of trees, and so on, being hurled along with such speed as to render the streets quite dangerous for traffic or pedestrians during more than a hour. The gale continued the whole night through with somewhat abated violence.

The deaths were announced last week of M. Matthew Cantucuzene, Professor of Political Economy at Jassy University, and of Prince Edward Ghika, of Vas Lui, formerly Prefect of Bucharest.



Constantinople, September 8.

Turkey and Mosul.

Since the commencement of the Geneva discussions regarding Mosul there has, up to the present, been comparatively little Press comment here. Yesterday and to-day, however, the *Jumhouriet* has, apparently because of the question regarding the giving of undertakings by the two interested countries to abide by the League's decision having been referred to, devoted leaders to the Mosul question, entitled "Will Turkey make war?" and "Turkey-England." The first-mentioned article is at some pains to explain the perfect pacific intentions of Turkey and that war will not be of her making. It is made clear, however, that in the event of the League of Nations—who, it is believed, is well aware of the vital importance of the point at issue and that the decision directly concerns Turkey's existence—considering its authority and glory of primary importance, Turkey will be constrained to work out her own salvation. The second leader, encouraged by certain British Press publications advocating the non-insistence upon Mosul, refers to the grave consequences in the event of Anglo-Turkish hostilities, and states that should war ensue Turkey would, by no means, neglect to seek all possible aid and alliances. Opinions expressed in certain British newspapers deprecating the acceptance of the mandatory proposition and counselling the renouncing of Mosul are stated to be making a good impression here, and it is declared that should such opinions become general, a very favourable ground for future Anglo-Turkish relations would be prepared.

Social Reforms.

The Turkish Government is devoting itself to a rapid and radical social reform of the country and the closing of *tekkés*, or houses appropriated to Sheikhs and chiefs of tribes and sects, and the future mode of dress to be adopted by religious and Government officials was the subject of a meeting held and a decision taken by the Council of Ministers on Wednesday last. These *tekkés*, which have served as meeting places for political intriguers, and which have been proved to have played an important part in the recent Kurdish uprising, have now, without exception, been suppressed. Their exploiters are no longer able to exercise their influence over their previous followers, nor are they permitted to assume the eccentric form of dress which was previously peculiar to them. Only authentic ulema are privileged to wear the white turban and black cloth of office. Whilst the closing of all *tekkés* and the suppression of the Dervishes will doubtless constitute a great disappointment to visitors and be yet another deprivation of the picturesque, this consideration can have no comparison with the consequent good which the country will derive from the abolition of these longstanding obstacles to civilisation and national tranquillity. Government officials are also obliged, from now onwards, to adopt the international style of dress and wear clothes as occasion demands. The Authorities are making facilities for officials by advancing sums sufficient to enable them to acquire the necessary articles of clothing, and steps have been taken to prevent profiteering by outfitters. The exceptional demand for hats in Constantinople has resulted in a stall being opened on Galata Bridge, where Homburgs, trilbys, and every other kind made during the past ten years can be had for fifty piastres each.

The Journalists' Trial.

The trial of the Constantinople journalists arrested as a result of evidence given in the El Aziz Tribunal of Independence proceedings, commenced about fifteen days ago and still continues. Columns upon columns appear daily, recording in every detail the present proceedings. Ahmed Emine Bey, editor of the *Vatan*, is being submitted, among others, to an exceedingly extensive interrogation, the import and relevancy of the detailed questions of which rest, as yet, somewhat vague and incomprehensible to the outside observer. In view of the extreme punishment dealt out to Hussein Jahid Bey, the editor of *Tanin*, the result of the journalists' trial at El Aziz is being awaited with great interest and by some with anxiety.

PERSIA.

Teheran, August 28.

Parliament Re-opened.

The re-opening of Parliament on August 21, marked the termination of a period of stagnation caused by the Moharram holidays. Previously to the re-opening, the appointments of Prince Firooz and Qawam ed Dowleh as Ministers of Justice and Interior respectively, had been announced. This recognition of the Right Group's majority, marks an increasing gap between the Prime Minister and the Left Group which has in the past supported him strongly. The Leader of the Left (Suliman Mirza) had announced his intention of challenging the appointment of Prince Firooz on grounds of alleged irregularities when Governor of Kerman and previously in the negotiations relative to the Anglo-Persian Agreement and the St. Germains Treaty.

In a crowded House Suliman Mirza commenced a grossly personal attack on the new Minister instead of moving the usual vote for lack of confidence. The Prime Minister and Ministers walked out in protest and after a stormy scene the Speaker adjourned the sitting. On resumption it was decided by vote that the business of the day be proceeded with. Suliman Mirza the next day resumed his address, but was kept to a point of order, and not allowed to speak for long before a vote was taken to prevent his wasting the time of the House. The House was obviously hostile to him on account of his past record, and the incident is now considered closed. The result is regarded as a personal victory for the Prime Minister. Much admiration is shown for the firmness and dignity of the Speaker, Pirniva, whose personality is such a feature at all times in the Mejliss.

Only a few weeks now remain to the present Mejliss to finish off routine business. A series of Amendments to the Electorial Law is now under debate, but many other important Bills await attention which can scarcely be completed in the short time available.

THE PERSIA SOCIETY.

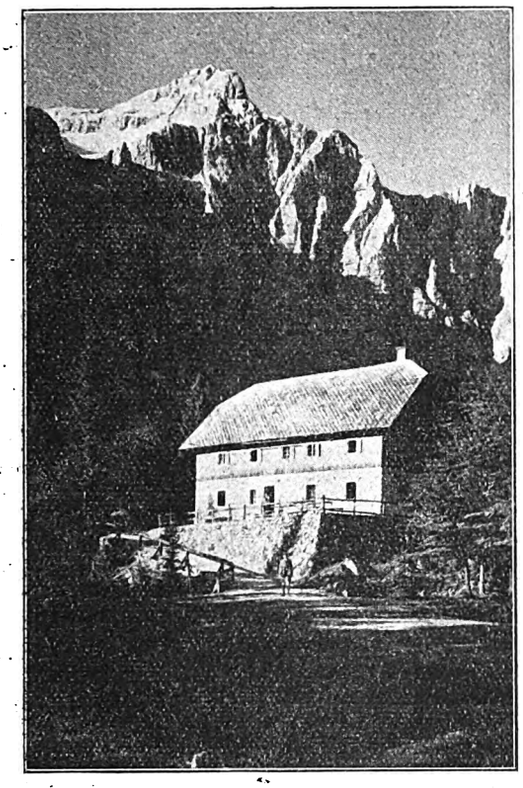
THE JULIAN ALPS: AN ANNIVERSARY.

A year ago the Slovene mountaineering world sustained its heaviest loss hitherto by the death of Dr. Klement Jug, who lost his life in an attempt to break fresh trail across the North Wall of Triglav, as the immense and all but sheer crag is called which forms the north aspect of the highest mountain in the Julian Alps. Dr. Jug was still a young man, but of great promise as a philo-



Aljaz House in Vratu.
In the background the Triglav Wall.

sopher, a man of science, and a friend of sport. A Slovene of Trieste in whom the typical—shall I say, static?—Slav temperament was strangely blended with the pioneer spirit, engendered, perhaps, by the lure of the sea, which is to the son of the Littoral as much as to any of our own coast-dwellers, he was brought inland by the political changes wrought by the War. Here, among the Slovene Alps, his natural love of the open developed into a veritable passion for the mountains and mountaineering. He was one of the original members of the Tourist Club Skala, the one club in Slovenia—or even Yugoslavia, for that matter—which devotes itself seriously to mountaineering and does excellent work for the promotion of that grand and manly sport among the younger generation in this country, credit for which is generally declared to be due largely to the example and influence of Dr. Jug. It was probably the complexity in Klement Jug's nature which made him remarkable as a mountaineer and makes his notes upon his climbing expeditions such attractive reading. He not only dared as an athlete, but discovered wherever he went; the scientific interest and beauty of the mountains appealed to him as much as the sport of climbing. Yet in that sport it was the very element of danger in which he found an outlet for the restless pioneering side of him, and a constant problem in ever-changing form,—a strange and paradoxical fascination which was bound to prove fatal in the end. It was in the sad stormy treacherous month of August of last year (1924) that he met his death—alone.

For days his young friends of the Skala sought for his body. One of them told me that his first intimation of having found it was that, on sliding down a face of rock, his hand landed in something wet and soft—the scattered brains of a dearest friend—"I was never nearer falling myself—" said the young man quite simply . . . .

A year has passed and on this brilliant Sunday in August 1925 the Club Skala has just unveiled a modest tablet put up to the memory of Dr. Klement Jug at the foot of the Triglav wall, not far from the place where his body was found. The official way to the tablet starts from the Alpine Hotel in the Vrata (Gates) Valley, the comfortable Aljazev Dom (named after the Rev. Dr. Aljaz—priest, composer and veteran mountaineer, whose parish is at the foot of Triglav), and it leads some three hundred metres upwards over a great moraine of rubble and scree, heart-breaking stuff to traverse at all times and distinctly trying in the broiling weather we have been enjoying of late. So, although the hut was packed with tourists, few but actual members of the Skala made their way up the steep and wearisome slope to the tragic spot. Once there, however, we sat in the grateful shadow of the great Wall itself on a sort of ledge amply large enough to accommodate our little crowd of a hundred or so. Near us stretched a long "snow," indeed, a true glacier, travelling down to the edge of the forest and there giving birth to one of the innumerable Bistricas, or Clearstreams, of this land,—a lovely water that flashes down the Vrata Valley, plays hide and seek with the sun as it vanishes and reappears in its bed of shining white limestone, provides the power for the big cement factory at Moistrana, and then joins the young Sava. Characteristically enough, not all of us by any means had come straight from the Hotel. Many (myself included) had roamed the mountains since long before daybreak, and from the heights we had come down to give greeting to a mountaineer's soul. I think we were all haunted by the feeling that this was only meet and in keeping with our duty there that day. And of course we were all in mountaineering kit, ice axes to hand, women and men alike sun-bronzed and glistening with the heat, a rough-looking company, perhaps, in the eyes of a city-bred chance-comer. Even the priest who read the memorial service was in tweeds with his band thrown over the collar of his Norfolk jacket.

Suddenly there rose upon the still hot noon air a dirge, half folk-song, half-hymn, tender and wistful, in all the beauty of the famous Slav unaccompanied singing. Then followed the short service. The pregnant words in the familiar Latin (oh, but one is thankful for something like a universal tongue on occasions like these!) sounded more full of meaning, nearer to the heart of things, in these simple, wild and unadorned surroundings, as we remembered in our prayers the bold climber whose memory we

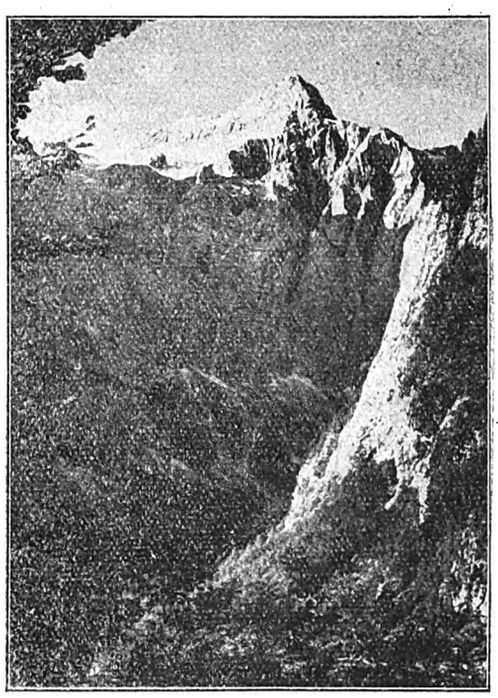


Photo by I. Skerlep.
Triglav from the direction of the Razor.

had come to honour—and young Vladimir, who followed him so closely and sleeps in the very bosom of the Crag, out of reach of mortal hands,—and all those others who, for love of the great mountain, had lost their lives in learning the secrets of his ways. Then followed more singing. Yanko Ravnik, musician and mountaineer and President of the Skala, spoke a few words in which he dwelt

Digitized by Google

upon the high educational value of mountaineering, the sport that teaches mutual helpfulness and good fellowship, and love of nature, no less than self-reliance and coolness in face of danger and even death. ("That's the right stuff," said a young climber to me on one occasion. "Break your neck if you must; but don't get scared." And the strange thing is—that one just doesn't.) One last song, one last prayer, and the little ceremony was over. The crowd broke up and we strolled down from the waste of rock and stone and snow, a thousand feet to sweet green beside the young river, and into the woods of pine and beech in the heart of which nestles "Father Aljaz's House."

Nothwithstanding their previous exertions, the singers, who had come down with the rest of us, delighted the company at tea-time with more exquisite songs,—wailing Serbian ditties, tricksy Croatian love-songs, and, last of all, songs of the sorrows of Slovenia, of lost Carinthia and of the Isonzo front where so many brave Slovene lads lie—"*Oj Doberdob, slovenski grob!*" Then they, too, hurried off to catch their train at Moistrana, leaving us to watch the shadows creep upward on the Wall, and the far peak flame gold and pink in the sunset ere it faded to ashen grey as the moonless night closed in.

THE STUDY OF ENGLISH IN LIUBLIANA.

(From Our Liubliana Correspondent.)

This year the study of English at Liubliana University received considerable encouragement through the offer of three prizes for the three best papers worked out by students of English at the University classes. The generous givers of the prizes were Lady Dunedin, Lord Strathclyde, and Professor Sarolea, all well-known for their knowledge of international and national questions. Dr. Lloyd Storr-Best, who has, among other distinctions, that of being Examiner to the University of Manchester, is just now spending his holiday in Yugoslavia and incidentally representing the Board of Education at the International Educational Congress at the end of August in Belgrade. As Dr. Storr-Best is sincerely interested in the progress of a knowledge of English in this country, he very kindly undertook to correct and judge the candidates' papers. The winners of the three first prizes offered for English at the University of Liubliana are, in order of merit, M. H. Baerent, M. Zdenko Shvigelj (better known, perhaps, in some quarters, as the best ski-runner Yugoslavia has yet produced), and Mlle. M. Tsop. All three are members of the Yugoslav Society for the Study of English, which was founded at Liubliana a little over four years ago, and is still carrying on its useful and uphill work. The Society by now disposes of a really excellent, if small, library, which it owes entirely to the generosity of British and American friends. The main object of the Society is still to place English tuition and the means for study of the language within reach of everybody at the lowest possible cost.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA

THE FUTURE OF MOSUL.

We have received from the Near and Middle East Association the following copy of a letter addressed by them to the Secretary of State for Foreign Affairs:—

Sir,—We, the undersigned members of the Near and Middle East Association, beg respectively to submit to your notice the following consideration in connection with the settlement of the Mosul-Iraq question.

In a letter published in the *Morning Post*, December 14, 1922, Haddad Pasha, the Iraq Minister, declared that "the two races (Arabs and Turks) have every interest and should have every wish to live on close terms of friendship."

About the same time the Angora Government issued a Manifesto in which they promised to respect the integrity and independence of all the Arab States including Iraq, provided that the question of the possession of the Mosul vilayet was settled in accordance with Turkish sentiment and aspirations.

We venture to suggest that these two declarations form a basis for a solution of the Mosul problem which would at once satisfy the legitimate aspirations of the Turkish people, secure the safety of Iraq, and relieve the burdens of the British taxpayer.

The suggestion is that the League of Nations should invite Turkey to become a member of the League, and as a member to renew solemnly her pledge to respect the integrity and independence of Iraq in return for the acceptance by the League of the line of demarcation proposed by the League's Commissioners, or, failing that, the line of Jebel Sinjar-Jebel Hamrin.

We believe that in the friendlier atmosphere created by such a settlement there would be little difficulty, on behalf of the British and foreign interests involved, in arriving at an equitable arrangement with Turkey in connection with the Mosul oil field. Turkey has already offered to allow the British pipe line to run along the Baghdad railway line to the sea instead of through French Syria.

In any case the oil field itself would be far safer in Turkish hands than if left to the possession of a Baghdad Government faced by Turkish resentment and hostility and exposed to raids by hostile Kurds.

We are convinced that the alternative solution put forward by the Commissioners, that Great Britain should maintain the Mandate over Iraq, including the Mosul vilayet, for 25 years would result in no permanent or satisfactory settlement, but would throughout the suggested period of years involve the Mandatory Power in serious responsibility and formidable risks, both military and economic.—Signatories: Rt. Hon. F. D. Acland, M. E. N. Bennett (Chairman of Committee), Lt.-Col. Lord Henry Cavendish-Bentinck, M.P., Sir Graham Bower, K.C.M.G., The Dowager Lady Boyle, Sir Henry Parsall Burt, K.C.I.E., Sir William Ovens Clark, Mrs. Cobham, The Earl of Derby, Captain C. F. Dixon-Johnson, Sir John Foster Fraser, Admiral Hon. Sir Edmund Fremantle, Sir Park Goff, M.P., Dr. E. H. Griffin, D.S.O., Lord Headley, Sir John Prescott Hewett, G.C.S.I., Gen. Sir Archibald Hunter, G.C.B., Rt. Hon. Lord Islington, Lt.-Commander Hon. J. M. Kenworthy, M.P., Lord Lamington, Lt.-Col. D. C. Phillott, Rt. Hon. T. Shaw, M.P., Rt. Hon. B. C. Spoor, M.P., Colonel Sir Alexander Sprot, Bt., Brig.-Gen. Conyers Surtees, C.B., Sir George Sutherland, Brig.-General Sir George Macauley, K.C.M.G., Sir Charles Campbell McLeod, and Sir Armine Dew, K.C.I.E.

[The Near and Middle East Association suggest that the best settlement of the Mosul problem is to give Turkey all that she asks for. With that proposal the Turks will agree. Against it must be set the arguments carefully and convincingly elaborated by Mr. Amery at Geneva, which neither the Turks nor the Association show any inclination to answer.—ED.]

MARTIN HOPKINSON & CO., Ltd.

MOSUL AND ITS MINORITIES

By H. C. LUKE (Author of "The Fringe of the East." "The City of Dancing Dervishes.")

Assistant Governor of Jerusalem 1920-24.

Demy 8vo. *Illustrated.* **10s. 6d.** *net.*

Mr. Luke, with his 20 years of experience of the East, has contrived to give an excellent sketch of Mosul, the subject of the discussions of the League of Nations, and its people. The book deals largely with the many religions which still remain in or near Mosul, such as the Nestorians and Jacobites and their offspring, and the Yezidis or Devil Worshippers. A study of a town and of peoples who are of great political importance at the present time.

14, HENRIETTA STREET, LONDON, W.C. 2.

THE WEEK AT HOME.

London, Tuesday Morning.

The Trade Union Congress.

The Trade Union Congress at Scarborough has, without question (except from the omniscient journalist), been a success for what is called "the Left"—"the Right" of the Trade Unionists being those whom the capitalists know how to manage! For the Congress passed not only resolutions which showed sympathy rather with the Communist than the Socialist associations in Europe (in the abbreviated language of the day, rather with Moscow than with Amsterdam), but also a resolution which criticised even the Labour Party's interpretation of Imperialism. These things are, I think, significant, for they show that the English working-man is not only ignorant, but quite content in his ignorance. But to suggest that they are of permanent significance, as some journals have done, is going much too far; for there is no one more sensible, on contact with actualities, than the English working-man. It is one thing to sympathise, from a safe distance, with Moscow; it is quite another to convince oneself that our middle and upper classes are the very replica of the Tsarist society. And it is one thing to pretend that Palestine and Kenya and Egypt are merely breeding-grounds of the capitalist, but it is quite another thing actually to hand them over to foreign competitors.

The point on which most attention has been focussed, however, is precisely the one that seems to me least novel; namely, the resolution which approved of the unceasing efforts to overthrow the capitalist system, of the refusal to entertain the scheme of co-partnership, and of the necessity for retaining shop-committees "to force the capitalists to relinquish their grip on industry." Now it has been curiously represented that the delegates did not know what they were doing when they passed these resolutions, that it was only Soviet or Oriental methods which prevented their being defeated; or, alternatively, that the importance of these resolutions is but superficial, drawing no real distinction between the revolutionaries and the constitutionalists. But is it not all evidence of that love of talk of the class-war which is seldom absent from the trade unionist's breast, a pouring off of annual steam which has but a negative significance? If this rendering be right, it was foolish of people like Mr. Cramp to inquire precisely what was meant by the resolution, for the whole point of congresses like this is to express unbounded sympathy or reprobation. All conferences desire the illimitable, and it is well to note that only when the delegates discussed the eminently practical question or whether a General Council should be endowed with General Strike powers did they unhesitatingly refuse to countenance the purveyors of the large, revolutionary talk.

The Successor of Capitalism.

One thing is quite certain. Despite the pusillanimity of the "Moderates" at the Congress, despite all the talking of the vileness of the Capitalist system, the English working-man will never set the present system of industrial society in ruins before knowing much more exactly than he knows now what he is going to super-impose upon them. He may even enthusiastically tolerate the presence of M. Tomsky at his gathering, and take to his bosom the various reports of working-people upon present conditions in Russia, but he will never seek to make flow the blood of the Guelphs as the Bolshevist made flow the blood of the Romanoffs in order that London may become a second Moscow. For Bolshevism is of the East (b—easily!), and not even the appalling influx of aliens will ever make an adequate minority of Englishmen forget their Western heritage.

At the same time, the lesson unmistakably to be learned from the first week of this Congress is that the patriot's duty is, not blindly to defend the present system of Capitalism against all who talk of the desirability of its destruction, but to examine it in so critical a light and consequently to act in such a way that the ills at present resulting from it may disappear. Whether such a process would involve the changing of its character in so fundamental a way that the system could no longer retain its present name, is a matter of not the slightest importance, for it is not any particular system in England, but Englishmen working that system, that must be saved.

The Coal Commission.

The Coal Commission had an informal meeting yesterday, to settle questions of procedure, and in about a fortnight's time evidence will be held. It has not yet been decided whether their meetings are to be open to the public, but the public will very surely scrutinise the behaviour of the Commission. There has grown a certain uneasiness at the very "financial" character of those composing the Commission; it is being said that the financial angle may not be a bad point of view for such things as Palestine or Cotton, but to restrict the mining industry to this point of view may inhibit the finding of any very useful decisions.

Meanwhile, eighty pits have been re-opened as a result of the granting of the coal subsidy.

Cottage Holdings.

The Prime Minister, despite a certain haziness of idea about the industrial system in this country, is still a man of the land, who knows that agriculture is the finest and yet the least regarded of our industries. It is good, therefore, to know that his sound ideas upon the agricultural position here are finding shape in a Bill which the Ministry of Agriculture is introducing to provide cottage holdings. The proposal is to enable agricultural labourers to own or to rent a quarter of an acre of garden; or enough grass-land, in the stock-raising districts, to maintain a cow. Everyone must know the conditions of farm cottages at the moment: often they are in such disrepair or scant numbers that the labourers have to live a long way from their work.

This proposal appears to be identical with the excellent one that, I believe, George Wyndham introduced, with such beneficial results, into Ireland. If the re-establishment of a peasant propriety in England could be associated with the name of Baldwin, the Prime Minister might surely rest content, for, despite what the industrialists at the Scarborough Congress may say, there is no tyranny worse than the tyranny of the countryside.

The Communist Accompanist.

A very natural fuss is being raised by the determination by Mr. Saklatvala, the Member of Parliament for Battersea, to accompany the inter-Parliamentarians on their tour to the United States. This rather raucous Communist is sadly out of tune and time with the other Members who have chosen to go on this trip; so egotistical, indeed, are his opinions that three Unionist Members have refused to be accompanied by him. And with the dictates of their hearts, at any rate, one cannot fail to sympathise.

Whether any good will come from their particular form of protest, however, it is difficult to see. After all, Mr. Saklatvala has been constitutionally elected to Westminster, and manifestly has every kind of right to accompany Westminster's representatives on the tour. If the three gallant gentlemen who say, point-blank, that they will not go to another country with one whose confessed aim is the disruption of the British Empire, were wholly consistent, they would have, presumably, to resign their seats in the House of Commons.

The Destruction of Limehouse.

It has been proposed by certain official apostles of progress that an area in Limehoues Fields, being alleged to be insanitary, be cleared, to make way for modern flats. To the ordinary observer, ignorant of how often officialdom tramples ruthlessly on local tradition, it might seem that the tenants and owners of Limehouse who are strenuously opposing this suggestion of "improvement" were actuated by factiousness, but he would little understand the old, not yet dead, tradition of the Englishman's love for his castle were he to judge like this. There is the evidence of the man in Limehouse who two years ago paid £140 for his house, and to whom it had since become "a little palace."

There is no question that this philosophy of the poor—pride in his meagre poverty—is one to which the intellects of our academic and busy-bodying reformers cannot aspire. And even from their own point of view our reformers are short-sighted in wanting to destroy these ancient dwellings. For who ever heard of a society living in flats being satisfied? Such people are always discontented, from the time that they roll up to see "The Green Hat" to the time that, with the rising of the sun, they go to bed. Whereas the inhabitant of the true Cockney home does his honest day's work, revels in his sixpennyworth of Betty Balfour or Charlie Chaplin, and then has golden slumbers. He is, in fact, one of the most steadfast pillars of the State.

The Covered Omnibus.

The limitation by the Ministry of Transport of "strap-hanging" in motor-omnibuses to the "rush-hours" has led to the adoption by the London General Omnibus Company of a monstrosity on the streets—the covered 'bus. So many people are now being excluded from a place inside the 'bus that the Company have thought it best to provide rather for rainy than for wet days; and so they are trying the covered top.

Whether it will be popular or not it is difficult, in this effeminate age, to guess. Personally, I find riding on the open tops of 'buses one of the few joys of London, and the thought that the 'bus may follow the tramcar in covering its head to the glories of man and of Nature fills me with horror. However, it is only an experiment, and if the public do not like it, the remedy is in their own hands.

Petty Paternalism.

And as if this were not sufficient molly-coddling of our generation, the Government has suddenly become alarmed at the alleged violation of D.O.R.A. through the means of automatic cigarette machines. It sounds incredible, but it is still the law of our free country that tobacco may not be sold after 8 p.m. Now automatic cigarette machines were ingeniously invented to circumvent this curtailment, justified only by the circumstances of War, of our liberty. So far as one knows, no outcry has yet been made against them. But the Government apparently thinks that boys under sixteen may by means of them unlawfully procure for themselves cigarettes—as if boys of all generations had not always got anything they wanted!

It is all the most pathetic nonsense, this making servile of the State in the smallest things of life: perhaps it is our so-called Nordic blood or sense of discipline that inhibits our re-asserting our freedom. But there is no need for a Conservative Government, of all things, so to emphasise and trade upon our little weaknesses.

Nonconformity and Catholicism.

A curious commentary on the relations between Nonconformity and Catholicism in this country is now being shown in a Congregational chapel in Grosvenor Square. The church, called King's Weigh House, celebrates "Mass" every morning at 7.30, for its minister, Dr. W. E. Orchard, seems to accept the doctrine of Transubstantiation. He has, in fact, just published a little book upon the Eucharist, in which he says: "We may well hope that the Mass will one day be discerned by all Christians to be the one thing that matters, the Catholic celebration the point at which unity will be found, and the doctrine of transubstantiation, the basis of a sacramental philosophy which illumines many mysteries, the sure foundation on which a truly corporate life can be built, the centre from which all our efforts at reconstruction will be truly inspired." Further, Dr. Orchard practises what he preaches; at some of his services the rite of "benediction" is celebrated, and incense used.

What such Churchmen—let alone the rest of the Nonconformists—as the Bishop of Birmingham will have to say upon this indulgence in what he would probably call "magic" is best left to the imagination. But it is certain that, if such ideas are entertained by the Free Church to any considerable extent, the Church of England will with difficulty strengthen its position against Rome by simply calling in the aid of the Nonconformists. For this move of Dr. Orchard is the most spectacular exposition of the traditional approximation of Catholic and Nonconformist points of view that I can remember.

"Tess" Dramatised.

The production in town of a dramatised "Tess of the D'Urbervilles" was regarded with a certain misgiving, even though Hardy himself made the version for the stage. For "Tess" of the novel had become so admired a character in the discerning reader's imagination that her material representation was inevitably to shatter many individual conceptions. Even the more omnivorous of Hardy's followers had been staggered by a preposterous film version of the story, so that the first night at Barnes Theatre last week was a really great ordeal.

However, everything passed off well. Hardy's reputation has in no way suffered, and that of practically every actress and actor taking part in the production has increased. For Tess no one was less suited by nature than Miss Gwen Ffrangcon Davies (in the physical sense, at least, Miss Sybil Thorndyke, who was at first chosen to play the part, would have been better), but in actual performance she proved that no one was better suited in sympathetic understanding. The very frailty and ethereal delicacy of her conception brought to one, as poles meet, the strength and pagan earthiness of Tess's own character: it was deep calling to, though not portraying, deep. Nor was hers the only part to have been studied with a care merited of Hardy's characters, of all of whom it may be said that what of the book could come through them came through. Of course, the dramatic version is not one-tenth part of the novel; its great rhythmical impulse, its terrible increase, are impossible of reproduction. Above all, no theatre could contain, could even suggest, the President of the Immortals. ALTER EGO.

Book Reviews and Notes.

METAMORPHOSES IN ISLAM.

"THE MOSLEM WORLD IN REVOLUTION." By W. Wilson Cash. (London: The Edinburgh Press.)

Nothing has been so remarkable in the post-War world as the increasing accessibility of Islam to Europeans; it is a fact, indeed, which has led to wide hopes of a fusion of East and West. At the Jerusalem Conference last year it was estimated that at least four-fifths of the Moslem world are now open to every method of Christian missionary approach. Apart from the fact that the two Holy Cities, Mecca and Medina, are yet forbidden to all but the Faithful, it would appear that Islam has opened its long-shut gates, or, as the evangelist of Christendom chooses to put it, its age-long barriers have been broken down. And the question everywhere being asked is: *Cui bono?* It is the conviction of Mr. Wilson Cash, once Assistant Principal Chaplain to the E.E.F., and the author of this little book, that this loosening of the bonds of Islam is the opportunity of the Church, an opportunity which, if Great Britain and America would but seize it, could ensure the triumphing of the Cross over the Crescent.

Now Mr. Cash's account of the revolution now in process in the Moslem world is done with much lucidity and point. After tracing—in the traditional missionary's way—the story of Islam down to 1914, he shows how Moslems became profoundly modified in their outlook on life during and after the War years. New contacts were made through travel and education, the various nationalist movements had a dichotomic tendency in Islam, the abolition of the Ottoman Caliphate threatened to rend the Moslem world in twain, the Mohammedan became more and more to rely on the Press and on the power of the Press, the Moslem woman began to emancipate herself, Moslems, under stress of fear of the foreigner, brought themselves to unite with such people as Hindus and Copts, Islam became divided into orthodox and advanced camps—these, and many such, are the steps which the author thinks Islam has taken, apparently, towards its own end. But, one must ask, and omitting to question the accuracy of all these points: is it Christianity or is it merely Western civilisation that has so quickly broken down the reserve of Moslems before the West? And if it is merely materialism that has loosened the walls of Islam, why should it be Christianity that is to be the composing agent? Is it, for instance, a fact that since the Syrian Desert motor service was commenced (it is a slip of the author to say that a "wiry American" had anything to do with its inception, by the way), Iraq has shown any tendency of becoming more Christian? Less fanatically Moslem, possibly; but is not the proclivity of the "advanced" Moslem rather towards the material than towards the spiritual affairs of a new world? Again, if the bonds of Islam are really snapping, how does the author account for its success in proselytising, a success surely far exceeding anything that Christian missionaries can show in the backward parts of Asia and of Africa?

We would not have it understood that we are lacking in a certain sympathy with the author's ideal, but we do feel, despite the Bishop of Khartoum's justified encomium upon Mr. Cash's knowledge of the actual Moslem world, that he has not accurately envisaged either the world of Islam that he is seeking to destroy or the world of Christendom that he is seeking to impose upon it. For of the former he appears to accept the view, fashionable in students of masters like Servier and of sensationalists like Stoddard, that Islam was but a projection upon the desert of the bedouin mind; and of the latter, that Great Britain and American alone comprise it. In all his pages we have discovered no sign that he recognises the possibility of universal spiritual power in the Prophet Mohammed, nor that Christendom itself is grievously rent into Roman and Eastern Catholicism and Protestantism.

Especially do we regret his omission to examine the nature of the Christianity which might be inculcated into the modern Mohammedan, because this question of the possibility of a fusion between the enlightened sections of Christendom and of Islam is occupying considerable minds in three Continents. It is not impossible, though our author does not mention any partial prospects, that Western Christianity may find reconciliation with Islam sooner than Eastern Christianity, with its subtle intellectualisms; but to suggest that an imposition, or a substitution, of Anglo-Saxon Protestanism is, given the workers and the energy, a probability, seems to us to take far too narrow a view of the potentialities of the situation. Is it unfair, also, to suggest that we might at least attempt to settle our own differences in Christendom before seeking to seal them upon a distant people? K. W.

We have received from Messrs. W. and G. Foyle, Ltd., Charing Cross Road, the catalogue of their second-hand and new French books.

AVIATION IN PERSIA.

After negotiations extending over two years, the Junkers Company of Germany has concluded a five years' agreement with the Persian Government for the establishment of air services in Persia, which will serve ultimately to link up the Company's Russian line with that country.

The following is the text of the Bill, No. 1610, dated July 5, 1925, submitted by the Government to the Mejliss, embodying the terms of the contract:—

Air Services.

Whereas the establishment of aerial postal services in Persia would immensely facilitate communications and traffic with other countries and in the interior of Persia and would surely lead to the increase and prosperity of trade, and having regard to the fact that such rapid means of communication can be utilised on many occasions by various departments for the discharge of their urgent work, the following clauses are being submitted to Parliament for early consideration and sanction.

Clause 1.—As the German company, Junkers, represented by M. Edmond Jerolinsk, an Austrian subject, undertakes to perform one weekly flight by aeroplane from Teheran to each of the towns Bahlavi (Enzeli), Bushire and Quraitu (Qasr-i-Shirin), and one weekly flight from these towns to Teheran, the monopoly of aviation on the above-mentioned routes is hereby granted to that Company for a period of five years, beginning from the date of enactment of this law.

Clause. 2—From the date of establishment of the aerial service for a period of eighteen months, the Imperial Government will pay to Junkers a subsidy of three krans for each kilometre flown in accordance with the terms of Clause 1.

Clause 3.—At the end of the eighteen months mentioned in Clause 2 of this Bill, the Imperial Government will have the right to stop payment of the allowance mentioned in the same clause.

Clause 4.—The Junkers Company agrees to convey a weekly postal despatch with a weight of not less than 75 kilograms to and from each of the towns mentioned in Clause 1.

Clause 5.—During the period of concession, which is five years, the whole revenue accruing from the surtax collected by the Government from the aerial posts will be paid to the Junkers company after deduction therefrom of the expenditure of the Department. But when this revenue exceeds the sum of tomans four thousand, the surplus will not be paid to the Company. When the revenue in question is less than Tomans four thousand, the Company may not demand the balance. In view of the Treasury Law concerning the centralisation of revenues, a credit of tomans thirty-two thousand is hereby sanctioned to be paid to the Company out of the revenues accruing from the surtax of the air mail.

Clause 6.—Parliament hereby decrees that out of the saving of the credits already passed and sanctioned for the year 1304, a credit of tomans seventy-two thousand should remain at the disposal of the Ministry of Posts and Telegraphs in order that it may pay to the Junkers Company the amounts mentioned in Clauses 2 and 5. No payments are allowed to be made out of the above-mentioned credits before the amounts in question are duly secured therefrom.

Clause 7.—The aeroplanes will land in such towns situated on the lines of flight as the Ministry of Posts and Telegraphs may designate.

Clause 8.—The charges and the conditions of passenger and freight traffic will be fixed with the approval of the Ministry of Posts and Telegraphs.

Clause 9.—The rate of the surtax for the air mail will be decided by the Ministry of Posts and Telegraphs.

Clause 10.—The Ministries of War, of Posts and Telegraphs, the Interior and of Foreign Affairs are charged with the drafting and ratification of the contract for aerial service with the Junkers Company.

SCHOOL OF ORIENTAL STUDIES. LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

NEWS IN BRIEF.

The total number of Jews in Palestine is now estimated authoritatively to be over 120,000.

The extraordinary session of the Bulgarian Sobranye has come to an end. The ordinary session will open on October 28.

M. Zankoff, the Bulgarian Prime Minister, has left Sofia for Switzerland, where he intends to take a holiday. He will, however, take advantage of this opportunity to meet certain foreign statesmen.

Sir Sefton Brancker, Director of Civil Aviation, and of the Imperial Airways, Limited, arrived in Baghdad on September 9, having completed the flight across the desert from Cairo to survey the proposed air mail route to India.

The trial by Court-martial at Salonika of the accused officials of the Greek Refugee Settlement Commission has been adjourned *sine die*. It is generally believed that they will be rearraigned before the Common Penal Courts, according to the recently signed decree.

The Government of India announces the withdrawal of the general restrictions on the entry of ex-enemy aliens into India. The decision is the result of the Anglo-German treaty and the withdrawal of all restrictions against the entry of ex-enemy aliens into the United Kingdom.

In the revised table of rates of station pay granted under the Pay Warrant the Military Attaché at Teheran receives £4 per diem, and at Belgrade (with Athens) £3 per diem, and the Military Attaché, graded as General Staff Officer (2nd grade), receives at Constantinople (with Sofia) £3 per diem, and at Bucharest £2 10s. per diem.

NOTES OF THE WEEK.

(Continued from page 332.)

which had been left serviceable. The men had been stripped of their clothing by the raiders, but were unhurt, and they were able to arrange later to tow the abandoned cars to Damascus. A far more serious incident occurred last Saturday, when a convoy of eleven cars escorted by French cars carrying Arab soldiers and machine guns, was ambushed ninety miles from Damascus on its way to Baghdad. A running fight took place over twenty miles before the convoy threw off the attackers and made its way back to Damascus. The French Commandant died of his wounds and others of the escort were wounded. The sixty passengers, among them Dr. Millspaugh, the American Financial Adviser in Persia, and Mr. Keeling, of the Anglo-Persian Oil Company, are reported to be proceeding to Baghdad *via* Amman. These outrages, following hard one upon the other, raise a serious question in regard to this Desert Mail Service from Damascus to Baghdad. There can be no doubt now that they are connected with the Druse insurrection and are symptomatic of the general unrest in French mandated territory. The Desert service, however, is a British organisation and, as there will be no desire to increase France's difficulties, a good case would seem to be made out for transferring the service, until the French authorities can announce that Syria has been pacified, to the safer route that offers from Jerusalem, *via* Amman, to Baghdad. From what is known of the Nairn Transport Company all its members may be expected to run cheerfully the risk attaching to the service to and from Damascus, but their passengers, while admiring their pluck and optimism, may not feel called upon to share them.

PERSONAL AND GENERAL.

TO-DAY

September 17, 1925 (New Style).
September 4, 1925 (Old Style).
Sapharr 1344 A.H., of the Moslem Calendar.
Ellul 28, 5685, of the Jewish Calendar.

The ex-King George, of Greece, has arrived in London from France.

The Dowager Lady Boyle has returned to London from Switzerland.

Sir Henry and Lady Bax-Ironside are staying at the Hotel Royal, Dieppe.

M. Mishu, Secretary at the Roumanian Legation, has returned to London from Paris.

Shevky Pasha, Secretary at the Turkish Embassy, left London on September 8 for Geneva.

The Yugoslav Minister, M. Jouritch, left London last Sunday for Geneva and Belgrade, on leave.

Crown Prince Peter of Yugoslavia celebrated his second birthday on September 7 at Selce in Dalmatia.

Sir Ernest Budge had the honour of dining with the King and Queen at Balmoral Castle last Friday.

The Roumanian Minister and Mme. Titulesco, who are at present in Geneva, will return to London on September 25.

Brigadier-General and Mrs. L. C. Koe have left Hove and will sail in the s.s. Naldera on September 25 for a tour in the East.

The marriage of Mr. Percy Ball, Sudan Political Service, and Miss Maraquita Laura (Tiny) Phipps took place last Thursday at Bromham Church.

The Bishop of Calcutta travelled by the P. and O. boat express from Victoria last Thursday to join the steamship China at Marseilles for Bombay.

Air Marshal Sir John Salmond is attending the conference of the League of Nations, and he and the Hon. Lady Salmond are staying at the Hotel Richemond, Geneva.

M. Grégoire Michaesco, Commercial Attaché at the Roumanian Legation, left 78, Carlton Hill, St. John's Wood, last Thursday for Vichy, and will be absent a few weeks.

M. Tzokoff, who was Bulgarian Minister to the Court of St. James before the War, arrived in London last week from Paris, and is staying at 15 Aldford Street, Park Lane, W.1.

Princess Ileana, daughter of the Queen of Roumania, who is staying at the residence of the Roumanian Minister in London, is not expected to leave Grosvenor Street until September 25.

Dr. Constantine Sarafoff, the Bulgarian Chargé d'Affaires in Brussels, with Mme. Sarafoff, who have been the guests of the Bulgarian Minister in London, left last Thursday for Belgium.

Sir Malcolm Stevenson, Governor of Cyprus, who has been home on leave, accompanied by the Hon. Lady Stevenson and family, left last Friday for Tilbury to embark in the steamship Comorin for Port Said.

The engagement is announced of M. George V. Mélas, C.V.O., Secretary to the Greek Legation in London, and at present Chargé d'Affaires, son of Mme. Nadine Victor Mélas, of Athèns, and Mlle. Julia Salvago, daughter of M. and Mme. Michel C. Salvago, of Alexandria.

Sir Kay and Lady Muir have been entertaining a house-party at Blair Drummond, Perthshire, for the shooting. Their guests included the Marquess and Marchioness Douro, Lord and Lady Manton, Captain the Hon. Henry and Mrs. Howard, Sir Montague Barlow, Mrs. Ivan Stancioff, Lady Boyle, Count Rovasenda, and Miss Moyra Ponsonby.

Indian Affairs.

"CONGRESS PROVINCES."

In view of the recent correspondence on Provincial Autonomy in India, an account of the unofficial redistribution of Provinces, made by the Indian National Congress to form the electoral units for delegates to the Congress, will perhaps be of interest. In the accompanying map, the continuous lines show the boundaries of the official administrative Provinces, and the dotted lines those of the Congress Provinces where they differ from the former. The selection was primarily made on a linguistic basis, though this has not, in all cases, been accurately followed. The most notable instance of linguistic readjustment is to be found in the Congress Province of Bengal, which includes the Bengali speaking part of the administrative Province of Assam: and the most noticeable instance of disregard of linguistic unity is to be found in the inclusion of the North-West Frontier Province, which speaks Pashtu, a totally distinct language, in the Congress Province of the Punjab. The Congress Provinces of the Punjab and Bengal are larger than their administrative originals: the United Provinces are practically the same: in all other cases, the Congress Provinces are smaller. Thus Bombay is divided into four: Sind, Gujarat, Maharashtra—speaking Sindhi, Gujarathi and Marathi respectively—and the City of Bombay, where Gujarati and Marathi are spoken in such equal proportions that it was considered impossible to subdivide it between Gujarat and Maharashtra. Madras is also divided into four "Provinces"—Karnatak (Canarese), Kerala (Malayalam), Tamil Nadu (Tamil) and Andhra (Telugu). The Central Provinces are divided into three "Provinces"—Berar (the Ceded Districts of Hyderabad, where Marathi is spoken) and the Hindi and Marathi speaking portions of the Provinces proper. Behar and Orissa are divided into their component parts, the latter, which speaks Uriya, being called Utkal. Baluchistan is ignored altogether, possibly because it speaks two quite distinct languages—Baluchi and Brahui—added to the fact that its political consciousness, so far as the Congress is concerned, is non-existent. Ajmer, which speaks the language of the Rajputs—Rajasthani—is reckoned as a separate Province; as is also Delhi, with the addition of a small part of the United Provinces—Meerut, Muttra and Muzaffarnagar—whose language is the Persianised form of Hindi known as Urdu.

The framers of the Congress constitution made no attempt at equalising the sizes or the population of their Provinces, or at distinguishing between Hindus and Mohammedans. The reason for the latter omission is obvious: that the Congress authorities were, practically without exception, Hindus. The geographical line of division between Hindu and Mohammedan in Begal is clear and definite; but the Bengali Hindu could not consider the possibility of reverting to the partition between Western and Eastern Bengal that he had fought so fiercely to repeal. The agitation against Lord Curzon's partition of Bengal was carried on entirely by the Bengali Hindus, ostensibily in protest against division of the "Bengali Nation": in actual fact because the nimble witted Bengali Hindu held all the minor official posts in Eastern as well as in Western Bengal, to the practical exclusion of the slower witted Mohammedan of the Eastern districts: and realised that the grant of "self-determination" to the latter would mean the eventual replacement of the Hindu "Babu" by his Mohammedan counterpart. For a similar reason, no doubt, the United Provinces were not separated into their component parts of Oudh and Agra, the former having a Moslem majority: the North West Frontier Province was reckoned as part of the Punjab, instead of as a separate entity: and Baluchistan was ignored: so that, on questions where the vote was taken by Provinces instead of by the counting of heads, the Mohammedan Provinces should be as few as possible.

Some years ago, at the Ahmedabad session of the National Congress, a Mohammedan firebrand brought forward a resolution for the declaration of "The United States of India" and the immediate organisation of a parallel Government on the Sinn Fein model. The idea proved most popular and it needed all the tact of Mr. Gandhi—then at the zenith of his power—to achieve its rejection: competent observers, indeed, confidently asserted that, if the vote had been taken immediately after the mover's speech, and before Mr. Gandhi had spoken, the resolution would have been carried by a large majority. The mover, when asked to develop his views on the Hindu-Mohammedan question, was credited with some interesting suggestions. One of these was that, though the Hindus would admittedly be in a great majority in the United States of India, there would still be a certain number of Provinces in which there would be a Mohammedan majority: and this fact would prove a powerful protection against any oppression of Mohammedans in a Hindu State, since the Mohammedan States would be able to preserve the balance by threatening

reprisals against their Hindu population. Another was his enumeration of the States that would have a Mohammedan majority—the Punjab, the North West Frontier Province, Baluchistan, Sind, Oudh, Bengal (or Eastern Bengal, if the Province were divided), Assam (on the assumption that the limits of the administrative Province would remain as they were, without the subtraction of the Bengali speaking districts as decreed by the Congress) and Kashmir. The inclusion of Kashmir—a mainly Mohammedan State with a Hindu ruling caste—appeared to suggest the inclusion of Native States, with or without the agreement of their rulers, in the scheme: and an explanation of this suggestion, offered by a leading Mohammedan extremist shortly afterwards, was particularly illuminating. He said that, while extremist Indian politicians found much to object to in British rule, such objections paled into insignificance when compared with their objections to Native State rule: which he declared to be founded, practically without exception, on "zulm" (tyranny) and a denial of justice—except the particular brand that a wealthy or influential suitor was able to purchase—that were almost beyond belief. His conclusion was that, on the day that the United States of India became an accomplished fact, there would be a revolution in every Indian State throughout the country, and their inhabitants would hasten to throw in their lot with whichever of the States of the Union happened to be nearest to them: even if such adherence were to be to a State whose majority was of the opposite religion. Several of the correspondents on the Provincial Autonomy question have mentioned the difficulty of assimilating the Indian monarchies to the Indian Republics of the future that they foresee: but none of them has suggested so drastic a solution as the above. There can, however, be no doubt that this is the solution that was present in the minds of the Indian Congress leaders when they fixed the limits of their Provinces: since these were, in fact, drawn on the map without exclusion of the Native States—a fact which led to the Congress' political map being treated as confidential, and to the greatest difficulty being experienced in obtaining a copy. For instance, the "Province" of Ajmer includes the whole of Rajputana: the "Province" of Kerala includes Mysore: and the line of demarcation between the "Provinces" of Maharashtra and Andhra passes through the State of Hyderabad.

INDIAN REFORMS.

As was, perhaps, inevitable, the Legislative Assembly carried on September 8, after two days' debate, Pandit Moti Lal Nehru's amendment to the Government resolution proposing acceptance of the principles underlying the majority Report of the Reforms Enquiry Committee. The combination of the Swarajist and Independent Parties which enabled the amendment to be carried by 72 votes to 45—significant figures when it is remembered that the official members of the House number 40—seems finally to have disposed of the hope that the Nationalists had realised the true value of the pronouncements of the Secretary of State and the Viceroy, and were beginning to turn their thoughts towards the co-operation which both had declared to be a necessary preliminary to a further advance. But examination of the terms of the admendment, and of the speech of the mover, shows that the solidity of the Swarajist-Independent combination is not so firm as it looks. The wording of the admendment had been carefully framed so as to combine the views of all Nationalist sections: and Moti Lal expressly said that his amendment must be accepted or rejected exactly as it stood—"it must not be altered by one comma." The result of this was, that all the Nationalist speakers were obliged to confine their remarks to general terms: any attempt, by any one of them, to dilate on particular details, would have run the risk of raising opposition from some other supporter of the amendment; so that no such attempt was made.

It is noteworthy that the Pandit and his supporters have discarded their previous claim that the Minority Report of the Reforms Committee should form the basis of Government action and that, in accordance with that report, a Royal Commission should be set up to formulate the terms of a further advance in the Reforms; for the amendment demanded the calling of a Convention in India, representative of all parties, which should place a scheme for the future constitution of India before the Assembly, who should consider it and forward the result of their consideration to Parliament for passage in the form of an Act. It is also noteworthy that Pandit Madan Mohan Malaviya declared that what India wanted was "unadulterated Western models of representative government": thus, while endorsing Moti Lal's denunciation of diarchy as a failure, abandoning the contention that India resented, in it, an attempt to force upon her Western political methods foreign to her own ideas, and declaring that her resentment was limited to the fact that Diarchy was a contrivance foreign to Western no less than to Eastern ideas. The debate included a certain amount of violent speaking, such as the declaration by a back-bencher that Englishmen in India were nothing but a gang of thieves and robbers: and the statement by Mr. Jinnah, the Independent leader, that the horrors of India under bureaucracy were worse than those of anarchy; but these purple patches seem merely to have evoked merriment, not only among the European members but among Swarajists themselves. On the other hand, the opinion of an influential Mohammedan member, that Moslems wanted no further political development until their special minority demands had been granted, passed unheeded by the Nationalists, and had no effect on their decision to support the amendment as it stood.

On the whole, the result of the debate supports the conclusion put forward in a recent issue of THE NEAR EAST AND INDIA: that, when there is an opportunity of showing opposition to Government on a big political question, Independents and Swarajists may be counted on to combine for the purpose, even though they are fully aware that such a political "gesture" in reality leads nowhere; but that, in matters of detail, where their attitude really counts for something, there are so many causes of disagreement between the supporters of Nationalism that effective combination is almost impossible: and it may reasonably be expected that, after their latest dramatic gesture, the Nationalist members of the Legislative Assembly will get down to business: and will not only show themselves to be sensible persons, alive to real facts, but also to be prepared to offer a considerable measure of co-operation in making the best of the present and in assisting to make the best of the future.

CURRENT TOPICS.

Sir Frederick Whyte.

A message from Simla announces that Sir Frederick Whyte has undertaken, on behalf of the Government of India, an investigation into the relations between Local and Central Governments in various parts of the world.

This announcement, which is apparently intended as a result of the claim, mentioned by Lord Reading in his speech at the opening of the Assembly, that Provincial autonomy and a Central Federal Government should take the place of Diarchy, would appear to be merely a deduction from Sir Frederick Whyte's known intentions as regards the route of his return to England from India next October. We are authoritatively informed that no such arrangement has been made. Sir Frederick Whyte intends to return to England via Australia, the Far East, and America: and it may well be that the fact, that his itinerary includes Australia, the United States, and perhaps

Canada, has led to the belief that he will examine the Federal forms of Government obtaining in those countries, with a view to submitting a report to the Government of India. He may even have offered to do so, in which case it is not at all unlikely that the Government of India may have accepted the offer, as they would naturally welcome a statement, from so competent an observer as Sir Frederick Whyte, of his personal impressions on a subject that may quite possibly become one of practical importance before very long; but it seems certain that the report has no more substantial basis than this.

The High Commissioner's Staff.

The Council of State passed, on September 8, a resolution that Indianisation of the establishment of the High Commissioner for India should be carried out so far as is compatible with efficiency and economy, and should take place in the higher staff of the establishment. This was an amendment to the original resolution, which demanded unconditional Indianisation: the mover pointing out that only six per cent. of the whole staff were Indians: whereas, in the case of the other High Commissioners in London, all responsible offices were filled by them with their own nationals. The use of the phrase "responsible officers" seems to have been the deciding factor; for it was represented that, though the present High Commissioner—himself an Indian—was appointing Indians wherever possible, and that an Indian complexion was being given to his Department, the bringing of Indians to England to fill routine posts, which were in fact much better filled by Englishment recruited on the spot, would be a most uneconomic proceeding.

It is to be hoped that the selection of the High Commissioner's superior staff will be carefully made, and that only such Indians will be appointed as are really suitable for the very important duties of the High Commissioner's office. One remembers the dictum ascribed to the late Lord Morris: who, to a friend who said that, when making an appointment, one should, *ceteris paribus*, appoint a man whom one knew personally, is said to have replied, "*Ceteris paribus* be d—d." And ayone who has recently been in India will at once agree that the appointment of Indians to superior—even to the very highest—posts under the Indian Government has generally been based on the fact that they were Indians, this being their sole qualification for important duties. In the Departments of the Government of India, however, there are still European officials who stand in the same sort of relation to their Indian superior officers as do the permanent staff in England to their Parliamentary chiefs; so that this method, of assisting Indians in high places to learn the trade of government, is all to the good. But, in the case of an isolated Department such as that of the High Commissioner for India in London, any weakening of the "permanent staff" would be a serious matter; and, when the High Commissioner's existing European assistants are replaced by Indians, they will need individual qualifications in addition to their racial one.

Punjab Irrigation.

An authoritative statement regarding the great Sutlej irrigation scheme, at present under construction in the Punjab, says that the total area that will be irrigated by it comes to five million acres: of which two million acres will receive water for both the spring and autumn crops, and the remaining three million for one crop only. Nearly two million acres of the newly irrigated land will be in the Punjab, two and three quarter million acres in the State of Bahawalpur, and nearly a third of a million in the State of Bikanir. Of the total irrigated area, no less than three and three quarter million acres are, at present, absolute desert; so that, apart from the water rates, which are expected to produce a return of 12½ per cent. on the capital expenditure, the sale of the land, by the Governments concerned, will probably do more than defray the total cost of the undertaking, besides offering a valuable outlet for surplus population from elsewhere. The average economic holding per cultivator is reckonded to be twelve acres: and the average size of the Indian family is put at five persons: so that the three and three quarter million acres of reclaimed desert ought eventually to support a population of not less than a million and a half. It is expected that the newly irrigated land will prove eminently suitable for the production of good varieties of long-staple cotton.

India's Trade with England.

Two important articles in the *Financial News*, stated to emanate from an exceptionally well-informed and authoritative source, are deserving of close attention. The articles set out to show that the decline in India's absorbtion of British goods, which is relative and not absolute, is not due to political influences but to purely economic causes. British exports to India fall into two broad classes—cotton goods and the rest. In cotton goods, the pre-War British percentage of India's total imports was 94.4: it is now 82. In the rest, the percentages are 46.8 and 41. The percentage in cotton goods lost by Great Britain has been gained by Japan, and that in the rest almost entirely by the United States. As regards the former, the opinion is expressed that, as Japan is the most serious rival to both the Indian and British textile industries, it is high time that Bombay and Lancashire made common cause against the Japanese threat to their mutual interests.

As regards the latter, the need is for improved propaganda and expert salesmanship. Foreign competitors are improving their qualities, cutting their prices, and extending their propaganda. British manufacturers are doing a good deal in the same direction, but further effort is required. It is generally understood that the increased costs of post-War industry have led to a wider margin, than there was before the War, between the prices of raw materials and of manufactured goods, in spite of the improved value of the former: so that the vast bulk of the Indian population, whose sole industry is agriculture, simply cannot afford to pay the prices asked nowadays for the goods that they used to buy before the War: and this is the true explanation of their recent heavy expenditure on bullion, particularly gold. Here at last was a commodity that stood at or below pre-War values, representing credit in a visible and durable form to the cautious peasant, who knows that a good monsoon cannot always be relied upon and who is bent on making provision against the ever-recurring possibility of a poor harvest. But, of the manufactured articles that he does buy, the Indian is still just as ready, as he ever was, to buy British goods: though, in face of foreign competition, he nowadays needs more adroit and more persistent convincing that British goods are best and, in the long run, the cheapest. Commercial travellers with long experience of Indian bazaars are required: and British manufacturers would do well to combine in the employment of such men.

Further, the new Indian Stores Rules, which permit the purchase by the Government of India of plant and machinery from branches, established in India, of manufacturing firms borne on the official India Office list of approved firms, have for their object the encouragement of British manufacturers to maintain stocks and expert staff in India, leading eventually to further expansion of Indian industrial effort under the best British supervision. British manufacturers are urged to take advantage of this new departure and to establish branches in India where they have not already done so. If the British do not give a lead to India's industrial efforts, others will; but, if they do, their efforts will lead to an increase in the earning capacity of the Indian and to his conviction that Great Britain is a country in which his earnings may most profitably be spent; so that closer commercial co-operation between India and England cannot fail to be of value to both.

Germans in India.

The Government of India have announced the withdrawal of the general restriction against the entry of ex-enemy aliens into India. For some considerable time past, the Government of India has been embarrassed by this restriction, which was originally intended to be effective for five years after the conclusion of peace. The long

Digitized by Google

delay that ensued after the Armistice, before the official "termination of the War" in August 1921, produced a state of affairs that was not foreseen at the time that the Government of India made its original announcement: and the expiry of the general restriction has now been ante-dated by nearly a year. The intention of Government, when making the announcement, which they perforce regarded in the nature of a promise, was to protect British commerce in India from the objectionable form of German penetration that existed before the War; but the abolition of similar restrictions in Great Britain, and in neighbouring countries such as Ceylon—especially in view of the fact that there are no passport restrictions between India and Ceylon—as well as the existence of the French and Portuguese settlements at Pondicherry, Goa, and a number of less important places, has, for a long time past, made the retention of the restriction a matter of great difficulty.

Some years ago, it was decided that applications by German nationals would be considered individually on their merits, and the general restriction against other ex-enemy nationals was, to all intents and purposes, abandoned. Applications by German firms to send representatives to India, or by Indian firms to import German experts, were fairly frequent: and, where a good case was made out by the applicant, these were generally granted for a restricted period; with the general result of further applications for the period to be extended. Thus an Indian firm would receive permission to import a German expert to set up some special form of machinery imported from Germany. When the period of his stay in India was about to expire, it would be explained that unexpected delay had occurred in receipt of the machinery, and that the expert's further retention was necessary, to complete its installation. Later, it would be represented that, though the machinery was installed, it was not yet working satisfactorily: and so on: so that the restriction became little more than a farce, while its existence seriously inconvenienced *bona fide* applicants. An attempt was made to differentiate between German commercial principals and employees, though this was not much more successful: there were cases in which alleged employees of German firms turned out, on arrival in India, to be principals.

The Government of India tried to get itself absolved from its promise by argument: pointing out that it was to the commercial interest of India to trade with Germany, one of its most important pre-War customers: and that, if restrictions were placed in the way of German trade to India, Germany would not be in a position to pay for Indian trade to Germany. In the meantime, as the latest statistics show, German trade with India has practically reached it pre-War level, in spite of the restrictions: and it is, perhaps, this fact that has led to the decision to abolish them. Whatever the reason, Government has cause to congratulate itself that they have been abolished: and it does not seem in the least likely that anyone else in India will experience any inconvenience from their disappearance.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 27.

The Viceroy's Speech.

The reception which has been accorded to Lord Reading's speech differs considerably in tone from that which greeted the pronouncement of the Secretary of State for India, although all sections of the Press feel that Simla has added nothing to the inadequate Westminster oration. The main distinction lies in the more human tone which the Viceroy has employed and it is here that he has shown his understanding of the people with whom he has to deal. Lord Birkenhead's rhetoric failed to impress the Indian people; in India the gilded phrase is looked upon with suspicion, as custom has ordained its usage to cloak insincerity, a fact which the extremist press has not been slow to grasp. In his appeal to the heart, the Viceroy took the right line, but evidences of distrust are still not fully dispelled. *Forward* attributes the motive behind the speech to a desire to pacify "a large and influential body" in France and America whose opinion is decidedly hostile towards British Imperialism and adds to this indictment that the speech is designed to make wholesale converts to the new-fangled creed of Diarchy. The *Amrita Bazar Patrika* is not quite sure of itself and drifts off into a criticism of Swarajist methods, the failure of which it puts down to the flush of partial success. The *Bengalee* publishes a long article from the pen of Mr. Sastri in which he says that India has been saved in the nick of time from anarchy and, while he puts forward the danger of unmitigated autocracy, he urges all parties to use the methods of patient effort and constitutional agitation, a sentiment which the *Bengalee* warmly endorses. To the man in the street the speeches, coupled with the downfall of the Swaraj party, create a situation which he finds difficult to assess and leaves him wondering what all the tumult is about. His faith in the Swaraj leaders is shaken and he is tired of agitation of the kind they advocate; herein lies the healthy sign.

The President of the Assembly.

Mr. V. J. Patel, the Bombay Swarajist, has been elected to the Chair of the Legislative Assembly by a narrow margin of votes, defeating Mr. Rangachariar, an Independent candiate and the late Deputy President. The record of the latter gentleman shows him to be one of the ablest debaters in the house, and on the occasions when he has been called upon to occupy the chair, he has done so with impartiality and dignity. Although Mr. Patel's reputation has municipal administration in Bombay to its credit, his prominence in the public eye is the result of his refusal to participate in the official welcome to the Viceroy at Bombay and also of his extreme views, expressed at a time when the Swarajist tendency was towards more moderate action. His acceptance of office creates a further paradox in the history of Indian politics. The avowed policy of the Swaraj party is to wreck the constitution, and it remains to be seen how Mr. Patel will adhere to his creed and efficiently discharge the duties of President at the same time. There is always the contingency that, having risen to a post of honour, he will moderate his views, but any indication of a change of front will result in a brush with his Swaraj supporters before the present session of the Assembly is much older: and, should he see fit to decide a point against them, even the extensive vocabulary of *Forward* will be insufficient for his denunciation. Mr. Patel has shouldered a grave responsibility in his new position; his survival, or otherwise, of the test imposed upon him will form an indication of the fitness of the Swaraj party to hold the reins of Government.

Resignations.

On Wednesday last, Mr. Sen Gupta took it upon himself to state that the Swaraj party was in no danger of breaking up and in his usual bombastic style announced that, although several Councillors had resigned from the Municipal Congress Association, which he inferred differed from the Swaraj Party in the main, he had little doubt that he would be able to prevail upon them to return. His hopes have not been realised and two further resignations from prominent Mohammedan Swarajists have been handed in. The more sensational is that of Dr. A. Suhrawardy, who was recently the Swaraj nominee for the chair of the Legislative Council. This sudden change has been the result of Gandhi's interference. It appears that the Mahatma took exception to a visit which the Doctor paid to Lord Lytton and accused him of having sold his country. The other resignation comes from Shah Syed Emdadul Huq, an Eastern Bengal Zemindar. Mr. Huq has for some time past advocated the amelioration of the conditions of the peasants, but on his tabling resolutions to this end has met with no sympathy from the Swarajists, whose policy appears to be for the preservation of the unjust privileges enjoyed by the Zemindars who are leading members of the Swaraj Party. This is a revelation of the utmost importance and shows the true motive behind the

Digitized by Google

extremist cause. From time immemorial the Zemindars have practically owned the *ryots* on their estates and have succeeded in keeping them poor by a variety of pernicious systems; it is not to the interest of these gentry that the peasant class should receive enlightenment, as this would cause a very real decrease in their income. Mr. Huq's statement provides the Moderates with evidence of the most convincing type, and they should see that it receives the publicity which its importance demands. By throwing in their lot with the Swarajists, the masses of India take the shortest route to the achievement of national suicide, for the goal of the party is not "equal chances for all": they seek to keep themselves rich and, so long as that end is achieved, methods do not matter. The warmest adherents to the Swaraj creed are prompted by selfish motives; these are not the leaders whose names come prominently into print; the leaders are their dupes.

The New Market Burial.

As a result of the Corporation's decision to exhume the body of the beggar from its grave in the New Market, a demonstration meeting of Mohammedans was held in Halliday Park on Sunday last. While the views of that community appear to have undergone a change in that they say it does not matter what religion the deceased professed, their real objection is to the disturbing of the grave. The speeches in the main were extreme in tone, one worthy Muslim going so far as to threaten that if the grave were interfered with dire consequences would follow. Another development has been the inception of a Moslem Councillors' Association, the moving spirits being the Mohammedans who left the Council Chamber as a protest agains the Corporation's resolution. At the inaugural meeting of this body it was resolved that the Mohammedan Councillors who have not yet broken with the Swarajists should be urged to do so and, if they refuse, an appeal is to be made to their constituents. If this agitation has been organised to administer the *coup de grace* to the Hindu Moslem Pact, its mission has certainly been fulfilled, but history proves that to meddle with the religious feelings of the Mohammedan masses is to fan an ever smouldering fire; should it burst into flame on this occasion, there is no knowing to what extent the conflagration may spread before being brought under control; it can never be quenched. The weapon is a pretty one to flaunt in the face of the Swarajist Corporation, and creates a situation with which they might be called upon to cope on the attainment of Swaraj in its fullest sense. Will the Swarajists be cowed by the display of force by their Mohammedan brethren? Both sides are on their mettle.

Markets.

The report this week is not encouraging. Dull conditions have ruled in the jute and gunny market with only a small business passing at varying prices; at the close the tone was quiet but steady. The tea market shows no signs of recovery from its recent depression, and advices from London indicate a further lowering of rates; this is in conformity with the position here, where sales this week have resulted in declines for all grades but the best, and these have been sold at lower rates owing to a falling off in quality. Stock returns should be to hand next week and, while nothing abnormal is anticipated, the statement should give an indication of the future tendency of the market.

The share market has displayed no particular feature. A somewhat easier feeling has been apparent in most departments in sympathy with the general conditions. Jutes have been irregular and show declines on the week; the best coal shares continue to command a fair amount of attention, but teas and cotton remain neglected. A fair business has been done in Government Stocks at lower rates, and rubbers have been steadier with no scrip offering.

The Trade returns for July show an increase in imports and decrease in exports over the previous months. Money is still abundant at previous rates, with exchange very steady.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, August 27.

The session of the Bombay Legislative Council at Poona came to a somewhat abrupt end a fortnight ago. The session was expected to last till about Wednesday, August 19; and on Saturday morning there were still a large number of resolutions in the name of Swarajist members on the list, any one of which might have been expected to last for several hours.

On Friday night, however, the Swarajists considered themselves aggrieved because one of their resolutions was opposed by the united vote of the Government members, the non-Brahmins, and the Sindhis: and they therefore determined to adopt non-co-operation unless they could get some redress from Government. As, however, the co-operation of this particular party consists, in the Legislative Council, solely in proposing and voting for purely obstructive resolutions, their abstention was more welcome than otherwise: and Saturday's business consisted entirely of watching the numerous resolutions, standing in the name of Swarajist members, go by default owing to their refusal to take any part in the proceedings.

It is equally unfortunate that the Swarajist Party should be unable to maintain the recognised position of a minority in fighting on against odds, and that their policy should be regarded as so wholly obstructive that their abstention from the business of the House should be regarded by everyone concerned as the greatest of benefits. The Non-Brahmins are meanwhile consolidating their position as a recognised Opposition with a constructive and reasonable policy, and their party in the Bombay Council is probably the best and strongest in India.

In the Legislative Assembly at Delhi, on the other hand, all the opposition parties have combined to carry a vote of no confidence in the personnel of the admirably constituted Currency Commission. There is no doubt about it that the Indian, who is not by nature or training an expert in international finance, is possessed of a very definite idea that the rise of the rupee has been engineered in the interests of England as against India. The theory that the appreciation of currency leads to bad trade and unemployment is obviously gaining ground in many countries at present: and, as has been shown in a previous letter, Bombay mill owners are inclined to attribute their present difficuities in great part to the fall in the yen/rupee rate. But the opposition to the present Commission goes far further than this, and concerns itself with the mythical drain on India's resources that is supposed to be taking place towards Europe: a theory that, in view of the enormous influx of gold and silver into India, is a little difficult to understand. But, whatever the reasons, it is quite certain that what the Indian members of the Legislative Assembly want is a Currency Commission, pledged to bring back the 1s. 4d. rupee regardless of any argument: and the fact that the members of the Commission are all recognised experts on Indian or international finance, who may be relied on to express an opinion in the interests of all concerned—and, after all, in matters of finance the interests of India are ultimately those of England—has no weight with them.

The Central Bank of India.

The run on the Central Bank this week has been a most unfortunate illustration of the lack of confidence of Indians in their own management of affairs. The Central Bank which, a year or two ago, absorbed the Tata Industrial Bank, has, under the management of Mr. Pochkhanawalla, been for a number of years a great source of pride to all who are interested in Indian industry. It has built up a very sound position, and is now very considerably ahead of any other native Indian Joint Stock Bank, and is one of the most successful Indian institutions of any kind in the country.

Yet on Tuesday and Wednesday of this week it was subjected by its Indian clients to one of the most determined attacks that any bank has ever faced. How far the run

Digitized by Google

was deliberately organised, or whether it was merely the result of a meaningless panic, will never presumably be known. But the Central Bank kept its doors open till midnight on Tuesday and, with the aid of the Imperial Bank and of the Currency Office, which kept it supplied with notes of all denominations, it was able to meet with comfort all calls made on it. The run continued on a smaller scale on Wednesday, but it is understood that it had ceased on Thursday.

The episode is much to the credit of the bank, but it is disappointing that its Indian clients should have shown so little confidence in the ability of their countrymen as to develop a foolish panic of such magnitude.

The Cotton Mills.

A deputation of mill owners interviewed the Viceroy during the week, but were informed that the financial situation did not allow of the abolition of the Excise Duty: whereupon Mr. N. N. Wadia, the leader of the deputation, is reported to have announced, with some heat, his intention of appealing to Lancashire for assistance in averting the common danger to India and England.

That such a retort should be possible shows how far we have moved from the days when it was considered that the Excise Duty was imposed solely to protect English piece-goods from Indian competition. It is now an article of faith with the mill owners that the main effect of the Excise Duty is to encourage the dumping of Japan's surplus production into India: and it is assumed that this is almost as obnoxious to Manchester as to Bombay.

No further developments are reported as to whether it is intended to bring the general reduction of wages into effect next week, and there is no information available as to the prospects of a strike.

THE INDIAN MAIL.

The Howrah Bridge.

The mail brings the news of the appointment of a Committee of the Bengal Legislative Council to consider the Government Bill for raising the money for the construction of a new bridge over the Hoogly at Calcutta, to replace the existing bridge of boats, which is sadly in need of replacement. The decision, that its replacement was necessary, was arrived at in 1909; but twelve years were expended in argument about the form of the new bridge: and it was not until 1921 that the supporters of a cantilever bridge carried the day. The Bengal Government then took two years to consider means of financing the project, but finally drafted a Bill, to the introduction of which the Government of India delayed sanction for several months. It was eventually introduced, in the Bengal Legislative Council, in August, 1924; but the Swarajists in the Council insisted that it should first be circulated for public opinion; so that the Committee, then appointed to consider the provisions of the Bill, lapsed and another year's delay ensued. A fresh Committee (of the unwieldy number of 25) has now been appointed and instructed to report as soon as possible. The chief duty of the Committee will be to report how the funds are to be raised; this will not be easy, since no person or public body wishes to contribute, though all are anxious that others should do so, and all are agreed that the Government of India should bear a share of the cost—which they have declined to do.

The Bill provides for the expenditure of the money required to build a cantilever bridge, but is capable of being modified so as to provide for a less permanent and less expensive structure. A pier bridge is not possible, since such a bridge would be likely to lead to silting—a form of trouble that is serious enough in the Port of Calcutta as it is: and the three remaining alternatives are cantilever, and a twin or a single bridge of boats. The report of the Committee, whatever it may be, will have to run the gauntlet of discussion in the Council, to which the Government of Bengal have left the final decision: and it is locally considered certain that the report will advise against a cantilever bridge: so that, to quote the *Statesman*, "the second city of the Empire will now revert to the primitive bridge of boats beloved by the late Julius Cæsar, and direct railway communication between Calcutta and the North of India will be postponed for another quarter of a century."

Bombay Swarajists.

The Swaraj Party in the Bombay Legislative Council have gone on strike and have refused to take any further part in the proceedings of the Council: of the resolutions and questions standing in the name of members of the party, none was moved or asked. The reason given by the leaders for this party manœuvre is a quaint one. They say that the Mohammedans and non-Brahmins passed a number of resolutions, with the assistance of the voting strength of the Swaraj Party, by which they obtained considerable concessions from the Provincial Government; but, when the Swarajists demanded reciprocal support, for their own resolutions, from their erstwhile allies, the latter refused to give it. They therefore decline to continue to assist the other communities to extract benefits from an unwilling bureaucracy: and propose to leave them to their own unaided devices in future, to see how they like it. No doubt they hope that the other communities will not like it: and will agree to play in the Swarajists' yard, if the Swarajists will continue to allow them to play in theirs.

"Indian Sandhurst" Committee.

When the personnel of the Indian Sandhurst Committee was first announced, objection was taken to the fact that it included no Mahratta representative: which, considering the excellent record of the Mahratta regiments in the War, was looked upon as a grave injustice. It is now announced that the omission is to be repaired, and a Mahratta representative appointed: and opportunity has been taken, at the same time, to add a representative from Madras.

The Committee held its first sitting shortly before the last mail left India. It will be interesting to see what decision it arrives at regarding its projected visit to this country and to Canada, to study the conditions at Sandhurst and Kingston. It does not seem possible that either of the European members—Sir Andrew Skeen, the Chief of the General Staff, and Mr. Burdon, the Army Secretary—will be able to make the trip: or that the prominent Indian politicians who are members of the Committee will find it possible to tear themselves away from the game of Indian politics which is in such an interesting state just now. It seems likely that the Committee will choose a deputation to represent them on tour: and, even if the result of their investigations is unlikely to be striking, they will doubtless have a good time, and thoroughly enjoy their trip.

Ibn Saud and the Hedjaz.

The Bombay Jamiat-ul-Ulema (Council of Doctors of Moslem canon law) have passed resolutions that outrages in the Hedjaz have been proved against Ibn Saud's soldiers, by whom many mosques and graves have been defiled or demolished at Mecca and Taif: that Ibn Saud was personally responsible for those outrages and had therefore merited their "severe hatred and contempt": that the leaders of the Central Khilafat Committee should be asked whether they would call upon Ibn Saud for an explanation of his false denial of the outrages, and whether they still continued to trust Ibn Saud's pledges after the proof that they had received of the falsity of his statements.

At a meeting of the Central Khilafat Committee, presided over by Shaukat Ali, it was stated that Ibn Saud had promised to see that the mosques and graves were repaired: that in no circumstances would he touch the holy places of Medina, or wage war there: and that, as soon as communications were safe, he would invite all Moslems to meet at an International Moslem Conference, for the purpose of "shouldering the responsibility, with his party in the Hedjaz, in freeing the Hedjaz from foreign domination" and for deciding on a constitution for the Holy Land.

Digitized by Google

Shaukat Ali said it was the duty of Moslems to see that the Jezirat-ul-Arab ("Island of Arabia") was freed from non-Moslem hands: and, though the Turks had driven away the Khalifa from their country, he would assure the whole world that Moslems would not rest content until the Khalifa was restored to his former position, with his seat in the Jezirat-ul-Arab.

Shaukat Ali's younger brother, Mahomed Ali, was invited (at Delhi) to express an opinion: and said that Ibn Saud should be asked to restore all the damaged or desecrated buildings, or at least to allow Mohammedans to do so at their own cost: and added, that such a matter could not be decided by any Conference, whose duties should be confined to political matters.

For the moment, therefore, Ibn Saud's stock appears to be at a discount in India: and the Ali brothers are doubtless repenting of their previous whole-hearted acceptance of his claims as a champion of Islam. Shaukat Ali's demand for the restoration of the deposed Sultan of Turkey as Caliph of the Moslems, with his seat in Arabia, suggests that the Central Khilafat Committee have finally recognised the claim of Arab independence from Turkey: and is not likely to increase the popularity of Indian Moslems with their European co-religionists; nor, perhaps, with Ibn Saud.

The Jezirat-ul-Arab.

It will perhaps be noticed that, at the meeting of the Central Khilafat Committee referred to above, Shaukat Ali improved upon Ibn Saud's formula of freeing the Hedjaz from foreign domination, by substituting the phrase "Jezirat-ul-Arab" for "Hedjaz." The exact meaning of "the Island of Arabia" is a matter of dispute. According to the "Traditions," the Prophet, shortly before his death, ordered his followers to "eject Jews and Christians from the Island of Arabia." When the Prophet died, his temporal dominions were bounded on the North by a line drawn from the head of the Gulf of Akaba to the head of the Persian Gulf—roughly, by the thirtieth parallel of latitude. It is therefore permissible to suppose that, by the "Island" of Arabia, the Prophet meant the Arabian Peninsula. But subsequent Moslem geographers have interpreted the term in a wider sense: claiming, as the boundaries of the "Island," the Mediterranean on the West, so as to include Syria and Palestine, and the Euphrates and Tigris on the North and East, so as to include Mesopotamia.

Thus, if the Arabian Peninsula was the subject of the Prophet's instructions, the only part of it under non-Moslem domination is Aden: though the presence of a British Consul at Jeddah, and—when they existed—of British advisers to King Hussain, was, of course, obnoxious to a strict interpretation of the Prophet's words. But, if the geographers' definition is to be accepted, the presence of Christians and Jews in Mesopotamia, Syria, Palestine, and Trans-Jordania is equally obnoxious. On one side, it is argued that the religious meaning of the phrase, as present in the mind of the Prophet, can only have been the Peninsula, of which he died the temporal master: and that any subsequent geographical widening of the boundaries of the "Island" cannot be held to extend the religious obligation laid upon his followers by the Prophet's orders. On the other side, it is argued that the Prophet foresaw the extension of the sway of Islam to (and beyond) the confines of the enlarged "Island" and intended his injunction to apply accordingly. There are, in the Koran, several references to a region, not specified, called "al arz"—the land: which commentators consider to have meant Syria (including Palestine): as being of equal sanctity with the Arabian Peninsula itself. At any rate, it seems obvious that the Prophet's immediate successors, if they knew of his embargo against Christians and Jews, did not interpret it as applying to Syria: for the conqueror of Jerusalem explicitly permitted members of both communities not only to remain there, but to carry on their worship undisturbed.

After all, if Shaukat Ali and his followers feel it incumbent on them to carry out the orders of the Prophet in this particular, it is not necessary for them to worry about the lesser or the greater interpretation of the "Island": for, under either of the two interpretations, Aden is part of the Jezirat-ul-Arab, so that they might begin with that, and defer consideration of the rest until they have succeeded in "ejecting Jews and Christians" from there.

INDIAN EXCHANGE.

London, September 14.

Rates in India since our last report have been dead steady at 1s. 6 5-32d. for telegraphic remittances, with only a very limited inquiry at 1-64th higher.

Business, however, has been done between the Government and the Banks at 1s. 6 3-16d., to the extent of close upon two million pounds, and it is, therefore, evident that the import demand falls far short of the market requirements in order to finance the volume of exports.

The activity is chiefly on the Calcutta side, where shipments of jute are now on the move.

In the London market the quotations have been round about 1s. 6 3-16d., with only a little business done at this figure, which was not easily obtainable.

Transactions during the week have been usually put through at 1s. 6 7-32d., and at this rate the market was very steady on Monday.

A flutter was caused last week by the announcement of the India Government's official forecast of the jute crop, which has now been considerably reduced. The official estimates have always erred on the short side, and further details are awaited with much interest. Private advices anticipate a more satisfactory outturn than that given in the Indian trade cable of the 8th instant, which announced the final forecast of the jute crop in Bengal at 6,983,000 bales.

Prices have recorded a substantial advance, much to the chagrin of not a few in the industry who have been relying upon a larger crop and expected a reaction.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

Britain's Export Trade.

There has recently been published a "Survey of Overseas Markets," the result of the labours of the Committee on Industry and Trade appointed by Mr. Ramsay MacDonald in July, 1924. This volume affords interesting and valuable reading, as it examines each country in turn and sets out the principal factors affecting the development of British trade in that particular market. It is impossible in a short space to analyse its findings, and the Survey is worthy of being carefully studied by all interested in export trade. Briefly stated, the Committee's findings are to the effect that the adverse forces which still operate in overseas markets to retard the full recovery of British trade are in the main world-forces, which operate with equal intensity against the trade of other exporting countries. With minor local exceptions which do not appreciably affect the general situation, British trade, broadly speaking, is not at present suffering from adverse discrimination as compared with that of other exporting countries. Of the main forces with which British trade has to contend some are transitory, such as the instability of exchange, the dearth of capital, the impaired purchasing power and the general financial and economic weakness of our customers, following the War. The world is still poorer for the waste of war, and years of hard work will be necessary to re-establish its purchasing power; but, given peace and political stability, there is no reason to doubt that recovery will take place. Other forces, however, like the growth of manufacture in the less industrially developed countries, undoubtedly represent permanent tendencies, with which traders must inevitably reckon in future, and to which it is, therefore, essential that they should strive with all their power to accommodate their outlook, their methods, and their organisation.

The Competitive Situation.

In dealing in turn with each country, the "Survey of Overseas Markets" has many practical comments and some helpful advice to give to the British trader. Thus in regard to Roumania it is stated that reconstruction and development have been retarded by a variety of causes and by the adoption of restrictive measures of an experimental nature; but, it is added later, the policy of the country in regard to foreign trade has altered for the better in many respects, and with a greater measure of freedom from control and intervention the prospects of further improvement are favourable. The class of goods obtained from Great Britain in the past will continue to be taken by Roumania, but competition there is bound to be. If the high cost of British goods is maintained, a considerable portion of the trade will be diverted to Czecho-Slovakia, Poland, and especially, to Italy, for suppliers in these countries have been more accommodating towards the Roumanian buyers. Again, in the case of Turkey the British mercantile position in Constantinople, the "Survey" states, is strong; but in view of the tendency for towns in the interior to try to cut out Constantinople, and of the entrance into business of numerous Turkish firms, it would seem desirable that steps should be taken by British exporters to send travellers to the towns in the interior to examine conditions for themselves, and above all to make those personal contacts without which business in Turkey is impossible. The personal element is also emphasised as an important factor in trade relations with Yugoslavia, and indeed will become more and more the key to success in all business in the Near and Middle East. Fortunately, the necessity is already recognised in some quarters, and our own columns have borne testimony to the energy and shrewdness of the head of one firm who finds it worth while to tour widely, from time to time, in the Near and Middle East.

Egypt as a Cotton Goods Market.

Wherever the trade outlook is discussed, one is left with the conviction that British exporters must set much more store than they have done hitherto on details connected with their business. In the Report recently published of the British Commercial Secretary in Egypt, extracts from which appear on another page, there is a very comprehensive survey of the Egyptian market for cotton piece-goods. The results of the year's (1924) trading, it is stated, cannot, from the point of view of United Kingdom firms, be considered to have been very satisfactory, as, with certain exceptions, the volume of goods supplied by the United Kingdom decreased very considerably, while in many of the principal lines Italian firms made extraordinary headway. The heavy fall in the lira exchange was, of course, a contributing factor, and there has been a certain amount of Egyptian investment in lire; but, continues the Report:—"The methods of merchanting adopted by Italian houses and their local representatives may be worth examination. The goods are normally sold c.i.f. Alexandria at a price quoted in lire with varying discount rates, according to the standing or importance of the client. There are no extras to the prices quoted, as these include packing, patterns, shipment, Customs dues, etc." There can be little doubt that business in the future will go where attention is paid to the psychology of trade, the details of packing and attractive make-up, and where consideration is given to the wishes and the convenience of the local purchaser.

Germany in the East.

German trade successes in the Near and Middle East are becoming items of frequent mention in the Press these days. It is perhaps, possible to attach too much importance to them; for after being entirely cut off from these markets, it is inevitable that our German rivals should make special efforts to get a footing in them again. Thus in Persia German trade in 1923-24 was double what it was in the previous year, but even so amounted only to a little over one per cent. of the total. As evidence, however, of the trend of things there is the spinning and weaving mill being erected in Ispahan, under German supervision and with, of course, German machinery. Again, it is the Junkers Aeroplane Company which has

secured the contract for three regular air services between Teheran and, respectively, Enzeli, Bushire and the Iraq frontier. From Afghanistan comes the report that a German firm has secured the monopoly for all exports and imports. Further information on the subject would seem to be necessary before the precise significance of the alleged agreement can be gauged. It is said to provide also for the working of all mines in the country. The moral of it all would seem to be that no market these days is to be ignored. Competition is bound to be severe, but in the long run the quality of the goods will tell, if only adequate steps are taken to make that quality sufficiently known.

Greece's War Debts.

It is the principle rather than the amount involved that makes the agreement for the adjustment of Greece's War indebtedness to Great Britain such a satisfactory matter. The Greek Government has faced the music and, as was to be expected, has found her creditor very easy to deal with. Greece's War debt to Great Britain has been fixed at £20,710,312, inclusive of capital and interest up to March 31, 1925 and, together with one year's interest at five per cent. on the principal of the debt, will be represented by Treasury Bills falling due on March 31, 1926, which will be given by Greece to the British Government. Part of this debt represents the cost of material supplied to Greece under the Agreement of 1918, estimated at about nine millions sterling. Before asking for the repayment of any of this sum, the British Government has agreed to take into consideration Greece's general economic and financial situation. At the same time the damage caused by British troops when in occupation of Greek territory during Greece's neutrality will be offset against Greece's indebtedness to Great Britain. In regard to the balance of the debt then left payment will be arranged for on the lines to be fixed by Great Britain for her Allied War debts in general. Greece has set a commendable example in thus arranging for a settlement of her indebtedness to Great Britain. It was only in July that the decision authorising agreement on the subject was taken, and the signature of the formal document followed within two months, in spite of the difficulties through which the country has been passing as a result of the unfortunate struggle with Turkey.

Persia's Finances.

The wisdom of enlisting Western support in the administration of the finances of an Eastern country has been abundantly borne out by Persia's experience. Revenue has exceeded expenditure, it is pointed out in a recent British Commercial Report, since the American Mission took over the direction of the nation's finances, moreover, actual expenditure appears to be decreasing, while revenues increase. A report by the American Administrator-General brings the story down to March last, and it is stated that in spite of the fact that crops were the worst of any season since the famine year of 1918, revenues in general continue to show improvement. General trade conditions throughout the country also improved, and Dr. Millspaugh concludes the report by saying: "With order and stability still reigning in the country, may we all join in an effort to make the present year a year in which the work already done shall come to full fruition." In view of the fact that it has been the announced policy of the Persian Government and its American advisers for the last two years to attract foreign capital for co-operation with local interests in the development of the country's resources and the establishment of modern industries, and to secure from abroad a loan sufficient to permit of the construction or completion of modern roads or railway systems and the development of Persia's agricultural resources, the allusion in Dr. Millspaugh's words is taken to be that he hopes to arrange for an early loan for Persia. In this connexion a quotation from the British Commercial Report to which reference has already been made is apposite:—"Persia is doing her best to keep faith with her creditors, and in so doing she is strengthening her position against the day when she may need to float a large reconstruction loan, such as has already been said by the American advisers to be a necessity to the progress of the country."

Ships—and Ships.

Last week the Sanitary Inspectors' Association was holding its annual conference at Liverpool, and the programme included a visit of inspection to two White Star liners in the port. In the course of a brief speech of welcome the representative of the White Star Line referred to the company's vessels as being each a compact town or village in itself. The Majestic, he pointed out, had left for America the previous week with 3,500 people on board. Now, in addition to the constant sanitation in the way of cleaning after each voyage, these ships undergo every six months rigorous fumigation. Every crevice and corner of the vessel is stopped up and, of course, everybody on board, including the cats, has to leave. One day, it is to be hoped, the same strict attention to cleanliness will permeate the Near East, both in regard to steamers and trains. Time was when in certain coasting steamers the first-class deck, if not the saloon, might have to be shared with sheep. Things have, of course, improved very much since then; but even to-day the wary traveller will be careful as to the line of steamers on which he makes the most delightful of trips—from the point of view of scenery—on the Danube. There is, perhaps, no Sanitary Inspectors' Association in the Balkans at present: but it would be quite easy for an official of each company to be appointed to inspect every steamer before it started on a fresh trip and to satisfy himself that in the matter of cleanliness the vessel was up to the mark. In a comparatively short time officers, crew and passengers would adapt themselves to an improved standard, with advantage to the ship, themselves and the Company.

COMMENTATOR.

The Bank of Athens has opened a branch at Durazzo, and thus has the credit of being the first bank to begin business operations in Albania. A week ago the National Bank of Albania was formally created in Rome, but it has not yet been announced when premises will be opened in Albania.

An attempt will be made early next year to recover the treasure, amounting to over a million sterling, that went down in the P. and O. Egypt, which sank off the coast of Ushant in May 1922, after collision with a French cargo steamer. The Egypt carried £839,000 in gold, and £250,000 in silver. A contract for the salvage work has been entered into with the Towage and Salvage Company of Gothenburg, which after several months' search has been able to locate the wreck. The services of a French firm belonging to Brest will be utilised and a German deep-sea diving apparatus employed.

THE LIUBLIANA SAMPLES FAIR.

(From Our Correspondent in Yugoslavia.)

Liubliana, September 2.

A Clash of Exhibitions.

In spite of economic depression and the special crisis through which Slovenia's chief standby, viz., the timber industry, is passing at the moment, the Fifth Liubliana Samples Fair was duly opened on August 29, and will last for ten days. It was rather a pity that the Subotitza Fair was held so immediately before it that the two events practically clashed, and that a big Hunters' Exhibition will open in Zagreb on September 8, claiming one of the most attractive features of last year's Fair, the contents of the Hunters' Pavilion—which would well have borne repetition. All the same, this year's Fair is looking well, and unexpectedly good business is being done. For one thing, the clerk of the weather is being kind for once, and visitors and dealers can see what there is to be seen and transact their business without wandering in and out of an all-depressing downpour.

Familiar Features.

Many features have by this time become familiar in the Liubliana Samples Fair—paper from the United Paper Mills (Vevche, etc.,) machinery from the Carniolan Smelting Works (Kranjska Industrijska Druzbr) and the Liubliana Machine Works, an exceptionally mellow-toned peal of bronze bells, a large display of foot-gear, basket-work furniture, wines and spirits, Slovene lace, in greater quantity than usual, and the inevitable Bosnian filigree stands, where one marvelled how little ornaments entailing so much hand labour and made of real silver, could be offered at so modest a price. And there are several interesting new departures.

Cement and brick works are greatly in evidence, housed in separate pavilions, constructed of their own material. The big canning factory "Globus" at Vrhnika is actually showing real jam made according to the English recipe, and offering it at reasonable prices. There is even apple jelly. Accessories for wireless apparatus have found their way here, too, and since the opening of the fair, a Liubliana firm has been advertising facilities for listening-in.

A very pretty novelty was a properly appointed and arranged green-house, such as I have not seen since I came to this country. It was shown by a native firm in Brod on the Save, and the flowers inside it as well as the cut blooms exhibited by the same firm were really "show" specimens! Perhaps there is not that incentive to cultivate beautiful, but practically artificial or exotic blooms in hothouse or garden in a country where the ordinary wild flowers are the prized garden flowers of less favoured climates, and the old-fashioned cottage garden favourites flourish without any trouble whatever. Adjoining this greenhouse there stands a wood-built villa, recommended as a useful sort of dwelling in days of housing shortage and high prices for building.

A sumptuous display of Oriental carpets and rugs by a Constantinople, London, and Vienna firm is a new and valuable exhibit. The number of B.S.A. motor bicycles has increased very greatly; the only aeroplane on show is of British make—so is one of the Liubliana Sporting Club's racing boats. The Hygienic Exhibition is practically the same as last year.

The Czecho-Slovak Pavilion is taken up altogether by exhibits of the world-famous Skoda Works, once an immense arms factory and now given up to works of peace. The firm is showing milk separators, motors, various machine parts, and plans for model slaughter-houses.

The Vogue of Sport.

The Sports Exhibition shows what has already been done for the development of sport in this country, and suggests many possibilities. Motoring, football, boxing, wrestling, rowing, ski-running, mountaineering and bicycling are represented, and it is here that the aeroplane already mentioned is to be seen. Skating and tennis are only represented by photographs of good exponents of these sports. The number of cups in all sections testify again to the fact that the Slovenes, though few in number, furnish the majority of Yugoslavia's best athletes. Ski-runners and mountaineers have obviously been most at pains to make their sections interesting and attractive. It is interesting to learn that ski-ing has been practised for centuries in certain Alpine villages of Slovenia as an ordinary method of getting about in winter, and to compare a few very primitive skis, warranted two hundred years old, and of a very stumpy shape with the present day style which is copied from the Norwegian ski. Several native firms showed skis of various patterns, and, of course, there were mountain boots in plenty. The most attractive feature, however, was the veritable gallery of beautiful Alpine views—summer and winter landscapes—shown in the Mountaineering and Winter Sports sections by the amateur photographers of the Tourist Club Skala. There were also good photographs of climbing exploits, and a clever model of a mountain top with hut and path, bolts and wires and bull's eye guide marks, all complete.

Timber and Side Shows.

The row of stands occupied by the Slovene timber merchants was the most important section of the Fair, although the least attractive, and indeed scarcely noticeable. Various samples of timber were shown, most of them merely sawn, some planed, and specimens of parquet work. Slovene timber is very close-grained and otherwise of good quality. The samples on show included several specimens of fumed beech, for which there ought to be a demand.

The number of visitors to the Fair is very large this year. There will again be a horse show, and a cattle show will be held in connection with it. These shows are economically important, as horse breeding and stock-raising are old-established occupations in Slovenia.

Not in connection with the Fair, but probably with a view to profiting by the number of visitors to Liubliana at Fair time, the "Light Athletic Meeting" for the Slovene championships took place on August 30. The most interesting items on the programme were the 1,500 and 5,000 metre races. Both were won by E. Drzaj, who established a new Slovene record over both lengths, covering the longer distance in 17 min. 10.8 sec. (P. Nurmi's time for this race at the 1924 Olympic Games was 14 min. 31.15 sec.)

ROUMANIA.

(From Our Own Correspondent.)

Bucharest, September 1.

Railway Electrification.

Conferences are at present being held at the Ministry of Industry and Commerce with French, Italian and Swiss engineers with a view to drawing up plans for the electrification of the whole Roumanian railway system. It will no doubt be a long time before such comprehensive plans can be carried out in full, for it will be a gigantic piece of work; but one must admire the sanguine temperament and energy of the Ministry of Industry and Commerce in launching upon such an enterprise, or even in contemplating it at a time when the country is still struggling to establish her financial position.

It is proposed to establish power stations at suitable points along the great watershed of the Carpathians, which will not only be large enough to supply the railways, but will also provide energy for some of the growing industries, especially in Transylvania, and possibly also the towns within their radius.

At the present time many of the locomotives, more particularly those running in the Old Kingdom, have been converted for burning oil, which is very much cleaner than the poor quality lignite used as fuel in Transylvania, which fills the carriages with soot.

AGRICULTURAL CONDITIONS IN IRAQ.

The following extracts are taken from the Agricultural Bulletin of Iraq for the month ending August 15:—

The calendar month of July opened with a week of comparatively cool weather, but became hotter later. The strong seasonal winds from the north-west were very active and dust-storms were frequent, but the hot scorching winds which usually occur during this month were rare. At Hinaidi the mean maximum and mean minimum temperatures recorded were 109.4 deg. F. and 75.2 deg. F. as against 109.5 deg. F. and 79.9 deg. F. the average for the past 36 years. The relative humidity was only 26 per cent. as against an average of 36 per cent. Climatic conditions were good for all crops, and the seasonable winds enabled cultivators to make satisfactory progress with their threshing.

The abnormally low state of the rivers is making the satisfactory irrigation of all Saifi crops a very difficult problem. The river Dialah above the dam at Table Mountain has a discharge of only about one-half of last year, and in consequence there is a great scarcity of water in all the Dialah Liwa canals. Garden owners complain of the shedding of immature fruits and the annual Saifi crops present an almost universal appearance of drought. Pump irrigation on the Tigris is equally difficult. In many cases the river has fallen below the foundations of the wells, and attempts to get water into the well lead to very great danger of a collapse. Fears are expressed that the rice crop will be short on both rivers due to irrigation difficulties. The present state of all three rivers is said to be lower than ever before experienced.

The prices of food stuffs remain high. Wheat is being imported into Basrah and the price in the Port is Rs. 210 per ton.

Most of the inland markets are selling at from Rs. 220 to Rs. 250, whilst the price in Mosul is still as high as Rs. 340 per ton. These high prices will probably adversely affect the areas sown next winter.

Apart from the water shortage *Saifi* crops are in good condition generally and very free from disease. Early sown maize and *Dukn* have been harvested and have given good yields as a rule. Cotton remains very free from all disease. The spotted boll worm *Earias Insulana* has been reported from various plantations, but nowhere is the attack severe. At the Experimental Farm the intensity of attack on the crops is certainly less than one-tenth of what it was at this time last year. In irrigated tracts, however, much cotton is being forced into premature opening by water-shortage, and a dull, weak-stapled cotton is being picked. Pickings become general in early August, and Messrs. The British Cotton Growing Association have commenced buying at Rs. 500 per ton for first class cotton. The present market price of raw cotton does not justify this high price, and unless the Liverpool market hardens, which is not considered likely at present, the price will probably have to be reduced.

The good reports previously to hand of the date crop are confirmed this month. The quantity of all three varieties is well above the average. The quality will depend largely on the weather conditions of the current month, during the final ripening. *Chubbar* disease has increased a little during the period under report, but it is not serious. Experimentally it was successfully controlled on an infected plantation by spraying.

The July, 1925, exports of wheat from Iraq were 117 tons and nil of barley as compared with 7,408 tons exported during the same month last year. The August, 1924—July, 1925, exports of dates from Iraq were 143,216 tons, valued at Rs. 1,85,63,479, as compared with 124,076 tons, valued at Rs. 1,57,01,581 exported during the corresponding season last year.

The July, 1925, exports of wool from Iraq were 447 tons as compared with 8,756 tons exported during the corresponding period last year.

THE AGRICULTURAL SITUATION IN INDIA.

A report issued from the India Office on September 11, states:—In India during August rainfall on the whole was sufficient in Madras Presidency, over the greater part of Bombay Presidency and Sind, in the Central Provinces, Bihar and Orissa, the Punjab, the majority of the Punjab States, Burma, Assam, the North West Frontier Province, Baluchistan and Hyderabad. Excessive rain has damaged the crops in most districts of the United Provinces, especially in the lowlands, and also in parts of the Punjab. Extensive damage to winter rice crops has been done by the floods in two districts of Orissa. More rain is needed in Central India States, Rajputana, Ajmer-Merwara, Western India States and Bengal.

Standing crops are generally fair. The cotton crop is backward in parts of the Central Provinces. The condition of sugar cane is good in the United Provinces and Bihar and Orissa. The harvesting of jute is in full swing in Eastern Bengal, but lack of water is being felt in Mysore District for retting. In Assam, prospects of tea are good, but the out-turn of jute is poor and cotton is likely to be poor.

Fodder and grazing are generally sufficient. The condition of cattle is good generally, but cattle disease has prevailed in parts of Rajputana and Hyderabad and in one district of Burma.

Prices are high but steady in the North West Frontier Province and Baluchistan. Hyderabad reports a downward tendency. The price of rice remained almost stationary in Bengal, while the price of jute reached a record level. In Madras and Burma prices generally are lower than during the correspondingly period of last year, but the price of rice in Madras showed a slight tendency to rise. In the Punjab the price of wheat was slightly higher than last year. The stock of food grain is low in Baluchistan. On the whole the agricultural outlook is satisfactory.

British Consular Reports

EGYPT.

The marked prosperity of Egypt is clearly brought out in the Report on the Economic and Financial Situation of Egypt by Mr. E. Homan Mulock, H.M.'s Commercial Secretary in Cairo, which is dated June, 1925, and has just been published by the Stationery Office.

The financial situation of the country at the end of 1924, it is stated, is summed up concisely in the following quotation from the Finance Committee's Note on the 1925-26 Budget:— The figures for foreign trade for the calendar year 1924 show an excess of exports over imports of £E16,467,000 as compared with an excess of £E14,576,000 and £E8,040,000 in 1923 and 1922 respectively. Statistics of foreign trade are, of course, subject to correction on account of methods of valuation, invisible imports and exports, transactions on credit, etc. Without attempting to establish the real balance of trade for the year 1924, it is clear that there was a substantial addition to the financial resources of Egypt during that period.

This is represented by an increase in Egypt's foreign investments. The Note Issue, which stood at £E36,400,000 on December 31, 1923, had increased to £E42,000,000 on December 31, 1924. Private bank deposits have grown, while the public deposits with the National Bank of Egypt increased during the year by £E7,459,537, resulting in a corresponding increase in the Bank's short-term investments abroad. The investments consist not only of British and other foreign securities, but also purchases from abroad of Egyptian Public Debt, and the securities of Egyptian companies. The statistics of the Caisse de la Dette show that, whereas in the first six months of 1923 53 per cent. of the Public Debt coupons were presented for payment in Egypt, by the second half of 1924 this figure had increased to 57 per cent.

It is chiefly cotton, continues the Report, which is responsible for the increased prosperity of Egypt. That the favourable trade balance in 1924 was greater than that of the two preceding years, in spite of a considerable rise in imports, which in itself indicates an increase in the purchasing power of the country, was due to a still greater advance in exports, accounted for practically entirely by a rise of over £E7,000,000 in the value of cotton exported during the calendar year 1924. As this rise in value was accompanied by a decrease in quantity of over 200,000 cantars, the resulting average price per cantar over the whole twelve months stood at 38 dols. 96 cents for 1924, as compared with 33 dols. 13 cents for 1923. Since 1924 prices 100 per cent. higher than the average for that year have been attained, owing to the strong statistical position of Sakellarides resulting from extensive curtailment of the area under that variety in the 1924-5 season. One result of high prices has been arrivals and exports on so large a scale that the carry-over at the end of the current season is expected to be very small, while the effect of the high premium enjoyed by Sakellarides over both Uppers and American cotton on the cultivators has been to make them revert to the sowing of Sakellarides on a scale that will, in all probability, more than redress the balance of last season's curtailment. In any event, it is to be hoped that the area under, and yield of Sakel in Lower Egypt will be sufficiently large in 1925-26 to remove from misguided merchants and cultivators the temptation to mix F.G.F. Sakel with Zagora or second-rate Sakel with best Pilion, in order to make up for shortages in tenderable cotton, which did so much harm to Egypt's reputation as a cotton-producing country during the current season, and which has caused such grave and widespread doubts as to the quality of the seed (whose adulteration was the natural consequence of mixing Sakel with other varieties before ginning) distributed for the 1925-26 crop.

Unfortunately for Egypt, the legislative measures for preventing the mixture in the fields, or even the hybridisation by too close proximity in cultivation, of any variety of short-staple cotton with Sakel, which should have been enacted in time to apply to the sowing of the 1925-26 crop, were not taken in hand until too late, and in June of this year were still under consideration by a technical committee of the Ministry of Agriculture. The broad lines of their proposals are to confine the cultivation of Sakel strictly to Lower Egypt, and of Zagora and Ashmouni to Upper Egypt, and to allow the planting of Pilion in Lower Egypt, provided that it is nowhere in proximity to Sakel. Measures are also being investigated with the object of ensuring the purity of tagawi, or seed suitable for sowing, and to control its distribution, but it is to be feared that, however watertight and stringent these may prove to be, they will be inadequate in view of the insufficiency of native personnel qualified in every way to enforce them. The fixation of zones for Sakel and other varieties has been advocated for years by European experts, but, while it is unlikely that Zagora and Ashmouni have been planted at all in Lower Egypt, the absence of legislative measures governing the distribution of Sakellarides may yet be regretted as regards Upper Egypt, since the chances are that the small and large cultivators, in their anxiety to grow on as large a scale as possible the variety which has commanded such high prices this season, have planted Sakel in Upper Egypt as well.

Position of the Cultivator.

In this connection it may be of interest to consider the ratio of cost of cultivation to the proceeds of sale in the case of the fellah in 1924. As the high prices for cotton attained during the year 1925, particularly in March, may not have benefited many of the small cultivators owing to their having contracted to sell their cotton earlier, it does not afford a fair criterion of the extent to which the average fellah benefited to compare prices subsequent to 1924 with the cost of cultivation. Taking, therefore, the average price of all cotton in 1924, viz., 38 dols. 96 cents (a dollar equals 20 piastre—4s. 1¼d.), as a very considerable estimate, and multiplying this by three as a fair estimate of yield in cantars per feddan of Sakel, and by four in the case of Uppers, the resulting sum represents a handsome profit over the cost in 1924 of cultivating one feddan of cotton (after rice), assuming that the cultivator has to hire oxen and all the labour required for each stage or process. The cost of cultivation under these circumstances, which does not by any means apply to all cultivators, is estimated by experts at 649½ piastres, or 32 dols. 47 cents, per feddan in 1924, as against 1,658 piastres, or 82 dols. 90 cents, in 1920. The very great difference between these two figures and the small proportion borne by cost of cultivation in 1924 to the proceeds thereof are evidence of the fallacy of the complaint so often heard during the year under review of the existence of an economic crisis. So far as the fellah is concerned, it must be borne in mind that, as he is able to pay his taxes out of, and feed himself on, his other crops, any profit he makes out of cotton is net. It is estimated that, as regards Sakel, 40 dols. a cantar is a remunerative price, and, although the average price during 1924 was slightly below this profitable minimum, Sakel contracts rose during the first four months of the current season (the period during which the fellah usually reaps the reward of his labours) from 40 dols. 38 cents on September 1 to 58 dols. 60 cents on December 31, 1924.

The "Economic Crisis."

As the fellah constitutes so large a proportion of the population, and as the landowners' profits from cotton were so very much larger than those of the fellah, the so-called economic crisis in 1924 was presumably limited to the minority comprising such of the business and industrial community as are not directly interested in cotton. Assuming that it was, it is difficult to reconcile with a 10 per cent. increase in imports; with the amount of money circulating as the result of the export during the year of more than £E56,000,000 worth of cotton; with the extensive building of new private houses, huge blocks of flats and shops, showrooms and offices (which cannot be solely attributable to the fall in the cost of building materials); with the frequent transactions in desirable house property and vacant land, both of which have

Digitized by Google

greatly appreciated in value owing to the building craze; with the increase in the number of private motor-cars and commercial motor vehicles of all kinds, both in Cairo and Alexandria; and, *inter alia*, with the appreciation in the prices of stocks and shares of all kinds.

Budget Surplus, 1925-26.

To these important factors in the prosperous economic situation of Egypt should be added the highly satisfactory condition of Government finance, indicated by an estimated surplus of nearly £E 6,000,000 on March 31, 1925, and a corresponding increase in the Reserve Fund, which on that date was roughly computed at £E24,000,000. In addition to this, two special reserves have been created, viz., £E1,037,860 as a "Reserve relating to the Capital Account of the Egyptian State Railways, Telegraphs, and Telephones," and £E512,462 relating to the Ottoman Debt. Receipts for 1925-26 are estimated at £E36,870,000, and expenditure at £E36,288,266, indicating a surplus of £1581,734. Receipts and expenditure in 1925-26 are respectively £E2,470,000 and £E2,012,783 higher than in 1924-25. The increase in receipts is due chiefly to estimated increases in revenue from railways, £E785,000; interest on funds, £E305,000; cotton tax, £E250,000; customs, £E140,000; telephones, £E105,000. The most important items in the increase in the total expenditure are:—Railways, £E1,067,000; Education, £376,000; public debt, £E300,000; and educational missions, £196,000.

The Government's Economic and Financial Policy.

A review of the economic and financial development during the period covered by this report, viz., the financial year 1924-25 and the first two months of 1925-26, falls naturally into two periods, viz., Parliamentary and post-Parliamentary. The economic and financial policy of the first Egyptian Parliament, which sat from March 15 to July 10, 1924, may be summed up in the words:—"Economic independence at all costs." The outstanding instance of this was afforded by the Government's repudiation of payment, after July 12, of the coupons of the Turkish Loans secured on the Egyptian Tribute. After reference to Reserve Fund Investments and to the application of this desire for economic independence in regard to native industrial enterprise and a national mercantile marine, the Report continues:

It is a matter of considerable difficulty to describe exactly what was the policy of the Egyptian Government and Parliament in matters of finance and economics of a purely domestic nature, i.e., those in which European interests were not solely or chiefly affected. For instance, the Government on the one hand insisted on the Reserve Fund being kept intact, but on the other agreed to an unspecified amount for Government purchase of cotton, and cash for a loan of a quarter of a million to the Agricultural Co-operative Societies, being drawn from the Reserve.

Coming to the Post-Parliamentary period the Report states:—

In February, 1925, the Council of Ministers decided upon the reconstitution and revival of the Economic Council, which had been suspended during 1924 by a decision of the Chamber on June 11. The recent reconstitution of this body, so far from fulfilling the aim of the Chamber to confine it to Egyptian members, includes a greater proportion of Europeans to Egyptians than it did at its original inception in September, 1922. The policy of the Egyptian Parliament of encouraging local industry still survives, although such encouragement is no longer confined to purely native enterprise, as is shown by the abolition on February 15, 1925, of the excise duty of 4 per cent. *ad valorem* on all cotton piece-goods manufactured locally by mechanical means. This will principally benefit the Filature Nationale, which is entirely in European hands. A purely Egyptian industry will, however, be fostered by the action of the Government in re-opening on February 25, 1925, their petroleum refinery at Suez, which had remained inactive since the end of November, 1923, owing to the indecision of the Government as to whether it would not be better to sell, or at least let, a factory which can only be run at a loss. Although the Egyptian Parliament considered that 70 per cent. of the railway revenues was too high a proportion for expenditure, which, in their opinion, should not exceed 45 per cent., it was the Zaghloulist Cabinet which on November 10, 1924, approved of the programme, to be spread over the three financial years 1925-26 to 1927-28, for spending £E3,105,000 on abnormal renewals of track and rolling-stock, in addition to normal current renewals amounting to £E567,000 a year. It may perhaps be of interest to add that, according to a statement made in the Chamber by the Finance Committee, the capital of the railways was placed at £E30,126,028 on March 31, 1924, and the net estimated railway revenue for 1924-25 constituted 6 per cent. of that sum.

General Finance.

The outstanding events in financial circles during the period under review have been the repudiation of the Tribute Loans, and the action brought against the Suez Canal Company—which is an Egyptian company in the eyes of the law—by the debenture holders who claim that their interest should be paid in francs, not at the rate of exchange, but at the legal value of the franc in Egypt in the money having legal currency there, viz., 3.8575 pt. per franc. The first Civil Chamber of the Mixed Courts at Cairo gave judgment on January 26, 1925, in favour of the debenture holders, but the company appealed against this decision. The result of the appeal—which was started on April 23, 1925—was that the decision of the First Civil Chamber in favour of the debenture holders was confirmed. The court of Appeal also confirmed a similar decision given in favour of the debenture holders against the Cairo Electric Railways and Heliopolis Oasis Company. This campaign of debenture holders against companies under European management which operate in Egypt, but pay their interest and dividends in francs, French or Belgian, as the case may be, was encouraged by their initial success against the Sucreries et Raffineries d'Egypte in the Mixed Court of Appeal on June 17, 1924. Speculation in the debentures of all the companies attacked, or susceptible to attack, has been rife, and it is generally understood that the extent of the annual exodus to Europe in the summer of 1925 depends largely on the result of the appeal by the Suez Canal Company.

All the principal banks had satisfactory financial years, and in some cases were able to increase their dividends. However, the effect on banking business of the augmentation in the prosperity of the country was rather an adverse one, owing to the reduction in demands for advances, and the accompanying extension of competition therefor, and to the fact that private deposits, which greatly increased, had, of necessity, to be placed in short-term investments, the return from which is not as profitable as that on commercial and industrial advances.

BRITISH MOTOR-CARS IN THE EAST.

Mr. James Thom, who is well known in the motoring world throughout India, Burma, Ceylon, and the Far East, has joined the export department of Rootes, Ltd., 141, New Bond Street, London, who handle the sole world's export of the Clyno and Hillman cars, and has left for Bombay. He will be travelling through India during October, and will then proceed to the Far East. During his tour Mr. Thom will be prepared to take up the matter of agencies with any dealers throughout the Orient. Until October 31 Mr. Thom will be found c/o Messrs. Allen Berry, Ltd., of Calcutta, and after that date and until February 28 c/o Raffell's Hotel, Singapore.

Near East Markets.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ending September 5:—

Sultanas.

The arrivals of sultanas on the Smyrna market since the opening of the season are estimated at 4,760 tons as compared with 13,000 tons for the corresponding period in 1924. Estimated sales are put at 4,210 tons compared with 10,360 tons in 1924. The closing prices are: Types 12-17 inclusive: 57s., 60s., 63s., 66s., 70s., and 74s. respectively, per cwt. c.i.f. London (Liverpool): the corresponding prices per 100 kgs. c.i.f. Hamburg (Trieste) Amsterdam were Fls. 68, 71, 74, 77, 81, and 86 respectively.

Prices in the Sultana market show a slight reduction on last week's closing level. The course of market indicates an easier tendency. Shippers are putting a strong opposition to present level of prices owing to the heavy losses they are incurring in their forward sales made earlier in the season.

In face of their reluctance to buy, prices have slided slightly.

It is now possible to form a fairly reliable estimate of the yield. It is generally estimated at between 23 to 30,000 tons. Our own view is that the yield will not exceed 23/25,000 tons.

Figs.

Arrivals of figs on the Smyrna market since the opening of the season are estimated at 30,000 bags, as compared with 55,500 bags for the corresponding period in 1924. Estimated sales for the same period are put at 25,000 bags, as compared with 48,500 bags in 1924. Shipments to date to the United Kingdom are estimated at 110 tons, as compared with 1,431 tons in 1924.

The fig crop is ten days backward, and there should be large arrivals from this date onwards. Supplies until now have been hardly sufficient to meet current engagements.

TURKEY'S NUT CROP.

His Majesty's Consul at Trebizond (Mr. W. L. C. Knight) informs the Department of Overseas Trade that the local nut crop, harvesting of which is in progress, promises to be one of the most abundant on record. It is stated that nothing like it has been known for at least thirty years, and the quality is as excellent as the quantity is exceptional. The Turkish growers and exporters have the added satisfaction of having to meet considerably less competition than usual, owing to the poor Spanish crop and the almost total failure of that of Southern Italy.

A preliminary calculation estimates this season's yield, for the Trebizond-Labistan area alone (i.e., excluding the still more productive district of Kiressun) at 400,000 cantars = 17,600,000 okes = 22,000 tons, valued approximately at 8,000,000 lira or roughly £1,000,000 sterling.

The local merchants' prices average 50 piastres per oke for the unshelled nuts and 110 for the shelled. Important shipments are now being made to America (transhipment at Constantinople, Hamburg, or Rotterdam). Prices c.i.f. New York are around 110 shillings per 100 kilos for the unshelled, and vary from 230 to 250 shillings for the shelled nuts.

As a general rule the great bulk of the nuts are exported shelled (*itch Funduk, décortiquées*), and only a very small quantity unshelled (*kabuklu, en coque*). The former are chiefly used by chocolate manufacturers, while the latter are mostly retailed for table use, principally in England, Germany, and Egypt. This year, however, a greatly increased amount is being exported unshelled, owing to the scarcity of Spanish and Italian nuts already referred to. It is estimated that nearly 25 per cent. of the present crop is being exported unshelled. As regards the local price of nuts, it is said to be less than half that of 1024, and it is thought that owing to the great quantities available for export, prices will fall still further later in the year.

SHIPPING NOTES.

A Nile river steamer is being built by Messrs. J. T. Thorneycroft and Co. for Egyptian owners. The dimensions of the vessel, which is to be completed within eight months, will be 250 ft. over all and 32 ft. between the paddles, with a draft of 3 ft. 6 in. The speed is to be about 9 knots.

A steamer, built by Messrs. Short Brothers, of Pallion, Sunderland, to the order of Messrs. Lowther, Latta and Co., for the Nitrate Producers' Steamship Co., is to be called Anglo-Indian. The dimensions of the vessel, which underwent her official trials last week, are:—Length, 426 ft.; breadth, 59 ft. 6 in.; draft, 25 ft.

Messrs Andrew Weir and Co. (Bank Line), have taken over the first of the two twin-screw motor vessels now being built for them by Messrs. Harland and Wolff, Govan. The Bank Line already have two of these cargo vessels in service.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Liverpool, September 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Dorsetshire for Port Said, Colombo, Madras, and Calcutta (London, October 3).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, September 23); s.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, October 7).

British India Line.—S.s. Domala for Colombo, Madras, and Calcutta (London, September 26); s.s. Merkara for Bombay and Karachi (London, September 25); s.s. Manela for Colombo, Madras, and Calcutta (London, October 10); s.s. Madura for Bombay and Karachi (London, October 9).

Cunard Line.—S.s. Phrygia for Gibraltar, Oran, Algiers, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, October 10).

Ellerman "City" Line.—S.s. City of Hong Kong for Calcutta (Birkhenhead, October 1).

Johnston Line.—S.s. Vedamore for Galatz and Braila only (Liverpool, September 30); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galata, and Braila (Liverpool, October 17); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 6). (The last steamer of the season for Sulina, Galatz, and Braila.)

P. and O. Line.—S.s. Nyanza for Colombo, Madras, and Calcutta (London, October 3); s.s. Ranchi for Bombay (London, October 2).

Prince Line.—S.s. Lancastrian Prince for Malta, Alexandria, Jaffa, and Haifa (London, October 3); s.s. Egyptian Prince for Malta, Alexandria, Jaffa, and Haifa (London, October 24).

We have to record with regret the sudden death of Sir John Jordan, a director of the Chartered Bank of India, and a great authority on China, where he was British Minister from 1906 to 1920. He was the kindliest and most unassuming of men.

ANCHOR LINE

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ending September 3, state:—

Since our last report the Futures market has been erratic; at the close the Sakel tone has been firmer, whereas that of Ashmouni is somewhat easier; the net changes on the week are the following:—

Sakellarides, 0.52 dollars up for November, 0.37 dollars up for January, 0.17 dollars up for March; Ashmouni, 0.55 dollars down for October, 0.70 dollars down for December. The position does not offer any new features worthy of comment. The demand from abroad is still rather small and commercial houses continue to keep, more or less, out of the market. The wide fluctuations experienced during the week are due to speculative manipulation. The bull clique has been trying to push up prices by spreading the report that the Government's intervention in the Sakel market was imminent, whilst the bear clique has been endeavouring to break prices by spreading alarming forecasts as a consequence of the reported financial difficulties of some English spinners. With regard to the Government's intervention it appears that the question will be considered at the next meeting of the Council of Ministers; however, even if it is decided to intervene in principle, we do not think the Government will begin purchasing at the present level of prices.

The easier tone of Ashmouni may be attributed to some hedging of high grade cotton, which has just arrived and which the holders withdrew from the market owing to the recent heavy depreciation in premiums; also, to sales by straddlers against purchases of Sakellarides and American. The usual end of the season adjustment of figures of stocks etc., has not yet been published.

We estimate the quantity of old crop cotton remaining up-country at August 31 last at 50,000 Cantars, the larger proportion being Scarto and Affrita. The week's receipts amount to Crs. 66,551 against exports Crs. 57,210; the stock stands at Crs. 303,893.

Spot: Minet el Bassal has been slightly more active this week and sales for the week amount to about 5,300 bales, of which we estimate 150 bales Sakel, 5,100 bales Uppers, 50 bales Zagora and a few bales of Pilion. Cotton from Upper Egypt is beginning to arrive rather more freely.

Sakellarides: has been almost entirely neglected and only a very small turnover has taken place. Quotations are nominal and spot differences are generally markedly cheaper than last week. A few bales of very early new crop Sakel have arrived and were sold at good prices.

Ashmouni and Zagora: have met with a good demand covering all grades. Spot differences are easier for good and better, steady for Good Fair and Fully Good Fair and stiffer for the grades below Good Fair, which are now becoming scarce and hard to buy.

Brown and Pilion: are neglected. A few bales of Pilion have changed hands but quotations are still nominal and must remain so till the new cotton arrives in sufficient quantities.

White is entirely neglected. Quotations are once more easier and nominal.

Crop 1925: We give below the report of the Alexandria General Produce Association for the month of August. In our opinion it gives a fairly accurate statement of the present condition of the crop.

Latest reports from Upper Egypt are rather optimistic.

Lower Egypt.—The temperature on the whole has been favourable to the cotton plants. There have been mists, but it is not yet possible to judge the damage done. Bollworm has been reported everywhere; the percentage of bolls attacked varies between 10 and 15 per cent. It is reported that the Pilion and Zagora varieties have suffered more from this pest than the Sakellarides variety. Water for irrigation has been sufficient. The picking of the Zagora and Pilion varieties has commenced sporadically. It is agreed that the backwardness of Sakellarides variety has been more or less recovered and it is expected that picking will commence about September 15.

Upper Egypt and Fayoum.—The temperature during the month of August has been favourable to the cotton plants. Some damage from attacks of pink worm and boll worm has been reported and estimated at between 5 to 8 per cent. Also some damage has been done by "Nadwa Assaliya." Picking began in August 20 and progresses normally. The crop on the whole promises to be superior to that of last year.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ending September 12 states:

Conditions during the past week have been such as are usually considered favourable to inducing buyers to extend their operations. Raw Cotton, after exhibiting weakness for quite a long period, has rallied and begun to climb upward. Business in yarn and cloth, however, has not shown any development of special note. Enquiry has been on a considerable scale, but generally at prices corresponding to the lowest point touched by the raw material.

Yarn.—The rise in the price of American Cotton has operated against Spinners, who find that only with the utmost difficulty can they secure for themselves the increased prices necessary, most buyers, for the time being at any rate, declining to pay the advance. There is nothing fresh to report with regard to Egyptian Spinnings. Demand remains still poor, and, in view of the heavy discount on new crop months, this can hardly be wondered at. Shipments of yarn last month amounted to 15,038,000 lb. as compared with 14,044,700 lb. in July and 11,852,000 lb. in August last year.

Cloth.—There has been a considerable development of enquiry in this section, but reports as to the amount of business actually booked vary somewhat. India has taken some fair lines in light goods, but the heavier fabrics are difficult to move. Trade with China has moved along the same lines as reported in recent weeks. A fair demand has been met with for South America, but business for Egypt and the Near East remains at a disappointing level.

Shipments of cloth last month amounted to 344,277,000 square yards as compared with 370,841,700 square yards in July and 373,644,000 square yards in August last year.

Raw Cotton.—As already mentioned, there has been a change of sentiment in this section. Saturday of last week and Monday both showed small declines in price, but the Bureau Report issued on Tuesday was a surprise. The condition was given as 56.2 per cent. and the indicated yield 13,740,000 bales, a decline of 250,000 bales since the previous report. The number of bales ginned to the last September was given as 1,893,000, by far the highest figure reported at this date for many years past. The condition report was decidedly worse than had been anticipated and, in consequence, prices began to rise and have continued to do so throughout the remainder of the week. It is thought here, however, that, with the season so far advanced, a large crop is a certainty and the ginning figures are pointed to as evidence of the remarkably early date at which it is maturing.

An estimate has also been published during the past week by the Egyptian Government giving their country's crop at 7,273,000 cantars, of which 3,563,00 is said to be Sakellarides. These figures both represent considerable increases over last year. Prices of this class of cotton are only slightly changed on the week.

Closing quotations yesterday were as follows:—American Middling 13.01, Egyptian Fully Good Fair 28.05, the figures for last week being 12.51 and 27.95 respectively.

Company Meeting.

DIALA COTTON PLANTATIONS, LTD.

The statutory meeting of the members of the Diala Cotton Plantations, Ltd., was held on Wednesday, September 9, at Winchester House, Old Broad Street, London, Sir Edward Manville presiding.

The Secretary (Mr. William S. Gregg) having read the notice convening the meeting, the Chairman said:

Gentlemen, this statutory meeting has been convened in accordance with the provisions of the Companies (Consolidation) Act, 1908, and is of a formal nature, there being no resolution to put before the meeting for adoption. The statutory report has been sent to every member of the company, but if there is any further information which you desire to obtain with regard to any matter relating to the formation of the company or arising out of the report, I shall be happy to furnish the same. There has also been prepared a list showing the names, etc., of the members of the company and the number of shares held by them respectively, and this list is open for your inspection.

Iraqi Shareholders.

There is a point of considerable interest in connection with the list of shareholders to which I should like to draw your attention. It is that we have a considerable number of shareholders domiciled in Iraq—in fact, a larger number than those residing in the United Kingdom. This demonstrates the interest taken in our undertaking by Iraquis, and it is obviously to our advantage that a considerable number of the inhabitants of the country should be so interested. Naturally, the number of shares held by individual Iraquis is relatively small, as might be expected, having regard to their means; but it cannot fail to be of advantage to the company that so many of the resident individuals have acquired an interest in our undertaking, which should result in local support for our policy. It thus transpires that we have no fewer than 693 shareholders domiciled in Iraq, with 605 shareholders outside that country domiciled, with a few exceptions, in the United Kingdom, whilst, on the other hand, the Iraqi shareholders hold a total of 27,644 shares, the remaining 372,356 being held by the shareholders chiefly in this country.

The financial statement included in the report, I think, explains itself. There has been called up 10s. per share on the 400,000 shares of £1 each allotted, and the report shows that the application and allotment moneys due in respect of these shares have been well paid up, there being but little in arrear, and these arrears are now carrying interest at 8 per cent. per annum until payment. The preliminary expenses have practically all been settled, and the purchase consideration of £25,000 due to Eastern Irrigations, Ltd., in accordance with the agreement of the 16th day of June between that company and ourselves has been paid. In accordance with the same agreement, application was duly made for 50,000 shares of £1 each in Eastern Irrigations, Ltd., and the balance payable in respect of these shares will become due towards the end of the present month.

Work in Iraq.

Reference was made in the prospectus to the fact that Mr. Roger Thomas, late Inspector-General of Agriculture in Iraq, would join the Board after allotment. I am pleased to inform the shareholders that this arrangement has been duly carried out, and Mr. Roger Thomas has been appointed Managing Director of the company, and is now in Iraq carrying on his duties. Mr. Thomas left for Baghdad at the end of July, and from the incorporation of the company until that date he was in close consultation with your Board in regard to the various details involved in the work of the company and its general policy. He is now actively engaged in making the preliminary arrangements for the development of the acreage on which we shall cultivate cotton. As you will recollect, before the incorporation of the company 600 acres were put under cultivation. The object of this, apart from the relatively small crop which will be obtained from it this autumn, was to enable the company to obtain the requisite experience sufficiently to deal with a much larger area which will be put under cultivation at once, and to enable the cultivators to be educated in the work which lies before them. Since Mr. Thomas has returned to Iraq he reports that he is satisfied with the progress which has been made during his absence, and that, in spite of our methods being absolutely new to the cultivators, these have now settled down contentedly to the work, and that there is available for the bigger cultivation in prospect an adequate amount of labour.

You will have observed from the report made by Sir Thomas Ward, which was published in the prospectus, that a number of important matters arise which call for an early decision; and, in view of the importance of eliminating as far as possible mistakes and difficulties which might be encountered in the work of considerable magnitude which lies before us, we have appointed a Commission to proceed to Iraq forthwith to consult with Mr. Roger Thomas and Sir Thomas Ward on the spot. This Commission consists of Lord Chelmsford, the Chairman of Eastern Irrigations, Ltd., which company he represents, and Sir Douglas Newton, a member of our Board. The advice and assistance of Sir Thomas Ward, the company's Chief Consultant, and others, including the company's Resident Engineer, will be available when the Commission arrives, as they are proceeding to Baghdad in advance. We believe that this procedure will tend to render the operations of the company efficient, and will result in a general policy being inaugurated under the best possible conditions. The machinery, etc., immediately necessary was ordered before Mr. Roger Thomas left for Iraq, so that the opening up of a considerable area for cultivation this autumn can be proceeded with without difficulty.

I have here some cotton from our estates which was brought over by King Feisal, who is here now, as you know, and which one of our directors Mr. Wilson, who is well skilled in judging the quality of cotton, says is of first-class quality. If any of you would like to examine it, please do so.

No questions being asked, the proceedings terminated.

NEW COMPANY.

Bulgarian Development.

Private. Capital, £750 in 1s. shares. To acquire from the Bulgarian or any other Goverment or authority any rights with respect to trading of all kinds between Great Britain and Bulgaria. Subscribers:—P. Ivanoff, 21, Cornwall Terrace, Regent's Park, mining engineer; P. Felenott, 35, Chalfont Court, Upper Baker Street, shipowner; J. Baerselman, 56a, Park Street, Southwark, merchant; H. Registered office: Boston House, 63-4, New Broad Street, E.C.

COMPANY NOTES AND REPORTS.

BURMA RUBY MINES.

The accounts of the Burma Ruby Mines for the year ended February 28 show, after making the usual provision for depreciation, a deficiency of £33,520, which, added to a debit of £14,715 brought forward, makes a net deficiency of £48,235. Owing to loss on operations during the year, which was due to unforeseen working difficulties and to the panning out of two mines in the Mogok district, the Board considered that it was not possible for them to proceed with new development to an extent which would be likely to give any return for money expended unless fresh capital could be raised for the purpose. They accordingly addressed the Government on June 5, explaining the position, and suggested that a fresh lease should be granted on terms which there was reason to believe would enable them to raise, by debentures, a sum sufficient to carry out further development. The Secretary of State has definitely refused this proposal, but has offered—provided the company continue working—to cancel unconditionally the liability of £19,589 to Government. This offer the Board has accepted. Meeting, Cannon Street Hotel, E.C., September 22, 2.30 p.m.

EGYPTIAN AND FOREIGN TRUST.

The net profit of the Egyptian and Foreign Trust for the eighteen months ended June 30, 1925, was £3,317, reducing the debit balance to £22,822. Investments have been taken in at cost; valuation at current market prices on June 30, 1925, shows depreciation of about 32 per cent. Report states that directors have given careful consideration to the question of continued depreciation in the value of securities and the inability of the company to pay dividends while this depreciation exists. Their proposals for the future of the company are embodied in a circular accompanying the report. Meeting, River Plate House, September 17, 3 p.m.

COMPANY NEWS IN BRIEF.

The Eastern Bank has declared an interim dividend for the current year of 4s. a share, less tax, payable on October 1. The dividend a year ago was the same.

The Chartered Bank of India, Australia, and China has declared an interim dividend for the half-year ending June 30 last at the rate of 14 per cent. per annum, free of Income Tax, payable on and after September 16.

The directors of the Mercantile Bank of India have declared an interim dividend of 8 per cent., less tax, on the "A," "B," and "C" shares, payable September 25. A similar payment was made last year, followed by a final payment of 8 per cent.

The Nizam's Guaranteed State Railways Company recommends final divided of 4 per cent., plus bonus of 3½ per cent., on capital stock, making 11½ per cent. for year. (Distribution for 1923-24 was 10 per cent.)

Messrs. Harrisons and Crosfield have declared a dividend on the preference shares at the rate of 6 per cent. per annum for the three months ending September 30, less tax at 3s. 8½d. in the £. Warrants will be posted on September 30 to shareholders registered at that date, and will include approved transferees in respect of transfers lodged at the Company's office not later than September 15.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Fabian Tactics.

As the League of Nations has yet to convince the world of its practical utility, it is unfortunate that it has deliberately lost an opportunity of asserting its authority by a clear-cut decision in the Mosul controversy. By calling into question its own competence, instead of acting up to the rôle of the Areopagus of the nations, the Council has impaired its own prestige and has played into the hands of Turkey. Having no valid arguments to support its claim, the Turkish Government has adopted blocking tactics; from day to day in Geneva it has shifted its ground, in the hope that amid a multiplicity of excuses and objections it will find a means of undermining Great Britain's sense of duty towards Iraq. As a last resort the Turkish delegate appears to have brusquely informed the Council that Turkey would admit its competence only in the event of its decision being entirely in her favour. Instead of ignoring this piece of unsophisticated impertinence, the Council apologetically turns to The Hague Tribunal to substantiate its authority.

The Lausanne Clauses.

There is nothing in the Turks' allegations to support their contention in regard to their "rights" under the Lausanne Treaty. A moment's deliberation on the part of the Council, it would have been thought, would satisfy it on this point. Article 3 of the Treaty may be loosely worded; but, when a dispute has defied two efforts at settlement, it is not referred to a body of the standing of the Council of the League of Nations for pious recommendations, but for an arbitral decision. If the Turks do not understand this fact, it is a pity that the Council did not seize the occasion for enlightening the Anatolian ignorance of the Turkish Government. Again, the Turkish delegation claimed that certain words used by Lord Curzon in the Lausanne negotiations supported their contention. The words in question have no real bearing on the point at issue. Lord Curzon was trying to explain to the Turks what procedure the Council of the League might be expected to adopt. He disclaimed specifically any knowledge of what the Council would do, but added:—"Article 5 of the Covenant lays down that the decision of the Council, on which the Turkish Government will be represented, must be given unanimously. Therefore, no decision can be taken without the consent of that Government." The circumstances Lord Curzon had in mind passed when Turkey refused his offer. The Constantinople negotiations showed that settlement by consent was impossible and only an arbitral award became practicable. If Turkey had been guided in her attitude by any previous remarks of Lord Curzon, who stated that he could not bind the Council, she ought to have made the point when she agreed to have the dispute referred to the Council. The citation of Lord Curzon's remarks at this stage is merely a blocking device, to which a strong-minded Council would have given an immediate and crushing reply.

Great Britain's Policy.

There is no reason why Turkey's tactics should be allowed to over-embarrass Great Britain. A speedy solution was to be desired, because as a nation we have too much on our hands to allow us to regard with complacency a protracted state of unsettlement in any one quarter. Turkey, as an Oriental State, does not share this frame of mind. If she prefers to leave the question of her frontier with Iraq indefinitely in dispute, she must be allowed to do so. The next move will rest with her. Great Britain has been in effective occupation of the Mosul vilayet for six years or more; the Turks are on the other side of the Brussels Line. There will be time enough for public opinion to become agitated when anything in the nature of a serious invasion of Iraq is on foot. Until then we can trust those who are responsible for the security of Iraq to be equal to their immediate task. Great Britain desires to be on friendly terms with the Turks, but cannot betray the Iraqis to gain this end.

Digitized by Google

In time, if the British Government holds its ground, the Turks will appreciate this point.

Turkey at Geneva.

Those who are encouraging Turkey in her present attitude on the Mosul question are not acting the part of a true friend. Much of what lies behind the Angora movement has commanded the respect and admiration of the world—the determination of the Turks to do things for themselves, their desire to make good and to throw off the shackles that prevented them from marching in the van of civilisation with Western nations. The evil genius that led them into the Mosul dispute, however, has robbed the Turks of much that they had previously gained and dealt them a serious set-back in the march of progress. At Geneva they have lost face among the nations; their claim to be on an equality with the West has been proved to be hollow, for both in intellect and in tactics they have shown themselves still essentially Oriental; their outlook has been that of Anatolia, not even that of Turkey in Europe. Their worst *gaucherie* has been to harry and persecute Nestorians within their power, while the Council was still considering their claims to have yet other aliens brought under their jurisdiction. We are of those who believe that new Turkey can yet make good, but she must learn to walk before she can run. All that she requires to know about Western civilisation cannot be evolved in the inner consciousness of Angora alone, and it is the part of a true friend to drum this fact into her. In Angora Turkey may have learned the virtue of panama hats and hit upon the device of abolishing Dervish orders, but Western civilisation is built up on a wider outlook than it has been possible to gain so far from Angora. Turkey is acting to-day as a man who had announced his intention of becoming a doctor, but refused to learn medicine and anatomy from any other doctor. With such tactics the process of stepping into line with Western nations may not be altogether hopeless, but it will be a long one. If the Mosul vilayet had meant to her all that she declares, she could have set about obtaining possession of it in many better ways. As things are, she has merely gone to Geneva to draw attention to the fact that she is entirely unqualified to be given it.

Druses and the Desert Mail.

Since last week's issue of THE NEAR EAST AND INDIA went to press the French authorities in Syria have declared their inability to protect the Desert Mail Service to Baghdad, and the route has been changed. Convoys for the present will run from Beyrout via Haifa and Jerusalem and will set out for the run across the Desert from Amman. There is a tendency in France to attribute *Schadenfreude* on the part of the British to this deflection of the Baghdad mail service to a route entirely through Great Britain's mandated territories. If there is such a tendency, it will not be on the part either of the Company responsible for the service or of passengers. The French route was originally chosen on account of its obvious advantages: the journey across the Desert is much shorter from Damascus than from Amman, and much easier for motor-cars. The whole organisation has been built up on the Damascus route. A French steamship line supplies the connexion at Beyrout, and passengers, after landing, have no further trouble with their luggage, apart from the one night spent in Damascus, until their arrival in Baghdad. The Jerusalem route is handicapped by changes at Port Said, Kantara, Jerusalem, and Amman, with the absence of hotel accommodation at the latter place. Moreover, the desert track from Amman suffers from some fifty miles of lava country which offers very bad going for cars. If the service were to be permanently transferred to the southern route, it might be possible to arrange for the improvement of this part of the journey; but neither the Company nor the Palestine Government is likely to be anxious to spend money on roadmaking for a temporary deflection of the Service. What can be guaranteed is that all concerned will co-operate to make the Desert Service as easy and as comfortable as possible while it is being run over a temporary route.

The Future of the Desert Service.

The French authorities in Syria have not been slow to appreciate the value to their territory of having the Desert Mail Service pass through Damascus. They have, accordingly, done their best, by granting special facilities to the Service, to make sure that it will continue to run across Syria. The Druse revolt, however, has introduced a serious complication. Until the Druses are pacified, not merely subjugated, there will be no justification for a return to the former route. The longer the Desert Service has to accustom itself to the Jerusalem-Amman route, the easier it will be to introduce the improvements required to turn the scale in favour of Palestine as the starting point instead of Syria. Next spring should see an Iraq post established at Rutba Wells, halfway between Amman and Baghdad, with an emergency station for the British Air Service between Egypt and India. It will be easy to add a second station for the motor service. Again, it would not be a very costly undertaking to make a road through the lava country, and the Palestine Government could recover some of the expense by levying a toll on all cars other than those employed in the Desert Mail Service using the road. On the other hand, there can be no question that the future of land communications between Palestine or Syria and Iraq suggests possibilities beyond the scope of a small private company, however enterprising. The need for converting the Nairn Transport Service into a public company and extending its sphere of usefulness has already been recognised, and negotiations to this end have been only temporarily interrupted by the latest developments in Syria. Participation of French companies, the French authorities in Syria, and the Beyrout municipality would inevitably keep the Service to the Damascus route, unless in the course of the next month or so the Palestine Government, as a result of the temporary transfer of the mail convoys to the Amman route, should express a strong wish to support the undertaking. In that case, provision might be made to use both the Damascus and the Amman route, which converge on the Rutba Wells; for it cannot be long before the traffic between the Mediterranean and Iraq and Persia will call for the double route. Unfortunately, in matters of this nature British officialdom usually finds that precedent requires it to do nothing. The Desert Mail Service owes its existence to an enterprising Briton, a British Bank that was long-sighted enough to break away from prescribed practice, and the very practical support of the French authorities in Syria. If it is to be established on a wider or stronger basis, it would be thought that British official co-operation, either through or on behalf of the Palestine and Iraq Governments, was essential to British interests in the Middle East.

BUSINESS OR BLUFF AT GENEVA.

The meeting of the League of Nations at Geneva has resolved itself, as far as the Mosul controversy is concerned, into a big question mark—Business or Bluff? Even the Council itself is a party to the general enigma. It has decided to invite the Permanent Court of International Justice at The Hague to elucidate certain points of law, the chief of which is whether the Council, under the provisions of the Treaty of Lausanne, is acting in the Mosul dispute as an arbitrator or as a mediator. This point, it may be admitted at once, is an important one. It is conceivable that the Council, taking note of the equivocal attitude of the Turkish delegate on the question as to whether Turkey still considered herself bound by Fethi Bey's undertaking to accept the Council's ruling, was anxious to deliver its decision with the fullest possible authority, and to this end bethought itself of securing the endorsement of The Hague Tribunal. Even so, it might have been expected that the point would have been raised when the Mosul question was first submitted to the Council rather than postponed until the moment when a decision was awaited. On the other hand, the uncomfortable inquiry asserts itself, Is the Council merely seeking to shuffle out of its responsibility? The reference to The Hague, it seems to be taken for granted by the Council itself, postpones a final decision until December. In view of the admitted urgency of a decision, would any body of men who meant business have sheltered themselves behind the thin cloak of uncertainty regarding the status of a Court that is meant to be supreme for the nations of the world? No one outside Turkey can have imagined that the stage at Geneva was set for simple mediation—a term entirely at variance with the essence of the dispute. By Article 16 of the Treaty of Lausanne Turkey renounced all rights and title whatsoever over or respecting the territories situated outside the frontiers laid down in the Treaty. At the moment when that agreement was signed Great Britain had been for five years in effective occupation of the Mosul vilayet; Turkey, summoned to a conference for an agreed peace in regard to matters affected by her victory over Greece, chose to challenge the British demarcation of the Turkey-Iraq frontier. The British Government, unwilling to detain its Allies on a relatively minor point which concerned no one except Britain and Turkey, agreed that the precise alignment of the Iraq frontier should be left to be settled by subsequent negotiation; but it would be straining credibility overmuch to suppose that the possibility of the demarcation of the frontier reducing the total area of Iraq by one-quarter was at any time under question. When, therefore, the dispute was referred to the Council of the League of Nations it must be regarded as axiomatic that the Council was being asked to make an arbitral award.

Of more importance than the hesitation of the weak-kneed Council is the question whether Turkey by her attitude at Geneva means business or bluff. She has now, through the mouth of her chief delegate, repudiated the undertaking previously given to accept the ruling of the Council; she refuses to allow that the Council can exercise more than a mediatory function, or that her sovereignty over Mosul can be in any way impaired unless and until she voluntarily resigns it. In the meantime, the Turks have circulated the information that they have moved up troops to the Mosul frontier, and they have certainly harried and driven into the mountains a number of Nestorians occupying the country between the Brussels Line and the former Mosul frontier, where they had pledged themselves not to disturb the *status quo*. Our own reading of the Turkish action is that the Angora Government has made up its mind that the Geneva decision is going against Turkey and it is resolved to make itself as unpleasant as possible in order to increase the price at which its good behaviour will have to be purchased. Unless it had satisfied itself that its claim to the Mosul vilayet, with the supplementary offer of a Security Pact, would never be granted, the persecution of the Nestorians at this particular moment was the work of a lunatic. Between this attitude and war, however, there is a wide gulf. The Turks are not going to set out on the conquest of the Mosul vilayet with forty thousand men or in October. On the other hand, they will encourage everyone so minded to believe that they will, and the Turkish delegation at Geneva must have been considerably disappointed at being unable to discover any trace of a white feather on Mr. Amery's person.

For Great Britain the situation is admittedly embarrassing; but as in all similar cases, the way out lies in firmness. The embarrassment for the most part concerns Iraq, because throughout this period of uncertainty the mandated territory is compelled to mark time, whereas it is most important that many matters of internal urgency awaiting decision should be settled to enable the country to go ahead. The withdrawal of the undertaking to accept the League's ruling was inevitable in the face of the Turkish attitude, and it has to a certain extent cleared the ground. If Turkey is anxious to stake the future of the Republic on the possession of the Mosul vilayet, which is not Turkish in language or sentiment, she must sooner or later find herself up against the opinion of the greater part of the civilised world, because the Arabs could be subjugated only by force of arms and kept in subjection by the same means. Ultimately Great Britain would be forced to interfere, and it is better, easier, and less costly that she should, with Iraq behind her, stand her ground to-day on the mountains of Kurdistan and leave the Turks, if so resolved, to do their worst. Any other course would be derogatory to Great Britain's prestige in the East and humiliating to the great mass of Britons. In the interests of humanity the British Government has claimed a frontier which would protect the Nestorians from the persecution that they have again had to undergo; but there can be no need at present for a forward move to occupy this line, if Turkey bars the way. On the other hand, the effective occupation of the Mosul vilayet for six years holds good to-day, and, apart from the annoyance of an unsettled question, Great Britain has in all probability only to hold her ground to find that a wiser policy will eventually prevail in Angora.

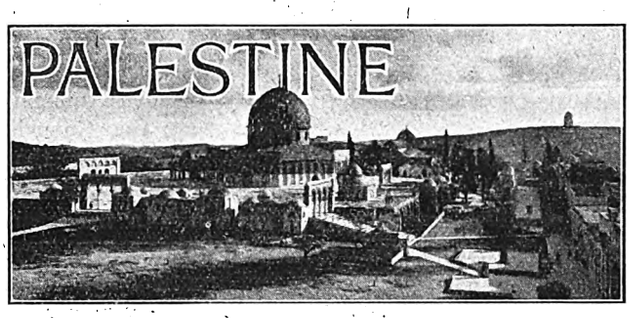
The Near and Middle East*

From Our Own Correspondents.



Jerusalem, September 12.

Arabs of Syria and Palestine.

Though so very near at hand the Druse revolt has not had anything like the electrical effect on the Palestinian Arabs that it has had on the Syrian Arabs. Even the French efforts—and highly successful efforts—at stifling the easy passage of news, with its certain consequence of increasing the supply of exaggerated and baseless rumour, have not helped to stir up Arab feelings in Palestine. These remarks are by way of preface to the most recent activities of the local "Arab Executive." Exactly what connexions and relations there are between the political malcontents of Palestine and Syria one cannot tell; but it almost looks as though there may have been some thought of an attempt at concerted action between the Syrian "Popular Party" led by Dr. Abdrurrahman Shahbandar, and the Palestine faction of which the Arab Executive is the mouthpiece. Some ten days ago, shortly after the strong French measures towards suppressing the Syrian "Popular Party," the Arab Executive published widely a letter to General Sarrail expressing their sympathy with the Druses in their fight for freedom, deploring the strong measures adopted by the French and protesting against the arrest of the Arab leaders. Now the Arab Executive has gone a step further. It has submitted to the Government the request that next Wednesday, Sepember 16, shall be made an opportunity for holding "peaceful demonstrations" throughout the whole of Palestine to express Palestine Arab sympathy with the Syrian people's bid for liberty; it has also "resolved" that prayers shall be offered in the Mosques next Friday, and in the Christian Churches the following Sunday, to the effect that Syria "may be delivered from servitude." What answer the Arab Executive will receive from the Palestine Government goes without saying. The whole of these activities are as artificial as they are dangerous. They seem to be an attempt by these few Arab leaders to create a factitious atmosphere of Syrian and Palestinian unity and of a common striving for "political redemption," and, incidentally, an attempt by the Arab Executive to assume definitely in the eyes of the new High Commissioner, the position of active and influential leadership and representativeness in the Palestinian Arab sphere.

Of the activity and, indeed, honest patriotism of these Arab leaders there can be no doubt; and, compared with the other Arab parties, they have a far superior imagination and flair in carrying out their purpose—in spite of their frequent ineptness in judgment. But what remains to be proved afresh is their influence throughout the country, and how far their activities arise out of a deep-seated feeling in the country and to what extent they are backed by the Arabs as a whole.

The High Commissioner.

Last Tuesday Lord Plumer made his first real public appearance since his arrival nearly three weeks ago. It was mildly sensational. Instead of the expected large-scale reception of the customary type—the whole of Government officialdom and Government wives and families, the entire and variegated assembly of Jerusalem's mass of religious and community heads, representatives, consuls, "notables," social lights, and the whole of the Government House "visitors' book"—instead of this there was only a sedate gathering, women excluded, comprising a small selection of some fifty inhabitants of Jerusalem of the serious, stolid, professional classes—bankers, lawyers, doctors, merchants, members of city council, a professional academic or two, and a few of the numerous journalists. Lord Plumer conscientiously took them all in turn and left on them the clear impression of an active mind, alert and interested in problems of most kinds, and not by any means that of a dour or stiff military man. The journalists, hopeful of making the most of a choice opportunity, received no change: in his conversation with them the High Commissioner harped solely on the advantages of Samoa as a place of deportation for tiresome Pressmen.

BULGARIA.

Sofia, September 15.

A Settlement with Roumania.

Desultory negotiations have been proceeding for the last two or three years between Bulgaria and Roumania with regard to the payment of sundry claims arising out of the War. First and foremost comes the question of the property of Bulgarians living in Roumania. After the War the Roumanian Government placed a sequestration on these properties, but the Bulgarian Government by paying a sum of 250 million Lei has arranged for this sequestration to be raised. Secondly, Bulgaria will pay 70 million Lei in compensation for damage done to Roumanian property in Bulgaria during the War. Lastly, 43 million Levas will be paid to Roumanians living in Bulgaria whose lands were expropriated under an agrarian law passed in 1920.

At Geneva this week it is expected that MM. Kalfoff and Duca, the respective Foreign Ministers of Bulgaria and Roumania, will sign an agreement relative to the above. Then the two Parliaments will have to accord ratification. Payment will be spread over four years, and there has been a certain amount of grumbling in Bulgaria regarding the extra charges which will be consequently laid on the Budget. But if one look at matters from a broader point of view it would seem an excellent thing that the only important point in dispute between two neighbouring countries has at last been settled.

***Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.**

Digitized by Google

For some time past Bulgarian interests in Bucharest have been looked after by a Chargé d'Affaires, but M. Pomenoff, Chief of the Political Section at the Foreign Office, has now been appointed Minister.

The Departure of M. Zankoff.

Rather suddenly M. Zankoff, the Prime Minister, left Sofia last week for a holiday in Switzerland. As M. Kalfoff, the Foreign Minister and a close friend of M. Zankoff, is at present at Geneva it is surmised that the Bulgarian Premier wishes to keep in close contact with his colleague. Reports have been issued to the effect that offers made by a foreign group for a loan to Bulgaria will be considered by M. Zankoff when in Switzerland. This is improbable, and what is more likely is that M. Zankoff wants a good holiday away from Bulgaria but sufficiently near M. Kalfoff to allow of future political combinations being discussed.

British Warships at Varna.

The visit to Varna of two cruisers belonging to the Mediterranean fleet has caused a good deal more comment than circumstances would appear to warrant. It is said, for example, that Great Britain dispatched these two cruisers to the Black Sea with the idea of showing Yugoslavia that British policy towards Bulgaria and Roumania could be very friendly if necessity demanded. Then it was said that the visit of the cruisers was intended to remind the Soviet that British sea power was still existent. Lastly, of course, it was said that the cruisers were demonsrating British naval superiority to the Turks in view of the dispute over Mosul. In all probability all the three theories mentioned above may be dismissed as ridiculous. The two cruisers in question were detached from the Mediterranean fleet purely and simply in order that their crews might acquaint themselves with new waters.

In any case, the reception accorded to our ships at Varna was cordial in the extreme and before leaving, the British Admiral, during a dinner given by the Mayor of Varna, spoke in highly flattering terms of Bulgaria, her Monarch, and the uphill struggle she was at present waging.

Ceded Property in Ex-enemy States.

The Reparation Commission in Paris have sent to Sofia a Commission which will receive reports from experts regarding Bulgarian State properties in territory ceded by Bulgaria according to the Treaty of Neuilly. The value of these properties will be deducted from Bulgaria's Reparation payments. Several meetings have taken place between this Commission and Bulgarian officials, and it is expected that the Commission will finish its work in two or three weeks.

ALBANIA.

Tirana, September 16.

Official News.

The Press Bureau of the Government, in view of tendencious reports that have appeared in the Belgrade newspapers and repeated elsewhere, has issued the following notice for foreign newspapers to copy:—

"1. The Commission set up under the auspices of the Council of Ambassadors for the delimitation of the frontier between Albania and Yugoslavia has recommenced its labours, accompanied by the Albanian delegate, M. Mehdi Frasheri.

"2. The National Militia has initiated its manœuvres, which are proving a great success. The President of the Republic has inspected the troops and has congratulated the officers on the success of the turnout.

"3. Parliament will shortly be resuming its labours, and deputies are consequently returning to the capital.

"4. The whole of the exiles who have been amnestied have returned to Albania. Perfect tranquillity reigns in the country."

The Commission in question is the one set up to demarcate the recent changes in the frontier agreed upon by the two Governments concerned.

With regard to the manœuvres, it will be recalled that after the successful revolution accomplished by Ahmed Bey Zogu, the Regular Army was abolished. Its place has been taken by a voluntarily recruited Gendarmerie and a Militia, organised on a local territorial basis and commanded by officers drawn from the Clans and Districts to which the men themselves belong. The present manœuvres constitute a test of the efficiency of the new organisation.

CYPRUS.

Nicosia, Delayed.

The Breach of Promise Case.

The action, mentioned in a former note, in which a Greek girl, Miss Rouvali, sought compensation for a breach of promise of marriage from Mr. J. Ellis, the Acting Chief Secretary to Government, has been concluded. Mr. B. Dickenson, President of the Court, pronounced a long and careful judgment. The plaintiff, who claimed £3,000, has been awarded £1,720, including £30 costs. The present salary of the defendant is £850 a year, and it is provided that payment shall be made by instalments, with interest at 4½ per cent. on the unpaid balances. The matter of an appeal is being considered.

A Summer Camp on Mt. Troodos.

Amongst the spots well known to summer visitors is the attractive home for paying guests provided in the camp under canvas known as Miss Young's camp. For many years Miss Young, of Nicosia, has received visitors and tourists in a group of tents—with tastefully decorated interiors (mostly manufctured in the bazaars of Cairo). They are pitched annually during the season in a very picturesque site, over 5,000 feet above the sea, amidst the towering pine trees of Mt. Troodos. The camp has been a welcome retreat for numerous visitors from Egypt and elsewhere, who have enjoyed a holiday there. Miss Young contemplates giving up the excellent effort she has carried on for so long, the camp and equipment being for sale. It is to be hoped that they will be taken over by some enterprising successor.

A Cyprus Spa.

Of places that have been coming more and more into repute, mention should be made of a village high up in the Troodos range, situate on the banks of a torrent that

runs down northward into the Morphou Bay. It possesses the rather formidable name of Kalopanagiotti. Here there are hot sulphur springs, which have long been visited by patients suffering from rheumatic and other ailments, who have in most cases, if not all, derived great benefit from the waters. Until lately there was no hotel; but accommodation can now be obtained, and this will no doubt be gradually improved. The neighbourhood is attractive. It is but a few miles from the Troodos military and civilian camps, and various places of interest are within easy reach.

General News.

It is believed that Mr. Fenn, the Chief Secretary, now acting as Governor, will leave in October.

The gathering of carobs (locust beans) will begin on August 15 in the plains, and will be continued at later dates in the higher zones. The times are fixed under a special law.

Nicosia, September 8.

The New Legislative Council.

October 1 has been fixed for the nomination of candidates for seats in the new Council—to be enlarged by six additional members, three Greek and three official; and October 14 for the polling in the twelve electoral divisions. Canvassing is proceeding actively throughout the island, and all the Greek seats will, it would appear, be hotly contested.

The Mediterranean Squadron.

A large division of the Fleet will, it is said, visit Cyprus on September 28. H.M.S. Queen Elizabeth, flagship of Admiral Sir Roger Keyes, it is expected, will drop anchor in Famagusta Harbour, while the Iron Duke, with Rear Admiral Hodges, will visit Larnaca. Other vessels of the Squadron will proceed to Limassol. It is expected that they will remain in Cypriot waters longer than has been usual in the past. These visits, which are less frequent than might be hoped, are much appreciated.

Town Planning at Nicosia.

Very soon after the occupation, in 1878, houses built, or to be occupied by, British officials began to spring up outside the walls of the capital, Nicosia; and, although a few have preferred to occupy old, and often interesting, houses—Turkish and other—inside the city walls, sites outside have been generally preferred. Government House and the Government Offices were constructed at some distance. Tree planting and avenues followed. It is now desirable that provision should be made for future roads and streets of different categories; and a Committee, which consists of the District Commissioner, the Director of Public Works, and the Chief of the Land Registry Office, will regulate all buildings situate outside the city walls. Plans may be seen at Government and Municipal Offices.

Alleged Cure of Leprosy.

According to the Greek paper, *Phoné tes Kyprou*, great success has attended a treatment of lepers by a Greek specialist, Dr. Cons, who is said to have cured a leper in the island of Chios. At the invitation of the Metropolitan of Chios, he has been dealing with all cases in the island, and has instructed the local practitioners how to proceed during his absence. The treatment lasts from six to sixteen months. Greek doctors in Crete and elsewhere are applying it. The *Phoné* suggests that a trial of the cure should be made in Cyprus. Here the lepers are segregated in an establishment outside Nicosia, called the "Leper Farm," and are under the supervision of the Chief Medical Officer.

General News.

The Emir Zeid, after paying his father, ex-King Hussein, a visit, left by steamer for Port Said, having decided to proceed via Egypt rather than by Syria—to Iraq—on account of the disturbed state of the country. His father accompanied him as far as Larnaca.

Great regret is expressed at the coming departure of the Director of the Skouriotissa mines, which produce iron pyrites, in the north of the island. They provide employment for a large number of Cypriots, and are of great benefit to the island.

The carob (locust bean) crop, gathered in August, has been less than that of last year. The present price given by merchants is 20s. to 21s. the (Aleppo) kantar (of 180 okes): 800 okes to the ton.

PERSIA.

Teheran, August 28.

General News.

A certain amount of grumbling was inevitable in the Provinces over the new Tea and Sugar Taxes, and the Deficient Coinage question. All defaced and deficient coin was recalled recently and the use thereof declared illegal after a reasonable interval, but to mitigate the loss caused thereby, all Government administrations and the Banks for some time after, continued to accept such coin subject to 10 per cent depreciation. The time limit for this concession has again expired, but has had to be re-extended in response to popular clamour.

The chief problem of the moment is the shortage of water all over the country, and the provision of adequate grain supplies now and next year. Another dry winter will be a calamity for which the country is not adequately prepared. Thanks to the foresight and energy shown by the American Finance Commission, this matter is receiving close attention, and all grain supplies are being registered and conserved.

It is at such times that the need of an up-to-date policy is felt in regard to schemes of water conservation. Lack of Capital is the great obstacle in this as in other schemes of progress in Persia, and always will be till greater encouragement is given to genuine investors. The conditions for its encouragement are certainly improving fast. The country for many years has not been so safe and tranquil as at the present time, thanks to the confidence inspired by the firmness of the present Prime Minister and his Government, in every corner of the country.

The Turkoman operations are not yet at an end, but more reinforcements have been sent in order to occupy and more thoroughly to subdue the country. Very little news filters through but from letters received it appears that the Army is likely to be kept in occupation there for some time owing to the attitude of the Turkoman Soviet across the border.

Fifty Bulgarian politicians arrived in Budapest last week to spend some days in the capital as the guests of the municipality. Last Saturday they were entertained at a banquet at which members of the Government and of the National Assembly were present.

BRITISH CRUISERS IN VARNA.

(From a Bulgarian Correspondent.)

Varna, September 6.

Two British cruisers of the Mediterranean Fleet, H.M.S. Frobisher with Rear-Admiral Weystall on board, and H.M.S. Dragon, arrived at Varna for a week's visit, on August 29 They were watched by admiring eyes and welcomed at heart by all those who saw them glide into the bay on a very beautiful summer evening, when the dreams that come after sunset have cast their spell over the Black Sea.

Since the days when British ships had helped in the evacuation of Russian refugees from the Crimea, we had seen no British sailors in Varna. Here, at last, were some who were on no "war" or "relief" mission, just peacefully cruising and calling at a Bulgarian port, where, though pre-War prosperity has sadly declined, the natural beauty of the coast, its wooded mystery and sunlit charm persist. The cruisers seemed to bring a breath of Western brightness to the inhabitatns of Varna. Even more so, perhaps, to the young King of a much-tried country, who, from his Palace of Euxinograd, near Varna, saw them pass into the harbour. King Boris is a keen sailor by nature and enjoys nothing more than his summer holiday on the Black Sea. This year, the visit of Rear-Admiral Weystall will certainly have added to his memories of happy days.

On the morning after their arrival the cruisers fired a salute, which was answered by a Bulgarian Coast Battery. This exchange of greetings rang out pleasantly in the golden peace of summer, and soon after the cruisers were open to visitors, who rushed happily to see the ships. The fact that technical and practical wonders were explained by a British cicerone in a language that very few understood, could not damp anyone's enthusiasm.

From the very first day the Admiral and officers made themselves extremely popular with the Bulgarians, who, as a nation, have a deep sense of hospitality, and cherished this rare opportunity of welcoming most courteous representatives of the much-admired British Navy.

The Admiral had an audience of the King at the Palace of Euxinograd, and invited his Majesty to lunch on his flagship. When the King, accompanied by the officers of his suite, and by M. Stancioff, former Minister in London, arrived on board H.M.S. Frobisher, the Royal Bulgarian standard was hoisted. A salute of guns announced the arrival and subsequent departure of Bulgaria's Sovereign, who, for the first time since his accession to the throne, was thus a guest of Great Britain. To all present the occasion seemed a singularly moving and happy one.

The Admiral and senior officers lunched with the King at the Palace and made a tour of the gardens. They were also the guests of the Mayor of Varna and of the Colonel commanding the garrison, the authorities of Varna being asked to meet them. The same authorities and their families met with the most charming hospitality on the Admiral's ship, where a luncheon and afternoon reception took place. There was also an informal tennis party at M. and Mme. Stancioff's villa, and excellent football maches were played between the British sailors and the best Bulgarian teams.

When the cruisers vanished on the horizon line this morning, in the uncertain greyness of dawn, one hoped that such visits might be more frequent, and one felt the comfort of having been among friends, who often seem so scarce and distant when one gazes over the deep waters of the Black Sea, towards the hidden shores where clouds are heavy and whence they so easily travel westwards with their messages of thunder and unrest.

The Bedouins who were concerned in the last attack near Damascus on the motor convoy have been proved to belong to the same band as those who committed the previous outrage, as they were wearing clothes belonging to drivers who were stripped in that raid.

NOTES OF THE WEEK.

(Continued from page 362.)

The Labour Party and Bulgaria.

Bulgaria seems to exercise as strong a fascination over the British Labour Party as Iraq does over the *Daily Mail*. Yet a third delegation has been sent to find out what it can in the country. As a mission of relief its ostensible object was a worthy one. The party of three ladies, one of whom was Miss Ellen Wilkinson, M.P., represented the Committee of the Bulgarian Widows and Orphans Relief Fund, and had been charged to distribute, or to arrange for the distribution of, relief to those who had been left widows or fatherless as a result of the Cathedral outrage and the political troubles. The Cathedral outrage, it will be noticed, enters the picture conjured up by these warm-hearted sisters of Labour mercy, but it is not quite clear whether their compassion goes out to the families of the actual victims of the bomb explosion as overflowingly as it does to the families of those who, rightly or wrongly, are held in Bulgaria to have had a hand, directly or indirectly, in the outrage, or whether it is restricted to the latter category. For the Bulgarians, of course, the distinction is an important one, and any attempt on the part of a foreign delegation, holding aloft the standard of sympathy and relief, to exclude from its ministrations the victims of an unprovoked Communist outrage, while confining its attentions solely to Communist families would not unnaturally be regarded as a piece of unwarrantable impertinence. We do not know what policy Dr. Marion Phillips, Lady Clare Annesley and Miss Wilkinson adopted, but from the statements of the latter it is to be inferred that they were quite as much interested in learning what the political opponents of the present Bulgarian Government had to say against it, and what was supposed by these same opponents to be taking place in prisons, as they were concerned to see that an unspecified sum of money "raised by public appeal and private subscription" was expended to the best advantage for widows and children. The deputation, however, professes itself "well satisfied with the result of its efforts," which could presumably never have been attained by sending the money by post. The Bulgarian authorities appear to have regarded them at first as interfering busybodies, but an interview with the Prime Minister secured them freedom from official observation. They then return home to the Trade Union Congress, which proceeds, it is to be feared, in vulgar language to give the show away by a resolution expressing "horror at the continual repression of the workers and agrarian organisations in Bulgaria and the persecution of their helpless dependents and (the Conference) demands in the name of humanity that the Bulgarian Government shall give facilities to the Committee formed by the Labour organisations for relief work among the widows and children of those who have suffered." It was tactless not to drag in the victims of the Cathedral outrage, after the delegation had very carefully put them first on paper.

Members of the Salonika Re-union will lay a wreath on Sunday, October 4, on the Cenotaph, having first paraded at 11.30 on the Horse Guards Parade, when a short service will be held. Following the ceremony and the observance of two minutes' silence, the members will march off down Whitehall to the end of Parliament Street, where they will disperse. A dinner will be held at 1.30 in the Drill Hall of the Queen's Westminsters and Civil Service Rifles in Buckingham Gate, S.W.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor St., W.1.

THE CHIFLIK.

By MALCOLM BURR.

One inevitable result of the conquest of a country is the dispossession of the existing landowners and the establishment of an alien aristocracy.

The Balkan Peninsula has offered no exception to this rule, and after the Ottoman Conquest the land was seized and divided between the Sultan, and the *wakfs*, or religious endowments, and the nobility. A few subtle Phanariotes, by their subservience to their Turkish masters, acquired and held some large properties, and the Bulgarian usurers, the *chorbajis* of infamous memory, identified their interests with those of their rulers so effectively that they too were enabled to acquire and to retain some big estates, which were notorious for the rigour of their oppression. In Bosnia and in Herzegovina, the greater part of the old Serbian feudal aristocracy went over to Islam, and so retained their privileges. Only in the remote fastnesses of Albania, especially in the north, were the original owners able to retain their land in a state of semi-independence.

With the land in the possession of the *spahis*, *beys* and *agas*, the native population sank to the lowest levels of the proletariat, as *kmets* in Bosnia and Herzegovina, as *chifjis* elsewhere, becoming in practice, if not actually in theory, nothing but serfs tied to the soil, the mere cattle of their masters.

This mediæval system prevailed throughout the greater part of the Balkans until the liberation of the oppressed peoples. The great estates, or *chifliks*, were most numerous in the more open eastern and southern regions of the peninsula, nearer to the capital, and here the administration was most rigorous. In the lower Danubian basin, in the valley of the Morava and Vardar, practically all the peasants were *chifjis*, or labourers on the *chifliks:* here the Turkish population was most dense, and the relief of the country and its almost complete deforestation rendered easier the supervision by the *bey* over his employed, and revolt more difficult, and favoured the development of those crowded hovels, scarcely fit for human habitation, which are one of the characteristics of the system. The Christian population or *rayahs* were treated as mere cattle, often not so well, and centuries of such an existence could not fail to leave an impress upon their character.

But as we proceed in a northerly and easterly direction, further from the control of the capital, the country becomes more broken and mountainous, and the forests greater and denser: here the number of *chifliks* diminished, and the proportion of free peasants was greater. In the Shumadia or Central Serbia, in Montenegro, in parts of Herzegovina and of Greece and in Albania, there survived a large, if not actually dominant, proportion of free peasants, more occupied in pastoral pursuits than in agriculture, which began to develop in the Pindus and Dinaric ranges, in Serbia and northern Bosnia, only in the middle of the nineteenth century. It is not by chance that it was in the then densely wooded country of the Shumadia, with its houses in scattered clearings and sometimes powerful *zadrugas* or family communes, often strong enough to be able to make themselves respected, where the landowners could not easily supervise their men, that the spirit of nationality and freedom lingered on through the Dark Ages, and burst into flame in the revolt against the extortions of the *spahis* at the end of the eighteenth century, and set the example to Greece and the other oppressed Christian peoples.

Yet the *chiflik* system survived in what was left of Turkey in Europe until 1912, and lingers on to-day, in a modified form, in parts of Thrace and Macedonia, in Thessaly and in Bosnia and Herzegovina. In Thessaly and parts of Macedonia, big estates passed into the hands of wealthy capitalists, who bought the land from the peasants, while in Bosnia, as recently as 1910, the Austro-Hungarian Government recognised the existence of 650,000 *kmets*, and one of the most knotty of the post-War problems of the south-east of Europe has been the release of the peasants with compensation for the landowners. Greece, Roumania and Yugoslavia have all had to face it, the latter country meeting it not only with their own nationals in Bosnia and Herzegovina, but in Serbian Macedonia, where the landlords were Turks or Mohammedan Albanians, and in the vast latifundia of southern Hungary, where the Magyar magnates held the land that was worked by the mainly Slav peasantry: in Croatia, too, there were huge estates held by owners of alien origin and tradition. It is interesting, too, to note that near Dubrovnik, the home of freedom through so many centuries, there lingered on traces of mediæval *coloniae* that date from the thirteenth century.

In form, the *chiflik* is an artificial type of village which existed in Byzantine days, but was finally developed by the Turks. By the beginning of the nineteenth century it had spread throughout almost the whole of the Balkan peninsula, except Dalmatia, Montenegro, and part of Albania. It was most strongly developed in the broad, rich plains, especially those south of Nish, in the lower valley of the Danube, the basins of the Maritsa, and of the Vardar, the plains of Kossovo, Metohia and Thessaly, and large areas in central and southern Albania.

In general, the *chiflik* hamlet consists of a rectangular enclosure, the walls of which form a protection against marauders, both two- and four-footed, as may frequently be seen in Germany and other parts of the Continent. The outside wall consists of the backs of a series of single-room hovels, opening towards the courtyard, for the human, and stables for the animal, property of the *bey*, the two differing but little in style and filth. In a more favourable position, preferably on rising ground, stood the homestead, the house of the owner, consisting of two separate buildings, the *selamlik*, or men's, and *haremlik*, or women's quarters. The house is usually built of good material, and burnt brick, but the hovels are generally of sun-dried brick, with roof of a coarse thatch, or sometimes tiled. Outside this courtyard, in a suitable position commanding the fields around, there is usually a not inelegant kind of summer-house called the *chardak*, where the bey would sit and refresh himself while watching his men and beasts at work around.

Sometimes, but not often, several *chifliks* occur near enough together to form a regular village, and in this case, especially near the shores of the Aegean coast, the *chifliks* mingle with villages of the Mediteranean type, but with the elimination of the Turk, the *chifliks* are evolving into, or being replaced by, free villages, of types varying with the locality.

The hovels of the *chifjis* are primitive in the extreme: they are never whitewashed, and the soft sun-dried bricks are heavily eroded by every storm, and require constant patching. They offer the bare minimum of shelter indispensable for life, mere human stables, with no scope for amenity or any feeling other than strictly indispensable utility. The *chifji* led a life so arduous that he had no energy left for any of the joys of life, so that often enough his huts were lacking even in the most primitive furniture, though in the more remote districts, there were often enough some attempts at cleanliness, and even wooden chests for a few belongings, such as the variegated clothes of the women, the one bright spot in their drab lives, and even beds. Along the coasts of Thrace and Macedonia, too, under Greek influence, the conditions were somewhat better.

The *selamlik* and *haremlik* were usually substantially, sometimes quite elegantly, built. A typical case is the property at Bardovtse, near Skoplye, once belonging to a wealthy pasha. The houses are pleasing of aspect, of variously coloured brick: the two wings are rectangular,

while the centre portion has a convex facade, with the entrance door and broad stairs, leading through a spacious and pleasant verandah. The general effect is picturesque, and when it was furnished with luxurious oriental rugs, ancient weapons and carved woodwork, the pasha must have had a comfortable and luxurious home. The *selamlik* stands out prominently, but the *haremlik*, connected by a bridge, is modestly sheltered in a grove of trees.

Close by, under the eye of the pasha is the hamlet where, until 1912, the *chifjis* eked out their miserable existence. And here we find one of the most striking characteristics of the system, which throws a lurid light upon the mentality of the Turkish landowners. Every father of a family received a free grant of a tiny patch of land on which to build his hovel: adjoining each hovel, and built on it, were one, two or more sub-hovels, like excrescences. Each of these was the accommodation for a married son. For when a young man was old enough, he was married by order of the pasha to a suitable girl chosen for him, and the young pair then built their kennel adjoining the paternal hovel. Then for a time they were excused manual labour, not from any motive of sentiment, but to encourage them to breed, and so produce more labourers for the pasha; a young mother, moreover, was excused even domestic duties, so that she could concentrate her attention upon her babe: when this was old enough, it joined the crowd of its counsins in the grandpaternal hut, while the parents went back to their work in the fields, until the arrival of another young *chifji* gave the mother a temporary change of occupation. Of a truth, the pasha was a practical eugenist.

To enable the *chifji* to live, a proportion of the produce was allotted to him for the support of his family: at Bardovtse, and probably in many other places, the pasha took half and gave half to the *chifjis*: in a good year, they might do fairly well on this, and even among Turkish landowners there are sometimes good-natured men, and times and in places the lot of the serfs may have been almost tolerable, but in the vast majority of cases, it was a grinding, unending tyranny, brought to an end only by the victorious wars of the once dispised *rayahs*.

THE WEEK AT HOME.

London, Tuesday Morning.

Resumption of Mr. Lloyd George.

It may or may not be a good thing for England, it may or may not make judgment of party politics any easier—this return of Mr. Lloyd George, once head of a Coalition Cabinet, but for a longer period the most opportune of Radical Socialists. For without question this ex-Premier is, in the political sense, "coming back"; he has resumed the way of thinking which he quite rightly renounced when the Great War broke out: the state of mind, I mean, in which he was able to impose on the English nation the Germanic Insurance Bill.

One finds no gratification in so continually being opposed to an ex-Prime Minister whose energetic genius during the War so exactly coincided with the needs of the nation, but it is difficult indeed to discover aught else than opportunism in this latest effort of the ancient foe of the landlords to restate the land question. It seems true that he does not keep his ear quite so close to the ground, or, rather, to the voice of influential advisers or supporters, as he did in the fruity days of the Coalition, but it is still in the spirit of *carpe diem* that he, who in his speeches upon agriculture has perhaps made more mistakes than any other politician, should in effect accuse the present Government of lethargy in the agricultural struggle and claim for the Liberal Party the one true means of saving the situation. It seems almost like old times, when, in company with Baron De Forest the young Liberal politician went about the country making speeches which infuriated those very landowners who in later years came to support him so whole-heartedly. "He loves me; he doesn't; he would if he could but he can't . . . . he doesn't" must now be the puzzled comment of the landowners.

The Agrarian Problem.

At least this may be said for Mr. Lloyd George's speech at Killerton: it was uttered in sober and moderate tone; it was polite; it was even logical. Whether this was due to his realisation that the topic of agrciulture was a vital one, whether to the fact that he was the quest of Mr. F. D. Acland, whose loyaly to him had already once received a severe shaking, or whether because there were in his Devonshire audience many people who did know the difference between a turnip and a parsnip, one cannot say; at any rate the *faux pas* that he committed were for the most part theoretical.

But, however restrained his language was, his proposals were extreme. Not that there was anything against them on this account: but Mr. Lloyd George's extreme always means one thing—the State. Briefly, his proposal—the proposal, one assumes, of the Liberal Party—is to abolish landlordism in favour of land nationalisation. If only the incompetent landlords and inefficient farmers could have their work supervised by a host of tireless bureaucratic officials, how much happier we should be! Not that the landlord is to be swept away quite ruthlessly: he is to be "fairly compensated" (one rather guesses what "fair compensation" would be when an urban house of Commons got hold of an agrarian problem)—after the accomplishment of which complicated measure a State Department is to perform his functions. In other words, dispossess those who for generations have been mismanaging their job in favour of those high-souled men who during the past two years have learned all there is to know about British agriculture (and Continental agriculture as well).

The one main assumption that underlay this speech was that the English farmer was inferior to the Con-

tinental farmer—Liberals are always referring to the success of Danish and Scandinavian farming. One wonders what the Devon farmers thought of all this. I do not know south-west England sufficiently well, but it is safe to say that if Mr. Lloyd George had delivered his speech to the Norfolk barley-growers, the Oxfordshire vegetable-growers, the Lincolnshire potato-growers, or to the Cambridgeshire, Worcestershire, and Kent fruit and hop growers, he would have had one or two unanswerable question to evade at the end of his speech. For the fact is that in the Liberal Party there is little tradition of connection with the land; agriculture is of all subjects that in which moves most uneasily. How utterly false its touch is when it does approach the problem is to be seen from Mr. Lloyd George's passing of the Corn Production Act in the summer of 1920 and its repeal less than a year later. But that was four years ago; and the Welsh statesman's memory was never his strongest possession.

The Stockport By-Election.

The result of the Stockport by-election, in which the traditional order of Conservatism, Labour, Liberal was upset, appears to have sent both the professing foes and the professing friends of the Government into the wildest transports. For the danger of judging the general from the particular never impresses itself very much upon the losing side: the very fact that the Liberal gained nearly five thousand more votes than at the previous election is hailed by the Liberals as a sign of the times, and political Labour is frankly bubbling over because its nominee defeated the representatives of the older parties.

But the truth is that it is impossible, in ignorance of the local conditions at Stockport, to greet the result of this by-election either with frowns or smiles. Most of the comments upon it have been puerile. The Beaverbrook Press, for instance, stretching its anti-Baldwin bow even more tautly than usual, attributes the defeat of the Conservative to the granting of the Coal Subsidy, as if voters who disapproved of that measure would sullkily go over, directly or indirectly, to Labour. It may be true that the Government has failed to consolidate the ground that it won at the last election, but that that ground is now cracking under its feet is altogether a premature notion. The return of Labour is not yet; nor the revival of Liberalism. Political pendulums have a fickle swing, but they are not quite so fickle as is the penny Press.

The State and Liberty.

In these days when, if one is not an anarchist, the responsibilities of the State are seen inevitably to increase, the old controversy upon the desirable limits upon individual liberty is breaking out afresh. It is, in the broad consideration, the issue between the Liberal and the Socialist schools of thought—these names being used in the theoretical sense. One is not surprised, therefore, to find so doctrinaire and academic a body as the Fabian Society announcing a series of public lectures in which the point will be raised. These discussions, for all the aridity which commonly distinguishes Fabian polemics, should be interesting, in as much as such a heterogeneous list of speakers as Mr. R. H. Tawney, Mr. St. John Philby, the Master of Balliol, and the inevitable Messrs. Bernard Shaw and Sidney Webb has been announced. One wonders, for instance, whether Mr. Philby's idea of freedom gained from his experiences in the Wahhabi State will be the same as Mr. Shaw's gained from his experiences in the state of his own mind: Puritan systems so often approximate one another.

Public Schools and Association.

The Football Association has addressed to the headmasters of the public schools of this country a memorandum asking that Association football shall be re-introduced at least on equal terms with other winter games, abandoned in favour of Rugby. The memorandum argues that since Association is the winter game of the country, and especially of the Army, it is highly desirable that more public school atmosphere should be put into it.

With those bare proposals it is difficult not to agree, although one imagines that it is rather a sense of tradition than of social duty which has enabled such schools as Winchester, Repton, Malvern, Shrewsbury, Charterhouse, Westminster, and so on to remain faithful to Soccer. But they appear to overlook the reasons which prompted so many schools to forsake Soccer for Rugby. These were mainly, I believe, the general fact that the dribbling code had deteriorated in conduct so much owing to the influence of professionalism, and the particular fact that it had become increasingly difficult to arrange fixtures with neighbouring sides who were reputable.

Now it is hard, in view of the increasing number of ungentlemanly incidents which one reads of in the professional Soccer matches, to imagine that the public schools will easily renounce a game in which unsportsman like conduct is very rare, for any one who has watched some of the thousands of so-called "amateur" games of which the F.A. so proudly speaks knows very well that things that "are not done" are by no means confined to professional teams. Only last Saturday (it being too wet for cricket) I saw, in one of these "amateur" games, a back handle a ball standing on his goal-line, and, after the ball had passed from his hand into the net, appeal to the referee for a penalty to be given against his side!

It is true that, played in the proper spirit, Soccer is as fine a winter game to play as there is; but there will be long controversies before a general return is made to it by the schools.

A British Pianist.

It is complained by many worthy but ignorant people that for fine playing in music you must go to foreign executive artists. It is a great misapprehension—how great the death the other day of Mr. Leonard Borwick reminds us. For Borwick, though no virtuoso, was a pianist whose beauty of playing was essentially an English beauty. Whether he was interpreting Bach or Beethoven or Schumann or Brahms or Liszt or Debussy, his playing had a poise, a restraint, and, in fine, a soundness that were of his native country.

The pianoforte seemed to him the means of entrance to another world, not, as it becomes with many, a vehicle of display. Only such an artist could have done what he did for music in England. He was an apostle of the school of sweet reasonableness, the school which gives very definite, if not infinite, pleasure. ALTER EGO.

According to the *Jumhuriet*, part of the Soviet Black Sea Fleet was due to arrive at Constantinople last Saturday and part of the Baltic Fleet later.

Book Reviews and Notes.

TWO NOTABLE FIGHTERS.

"INDIA AS I KNEW IT, 1885-1925." By Sir Michael O'Dwyer. (London: Constable and Co., Ltd. 18s. net.)

"A NATION IN MAKING." By Sir Surendranath Banerjea. (Oxford University Press. 16s. net.)

It was Mark Twain who said that, if he ever wrote an autobiography, "it will be as other men have done—with the most earnest desire to make myself out to be the better man in every little business that has been to my discredit: and I shall fail, like the others, to make my readers believe anything except the truth."

It is, of course, a truism to say that, when X writes his autobiography, its most suitable title would be "X as I see him": it is so in all cases, and not less than usual in these two books. Neither is, in the slightest degree, an "apologia"—quite the contrary. Both are, in their different ways, indictments of the Government of India: the former as it is, the latter as it was. The main difference between them is what may be called their propaganda scheme: that of Sir Michael O'Dwyer being political, and that of Sir Surendranath Banerjea being personal. The casual reader of either would perhaps be inclined to a less sympathetic view of the writers than one who knew them. Sir Michael's presentation of himself hardly does himself justice: though the reader would necessarily recognise the truth that the author was a notable administrator and a much bigger man than most of his official contemporaries in India, he would also quite clearly realise how it was that Sir Michael had enemies as well as friends, and would be unlikely to understand the extraordinary personal attraction that he exercised on the great majority of those who knew him in India. Similarly, the casual reader would be apt to think of Sir Surendranath Banerjea as an amiable old gentleman who liked to lay it on to himself with a trowel, and who gloried so much in his gift of eloquence as to have made himself out to be a bit of a windbag. But, apart from the personality of the writers, both books are notable contributions to the Indian literature of the day. The political controversies in which both the authors were so closely involved have died down; but a perusal of their books is necessary to anyone who wishes to have a full view of the circumstances in which those controversies arose.

Sir Surendranath's book deals mostly with the past and is largely taken up with his history of the fight for the annulment of the partition of Bengal. In the present era of embittered communal feeling in India, his reason for the struggle against Lord Curzon's partition sounds almost pathetic. If the division of the Hindu west from the Mohammedan east was to be perpetuated, he wrote in 1905, "it would be fatal to our political progress, and to that close union between Hindus and Mohammedans upon which the prospects of Indian advancement so largely depend." It is needless to stress the fact that the Mohammedan view was quite different: the Mohammedans of Eastern Bengal welcomed Lord Curzon's partition, and regard its reversal as a breach of faith which they have never forgotten or forgiven. Sir Surendranath accepted Diarchy, and stoutly defended himself against the charge of betrayal of his principles by acceptance of a Ministry: it is not we who have changed, he said, but Government. At the same time, his idea of the eventual form that self-government should take in India, after the transition stage of Diarchy, remained what it had been in 1909: when, in his "last words to the British public" on leaving England, he said, "first give us autonomous Provincial Governments: then build up on them a Central Federal Council or Assembly. I will except army and railway expenditure for the sake of compromise; otherwise I claim Indian control over the expenditure of all money raised from Indian taxpayers."

Sir Michael's book, a large part of which is naturally devoted to the Punjab rebellion of 1919, is of special interest to the student of Indian economics, owing to its championship of the interests of the peasant. He mentions that, in 1905, there were in the Punjab twelve co-operative societies, with a few hundred members and a capital of a few thousand rupees: whereas, in 1919, when he left the Punjab, there were six thousand societies with 150,000 members and a working capital of one and a half million pounds. The rate of interest throughout the Province had been brought down to less than half of what it had been before, and hundreds of thousands of acres of peasant holdings had been redeemed from mortgages. The inception of co-operative societies had been met by strong opposition from moneylenders, which however proved unsuccessful; but not so the opposition of the lawyers to a subsequent extension of the principle, by which an attempt was made to substitute, between the members of the Societies, arbitration for litigation. This was unpopular with the Bar: the Minister himself was a lawyer: and, as the official, who had tried to start the new idea, pathetically wrote in his report, "litigation, being our second greatest industry, cannot be interfered with." It is to be hoped, says Sir Michael, that, in spite of this example of the difficulties attending it, this beneficent work for the Punjab peasant is now so firmly rooted as to be able to defy the opposition to which, as agriculture is a "transferred" subject, he foresees that it will still be liable.

As regards the future of the Imperial Services in India, Sir Michael makes a point which we do not remember to have seen put forward before. In 1924, he says, of eleven I.C.S. posts offered in England all but three went to Indians, and among them there was not a single Mohammedan or Sikh. In India, in the three years 1922-1924, 45 candidates were selected for the I.C.S.: of these 41 were Hindus, and there was not a single European or Mohammedan. On the other hand, the Indians admitted to Sandhurst are almost all Sikhs or Mohammedans. So that, in the future, the divorce between the Hindus holding political power, and the Mohammedans and Sikhs in the Army, will become even more marked than at present.

INDIA IN RECENT TIMES.

"A SKETCH OF THE HISTORY OF INDIA FROM 1858 TO 1918." By Henry Dodwell. M.A. (London: Longmans Green and Co., 6s.)

Professor Dodwell has placed everyone under a very deep debt by his "Sketch of the History of India from 1858 to 1918." As he has himself pointed out, the task was by no means easy, and what looms large at present may not necessarily have the same importance at a future date. He has limited his scope to some extent by confin-

ing attention mainly to the material that will be available to future generations, but that has not restrained him entirely from inserting some personal touches. The chapter dealing with education contains much more than knowledge from printed sources. It is the work of a close observer who has had plenty of opportunity to see the working of the system. Still, it is curious that then he seems to have missed the real cause which tends to keep the degree standard low. In India, a degree is a *sine qua non* for Government and most other better paid service, and the Universities are performing a double task—the work of the Civil Service Commissioners and that of responsible examining bodies. After all, it may well be considered an injustice to fail a man in his degree examination, when you declare him, thereby, to be unsuited for a minor post in a Government office. It is an interesting case of the conflict between standards of efficiency and standards of intellect. But the chapter is profoundly true and at the root of much of the modern unrest is the shallow thought which comes from defective education, used for a purpose different from that for which it was intended. There is one protest which will be welcome to those who know India through other than English-speaking channels—Professor Dodwell's regret that only those are regarded as educated, whose education is Western. It is one of the worst effects of the *damnosa hereditas* of Macaulay.

The intimate bearing of Western education on the rise of modern unrest is well worked out. But, though Professor Dodwell notices the unemployed officials of *l'ancien régime* as the material on which unrest has worked most successfully, he hardly stresses it enough. It is a most significant fact that the main activities of unrest in 1906 and even later correspond almost identically with the regions disturbed by the Mahrattas in the seventeenth and eighteenth centuries. The addition of the Muslim element is almost entirely due to the fear of majority rule.

Professor Dodwell's attack on the cult of efficiency may sound contradictory in the light of his attack on bad education, but this is not really the case. Efficiency is on the whole a shallow form of pragmatism, and a deflection of the aims of Government from the main duty of Government—the interests of the subjects—to the perfection of a system. It is from "systematization" that Indian Education has suffered—it was introduced largely in the interests of perfecting a system of political ideas, not so much that it was for the good of the Indian as that it was considered necessary for his political good. And—in the interests of efficiency it must be Western Education.

The two main portions of the book are devoted to the development of the Government and to Foreign affairs.

Both in his introduction and in Book I., Professor Dodwell shows how much the process of centralization has depended upon "the shrinkage" of the earth's surface before the development of means of communication. This has rendered it possible for India to be controlled from Whitehall by a Secretary of State who, while he might not understand the problems in hand, had sufficient justification to persist in the illusion that he did, and to enforce his decisions. It is under this head that we find the brunt of the author's attack on Morley, and it must be admitted, that severe as Professor Dodwell is, he makes a very strong case. He will never convince the idealist school of Radical thought, for Morley to them is *deus ex machina*, and facts count for nothing. There is one point on which even Professor Dodwell is moved to give Morley the meed of recognising good in a Viceroy's suggestions, but there, even, appears to be some doubt, and Professor Dodwell, like the House of Commons *may* have been led astray. The late Sir William Meyer, who was at Simla during Minto's Viceroyalty used to tell a story to the effect that Morley, relying on Lady Minto's love of Simla, wrote strongly to the Viceroy asking him to arrange that the draft reforms should appear to come at the instance of the Government of India—hence Lord Minto's difficult task of persuading his counsellors when the Viceroy complied, Morley was able to refer in the House "to the widely divergent views and traditions of His Excellency and himself, yet they were agreed" etc. The story is at any rate worthy of record, as its authority is fairly high. But, to return to the earlier point, the increasing intimacy promoted by means of communication and other economic factors enables Professor Dodwell to acquit the overworked district officer and to assign to its proper quarter the blame for the enormous increase of brueaucracy in India.

The sketch of Foreign affairs leaves nothing to be desired. In a way, it explains much of the rest of Indian development. The Central Asiatic problem and its solution have been the deciding factors of the stability of all governments in India, and the British Government is no exception. With the stability of the government goes the security of all classes, particularly in the North. The invasions of Nadir Shah and Ahmad Shah are long forgotten now, but a revival of their study might prove a salutary check on even the most enlightened sentimentalism on the reduction of Army estimates in India. The votes are usually moved by those who would be the first to pay for help if their vote had its full effect. Here it would seem the proper place to acknowledge Professor Dodwell's able explanation of the real cause of the failure of Kitchener's reforms. Kitchener's scheme was blamed —very freely—for the failure of the Indian Army in Mesopotamia. That will now no longer be possible. It is impossible to discuss all the points Professor Dodwell has raised, but apart from a bias in favour of "the good old days of John Company," when after all, problems were simple, he has presented an absolutely fair account of the sixty years following the Mutiny. He has avoided overstating the importance of the years 1857-8, but yet he has done justice to the change that took place then. He has given us an excellent guide to present day problems and last but not least done something to inspire with a little confidence the prospect of the future.

AN AMERICAN ORIENTALIST.

The death was announced from New York on September 14 of Professor Albert T. Clay, of Yale University, a distinguished student of Assyriology and Babylonian literature. It will be recalled that Professor Clay, while returning, in his capacity of President of the American Society of Oriental Research, from the opening last year of the Baghdad School of Archæology, was injured in a desert motor accident. His last publication was called "The Origin of Biblical Traditions," in which the thesis was maintained that the Hebrews did not borrow their religious traditions from Babylonia. He will long be remembered for his studies on the antiquity of the Amorites.

ASCENT OF MT. ELBRUZ.

An expedition sent out from Tiflis by the Georgian Geographical Society has successfully ascended Mount Elbruz (18,526 ft.) in the Caucasus. Five days were needed to attain the summit of this, the highest mountain in Europe, as during some 70 hours the expedition had to shelter in its tents from a snowstorm on the glacier at the height of 12,000 ft. On its way up the expedition installed a hut for permanent meteorological records on the Asau glacier at the height of 9,000 ft. Five women took part in the ascent, which was ardous owing to the snowstorm and the difficult going over the fields of lava and ice.

PERSONAL AND GENERAL.

TO-DAY

September 24, 1925 (New Style).
September 11, 1925 (Old Style).
Rabia I, 6, 1344 A.H., of the Moslem Calendar.
Tishri, 6, 5686, of the Jewish Calendar.

The Greek Minister returned to London from Paris last Sunday.

The Shah of Persia left Paris on September 20 for Lausanne.

Viscount Chelmsford left London on September 16 for the Continent.

Lord and Lady Lamington left London last week for Lamington, Lanarkshire.

M. Fikry, Secretary at the Egyptian Legation, left London last Thursday evening for Cairo.

Sir Henry and Lady Bax-Ironside have returned to 23, Grosvenor Place from a tour in Normandy.

Lady Willcocks left London last Saturday in the Peninsular and Oriental ss. Novara for Port Said.

Shevky Pasha, Secretary at the Turkish Embassy, returned to London on September 15 from Geneva.

Princess Antoine Bibesco left London last week to join Prince Antoine Bibesco at 45, Quai Bourbon, Paris.

M. Subotitch, specially attached to the Yugoslav Legation, returned to London last Friday from Belgrade.

Murad Hechmat, Secretary at the Egyptian Legation, left London last Friday evening for the Continent on leave.

The Aga Khan, who was the guest of Lord and Lady Savile for the Doncaster Races, left London on September 14 for Paris.

M. Dimitri A. Naoumoff, Secretary at the Bulgarian Legation, left London last Friday for Paris, and will be absent several weeks.

The Bulgarian Minister in London left last Saturday for Geneva. During his absence M. Stoyan Petroff Tchomakoff, Counsellor, is acting as Chargé d'Affaires.

Major and Lady Alexandra Metcalfe sailed from London last Friday for India, where Major Metcalfe will take up his duties on the personal staff of the Commander-in-Chief, Field-Marshall Sir William Birdwood.

Mr. Jyotis Ranjan Das, barrister, has been appointed one of the Judges of the High Court of Judicature at Rangoon in the vacancy caused by the retirement of Mr. Charles Philip Radford Young.

The Maharajah of Porbandar, who has been staying in England during the summer, left London last Friday for India. Colonel Bannerman, of the India Office, was present at Victoria Station to take leave of his Highness.

The marriage of Captain M. S. O'Rorke, Palestine Police, late Royal Irish Constabulary, son of the late Mr. M. O'Rorke and of Mrs. O'Rorke, of Rathmines Road, Dublin, and Muriel, second daughter of Mr. and Mrs. Mawdesley, of Oundle, will take place shortly in Palestine.

DOMESTIC ANNOUNCEMENT.

DEATH.

BOVILL.—September 15, at South Walsham, Alfred Karslake Bovill, I.S.O., late Principal Forest Officer of Cyprus, son of the late Sir William Bovill, Chief Justice of the Common Pleas.

Mr. William Culbertson, the newly appointed American Minister to Roumania, presented his letters of credence to King Ferdinand at Sinaia on September 12.

The engagement is announced between J. W. Robertson, Sudan Political Service, eldest son of the late Mr. James Robertson and of Mrs. Robertson, Ettrick Road, Edinburgh, and Nancy, elder daughter of Mr. and Mrs. Hugh S. Walker, Vernon Avenue, Huddersfield.

Ismail Pasha Sirry, the Egyptian Minister of Public Works, and the Under Secretary, Saleh Pasha Enan, have arrived in London to consult Sir Geoffrey Archer, the Governor-General of the Sudan, about the Gebel Auila dam, on the White Nile, which the Egyptian Government propose to build.

The Maharajah Gaekwar of Baroda gave a luncheon at the Carlton Hotel on September 16. His guests included Earl Winterton, General Sir Havelock Hudson, Sir Benjamin Roberston, Sir Albert Gait, Sir Reginald Mant, Sir Campbell Rhodes, Sir Muhammed Rafiq, Colonel M. J. Meade, Colonel A. D. Bannerman, Dr. Y. V. Modak, and Mr. N. M. Samarth.

The following are among transfers and promotions in the Colonial Service that have been made by the Secretary of State for the Colonies: Mr. R. Popham Lobb, Colonial Secretary, British Guiana, to Chief Secretary, Cyprus; Mr. J. C. D. Fenn, Chief Secretary, Cyprus, to Colonial Secretary, British Guiana. Mr. H. B. Popham, late Provincial Commissioner, Gold Coast, to Commissioner, Grade 2, Cyprus.

PRINCE SEIFEDDINE.

In view of the curiosity aroused by the circumstances attending the stay in, and departure from, England of Prince Seifeddine, we publish the following comment, which we have received from the Egyptian Legation in London:—

"Prince Seifeddine was, at the time of the former Khedive Abbas Hilmi, recognised insane by a Medical Commission in Egypt, whose advice was to send the Prince to an asylum in England, where climate and careful treatment would suit his case. As his state did not show any amelioration, he was kept in his asylum, where he was being treated by the best medical men in London. During his treatment he was authorised by his doctors to go out on walks with his attendants—which afforded his mother a suitable opportunity to plan his escape."

Indian Affairs.

POLITICAL PARTIES IN INDIA.

The two main political parties in India are the Swarajists and the Independents. They are both anti-Government and, on important occasions, can be counted on to combine against Government; but their policies are not identical. The policy of the Swarajists is non-co-operation, with a view to rendering the continuance of the present form of government impossible and so to force a change: and their tactics are to oppose all Government measures and to support all anti-Government measures, without discrimination. The policy of the Independents is described by themselves as "responsive co-operation"—the support of any Government measures which they consider to be in the interests of India, the support of any anti-Government measure of the same kind, and opposition to any measure, whether for or against Government, the passing of which they do not consider would be advantageous to India. The Swarajists in the Bombay Legislative Council have recently refused to take any further part in the proceedings of the Council because, after they have, in furtherance of their own policy, supported the demands of the Bombay Independents, the latter, also in pursuance of their own policy, declined to support the demands of the Swarajists except on their merits. As the Bombay Independents are in a minority in the Council when opposed by the official members, they can only defeat the latter with Swarajist assistance: and the defection of the Swarajists was intended to drive home this fact by leaving the Independents to "stew in their own juice." In the Legislative Assembly at Simla, the Swarajists and Independents have recently combined to defeat the Government of India in their resolution on Indian Constitutional Reform, by adopting an amendment in which their own programme for the future government of India was put forward in some detail. The Council of State—the Upper House of the Central Indian Legislature—adopted, by 28 votes to 7, the Government of India's resolution and rejected the Nationalist amendment. This action has given great offence to the Swarajists and Nationalists in the Assembly: and they threaten to organise opposition to all the elected members of the Council of State who did not vote with the minority, at the next Council election which is now imminent. The leaders of the two parties have also been in consultation regarding a proposal that all the Nationalist members should resign their seats in protest against the action of the Council of State, and seek re-election with a view to obtaining a mandate from their constituents in favour of their own action and in opposition to that of the Council. So far, it does not appear that the proposal meets with general approval from the rank and file, and it is unlikely to be adopted. But the constitutional breach, between the extreme Nationalists in the Lower House and the Moderate Nationalists in the Upper, is likely to check a tendency on the part of the Swarajists in the Assembly, of which signs were becoming evident, to draw nearer to the Independent policy of "responsive co-operation"; and to cause them to revert to their original policy of uncompromising opposition to all Government measures.

It appears, however, that a movement is on foot to organise a third party, which shall combine the existing Moderates and Liberals—at present few and disorganised—into a Conservative party, in which shall be included all men with a substantial stake in the country, in particular the great landlords: while it is hoped that, in the present strained state of communal feeling, it will be possible to add the Mohammedan members to the Party also. The Moderates and Liberals, while desiring progress towards self-government, declare that the present moment is inopportune for any further advance, and hold that nothing is to be gained by defiance of the British Parliament such as that enunciated in the Nationalist amendment passed by the Assembly on the Reforms. The men with a stake in the country are alarmed at the Communist doctries which at one time found an echo in the speeches of Mr. C. R. Das: and the landlords, in particular, are disturbed at a suggestion, lately put forward by extremist politicians, to revoke the permanent settlement existing in Bengal and in parts of the United Provinces. The Mohammedans are frightened at the prospect of a "Hindu Raj" which they foresee as the result of a successful issue to the present agitation against the form of government obtaining in India. But, though all these component parts of a possible Conservative Party have good reason to oppose extremist politicians, Swarajists and Indenpendents alike, the diversity of their own interests is such that their effective combination appears to be unlikely. Any permanent alliance between Hindus and Mohammedans is a practical impossibility: questions are bound to arise that would divide them sharply, and it would not be difficult for the astute extremist to exploit such divisions. Moreover, the Permanent Settlement is not a good party cry. An Association of the great landlords of Bengal has recently been formed with the declared purpose of resisting any attempt to alter it; but the very general complaint against the Permanent Settlement is not directed against itself so much as against the landlords who misuse it. When the grant of a permanent settlement was made to the great landlords, it was assumed that reliance could be placed on the goodwill of the landlords for the fulfilment of the implied contract—that they should extend to their tenants the advantages that they themselves enjoyed. This assumption was a mistaken one; for the landlords, though themselves secure against any enhancement of land revenue, did not scruple to raise the rents of their tenants, until the amount received by them as rent is many times what it was when the Permanent Settlement was brought into force. Moreover, one of the two Mohammedan members of the Bengal Legislative Council, who have recently resigned their membership of the Swaraj Party, has specifically done so on the ground that the Swaraj Party is the champion of the landlords against the tenants: that he feels convinced that the Swaraj Party is anxious to preserve the privileges of the landlords and that, although the agricultural population of India forms 95 per cent. of the whole, the peasants can expect no sympathy from the Swarajists. That he had, so far, been helping the Swaraj Party because he believed that it advocated a progressive policy; but that, as he is now convinced that its policy is really reactionary, he has felt himself compelled to resign from it.

An exceptionally well informed correspondent in India has recently written: "There is a steadily growing community in India which is undoubtedly in favour of wholehearted co-operation. At the same time this community largely consists of landed proprietors or their tenants who have not got the gift of the gab to the same extent as the other party which is still conceited enough to imagine that, despite its consisting of those who have little or no stake in the country, it can yet hold the power. All the more significance is attached to Lord Birkenhead's statements in regard to the agricultural question: and, if this Government follows up his words by deeds, I believe that, given proper representation and organisation, the landed classes will come out on top, joined probably by some of the trading community." The Viceroy's speech at the opening of the Legislative Assembly has shown that the Government of India is preparing to follow up Lord Birkenhead's words by deeds: and it may be that this will lead to the formation of a Conservative Party in the Councils, that will be powerful enough to hold its own against the disruptive efforts of the extremists. But such a result will only be possible if the landlords and their tenants pull together: and if the former, who will be the natural representatives of the latter in the Councils, succeed in educating the rural voter, not only into a certain knowledge that the interests of both classes are identical, but into the will to make his knowledge felt at the polls.

CURRENT TOPICS.

The Bombay Mill Industry.

A deputation representing the Bombay Mill operatives waited on the Governor of Bombay on August 15, to urge Government interference in the questions at issue between them and the Mill Owners: plainly intimating that, if the owners adhered to their expressed intention of reducing wages, a strike would be inevitable. The Governor explained that the financial loss entailed on the men by short time working—the remedy that they themselves proposed—would be greater than under the proposed wages cut: that the owners had specifically promised to restore the cut as soon as the financial situation allowed: and that a strike, while causing widespread misery, could not possibly improve the men's position, but could only have the inevitable result of making matters in the industry worse than they now are.

The cables show, however, that this advice was disregarded. The employees of a single mill walked out in a body on September 15: within an hour, twelve mills were involved and 20,000 men downed tools: and, by the following day, the number of hands on strike had more than doubled. The strikers assembled outside the mills that were still at work, and threw stones, but police were quickly on the scene and no serious disturbance resulted. At first sight, the moment chosen for the strike seems surprising: for the cut in wages was not due to take place until the first of October. But, when the position is examined, it appears in quite a different light.

In the third week of August, the Bombay Indian Merchants' Chamber submitted a representation to the Commerce Department of the Government of India, in the course of which they laid stress on the necessity for the immediate abolition of the Excise duty, in spite of the Government announcement that this was impossible for financial reasons. They said that Great Britain had recently made a great sacrifice of revenue with the object of avoiding a coal strike and preventing unemployment: and they urged the Government of India to similar "courageous action" in respect of the cotton industry. The mill operatives, who had been invited by the mill owners to join the latter's deputation to the Viceroy, not only declined to do so, but submitted a separate representation asking that the situation in the textile industry should be considered from the point of view of the workmen and not of the owners: and urging the Viceroy not to agree to the abolition of the Excise duty except on condition that the mill owners agreed, if it were abolished, to adhere to the old wage rate. It may reasonably be assumed that political influences have been set at work to combat the workmen's objections to joining forces with the owners: and it seems likely that the latter have been induced to give, informally no doubt, the required promise.

The date on which any given resolution will be moved in the Legislative Assembly is, of course, announced well beforehand: and a resolution recommending the suspension of the cotton Excise duties for the remainder of the year, in order to help the Bombay industry, was set down for September 16. It is obvious that the effect of such a resolution, which the Swarajists were certain of being able to pass against the Government, would be greatly enhanced if it could be synchronised with a successful strike: and one day would be enough to decide whether it would be successful or not. An arrangement, therefore, under which a strike should be started on September 15, would be a skilful political move—the previous fixing of the day for the Assembly's resolution prevented any arrangement for the resolution to coincide with a strike, but did not prevent an arrangement for the strike to coincide with the resolution: and it seems certain that this is what has been done.

It will now be represented that the existence of the Excise duty is the chief reason for the depression in the cotton industry and that it is mainly this that has forced the native Indian mill owners to reduce wages: the reduction of wages has forced the operatives to strike: and it is only Government's refusal to remove the duty that prevents the mill owners from continuing to pay the existing wage: ergo, Government is directly responsible for the occurrence of the strike, and will remain responsible for its continuance so long as it refuses to abandon the Excise duty. If Government were now to abandon the duty, it is quite likely that the mill owners would be placed in an awkward position; but this would weigh for nothing in the eyes of the politicians, as it would form yet another example of what they preach so persistently—that nothing is to be got out of Englishmen except by a display of force.

The Indian Currency Commission.

It is announced that the Chairman and the three members of the Indian Currency Commission who are at present in England (Sir Henry Strakosch, Sir Reginald Mant, and Mr. W. E. Preston) will leave London for India on November 5. The four Indian members, with Sir Norcott Warren and Sir Alexander Murray, are already there. The Commission will begin its work immediately after the arrival of the contingent from England. The question of issuing a questionnaire will be decided after the assembly of the Commission, but invitations have already been issued for the submission of written memoranda. It is expected that the taking of oral evidence in India, supplementary to the written data, will occupy about two months, so that the Commission should be back in London by the end of February, there to elaborate their conclusions.

Reference has already been made, on the cabled report, to the condemnation of the personnel of the Commission by a vote in the Legislative Assembly. From the mail papers to hand this week, it appears that objection was not confined to the fact that the Indian members of the Commission are in a minority of four to six, but that it extended to three out of the four Indian members themselves. Extremist newspapers claim credit for the moderation of the leaders' demands—instead of insisting, as they might well have done, that the Commission should consist entirely of Indians, all that they ask is, that the Chairman and a majority of the members should be Indians: that is, that its present racial composition should be reversed: though, at the same time, they claim that the Indian members should be selected by themselves and not imposed by the Government. The latter demand is due to the opinion, persistently held or, at any rate, persistently ventilated in India, that the rupee exchange has been and is being "manipulated" by the Government of India in the interests of Great Britain and against the interests of India. For this reason, the only one of the four Indians on the Commission whose appointment is welcomed is Sir Purshottamdas Thakurdas; whose general qualification is that he has all along been an unsparing critic of Government financial methods, and whose particular qualification is that he is an insistent partisan of the 1s. 4d. rupee. He apparently advocates the immediate stabilisation of exchange at that rate, by a stroke of the pen: without, so far as the layman can follow his arguments, either knowing or caring how such a result could be achieved in fact, or what would be its effects if it were; beyond a general belief that a low rate of exchange would benefit Indian industries in the face of British and Japanese competition.

One may reasonably suppose that his supporters in the Press have an even more hazy idea of exchange problems than he has himself: and that their opposition to his Indian colleagues—which has gone to the length of suggesting that he should resign his seat on the Commission rather than accept the position of a single voice crying in the wilderness—is based on Sir Purshottamdas Thakurdas' general qualification rather than on his particular one: and on what is considered to be the absence of it in the case of his Indian colleagues. The Commission is condemned as a "packed" one: and it must be assumed that the condemnation of the other three Indian experts is due to their politics rather than to their technical qualifications. It is true that the latter are belittled; but the gravamen of the attack is that they are "Jo Hookums"—persons whom Government can count upon to deliver a finding "according to orders." The Anglo-Indian Press is unanimous in declaring that the Assembly has done itself a grave disservice by carrying what was, in effect, a vote of censure not only on Govern-

Digitized by Google

ment, but also on three distinguished Indian financial experts; but this is an attitude that may be questioned. As things are at present, it is unfortunately only too evident that the Swarajists can always count on support from the Independents on any motion the effect of which is to asperse the motives, as distinct from the policy, of Government: and the acceptance of the opportunity, offered by the composition of the Currency Commission, is only what was to be expected.

"India To-Day."

This important film, which was exhibited at a private view at the Polytechnic Cinema Theatre, Regent Street, on September 14, was promoted by the India Joint Committee, representing five of the leading missionary societies. It aims at an appeal to the general public, as well as to those interested in missionary effort in India, but is likely to be more effective with the latter than with the former. The pamphlet, distributed to the audience, says that over five miles of film were taken in all, so that it was, of course, only possible to exhibit selected portions of it: and it is permissible to suggest that a better selection might have been made in the subjects of general interest—what may be described as the travel portion of the film. It is quite possible that, when it comes to be shown to the public, this slight defect may be removed: but, as shown on September 14, the travel pictures compared unfavourably with those shown by Indian films, such for instance as Lowell Thomas' "India" of two years' ago, whose object is entertainment rather than instruction. The latter not only is, but certainly ought to be, the main object of "India To-day"; and it makes as it is, an appeal which will be widely responded to, though its improvement, in the former respect, should do a great deal to widen the circle to which that appeal will be addressed.

The film begins by an attempt to bring home to its audience the vast extent of India and the diversity of its scenery and peoples: it next particularises on the primitive methods of agriculture and the existing observances of religion, as being the two main avenues, the material and the spiritual, through which missionary effort sets itself to bring about an improvement. Both these latter are presented in a sympathetic spirit that is most attractive: and lead naturally to the second part of the film, which is almost entirely devoted to showing the results of missionary endeavour and the uplift, material as well as spiritual, which it has already achieved, and of which its continued efforts promise so great an enlargement. Most of the pictures in this part are, as is only natural, serious illustrations of a serious subject; but they are interspersed with others, entertaining and humorous, which will be enjoyed by all who see them—young and old, solemn and frivolous. A presentment, in popular form, of missionary work in India has not previously been attempted on anything like the present scale: and the promoters are to be congratulated on the way in which they have met what all their supporters must now recognise as a long felt want.

The Viceroy's Farewell.

In bidding farewell to the Council of State, which dissolved on September 17, Lord Reading congratulated them on "the sober and temperate exercise of the wide powers entrusted to them": and added, in effect, a certificate that, if the Royal Commission on Reforms was not granted before 1929, it would not be the fault of the Council of State. As a reprisal for their rejection of the Nationalist amendment to the Government resolution on Reform, the Swarajists and Independents have threatened to oppose the existing Councillors, should they seek re-election; but it is probable that this threat does not disturb them overmuch; most of the members are persons with a real stake in the country, who wield considerable personal influence with their electors. There is a story—doubtless apocryphal—told of an important territorial magnate who, on being congratulated on the relief to his purse that would accrue from an anti-bribery bill that was passed in India a few years ago, is said to have replied, "Not at all—in future I shall have to bribe not only the electors, but the rest of the countryside also, to prevent them from giving me away."

Mr. Saklatvala.

The decision of the authorities in the United States to exclude Mr. Saklatvala, the Communist M.P. for Battersea, appears, according to reports from New York, to have amused his brothers, as it will doubtless amuse everyone in India who knows him. One of Mr. Saklatvala's complaints against his exclusion (which, of course, he attributes to pressure by the British Government—an insinuation that the latter promptly denied) was that he was thus prevented from visiting his two brothers in America; but they appear to bear the deprivation calmly. One of them is reported as saying that "almost from childhood, my brother has always taken the opposite side on every question. He really likes publicity"; and the other, that "he is the only member of the family afflicted with Communism, and we took most of his theories as a joke." Mr. Saklatvala's position, until his very recent resignation—a step apparently taken in order to avoid dismissal—as a salaried servant of a great "capitalistic" firm, has, of course, given constant point to the "joke." He is credited with being a nephew of the present head of Tata's, and with enjoying the certainty of succeeding, in due course, to a large share in the latter's great wealth: and he is also credited with the remark, made a few years ago, that circumstances would very likely compel him, in the future, to defend the position of which he was then so vigorous an assailant.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 3.

The Political Outlook in Bengal.

A lull in the activities of the Extremists in Bengal has been apparent since the appointment of an Independent to the Chair of the Legislative Council, and has been even more marked during the week under review. Coupled with the sensational defeats the Swarajists have sustained in the Council, it may be accepted as the verdict of the people on the attempt to revive revolutionary propaganda. Anarchical methods have been weighed in the balance and found wanting, and while the masses had sufficient faith in the leadership of the late Mr. Das to lend their support to any scheme which he cared to devise, their confidence is not with Sen Gupta. Bengal has been watching the turn things have taken at Simla; not many weeks ago Pandit Motilal Nehru was loud in his denial of pourparlers between the leaders of the Swaraj Party and the Government, but the support which he has accorded to the Contempt of Court Bill, together with his acceptance of a seat on the Skeen Committee, has given the lead to a general return to sanity. Even the appointment of Mr. Patel to the Presidentship of the Assembly has caused misgivings in the ranks of the Swarajists, and there are murmurings that his acceptance of the post has provided him with an easy means of dissociating himself from the Swarajist cause. Gandhi, after playing the role of Handy Andy for the past four months, has left Bengal, and his going has not been marked by any signs of great sorrow. There is some speculation as to whether his waning popularity has been the cause of his departure or whether he realises that, so far as his creed goes, Bengal is a sinking ship. Sen Gupta is now left alone with his triple crown, and the next few months will show if he possesses any of the qualities of a leader which have been claimed for him. His task is a difficult one; he has to face hard facts and to live down the somewhat unsavoury reputation he has gained for himself since he came prominently before the public. The situation does not promise to become any easier for him in the near future.

The Steel Industry.

Government has now issued the report of the Tariff Board on the Steel Industry, and in doing so records yet another victory for Tata's in the shape of a further bounty on steel ingots manufactured in India from Indian ores. To review the position briefly, last year the Steel Protec-

Digitized by Google

tion Act was passed and enforced a duty on imported steel sufficient to secure for the Indian manufacturer a price of Rs.180 per ton, which it was thought would enable him to cope with outside competition. Unexpectedly exchange rose in favour of India and, about the same time, European steel prices fell perceptibly, creating a position which favoured the purchase of the European product. Within six months of the passing of the Act, Tata's applied for an enhancement of the import duty, and their demand was acceded to by means of a bounty of twenty rupees per ton on seventy per cent. of their output of steel ingots: this assistance was granted for one year and limited to an expenditure of fifty lakhs of rupees. Since then, European prices have not recovered: and, after reviewing the situation, the Tariff Board have recommended a further bounty of eighteen rupees per ton on seventy per cent. of the output, from October of this year for the eighteen months the Act will have to run. The expenditure is limited to ninety lakhs: and it is pointed out that the import duty will bring in sufficient revenue to provide for the bounty and leave an estimated surplus, at the end of the time, of about a quarter of a crore of rupees. The forecast may be a correct one, but the prospect to the user of steel is not alluring. The Tariff Board have raised the price of steel, and are keeping it up; whatever surplus there may be will come from the pockets of the consumers in India. In seeking to protect the industry, the Tariff Board has overlooked the small concerns, who will suffer considerably as a result of Tata's good fortune: and, while much may be said for the fostering of the industry, it should have been done in such a way as would have guarded against the forming of a monopoly. With all the assistance, at the end of the eighteen months will the industry be any more stable than it is to-day? [It will be remembered that the Government of India, in giving effect to the proposals of the Tariff Board, reduced the bounty to twelve rupees and the maximum expenditure to sixty lakhs.—ED.]

Markets.

Following a heavy decline earlier in the week, jute has displayed a much steadier tone at the close, with more interest showing at a higher level of prices; gunnies have appreciated in sympathy. There has been a little more doing in piece-goods, and though no particular feature can be reported, there is an indication of the possibility of a slight revival from the past dull conditions. Both here and in London, the tea market has continued depressed, with a general lowering of rates except for tippy teas, which have commanded a fair amount of attention at previous rates. The new returns, so far to hand, suggest a lower outturn, a factor which would help to counteract the effect of the present heavy surplus of stocks, with a corresponding steadying of prices.

All sections of the share market have been somewhat dull during the past week; jutes depreciated at first in sympathy with the commodity, and teas were almost neglected. The shares most inquired for were rubber, in which market a fair amount of business was carried through. A smaller demand has been apparent for first-class coal shares, buyers appearing to be satisfied for the time being; cottons are unchanged, and Government Stocks a dull market. Money continues easy at nominal rates with Exchange slightly higher.

THE INDIAN TERRITORIAL FORCE.

(By Our Simla Correspondent).

The Indian Territorial Force is an experiment of recent date, for it was only in September 1920 that a Bill for its creation was introduced into the Imperial Legislative Council; yet sufficient time has elapsed to make it worth while for a survey to be made of the results achieved by it up to date. Such a survey was made last year by the Committee which sat under the presidency of Lieut.-General Sir John Shea, the Adjutant-General in India, and the report of which was published last January. This report makes interesting reading, for it does not confine itself to probing the weak points in the present system and to suggesting remedies for them, but it looks ahead far into the future and seeks to devise a means by which India may become in course of time fully capable of undertaking the responsibility for her own defence. When the Indian Territorial Forces Bill was first introduced in the Council, Sir Charles Monro, who at that time was Commander-in-Chief, declared that the new force which it was proposed to create was intended to provide an outlet for those Indians who desired to see in existence a second line to the Regular Army, "whereby in time of need the almost unlimited man-power of India may be utilised to strengthen the military forces of the country on a scale commensurate with its vast population." The primary object of the force was thus to provide for patriotic Indians, who are actuated by a desire to fit themselves for the defence of their country, a means of satisfying this desire.

The results achieved, in so far as they can be visualised at present, have, however, been by no means over-encouraging in this respect. A number of Territorial units have been created in all parts of India, indeed in all areas in which there has appeared to exist a genuine desire for their formation. Yet the response has been only half-hearted. The professional and educated man has, except in a few rare instances, shown no enthusiasm to join these units, and the men from whom they are recruited belong almost entirely to those classes which are enlisted in the Regular Army. Moreover, the men of these classes who join the force do so, not for any reasons of patriotism or from any special desire to train themselves to defend their country, but because they regard it as a stepping-stone to enlistment in the Regular Army or the police. Another difficulty which was brought to the notice of the Committee was that the periods of training, which consist at present of two months in the first year of service and one month in each subsequent year, are totally insufficient to enable the Force to attain to a standard of efficiency high enough to justify the expenditure upon it. It is one thing to offer to patriotic Indians an opportunity of training themselves in their spare time to serve their country, but it is a very different matter to ask an already overburdened Army Budget to bear the cost of a force which is unlikely to prove of any real value in time of emergency, in its rôle of a second line to the Regular Army. As matters stand, the Committee have expressed the opinion that "scarcely one of the existing units would be fit to take the field, even after a period of intensive training, in an appreciably shorter time than it would take to raise an entirely new unit." That is to say, much of the money which has been spent in the last few years on the training, organisation, and administration of the Force, as at present constituted, has been wasted.

The only practicable solution of this problem of efficiency is the obvious one which the Committee have adopted, by recommending the lengthening of the periods of training to three months in the first and two months in each subsequent year. But this recommendation, simple as it appears on the surface, raises two fresh and serious difficulties, as the Committee fully realised. On the one hand the type of man, who at present forms the bulk of the rank and file of the Force, is an agriculturist in ordinary life, like his brother in the Regular Army: and, while it may not be difficult for him to spare one month in the year from his fields for the purpose of carrying out military training, it is not by any means every one of this class who can spare two months, and still less the three months advocated for the initial period of training. The increasing of efficiency thus carries with it an

appreciable diminution in the number of potential recruits of the only type which so far has been obtainable. On the other hand, the lengthening of the periods of training makes it even more difficult, than it is at the present, for the educated classes to take their share in this form of training. While it is doubtful if an agriculturist can spare two months a year for military duties, it is certain that the professional man cannot spare even as much as one. Indeed, it is generally declared that the sole reason why Indians of the professional classes in India have taken little or no interest in the Territorial Force is because it is an absolute impossibility for them to carry out the periods of training now prescribed, by reason of the fact that they cannot leave their ordinary work for so long a period at a stretch. Yet these are really the classes for whom the force was originaly created, in order to give them a means of satisfying their aspiration to train themselves to serve their country in her hour of need.

There is only one system of training which is suited to the requirements of men who cannot be spared for any length of time from their civil avocations, and that is the system, at present in vogue in the Auxiliary Force in India and in the Territorial Army in England, of continuous training throughout the year combined with a short period of training in camp. In order, therefore, to cater for those men who cannot spare the time to carry out the more lengthy training recommended for the units raised from among the agriculturists of the country districts, the Committee have recommended the formation in large centres of special units which will be trained on the less exacting system. These units would be drawn entirely from the educated classes, and would give the professional man the opportunity of undergoing military training, if he so desired. They would also act as a guide to the extent to which the desire for such training, so widely advertised in the Press and on the platform, does in fact exist among educated Indians to-day.

PROVINCIAL AUTONOMY IN INDIA.

Mapmaking and Politics.

By Janus.

The correspondence on this subject which has recently appeared in The Near East and India suggests that a short cut to the millennium can be found in the expedient of re-drawing the political map of the Indian Provinces. It seems to me that the present juncture is particularly unfavourable for undertaking that operation, or even talking about it. The existing map is, of course, unsatisfactory. Some of the provinces are far too big, some of them are heterogeneous, all of them could be improved, but it is at once too late and too soon to tackle the question. Looking back, we can see that it could have been done easily enough in the last century, by Dalhousie, for instance, or by Lawrence, when neither politicians nor vested interests counted for much; but India has moved since then, the interests are powerful, the politicians are vocal, and any suggestion of alteration will certainly rouse a hornet's nest. It is true that twenty years ago a Curzon could split Bengal, but it is also true that a greater than Curzon had to be called in to heal the wound. The pigeon holes are full of excellent schemes for altering administrative boundaries, dropped in deference to, or for fear of, popular clamour. You can scarcely move a police-station without bringing agitators into play. Let us admit that the interests are real, though they ought not to be decisive. The centre of administrative power is, by old tradition, the happy hunting-ground for State employment, the thing that still matters most to the political classes: shift the centre, or even talk about shifting it, and the fat is promptly in the fire. Again, legal business tends to concentrate at the Capital: propose to make a new Capital and, though you may get a little support from the second-rate lawyers there, you drive all the first-rate lawyers at the old Capital into active, though not necessarily open, opposition. If indeed the opposition of these and other interests was frank and open, it could be met effectively; but, as things now stand, that is not to be expected, and it is as nearly certain as anything can be that the interests will elect to fight mainly on the religious front. Almost any alteration which can be proposed will in fact make some difference from the communal standpoint. The division of Bengal produced two provinces, one Hindu, the other Moslem, in place of one where the religions were about evenly balanced; to split the United Provinces would weaken Moslems in the East and strengthen them in the West; and, in Northern India at least, the roll of the "drum ecclesiastic" may be expected to follow any proposal for a change. Now that is precisely what India does not want at present. Feelings, in part at least genuine, are very bitter as it is, and to bring interests in to reinforce them would be very bad statesmanship indeed. That is why I think it is unwise even to talk about political mapmaking just now.

On the other hand, I suspect we are not a very long way from the point where the provinces will readjust themselves almost in their sleep. The power of these interests for evil is a temporary phase, due to the fact that in the practice of politics the towns have got far ahead of the country. When the villages decide to take up the heritage which is waiting for them, their first act will be to call the towns sharply to heel: and, in the consequent readjustment of perspective, these urban interests will shrink to something like their proper size. Suppose a province gets a Legislative Council of the type contemplated by the present constitution but not yet realised in practice, with more than half the elected members bound to interpret the wishes of the countryside. They may find that a division of the province is desirable in the interests of their constituents and, if so, they will be forced to put it through over the heads of the urban minority, under penalty of losing their seats. It is also quite possible that they may find that their province can get along as it is, and that the idea of dividing it on racial or linguistic lines is an urban idea which does not interest the villages in the least; but in any case the question will come up for decision on straight-forward political grounds. Surely then it is best to wait. The existing machine is cumbrous, but it works: at the moment it is, at the least, doubtful whether any real improvement could be effected: readjustment, or reconstruction, will be much easier by and by, when the whole province has learned the trick of expressing its wishes and insisting on their prompt translation into facts.

At this point, however, I find myself brought up against Lord Meston's dictum that, "Vitality in popular government cannot, in the present position of the Indian masses, be looked for unless the unit of government is an area which possesses the maximum of common interests." That may be read as arguing that the map must be re-drawn in order to produce the conditions which, I contend, will lead to the re-drawing of the map; but I think it can be shown that this reading is incorrect. Let us take Lord Meston's example of the Jat and the Purbya, both of them good friends of mine as well as his. It is true that the Jat doesn't worry about the Purbya's domestic affairs; but surely in this case, as in most of the others, we have precisely that maximum of common interests which Lord Meston postulates. Both of them are peasants, and the interests of peasants are well enough known in every part of the world, except the present centres of Indian politics. High prices and free markets for their produce, low prices and an organised supply of what they need to buy, cheap capital, an efficient agricultural department, a sound tenancy system, rural education of the right sort, serviceable means of communication for carts, not motors, the maximum of help and the minimum of interference from the organised administration—that is a platform on which the Jat and the Purbya may stand side by side: and there is room on it too for the Bandelkhandi, the Kumaoni and all the other elements that go to make up the heterogeneous agglomeration facetiously styled the United Provinces. The agglomeration is, of course, too big for the most effective administration; but, so far as politics are concerned, it does in fact possess the maximum of common interests on which Lord Meston rightly insists. The thing that matters now is to bring these common interests quickly into play. Later on, Jats and Purbyas may bicker over

Digitized by Google

details, and may even decide to split; but, for the present, their obvious course is to make common cause against the townsmen who are frittering away the resources of their province on matters of secondary importance.

Will they do so? To my mind it is too soon for pessimism. In the whole history of India there have been only two elections. The first was a sort of dress rehearsal, and everyone concerned was anxious only that the polling booths should not be swamped: they had their wish. The second was effectively "crabbed," partly by the action of the Extremists, but much more by the fatuity of the Liberals, who neglected their chance of organising the constituencies until it was too late, and who still seem to prefer the easy game of "hatching vain Empires," as constitution-mongering was aptly described in a familiar discussion. The third election lies some way ahead. To make it a better one than the last is the work now before Indians: the most that we, in this country, can do is to help it on with interest and sympathy, and refrain from throwing new apples of discord into an arena where there are already too many.

Correspondence.

"To the Editor of THE NEAR EAST AND INDIA.

Sir,—Few will be found to disagree in principle with Lord Meston's complaint in your issue of September 10, as to units of Government in India. His statement that vitality in popular Government cannot be looked for unless the unit of Government is an area which possesses the maximum of common interests, supports the contention of those who argue that what is needed above all in India is a revival of the Panchayat or village council. There appears to be one contradiction in Lord Meston's letter: namely, when he speaks of a parliamentary commission of 1929 considering the propriety of fixing smaller areas of legislative and administrative activity than those now operating; whereas, later on in his letter, he questions whether our parliamentary and electoral models are those which India can best employ. Surely it all points to the necessity of Indians working out their own constitution in accordance with their own national genius.

In this connection, it is interesting to observe that the Commonwealth of Indian Bill, issued by the National Convention of India for presentation to the British Parliament, re-establishes the village council as a unit of self-government. So far as the provinces are concerned, there is a provision in the Bill whereby the Indian Parliament, to be set up under it, may, with the consent of the provincial legislature and the approval of the majority of the electors in the area to be affected, alter the limits of the province.—I am, etc., D. GRAHAM POLE.

(Hon. Sec., The British Committee on Indian Affairs.)

THE INDIAN MAIL.

Trade Returns for July.

The trade returns of British India for the month of July, for the first time for several months, show an increase in the value of imports of private merchandise and a decrease in that of exports. The total imports, valued at 1,774 lakhs of rupees, increased by 141 lakhs (just over a million pounds): though this improved figure is still 120 lakhs less than that of May. Exports fell by no less than 590 lakhs—nearly 4½ million pounds—to 2,720 lakhs, the lowest total for a long time past. A large proportion of this fall is due to reduced exports of raw cotton, of which 55,000 tons were exported in July, against 80,800 tons in June. The net imports of treasure rose by 106 lakhs, and the visible balance of trade in India's favour was only just over six crores of rupees (4½ million pounds) in July, compared with more than 14½ crores in June.

Jute Prospects.

The most recent forecast of the jute crop puts it at 3,800,000 bales. Practically no stock was carried over from last year, and it is estimated that the overseas demand will be over four million bales, if the liberal buying last year by Continental Europe, especially Germany, is maintained. If these estimates are correct, it seems likely that the price of raw jute will rise to an unusual figure. India has, at present, a monopoly in the production of jute—attempts that have been made to grow it, in various other parts of the world, have all ended in failure. The latest suggested competitor is Mesopotamia, where it is believed that jute could be successfully grown in the neighbourhood of the Marshes; though, from what is known of the Marsh Arab, it may safely be asserted that indigenous labour would be unobtainable, and that imported labour would need military protection. Jute merchants in India therefore treat the suggestion with scepticism; but, as *Commerce* (Calcutta) points out, there is an economic tendency that is slowly resulting in a redistribution of the staple raw materials of the world. For example, the world's cotton supply is at present practically in the hands of the United States, Egypt, and India; but there is little doubt that, if the necessary labour were available, equally good varieties of cotton could be grown in Western Australia: and that it is merely a matter of time before Australia enters the world's markets as a large cotton producer. Similarly, before the War, Great Britain was the world's principal producer of coal and iron, a position from which the existence of other extensive and valuable deposits had failed to oust her. But, during and since the War, circumstances have conspired to relegate British coal and iron to a position subordinate to those of the United States and Central Europe.

The Depressed Classes.

Much has been written regarding the depressed classes—the so-called "untouchables"—in India, who number more than fifty millions and who are, especially in Southern India, denied association with their caste superiors in many of the ordinary amenities of life. For instance, they have to draw water from wells set apart for them, and may not use other public wells: in local schools, when they are admitted at all, they are segregated from their fellow students: and streets, inhabited by caste Hindus, are closed to them. This latter disability, it has been elicited by a recent question in the Council of State, even debars them, in some parts of the Madras Presidency, from access to post and telegraph offices situated in, or only to be approached by, such streets: and it has been found necessary to move no fewer than 112 offices from their previous positions, to new ones where they will be accessible to "untouchables." One of the planks in Mr. Gandhi's programme is the removal of "untouchability," and many of the advanced politicians of India do lip service to the idea, though with practical results that, if not altogether non-existent, are certainly negligible. Those who, in India, talk so glibly of extending democracy to their country are fully aware of the state of affairs regarding the untouchables: and it would be a good thing if people, who profess similar sentiments in England, could be brought to realise the vastness of the problem and the difficulty of its solution.

Indian Jails.

The report on the administration of Bengal jails during 1924 contains at least one arresting passage. It complains of the practice of sentencing prisoners convicted of "bad livelihood" to simple imprisonment—i.e., without hard labour. These men consist of the dregs of the criminal world, but they cannot be made to work unless they volunteer to do so. "They are sent (to jail) to idle for six months or a year. They are provided with free board and lodging, have congenial companions to plan mischief for the future, and generally have a pleasant time. They enjoy the advantages of a residential club without the drawbacks of paying a subscription and monthly bills."

As a matter of fact, it is not only in "planning mischief for the future" that the inmates of Indian jails can occupy their spare time. It is only a year or two ago that a jail (not in Bengal) was found to include a quite fairly complete plant for producing forged currency notes, which was being worked by one of the prisoners in his cell.

Digitized by Google

A Government Bill, brought in during the present session of the Legislative Assembly, contained a clause intended to remedy the defect complained of in the report: under the provisions of which magistrates would be allowed the option of sentencing such prisoners, at their discretion, to rigorous (hard labour) or simple imprisonment. It was explained that the Bill had received the unanimous support of the Local Governments, that it involved no political issue, and that its sole object was the protection of law-abiding people. Nevertheless, the Assembly defeated the clause, by a single vote; whereupon the Leader of the House announced that, if the Assembly proposed to reject every measure providing for the maintenance of law and order, it had better say so at once.

Smuggling of Drugs.

The difficulty of preventing the trade in smuggled drugs was referred to in a recent note. The latest report of the Bombay Customs Department gives an account of the ingenious methods adopted by some of the smugglers: instancing a Chinese washerman who was found to have concealed a quantity of contraband drugs in a bundle of washing which he was bringing ashore from a vessel in harbour. A passenger on a steamer bound for the Far East was seen to be in possession of a package which, when he found himself an object of suspicion, he threw overboard. It was recovered by a diver and proved to contain 23 pounds of opium. The smuggler turned out to be a candidate for employment in the Customs Department; but, in spite of the well-known adage, it must be supposed that his exploit has prejudiced his chances of selection.

Free Railway Travelling.

In the course of his evidence before the Public Accounts Committee at Simla, an official witness stated that, in one year, $2\frac{3}{4}$ million railway passengers travelled without tickets. The Railway Board had sent a recommendation to the Central Advisory Council, for the strengthening of the law, but the latter had not accepted it. The Railway Board feared that, if they took strong action, it would lead to innumerable questions in the Legislative Assembly: as things were at present, most of the people found to have travelled without tickets merely gave a false address and went away.

This is only one of the difficulties that railway administrations in India are up against. Pilfering from railway waggons had reached such enormous proportions that most of the great railways found it necessary, two or three years ago, to institute a special Watch and Ward service, at considerable expense: which has, however, been amply justified by results. Along at least one of the great railways, villages had sprung up, near convenient sidings and crossing places, the sole means of livelihood of whose population was the contributions that they levied on passing goods trains: and, at one large station, an officer conducting an inquiry into pilfering found that the coolies, engaged in shifting goods, were in the habit of carrying away baskets full of coal from the loaded trucks. The (Indian) station master, when appealed to, declared that it was impossible to obtain the necessary labour except on condition that they should be allowed to help themselves to a reasonable amount of coal: and that the procedure had crystallised into a "custom" that he was powerless to prevent.

INDIAN EXCHANGE.

London, September 21.

During the past week in India more business has been reported in the Calcutta market, where rates have been quite steady at 1s. 6 5-32d. for T.T. with buyers at 1-32 higher. A fair amount of sterling transfers have again been fixed between the banks and Government at the higher rate; but towards the end of the week signs were manifest that the pressure on Government had to a certain extent been relaxed. Some of the Banks were inclined to be better buyers than sellers, and, after business had been done at 11-64 by the leading Japanese Banks, latterly they came into the market as buyers at 5-32, which was done to a moderate extent. The rate was still offering on Monday in both Calcutta and Bombay, but markets were quieter.

The temporary weakness may, no doubt, be associated with the adverse reports regarding the monsoon which were cabled from Bombay early this week. It is hoped that the situation may yet be saved, but the scarcity of rain is now causing anxiety.

In the London market although 1s. 6 3-16d. has been the general quotation, some business has been done at 1-64 lower, and the tendency appears to be rather on the weak side.

December fixtures have been done at 1s. 6 7-32 and January at 1s. $6\frac{1}{4}$d. Further forward rates are 3-16d. March and April.

The usual weekly Bank return indicates that the Imperial Bank of India have been further heavily drawn upon during the past week, and the trade demand is up 110 lakhs of rupees.

The final forecast for the jute crop for all India is reported to be round about 7,850,000 bales and much of the demand for money has arisen in consequence of activity in the Calcutta jute market, where a large amount of business has been booked.

Although no mention has yet appeared in the Press on this side, cable advices have been received that the Finance Minister stated in the Legislative Assembly that the India Government would take measures to prevent exchange rising beyond 1s. 6 3-16d. pending the Currency Commission report. This should have a steadying effect upon Exchange.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

Wireless in the Balkans.

It will come as a surprise to many to learn that private wireless receiving installations do not yet exist in Bulgaria. For one reason or another the Government has felt obliged hitherto to prohibit this now world-wide indulgence; but, no doubt, one of the earliest symptoms of renewed confidence in the established order of things in the country will be the removal of the present ban on "listening-in." Wireless telegraphy which celebrates its thirtieth anniversary this year, has existed in Bulgaria since 1912. There are four stations, at Sofia, Varna, Shumla and Kustendil, the last two being receiving stations only. In contrast with Bulgaria Yugoslavia can claim 627 private wireless receiving sets, the distribution of which is not without significance. The largest number, 226, is in Zagreb; Novi Sad has 133, Belgrade only 126; Liubliana and Serajevo 51 each, Split (Spalato) 35, and Uskub 5. In other words nearly four-fifths of the total are to be found in the old provinces of Austria-Hungary.

After Wembley.

The best proof that Wembley has been an overwhelming success is the circumstantial report that our friends across the Atlantic and other countries are proposing to start a strenuous campaign to capture the United Kingdom and other Empire markets as soon as the Exhibition ends. The rumour finds support in a questionnaire which has lately been sent to British firms by a foreign representative in London, asking for information on a variety of matters. There is, after all, nothing to be surprised at if our trade rivals seek to discount Wembley by a concentrated commercial campaign. We should do the same if we were in their place, and our business is to see that the intensive attack does not succeed. The Government can do much to assist in this matter, and our business houses can do even more by making it quite clear what are British goods and what are not.

A Dried Fruit Campaign.

Report has it also that the Near East dried fruit trade proposes shortly to institute a campaign to consolidate its position in the United Kingdom market. In this case, of course, it is not a reply to Wembley but to the attacks that have recently been directed against the methods of preparing the fruit for the market in the Near East. Obviously as production in the Empire is at present limited we shall have to depend on Smyrna for much of our dried fruit for a very long time to come, and it would be just as well therefore that timely steps should be taken to correct erroneous impressions with regard to the trade. As I have already pointed out the British consumer has taken the fruit for many generations without serious consequences, so that were conditions as bad as they have been made out to be (and they are very far from being so) it would be rather late in the day to raise the cry of wolf.

Ottoman Railway Progress.

A marked improvement took place in the results of the Ottoman Railway from Smyrna to Aidin in the second half of 1924, and the half-yearly report which has just been issued shows that the progress has continued in the first six months of this year. The gross receipts were £192,802, which compares most favourably with the figures for the corresponding period of 1924, when, however, it must be pointed out, conditions were exceptionally bad. The net result was a balance of £62,476 as compared with £15,975. The improvement was due almost wholly to larger receipts from the goods traffic, the increase under this heading representing 62 per cent. The general manager states that this result is accounted for by the largely increased tonnage carried and the higher tariffs in force. He points out, however, that during the latter part of the period much traffic was lost through the new transportation tax, to evade which produce was moved by road.

The Egyptian Market.

In view of the disadvantages under which British trade has to contend at present (disadvantages which are beginning to pass and, it may be hoped, will disappear altogether before very long), it is not surprising that British exports to Egypt in 1924 were not maintained at the level of the previous year. Actually the figures were £E13,993,584 as compared with £E14,771,677, but there is little reason for pessimism on that account, for the trade of our nearest rival is no more than £E5,230,772, and if in unfavourable conditions our trade is maintained as well as it is, we can look to the future with confidence in the assurance that, once the existing handicaps are removed, we shall be able to regain the last ground. The figures for Egypt's export trade make very interesting reading. The United Kingdom continues to be far and away Egypt's best customer, and with imports (mainly, of course, cotton) valued at £E31,955,625 may be said to dominate the trade, the total of which is £E65,733,935. Thus Egypt in her commerce with the United Kingdom in 1924 had a favourable trade balance of £E17,962,041. I lay stress on this fact because British traders look to the Egyptian market for a greater outlet in the future, and the fact that the United Kingdom bulks so largely in Egypt's export trade gives this country a claim for special consideration in regard to imports.

The Drachma.

So much has been heard of the strength of Greece's economic position that the adverse movements of the drachma in recent months have come in the nature of an unpleasant surprise to those who were looking to Greece to give a lead to the Near East in the race to recover from the effects of the War. In the first half of 1924 the fluctuations of the drachma were very pronounced, but the measures taken to stabilise it were successful, and the end of the year found the drachma fairly steady round about 260. To-day it presents a very different picture,

BANK OF ROUMANIA LIMITED

for recent months have seen the drachma steadily depreciating, and now it is no better than 335. It may well be asked how this sudden and most unpromising change has come about. It must be said at once that it has no connexion with the country's economic picture which is admittedly good and will gradually improve as the refugees contribute an increasing quota to the national endeavour. Nor has the question of political stability or the converse had any marked effect. When we come to consider the question of the financial policy followed in Greece it is, however, a different story, and it is to this factor that the recent weakness of the drachma is to be attributed.

Financial Policy.

Prima facie the financial position in Greece would seem to be steadily improving. The revenues have continued to go up, a point on which stress was laid by the Greek Minister of Finance in a statement recently laid before the League of Nations, in the course of which he drew attention to the burden of taxation borne by the Greek people. The Minister further maintained that the Government's policy was directed to promote the stability of the exchange and to bring about an improvement in the gold value of the drachma. With regard to the increase in the revenues it must be pointed out that inflation has had a great deal to do with it. Greece has not hitherto succeeded in attaining a balanced Budget since the War, but it is estimated that there will be a surplus on the Budget for 1925-26. In view of the fact that not until now has this been the case would suffice of itself to explain the depreciation of the drachma. To find the reason for the movement we have to look to another cause. There is not space here fully to go into the matter, and it must therefore be stated briefly that the issue resolves itself into the question of continued inflation in the sense that the reserve for foreign exchange is inadequate. In the recently issued report of the International Financial Commission approval is expressed of the imposition of a surtax, the proceeds of which are allocated to the reduction of the floating debt, and of the Government's intention to have no further recourse to issues of uncovered notes. But what has happened since the period covered by this report has not been such as to inspire confidence, and it is obvious that nothing short of a complete change of policy will put the financial situation of the country on sound foundations.

The Rubber Position.

Fluctuations continue in the rubber market, as must be expected when supplies have reached such a low level. The most interesting feature in connection with rubber now, however, is not the price of the commodity, but the fact that the share market has obtained a separation from it. The commodity may decline, but the shares, which are at present influenced solely by the prospect of large dividends for the next few years, continue firm; and it would not be surprising if before long the separation became a divorce, so that when rubber is 2s. or under the shares will stand considerably above their present level.

A SERVANT OF CYPRUS.

(From a Correspondent.)

Mr. A. K. Bovill, I.S.O., whose death is announced in another column, and whose funeral took place at South Walsham on September 18, will be universally regretted in Cyprus, where he was Principal Forest Officer for over thirty years. In the early days of his administration the Forest Department, like all the other Departments of the Island, was starved for want of funds, and Bovill had little scope. But the increased prosperity which followed on the visit of Mr. Joseph Chamberlain, when Colonial Secretary, and which was largely due to his foresight, enabled money to be gradually devoted to development and Bovill took full advantage of it. The results of his work were seen in the War, when the Cyprus forests supplied nearly the whole of the timber and firewood requirements of the Army in Egypt and Palestine, and the forest revenue increased from £10,000 in 1915 to nearly £120,000 in 1918-19. For his services in this connexion Bovill was mentioned in dispatches by Lord Allenby.

His long residence in Cyprus, the intimate knowledge he had of every corner of it, and his simple and forcible personality made of Alfred Bovill an institution in the Island. Although his duties were always bringing him up against the natives—for nearly every Cypriote has stock and is therefore the natural enemy of the forester—the people liked and trusted him, and very few Englishmen can have understood them better. His knowledge and experience were always at everyone's disposal and must have been of immense value to successive Governments.

When his time for retirement came a few years ago he had the satisfaction of knowing that he left the Island much in his debt.

The Greek Constitutional Commission has unanimously accepted a resolution for the suppression of decorations. Henceforth no Greek or foreign decoration can be bestowed on a Greek subject. Greek decorations, however, will continue to be bestowed on foreigners.

The Press Conference of the countries of the Little Entente, which was held last month in Bucharest, is to be followed this week by a visit of Greek journalists to Roumania. A party of Roumanian journalists and writers will be the guests of the Greek Government at Christmas.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. California for Bombay (Liverpool, October 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Dorsetshire for Port Said, Colombo, Madras, and Calcutta (London, October 3.

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, October 7).

British India Line.—S.s. Domala for Colombo, Madras, and Calcutta (London, September 26); s.s. Madura for Bombay and Karachi (London, October 9); s.s. Manela for Colombo, Madras, and Calcutta (London, October 10).

Cunard Line.—S.s. Phrygia for Gibraltar, Oran, Algiers, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, October 10).

Ellerman "City" Line.—S.s. City of Hong Kong for Calcutta (Birkhenhead, October 1).

Johnston Line.—S.s. Vedamore for Galatz and Braila only (Liverpool, September 30); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz and Braila (Liverpool, October 17); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 6). (The last steamer of the season for Sulina, Galatz, and Braila.)

P. and O. Line.—S.s. Ranchi for Bombay (London, October 2); s.s. Nyanza for Colombo, Madras, and Calcutta (London, October 3).

Prince Line.—S.s. Lancastrian Prince for Malta, Alexandria, Jaffa, and Haifa (London, October 3); s.s. Egyptian Prince for Malta, Alexandria, Jaffa, and Haifa (London, October 24).

Monthly Supplement of "The Near East" : No. 8.

ABUNDANCE OF MONEY IN YUGOSLAVIA.

An interesting economic paradox has arisen in Yugoslavia during the last month. All the banks are full of ready cash, but cannot place it suitably. The National Bank's current account shows about a milliard dinars of private deposits, and the accounts of the Postal Savings Bank and other banks about the same amount. Yet at the same time, business is unable to obtain credit on any terms, particularly for capital expenditure or long term loans.

This paradox can only be explained by an analysis of this sudden and relative overflow of money. The harvest this year is unusually good, and it was estimated that large sums would be needed for the financing of export. In order to avoid paying high interest at the critical moment or being without credit altogether, exporters began early to collect the necessary capital, which they placed in the banks under the strict and essential condition that the money could be withdrawn on demand. Deposits were, therefore, accepted at a very low rate, or without any interest at all. The banks, on the other hand, cannot place the money suitably for short periods, and are literally flooded with cash. Many of them are even refusing new deposits.

This overflow of money was largely accentuated by foreigners who speculated on the increase of the dinar, which indeed is most likely to occur in consequence of a fruitful harvest and large exports. Many Italian banks especially, both on their own and their clients' accounts, sold large quantities of liras, the rate of which was steadily falling, and bought dinars, the rate of which was as constantly improving. The same game was played also by Viennese and other foreign banks, including one British house. Speculation engaged large sums, and these banks consequently now hold large quantities of dinars in cash at Yugoslav banks, waiting for the increase of the dinar before returning once more to their own currency.

Many Yugoslav capitalists are similarly speculating on the increase of the dinar, and prefer to have large cash accounts at the banks than to tie up their money in capital expenditure. Their calculation is quite sound, for if they tie up money in buildings and machinery, its value will automatically decrease in a few months by a certain percentage. If, on the contrary, they keep their money in cash, their capital increases with certainty.

Thus, in view of a probable improvement of the dinar following an excellent harvest and favourably stabilised political circumstances, financial capital in Yugoslavia avoids capital expenditure, and seeks current investment. Many regard this attitude of monetary capital as injurious or even parasitical towards national economic life, and this dissatisfaction is the stronger, because Yugoslavia still lacks money for capital outlay. The country is in the full swing of development and there are great prospects of further prosperity. Many business men wish to make use of this progress by founding new, and enlarging old factories. During the last five years many buildings and factories have been erected, railways constructed, and mines opened and forests exploited. Great quantities of home capital were thus tied up, and since no foreign credits were to be had, there was soon felt a great lack of liquid capital on the money market, while the rate of interest on loans rose to 25 and 30 per cent., being sometimes unobtainable even at this figure.

This state of affairs on the money market still exists to a large extent, and it is very difficult to obtain home credit for the completion, extension, or foundation of enterprises in the country, even in the case of quite safe and profitable undertakings. Everyone wishes to retain the unfettered disposal of his cash, in order to be ready for any emergency.

This being so, manufacturers still look abroad for the necessary capital. It is expected that the radical stabilisation of politics by a close alliance of the larger Serbian and Croatian parties will greatly increase foreign confidence in Yugoslavia. The extraordinary development in economic life should have a similar effect, since it will result in a financial strengthening of the State and increase its credit capacity. As a positive example of this strengthening of Yugoslav credit abroad may be cited the rate of the 2½ per cent. War Reparation Bonds. These have increased by over 100 per cent. during the last three months, while the dinar also has improved 42 per cent. in the course of this year. It is also interesting in this connection that the Municipality of Belgrade is receiving more and more offers from abroad for a municipal loan, and that more liberal credits are being offered abroad to Yugoslav banks.

All these signs have resulted in a generally optimistic outlook in the Yugoslav business world.

DR. MILORAD NEDELJKOVITCH,
University Professor and General Director of the Post Savings Bank.

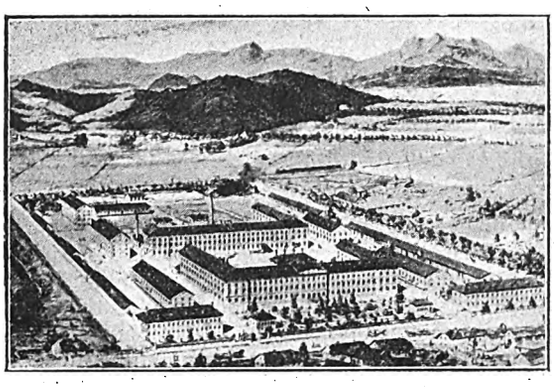
State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes



State Tobacco Factory in Liubliana.

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

The State Monopoly Administration, — BELGRADE —

STATE MONOPOLIES.

With Special Reference to the Tobacco Monopoly in Yugoslavia.

In Yugoslavia there exist State Monopolies of tobacco, matches, cigarette-paper, salt, petroleum and saccharine. All these monopolies are under the "Independent Monopoly Management." This has six departments:—for administration, for cultivation and fermentation of tobacco, for accounts, for production, for sale and for industry. At its head is the Executive Committee of six members appointed for four years by the King, on the recommendation of the Minister of Finance. In addition to the Executive there is also a Supervisory Committee of five members, elected by the Executive, and appointed by the Minister of Finance. The supreme head of the Monopolies is the General Manager with executive, managing and directing power. He is helped by the Assistant Manager, while at the head of the departments are their respective chiefs.

Under the Tobacco Monopoly Management are eight tobacco factories, about fifty raw tobacco stores, a number of stores for manufactured tobacco, two brine pits on the Adriatic (Pag and Ston), a salt mine (Krek), a petroleum depôt and a modern duty-stamp factory. All these monopolies represent a very important source of State revenue. In the budgetary year 1924-25, receipts from State Monopolies exceed one quarter of the total revenue of the State, while for 1926-27 the estimates are as follows:

I.—Ordinary Receipts.

From Tobacco	1,637,000.000	dinars
„ Salt	366,650.000	„
„ Petroleum	122,250.000	„
„ Matches	142,800,000	„
„ Cigarette-paper ...	128,700,000	„
„ Saccharine	2,000,000	„
Total	2,399,400,000	„

II.—Receipts from Duty Stamps.

From Duty Stamps and Papers of value (forms, documents, etc) ..	530,000,000	dinars

III.—Extraordinary Receipts.

From Fines on Smuggling ...	3,500,000	dinars
„ Various Unforeseen Sources	4,000,000	„
Total	7,500,009	„

The total revenue, therefore, from Monopolies is estimated at: 2,936,900,000 dinars. If from this sum are deducted the expenses, which are estimated at 991,231,000 dinars, a net revenue remains of nearly 2,000 million dinars for the budgetary year 1926-7.

Monopoly revenue represents the safest State guarantee for foreign loans, and it is from monopoly receipts that the services of the following loans are being met:—

4 per cent Loan of	1895
5 „ „ „ „	1902
4 „ „ „ „	1906
4 „ „ „ „	1909
5 „ „ „ „	1913
8 „ „ „ „	1922

The total amount of annuities from these loans represented less than one seventh of the net monopoly receipts, i.e., 252,000,000 dinars.

Of all the State monopolies the tobacco monopoly has always been, and still is the chief. In the budget estimate for 1926-27, its receipts form 55.2 per cent. of the whole Monopoly revenues. (See page 387.)

The State, therefore, pays the greatest possible attention to this particular monopoly, although in the near future the salt monopoly will also play an important part in emancipating the country from dependence on others.

The tobacco monopoly is also very important from the social point of view. Over 25,000 workers of both sexes were employed, besides a large number of officials and civil servants, in handling this year's tobacco crop. This number does not include the employees in the eight factories. Moreover, besides its economic significance to the country, especially as regards rational cultivation, tobacco has the additional importance of being, in some parts, notably in Herzegovina, Dalmatia and parts of South Serbia, the one means of subsistence.

Digitized by Google

The amount produced is sufficient not only to meet the demands of home consumption, but by reason of its excellent quality, to compete seriously and effectively with Oriental tobaccos on the world markets.

The best-known tobacco districts in the country are:—

1. South Serbia.—Here, where both cotton and rice can grow, tobacco flourishes. Near the Greek and Bulgarian frontiers in particular, and especially aromatic, small-leaved, and light coloured variety of Thracian origin is abundant. This yields from 600-800 kgs. per hectare. The varieties grown further north are larger-leaved, darker and stronger.

2. Herzegovina. Here a special type of tobacco flourishes, aromatic, light in colour, and with large, fine, silky, elastic leaves, which in cutting give long unbroken threads. It burns excellently. Its fine colour and long thread make it a kind selected for packing, but it is not so aromatic as South Serbian tobacco. It yields 1,000 to 1,200 kgs. per hectare.

3. Voivodina.—The extensive, fertile plain of the Voivodina (Banat and Backa), the granary of Yugoslavia, produces a thinner, strong and large-leaved tobacco of a Virginian variety. The somewhat colder climate here does not permit the production of fine, aromatic tobacco for cigarettes, only of kinds similar to those of Java, Brazil, Sumatra and Virginia, for pipe tobacco and coarser cigarettes. The yield varies from 1,500-2,000 kgs. per hectare.

Herzegovinian tobaccos are classified and bound in bales while those of South Serbia are packed in prints. The bales are firm and wrapped in linen, so that no harm occurs in transport. Export is duty free.

Fermentation is effected in State warehouses. The method of treatment is classified according to the quality, in six classes:—Export, 1, 2, 3, 4, 5, 6.

A package of the small-leaved tobacco weighs from 20-35 kgs; bales of Herzegovinian 50, and of Voivodina tobacco about 150 kgs.

In the last few years, tobacco production has enormously increased. The following table gives the progress in figures:—

Year.	No. of Producers.	Hectares Sown.	Total Crop. kgs.	Yield per Hect. kgs.
1920	87,455	12,515	9,023,654	752 5
1921	90 037	15,341	11,924,860	807 2
1922	83,249	13,010	10,000,864	816.5
1923	120,317	20,072	18,0 2,900	809.1
1924	162,602	31,238	33,695,281	1078.6

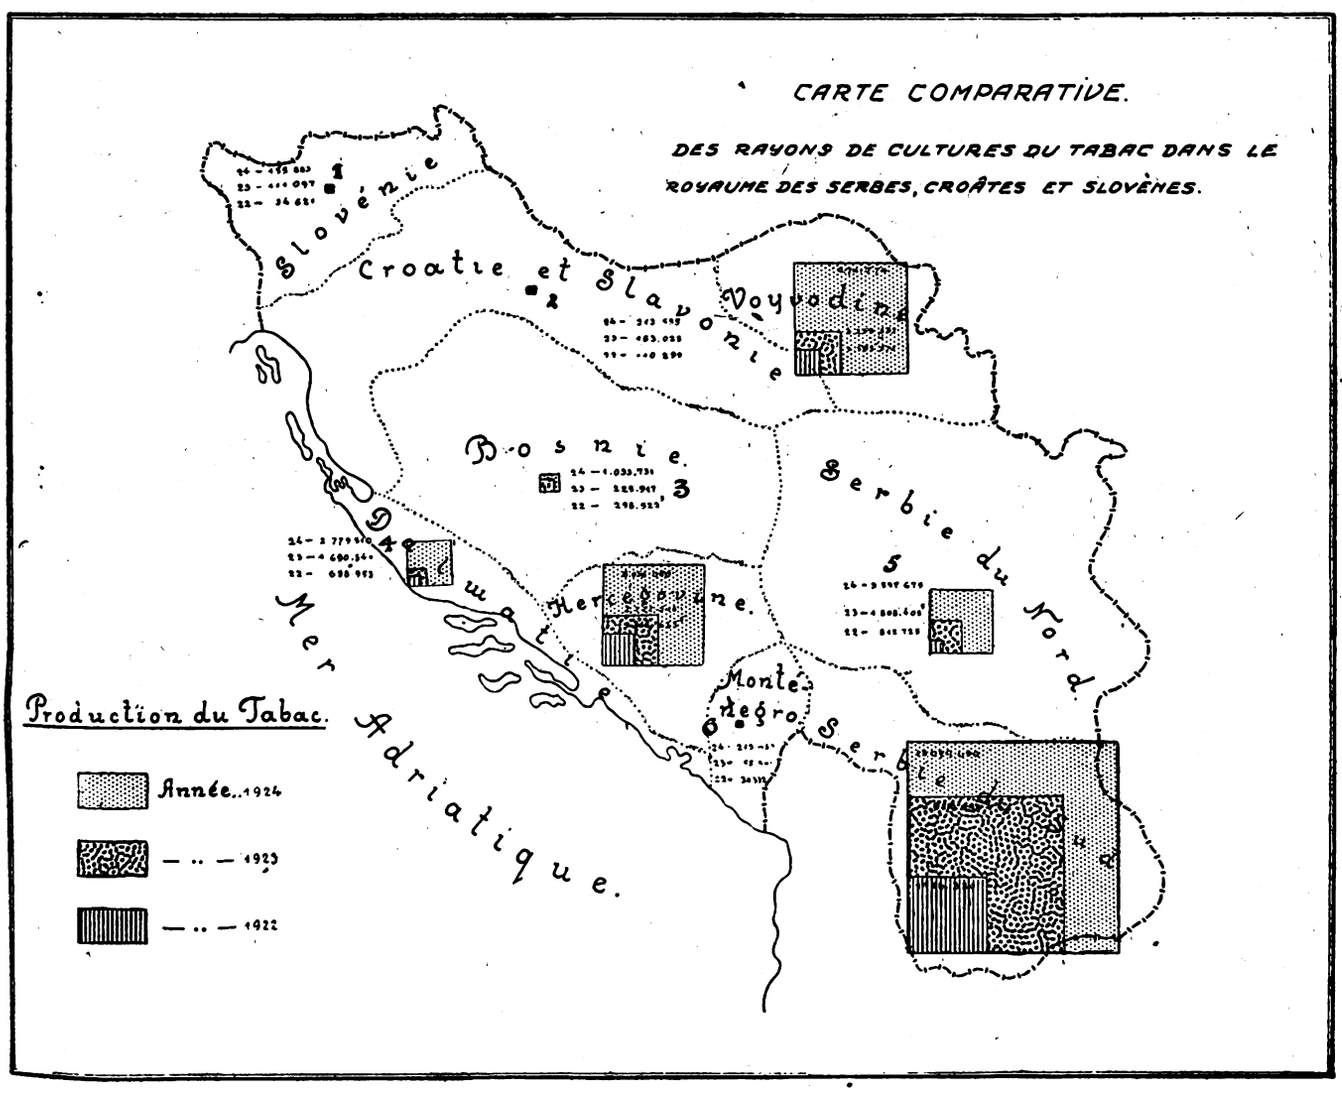
There are eight factories which are engaged in the preparation of the tobacco. The capacity in 1923 was as follows:—

Factory.	Cigarettes.g	Coarse Tobacco.	Cigars.	Plug Tobacco.	Value manuf. in Dinars.
Nish	670,312,827	2,090,335	—	—	476,539,839
Sarajevo	640,1f0,940	1,376,845	—	—	382,510,839
Liubliana	638,437,000	1,301,878	12,189.260	169,659	358,921,585
Mostyr	215,679,000	391,395	—	—	111,172,050
Travnik	112,463,209	405.809	—	—	102,610,070
Banjaluka	250,692,143	616,474	—	—	151,219,883
Zagreb	—	—	9,434.000	—	13,048,500
Senj	—	—	13,990,000	—	10,349,000

Thus, the total production of the eight factories in that year (1923) amounted to a value of 1,606,371,766 dinars, a fairly considerable figure.

The large increase in production last year, which in round figures amounted to 33,000,000 kgs, against which there was a home consumption of 12,000,000 kgs., not only allowed the security of good reserves, but also left a considerable quantity for export.

For this the way is open. The Monopoly Management



Digitized by Google

sold the Czecho-Slovak Tobacco Control 1,700,000 kgs. of earlier crops of various varieties, and also effected last year a large transaction with the Polish Tobacco Control, by which the latter bought about 4.500,000 kgs of the 1923 crop of various varieties.

It is only when we realise the renown of Oriental (Thracian) tobaccos on the world market and the difficulty of competing seriously against them, that the qualitative value of our tobaccos can be estimated and the significance of this sale in connexion with the further development of our tobacco trade in the future.

To what should be ascribed the steadily increasing success of our tobaccos abroad and foreign interest in them?

In the first place there is the question of the types of tobacco. The tobaccos grown in South Serbia are practically all just those famous Oriental or Thracian tobaccos, while the conditions under which they are grown are just as good.

We have, therefore, the opportunity of becoming really serious competitors in the production of those Thracian varieties.

The Monopoly Management, conscious of this, has set itself the task, not only of maintaining the types, but also, where possible, of improving them. With this end in view it has established a testing and selection station, whose chief work it is, first, to maintain the purity of the existing types which comparison tests show to be the best. Only those varieties are to be grown in future which best answer to the needs of the country's tobacco industry and commerce.

Further, the Monopoly Management is endeavouring to make fermentation which is the final process undergone by the tobacco before it is ready for manufacture or trade, a process to be rationally effected, for it is only by careful fermentation that the good qualities of the tobacco can be retained, or its quality improved.

Finally, the Management is aware that the handling in the stores must be such as is demanded by the world markets, where there is a high stand of taste. In the world commerce æsthetics are not an empty idea. The markets requires representative classification and packing of the tobacco, and consequently a number of experts have been engaged and are already at work who understand this matter in every detail. This must certainly bring fruitful results.

The foregoing facts are sufficient to give a fair picture of the work of the Monopoly Management in Yugoslavia, whose motto is: Work is progress and standstill retrogression.

There is every reason to expect that Yugoslav tobacco will very soon take an important place in the world's tobacco trade, a place which by reason of its kind and value it should long ago have held, but which it must one day finally attain.

We believe that other countries will follow the example of Czecho-Slovakia and Poland and instead of going to the East to buy their tobacco will come directly to Yugoslavia, a policy which, we feel convinced, will be of advantage both to themselves and us. Good quality must make itself felt. J. ALEKSANDROVITCH.

FOREIGN TRADE.

In 1924 the commercial balance of the S.H.S. Kingdom showed imports of 578,588,568, and exports of 671,271,951 gold dinars. The value of exports as compared with imports was in the relation of 116.02 per cent; 100 per cent.

IMPORTS DURING THE FIRST HALF OF 1925.

During the first quarter of the year imports amounted to 177,959,472 and exports to 189,816,626 gold dinars.

UNITED
CIGARETTE MACHINERY

Digitized by Google

The relation therefore of exports to imports was 106.82 per cent.: 100 per cent. In the second quarter foreign trade was: imports 210,599,682, and exports 189,883,189 gold dinars, with a relation of 90.24 per cent exports against 100 per cent. imports.

Thus the commercial balance of the Kingdom for the first half of the year was:—

	Tons.	Value in Gold Dinars.
Imports	801,483	388,559,154
Exports	2,145,337	379,699,815

The relative value of exports for six months was therefore 97.90 per cent. to 100 per cent. This small deficit in the balance is a result of abnormally large imports during the first two quarters, arising from the fact that importers wanted to take the fullest advantage of the favourable rates of the old customs tariff, which ceased to be valid on June 20, and was to be followed by a new general tariff with much higher duties. But since the year is a fairly favourable one for trade, and exports will doubtlessly be considerably greater in the second half of the year than imports, it is safe to predict a favourable trade balance for the twelve months.

The chief import articles in the first half of the year were:—

Article	In millions of Paper Dinars	Percentage
Cotton textiles	808.3	17.6
Woollen textiles	250.9	5.4
Cotton yarn	219.0	4.7
Hardware	187.8	4 1
All kinds of flour	184 0	4.0
Machinery and apparatus ...	183.7	4 0
All kinds of coal	144.9	3.1
Raw coffee	127.1	2.8
Raw cotton	100.6	2.2
Raw skins of domestic animals	88 1	1.9
All kinds of wheat, rye, spelt	86.6	1.9
Crude and half-wrought iron	64.1	1.4
Petroleum	63.5	1.4

II.—EXPORTS DURING JULY.

During July the S.H.S. Kingdom exported goods to the amount of 291,494 tons, valued at 51,388,111 gold dinars. The chief articles of export in this month were:—maize, timber, eggs, cattle, fresh meat and meat products, and raw copper as well as the other usual Yugoslav export articles.

Thus the total exports for the first seven months of 1924 and 1925 amount to:—

	Tons.	Gold Dinars.
1st 7 months of 1924 ...	1.920.879	333.203.588

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended September 19 states:—

The rise in raw cotton values which commenced last week has been continued without any break worth mentioning and has affected a considerable change in the outlook. As was anticipated, most prospective buyers failed to get in at the bottom, and there has been a certain amount of activity due to the covering of commitments by such parties.

There has also been a little more evidence of customary seasonal developments for some foreign outlets.

Yarn.—Probably for the reasons mentioned above more business has been on offer both for American and Egyptian yarn. The improvement is more pronounced in some qualities than in others and quotations still display much irregularity, but on the whole the feeling is more cheerful. Prices are increased approximately to the extent of the rise in raw cotton.

Cloth.—A larger business has been transacted but buyers are by no means reconciled to the higher price which have to be quoted, and it appears rather doubtful whether they will be prepared to pay them except for urgent requirements. India has done a fair business principally in light and fancy goods again, but inquiry on behalf of China has fallen away. For Egypt and South America there has been a slightly improved demand. Purchases for the Continent have been, for the time, quite noteworthy.

Raw Cotton.—The news from the United States this week has been almost uniformly of an unfavourable character. In addition to this, or perhaps because of it, sales in Liverpool have been considerably higher than for some time past and prices are consequently higher, as already mentioned. Estimates as to the Bureau Report to be published on Wednesday next are all tending towards a reduction in the total crop. The reports from Egypt continue satisfactory, but prices are higher in sympathy with those of American. Closing quotations yesterday were as follows:—American Middling, 13.57; Egyptian Fully Good Fair, 28.85.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended Setember 10, state:—

Since our last report the futures market has been rather firmer both for Sakel and Ashmouni; the net changes on the week are as follows: Sakellaridis, 0.58 dollars up for November, 0.75 dollars up for January, 0.60 dollars up for March; Ashmouni 0.55 dollars up for October, 0.70 dollars up for December, 0.82 dollars up for February. A better feeling has been in evidence; it may be attributed to the advance in New York and to the improved turnover on the spot market. On the 8th inst., the following figures on the American crop were published by the American Bureau: Condition 56.2, estimated yield 13,740,000 bales, against 62,00 and 13,990,000 a fortnight ago. These figures were much below the market's expectation and since their publication New York has been rising steadily due, we understand, to short covering. The demand from abroad has again been rather poor for Sakel but fairly good for Ashmouni, the Continent being the principal buyer. Some exporters who consider the present premiums for Extra Uppers reasonable, have been buying these qualities and putting out hedges; in all probability this cotton is intended for consignments to Liverpool. We are of the opinion that the future course of the Ashmouni market will be more or less governed by that of New York, and for the time being we do not expect much change in the present difference between these two markets; with regard to Sakellarides, the tendency at present is weakish owing to the dull demand; however, the markets are more or less bare of stocks of this variety and this should act as a brake to any abnormal depreciation in its value. The week's receipts amount to 91,856 crs. against exports 42,081 crs.; the stock stands at 353,668 crs.

Spot: Minet-el-Bassal has been considerably more active this week and sales amount to about 8,600 bales of which we estimate 1,200 bales Sakel, 6800 bales Uppers, 450 bales Zagora, 100 bales Pilion, and 50 bales White.

Sakellarides: Rather more interest has been shown in this growth this week but the demand is still very moderate. Limited quantities of all grades have changed hands and small arrivals of new crop Sakel have been absorbed fairly readily at good prices. Spot differences are generally a little easier.

Ashmouni and Zagora: A good business has been done in all styles. With the exception of Fully Good Fair, which is rather dearer, spot differences are unchanged.

Pilion: A small business has been done in new cotton. Spot differences are inclined to stiffen for the good grades.

White: A retail business has been done. Quotations are nominal and have eased considerably.

Crop 1925: No feature of importance to mention. Picking is general in Upper Egypt and has commenced in the Delta. Prospects are good and point to a total production substantially bigger than that estimated by the Government.

The report of the Ministry of Agriculture for August reads: Weather was on the whole favourable. The harmful over-watering of cotton usually practised by many of the small cultivators has resulted in some bollshedding besides favouring vegetative growth. The attack of bollworms (Gelechia Gossypielle and Earias insulana) is general; in severity it is not more, if not less, this year than at the corresponding date last year. The wilt disease Aphis and Boll-rot, have caused certain damage to the crop. The crop is still considered about one week later than last year especially in basin lands where unnecessary over-manuring with nitrogeneous manures was practised. In Upper Egypt picking is general in basin lands and has actually begun in perenially irrigated areas. It is expected to begin picking the Upper Egyptian varieties in Lower Egypt about the middle of September.

British Consular Reports

IV.—EGYPT.

(*Concluded.*)

British Trade.

On the whole the year could not be regarded as satisfactory from the point of view of British trade. But Mr. Mulock states that although the decline in value of imports from the United Kingdom was very much greater from 1923 to 1924 than it was from 1922 to 1923, viz., £E778,000, as compared with £E39,000, some consolation may be derived from the fact that whereas the latter figure was the result of varying decreases in a large number of articles, the former is accounted for in the main by a very few goods, with the result that those which have appreciably increased in value are in the majority. The total imports from the rest of the British Empire have risen from £E4,046,040 to £E4,541,931, thanks principally to increases on the part of Australia and other British Possessions in the Far East. The increase in imports from Australia and New Zealand is largely due to wheat flour, which accounts for £E230,000 out of a total increase of £E280,000, and contributes all but £E180,000 of the total imports from Australia in 1924.

The value of Egypt's imports in 1924 was £E50,736,918 as compared with £E45,276,963 in 1923, while that of the exports was £E65,733,935 as against £E58,387,327. The following table shows the share in the trade of the United Kingdom, the rest of the Empire, and the principal foreign competitors.

	Exports to Egypt. £E	Imports from Egypt. £E
United Kingdom	13,993,584	31,955,625
Rest of Empire	4,541,931	418,029
Italy	5,230,772	4,069,082
France	4,688,718	8,614,073
Germany	2,946,739	3,971,656

This table emphasises very clearly the overwhelming advantage of the British market to Egypt.

Foreign Competition in Textiles.

The United Kingdom lost ground in several lines of textiles during the year. Competition from Italy was particularly keen, and it is stated that it is now exceptional to find any large importer who does not stock some regular lines of Continental manufacture. While the total volume of cotton piece-goods absorbed by Egypt during the year under review fell by about 9 per cent. below that of the year 1923, the United Kingdom's share of this trade decreased by a fraction over 14 per cent. The high prices ruling on the cotton market were not reflected in increased sales of piece-goods, but the satisfactory financial position was undoubtedly responsible for the healthier lists of book debts with which merchants were able to close their year. Although, perhaps, it is not quite an accurate estimate of the year's trade in the five main categories of cotton piece-goods to consider too carefully the actual value of imports compared with previous years, owing to the fact that prices have fallen very considerably since the boom year, and that foreign competition has also become more acute, it must nevertheless be admitted that the results of the year's trading from the point of view of United Kingdom firms cannot be considered to have been very satisfactory, as, with the exception of bleached goods, light printed goods, and light goods dyed in the yarn, the volume of goods supplied by the United Kingdom decreased very considerably, while in many of the principal lines Italian firms made extraordinary headway.

On examination of the various causes to which may be attributed the steadily increasing strength of competition from Italy, the heavy fall in the lire exchange must be considered as having contributed very largely to the successful sales of her goods in the Egyptian market. The grouping under a central control of the several industries which combine to turn out the finished article, thus eliminating many costs of production, and the low cost of labour as compared with industrial wages in the United Kingdom, must inevitably contribute to the advantage of Italian firms. Further, the fluctuations in the exchange have led to the investment of Egyptian currency in lire when the latter have been cheap, and this money has frequently been used for the purchase of goods when prices were relatively high as the result of subsequent rises in exchange. In this connection it must not be overlooked that the element of gambling appeals irresistibly to many local merchants, with the result that recourse to these methods of business has been fairly widespread.

Further, the methods of merchanting adopted by Italian houses and their local representatives may be worth examination. The goods are normally sold c.i.f. Alexandria at a price quoted in lire with varying discount rates, according to the standing or importance of the client. In the case of the larger importing houses these discounts generally amount to 3 per cent., with two to three months' credit, but in special cases discounts have been offered at as much as 8 per cent., and even 11 per cent. This, of course, is seldom done. There are no extras to the prices quoted, as these include packing, patterns, shipment, Customs and relevant dues, etc. Owing to the credit facilities offered by Italian exporters, local merchants have been buying Italian goods for choice, as they are able to sell to the dealers in many cases before they actually pay for them themselves. Thus every facility is offered to the local merchant to trade with the minimum of cost or investment on his part. An added advantage enjoyed by Italian firms lies in the regular and frequent steamship communication and the comparatively short voyage between Egypt and Italy.

It is pointed out that United Kingdom trade has fallen away very considerably in the supply to Egypt of the following commodities: (*a*) iron and steel bars and billets; (*b*) iron and steel girders and joists; (*c*) non-galvanised sheets and plates; (*d*) axles, wheels, and springs; (*e*) rivets, nuts, and washers. There was also a certain reduction in the United Kingdom's trade in constructional iron and steel cables, chains, anchors and grapnels, wrought-iron pipes and fittings. The decline in the United Kingdom's trade in so many lines is almost entirely due to price conditions and high freights, and until these can be reduced very considerably future prospects for increasing trade are not very bright.

The satisfactory position of the United Kingdom in the matter of the supply to Egypt of stationary combustion engines is worthy of some notice. The great bulk of this trade was in low-powered engines, mostly cold-starting four-cycle engines of up to about 50 h.p. for use in connection with artesian wells in Upper Egypt. There was also a wide sale for vertical two-cycle engines. The market for high-powered engines is naturally limited to large power installations, mostly for Egyptian Government use, but those for private use are, owing to Govern-

ment control of the Nile, necessarily limited to a few estates. Swiss and German firms have been most successful in the market for these goods, and during the year, with but one exception, all Egyptian Government contracts for power installations were obtained by Swiss or German houses, in many cases working in collaboration, e.g., the Swiss supplying the motors and the Germans the electrical appliances.

Exports.

Exports from Egypt increased by £E7,346,608, or nearly 12.6 per cent. in 1924. The principal decreases were in sugar, which accounted for nearly £E600,000, and cottonseed oil, which further reduced the gross increase by nearly £E140,000. The decrease of sugar was due partly to the high price of the Egyptian product as compared with those of other countries, and partly to the fact that local stocks had been largely exhausted during 1923. That in cottonseed oil appears to be due to the fact that Germany whose purchases in 1923 constituted 40 per cent. of the total exports, prefers to crush Egyptian cottonseed at home (as is evidenced by her largely increased consumption of that commodity in 1924).

Raw cotton was, as usual, responsible for the great bulk of the total increase in value of exports, but so far from a rise in value of £E7,038,000 being accompanied by a rise in quantity, the volume of exports decreased by 220,000 cantars. Cottonseed and cottonseed cake both decreased in volume, but in each case the rise in cotton prices was reflected in increased values.

Substantial increases in value and quantity occurred in eggs, onions, phosphates, raw flax and wool, rice, and cotton piece-goods, grey, the last-named being purchased principally by Greece, Syria and Turkey, and amounting in all to 460 metric tons.

The decline in the export of cigarettes continues, and although this amounted to less than 9 per cent. in 1924, as compared with 50 per cent. in 1923 (i.e., in relation to the volume exported in 1922), the total quantity of 170,000 kilos. in 1924 is only 20,000 kilos. in excess of the total import of cigarettes, which were supplied almost entirely by the United Kingdom, and which incidentally, decreased by 10,000 kilos. In spite of an increase in the import of leaf tobacco, the 1924 total of 6,900,000 kilos. of the raw material is from one to two million kilos. below what is considered as Egypt's normal consumption, and the sales, both local and overseas, of cigarettes made in Egypt will probably continue to be adversely affected so long as no attempt is made to remove one or more of the various obstacles which beset this important Egyptian industry.

With the exception of Mesopotamia, Palestine, Syria, Turkey, and the Empire overseas, which are not purchasers of cotton, the rise or fall in the annual value of Egyptian produce exported to the principal purchasing countries corresponds, as a general rule, fairly closely to the increase or decrease in their respective purchases of cotton. Cotton was mainly responsible for the increase in exports to the United Kingdom, Czecho-Slovakia, France, Germany, Italy and Switzerland, and for the decrease in the case of Austria, Japan, Russia, Spain and the United States of America. The most noteworthy feature of the exports of raw cotton to the nine principal purhasing countries is that a small decrease in the purchases of the United States of America and a large increase in those of France have raised the latter country to second place after the United Kingdom, and ousted the U.S.A. from a position that she has held annually for some time.

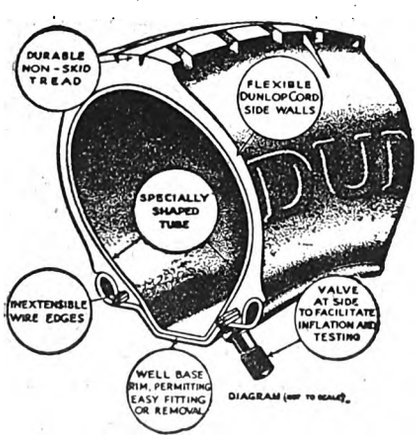
With the exception of rice and sugar, the United Kingdom is again the principal purchaser of Egypt's chief exports, viz., cotton, eggs, cottonseed, cottonseed cake and oil, and onions.

The Salonika Fair, which was to have been held from October 18 onwards, has been postponed until May 15.

Of the 653 exhibitors at the Liubliana Fair this year, 442 belonged to Slovenia, 54 to Croatia, and 14 to Serbia. There were also 37 exhibitors from Czecho-Slovakia, 30 from Germany, 23 from Italy, 13 from the United States, 7 from Great Britain, and 6 from France.

Dunlop leads the world again!

Dunlop made the first practicable pneumatic tyre in 1888. To-day Dunlop is still the leader in tyre design. By evolving the well base rim, which is the ideal rim for Balloon Tyres, Dunlop has set an example which no doubt will be followed by the whole motoring world.



DURABLE NON-SKID TREAD
FLEXIBLE DUNLOPCORD SIDE WALLS
SPECIALLY SHAPED TUBE
INEXTENSIBLE WIRE EDGES
VALVE AT SIDE TO FACILITATE INFLATION AND TESTING
WELL BASE RIM, PERMITTING EASY FITTING OR REMOVAL
DIAGRAM (NOT TO SCALE).

DUNLOP RUBBER CO. LTD., BIRMINGHAM.
Branches throughout the World.

DUNLOP
CORD BALLOON TYRE
AND WELL BASE RIM EQUIPMENT
should be on your NEW CAR because it is

SAFEST. The tyre is retained on the rim independently of the inflation pressure, and cannot become accidentally detached.

STEADIEST. Its broad base and well proportioned construction provide lateral stability—reducing "roll" and side-sway.

SIMPLEST. The tyre can be fitted and removed without effort, and the rim formation permits tyre inflation and testing in the most convenient manner.

LIGHTEST. The rim is made in one piece—is extremely strong, and is lighter than the S.S. Rim of conventional form.

Whether your new car is of European, American or Canadian manufacture, it can be fitted with Dunlop Balloon Tyres and well base rims if you

Near East Markets.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended September 12:—

Sultanas.—The arrivals on the Smyrna market since the opening of the season are estimated at 7,185 tons; sales to date are put at 6,760 tons. Closing prices, Smyrna; London-Liverpool are types 12, 60s.; types 13, 63s.; types 14, 66s.; types 15, 68s.; types 16, 72s.; types 17, 76s.

The market closed strong at an advance of 2s. to 3s., over last week's level. Buying has been active throughout the week. Shippers have found themselves obliged to start covering in September engagements, and the market has toned up under the pressure of forced purchases. Arrivals keep reaching the market very slowly and the impression is gaining ground that the crop is likely to prove short of the general estimates.

Figs.—The arrivals are estimated at 49,734 bags, and the sales to date are put at 40,134 bags. Notwithstanding more liberal arrivals all through the week, the market has shown considerable strength. A determined effort by the larger shippers to reduce the level of prices has been countered with an immediate stoppage of supplies to market. The close is firm with a tendency to advance. The shortage of choice fruit suitable for packing the best grades of Layers, Locoums and Pulled begins to tell more as we get into the season. Good genuine naturals are likewise scarce.

SUDAN EXPORTS INCREASING.

The figures of the external trade of the Sudan for the first six months of this year show an increase of practically half a million pounds on the total for the corresponding period of 1924. Government imports amounted in value to £E913,616, a decrease of £E132,304, while public imports at £E1,761,497 show an increase of £E116,173, the total being £E2,675,113 as compared with £E2,691,244.

The value of the exports was £E2,820,941 as against £E2,392,087, an increase of £E428,854. Re-exports amounted to £155,792 as against £E99,619, while the value of the transit trade was £E54,279 as compared with £E24,145.

The principal increase in the public imports was in cotton piece-goods, the value of which was £E652,341, an increase of £159,594. Increases were also recorded in imports of soap, spirits, tea, and petroleum. There was an increase in the value of most of the chief exports. Ginned cotton rose from £E1, 261, 575 to £E1,468,272, this being due to the increased price of the commodity, while dura showed an increase of £E108,153 as a result partly of the higher price, partly of the increased demand for the Egyptian markets. Sesame and ground nuts showed increases respectively of £E42,437 and £E42,666. There was, on the other hand, a decrease of £E34,062 in the value of the exports of gum.

Great Britain is first in both imports and exports. The Sudan took 34 per cent. of her requirements from this country, or £E988,796, while Great Britain took 65.3 per cent. of the Sudan's exports, the figures being £E1,842,186. Egypt occupies the second place in both categories with 35 per cent. and 17.4 per cent. respectively.

THE GEZIREH IRRIGATION SCHEME.

The report of the Central Economic Board of the Sudan Government, dated August 28, gives the following notes on the Gezireh Irrigation Scheme:—

The beginnings of the Gezireh Irrigation Scheme have overshadowed everything in the Blue Nile Province throughout the month of July. At the beginning of the month everything was ready at Makwar, but the canalisation position was less satisfactory. A great many odd jobs remained to be done and very few canals had been filled from the pumps in accordance with the programme. On July 1 a beginning was made in raising the water upstream of the Sennar Dam—filling of the main canal between Kilom. 77 and Kilom. 99 from the Wad el Nau pumps began about the same time. On July 5 water was turned into the main canal beyond the Kilom. 77 regulator in small quantities, and on the 8th the level had risen sufficiently for the water from all three Wad el Nau pumps to be turned into this reach of the canal. On the same day the water level upstream of the Sennar Dam came up to the level of the main canal and a beginning was made with filling this reach from Makwar to Kilom. 57. On the morning of the 11th the water was approaching the Kilom. 57 regulator from both sides and an interesting race was won by the water from the Wad el Nau pumps, which reached the regulator at 9.00 a.m., 50 minutes before the Makwar water. Actually a large fish touched the regulator a second before the Wal el Nau water. From that time the testing of canals went on steadily, the work being much facilitated by the Sudan Plantations Syndicate taking over the testing of a large number of the canals. Later on they took over the whole area to be irrigated this year.

On July 15 the main canal was opened for irrigation. Water in the Shukaba canal was high enough for a very small area to be watered on the 17th, but very little watering was possible until about the 23rd. This was due to the necessity of bringing the canals gradually up to watering level, and the large number of breaches which occurred. None of these was important, but they all tended to put back the time when the whole Gezireh Irrigation Scheme would be in working order.

During the last week of July things had been going much better, and at the end of the month it was estimated that 33,000 feddans had been watered. There had been no heavy rain in the area up to the end of July, which is fortunate, but there have been several storms of from 1 to 3 inches which have done little damage. Luckily the first of these was not until the 24th, by which time the worst of the early difficulties had been overcome. It is hoped now that the system is well enough set for a really heavy rain to do comparatively little damage.

It has been decided to allow 5 feddans instead of 4 feddans of dura to each tenant on the Gezireh Irrigation Scheme, sufficient water to mature the crop being guaranteed from the canals. The balance of the 10 feddan block will normally be under lubia, but will be fallow this

Digitized by Google

year owing to the necessity of reducing water demands as much as possible until detailed methods of running water distribution have been worked out and thoroughly tested.

It is interesting to consider the effect of the above dura decision. Last season dura was planted and guaranteed water given for the first time. The first estimate of the yield was 2 standard ardebs per feddan, but later information made it clear that this estimate was too low. On that estimate 4 feddans per tenant would give a total production in the Gezireh Irrigation Scheme of 80,000 standard ardebs (300 rottles or 135 kilos) or 48,000 local ardebs against an average production before the Scheme of 140,000 standard ardebs or 84,000 local ardebs. On this basis the annual production would have been as great as the pre-scheme production in any year of moderate rains. It would have been less than in years of good rains when there is surplus dura, and greater than in bad years. In effect it would mean that less dura would have been available for export, but that the supply of dura for the Sudan would not have been reduced by the Scheme.

But the increase from 4 feddans to 5 and the latest information as to probable yields make the situation more favourable. It is probably safe to assume an average of at least 2 1-5 standard ardebs per feddan, which would give a total of 125,000 standard or 75,000 local ardebs, and it is probable that the yield will be $2\frac{3}{4}$ standard ardebs, which give a total of 137,500 standard or 82,500 local ardebs, which is practically the average pre-scheme production. It should be remembered that an average production maintained every year is worth far more to the Sudan than the old varying production, as it means less dura in years when we should have had more than our requirements and more when we should have had too little.

The Roumanian maize harvest is expected to be a record. The prospects are particularly good in Bessarabia.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

PROJECTED SOFIA MUNICIPAL LOAN.

The Sofia Municipal Council is negotiating for a loan of £500,000 to be devoted to road paving and the installation in Sofia of a complete canal system. Details are given in the current issue of the monthy report of the Bulgarska Banka of the terms of an offer by a group of English and German bankers which is prepared to advance this sum at 8 per cent., the price of issue being 85 per cent., and redemption to be made in 1946 by annual payments. The terms of repayment are that £14,000 is to be paid annually during the first four years, and this amount is to be gradually increased until the annual payments representing interest on the loan capital and the annual reimbursements reach the sum of £50,000. These payments will take place twice yearly, on September 30 and March 31. The loan will be guaranteed by municipal taxes. The money will be issued by the group of bankers in four instalments in 1926, 1927, 1928, and 1929, at the rate of £125,000 per issue. The paving of the streets and the canalisation of Sofia will be spread over a period of four years, from 1926 to 1929 inclusive, and the work will be under the supervision of the group of bankers. It is understood that three other foreign groups are offering to the municipality similar propositions, which are now being considered. A loan project will be drafted and submitted to the Chamber next session.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at July 31, 1925, published in conformity with Article 8 of the Statutes. Banking Department:—Liabilities: share capital, £E2,925,000 (300,000 fully-paid shares of £10 each); reserve fund: statutory reserve, £E1,462,500; special reserve, £901,875; current, deposit and other accounts, £E13,652,281; Egyptian Government, £E20,183,022; Sudan Government, £E300,818; Mixed Tribunals, £E1,628,673; bankers' accounts, £E424,288; cheques and bills payable, £E339,696; sundry other accounts, £E778,755—£E42,596,908. CHESS.

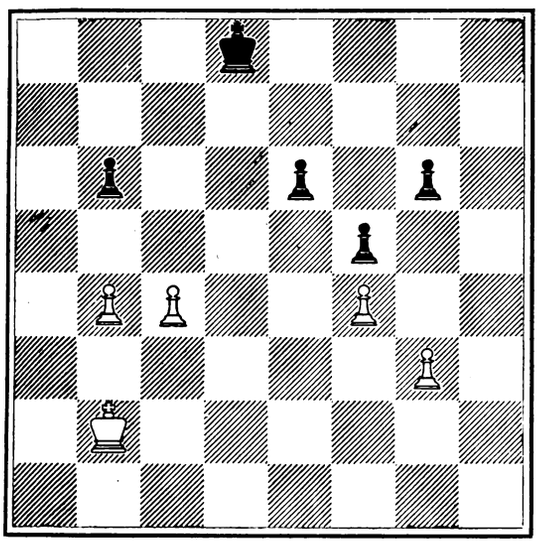
By "CARO-KANN."



PROBLEM No. 14.

White to play. What result?

Solution to Problem No. 13:—1,K—B3 (K—K3 is dealt with subsequently), K—K; 2, P—Kt5, K—Q2; 3, K—B4, PxP (ch); 4, KxP, KxP and wins. If 1, K—K3, K—K; 2, K—K4, K—Q(!); 3, K—K5, K—Q2; 4, P—Q5 (there is nothing better), KPxP; 5, P—Kt5, PxP; 6, KxP, P—Kt5; 7, K—B4, KxP and wins.

We are now nearing the end of the dead season in the chess clubs, and very shortly the entries will be made for the winter tournaments. But apart from the usual quick-time tournaments with which most clubs invariably open the season, there will be nothing to relieve the tedium of the impatient player until the end of next month. I have often thought that this interval might well be shortened, and conversely that more vacant weeks should be provided in the tournaments. A game a week does not sound much, but in practice the strain is very appreciable.

The following game was played between Mr. H. E. Atkins and Mr. T. H. Tylor in the British Championship, the first-named player having white:—1, P—Q4, P—Q4; 2, P—QB4, P—QB4; 3, Kt—KB3, Kt—KB3; 4, Kt—B3, Kt—K5; 5, P—K3, P—K3; 6, KtxKt, PxKt; 7, Kt—Q2, P—KB4; 8, B—K2, B—Q3; 9, P—QKt3, Q—Kt4; 10, P—Kt3, P—KR4; 11, P—KR4, Q—R3; 12, B—Kt2, Kt—Q2; 13, Q—B2, Kt—B3; 14, P—B5, B—B2; 15, Kt—B4, Kt—Q4; 16, P—B3, O—O; 17, Kt—K5, P—KKt3; 18, B—QB, Q—Kt2; 19, B—QKt2, BxKt; 20, PxB, B—Q2; 21, B—Q4, B—K; 22, QR—Kt, P—QKt4; 23, QR—Q, Q—KB2; 24, R—R, P—QR4; 25, R—Q, P—R5; 26, P—QKt4, Q—KKt2; 27, K—Q2, Q—R3; 28, K—B, R—R2; 29, K—Kt2, K—R2; 30, R—R2, QR—KB2; 31, R—K, B—Q2; 32, B—Q, B—K; 33, K—R, K—Kt2; 34, B—K2, K—R2; 35, QR—R, K—Kt; 36, Q—Q2, K—R2; 37, P—B3, PxP; 38 BxP, B—Q2; 39, Q—K2, B—K; 40, R—Q, Kt—K2; 41, R—KKt, K—R; 42, K—R2, Q—Kt2; 43, B—QKt2, Q—R3; 44, P—K4, PxP; 45, BxKP, Kt—Q4; 46, R—K, R—KKt2; 47, K—R, R—(Kt2)—KB2; 48, R—Kt2, Q—R2; 49, K—R2, Q—R3; 50, BxKt, BPxB; 51, B—B, Q—R2; 52, B—Kt5, R—B4; 53, B—B6 (ch), K—Kt; 54, Q—K3, B—B3; 55, Q—Q4, K—B2; 56, R (K sq)—KKt, R—KKt; 57, R—KB2, Q—R3; 58, K—Kt2, K—K; 59, K—B2, K—B; 60, K—Q, K—K; 61, K—K2, K—B2; 62, B—Kt5, Q—R2; 63, Q—K3, R—KR; 64, K—Q2, R—KKt; 65, B—B6, K—K; 66, P—Kt4, PxP; 67, RxP, Q—R4; 68, R—Kt5, Q—R2; 69, Q—KKt3, K—B2; 70, R—B4, K—B; 71, P—R5, PxP; 72, R(B4)xR, PxR; 73, RxR (ch), QxR; 74, B—K7 (ch), resigns.

DACIA ROMANO PETROLEUM.

The report of the Dacia Romano Petroleum Syndicate covers two periods, nine months to December 31, 1923, and the year 1924. In the former period the production amounted to 9,360 tons. More in well No. 2 came into production in April, and to December 31, gave 6,006 tons. The refinery was closed in November owing to lack of crude oil. The sum of £20,063 has been written off capital items for depreciation. After deducting this, together with the Debenture interest and other outgoings, there is a deficit for the period of £14,728. During 1924 the production came to 5,692 tons. The refinery remained closed. There was a loss on working of £1,513, and after charging general expenses, Debenture interest, and £28,694 for depreciation, the loss for the year was £39,801, increasing the total deficit to £54,529.

Mr. Albert Abid, of Dulford House, Cullompton, Devon, who died on July 23, aged 77, left estate "so far as at present can be ascertained" of the gross value of £30,148, with net personalty £16,866. The testator left £200 and his picture "The Lord's Supper" to the Armenian Church at Julfa, Ispahan, in which he was christened; £100 to the village church at Julfa, Ispahan.

BY VIRTUE OF THE AUTHORITY CONFERRED UPON THE COMMITTEE OF **THE IMPERIAL OTTOMAN BANK** BY A RESOLUTION OF A GENERAL MEETING OF THE SHAREHOLDERS OF THE BANK HELD ON THE 16th DAY OF JULY, 1924, THE COMMITTEE HAS DECIDED TO CHANGE THE NAME OF THE BANK TO

"OTTOMAN BANK,"

BY WHICH NAME IT WILL BE KNOWN ON AND AFTER THE 1st OCTOBER NEXT

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Mosul: A New Phase.

Until The Hague Tribunal has delivered its judgment on the points submitted to it by the Council of the League of Nations, no progress can be made in the settlement of the Mosul controversy. Before leaving Geneva, however, the British Colonial Secretary called upon the League Council to obviate the unsatisfactory situation along the Brussels Line, which was the subject of charges and counter-charges between the British and Turkish Governments, by appointing a Commissioner who, with a British and a Turkish assessor, would be able to keep watch and ward on the provisional frontier until such time as a definite decision could be reached. The debate on this question afforded another object lesson of the wide gulf that still divides Turkish mentality from that of Europe. On behalf of the British and Iraq Governments Mr. Amery gave the undertaking that every facility would be afforded the Commissioner for the purpose of his investigations in territory under their control, that is to say, south of the Brussels Line. When the Turkish delegate, who had already protested against this attempt on the part of the League to mix up the question of minorities in Turkey with the Mosul dispute, was asked to give a similar assurance that the League's Commissioner would be accorded help and freedom of movement north of the Brussels Line, he tried to evade the question. Ultimately, when forced into a corner on the subject, Rushdi Bey pleaded that he must ask for instructions from Angora. The Chairman of the Council at this stage declared that the resolution for sending a Commission to the Mosul frontier had been passed, and he expressed the hope that the Turkish Government would give for north of the Brussels Line the same assurance as had been given by Great Britain for south of the Line.

Turkey's Embarrassment.

This very simple matter of safeguarding peace on the Iraq frontier seems to have thrown Turkey into a state of profound perturbation. Not content to await a reply from his Government, Rushdi Bey decided that he must return post-haste to Angora for instructions, and left Geneva the next day. Whether this anxiety was personal or reflected the concern of the Turkish Government does not appear. The fact that, before leaving, he informed the Council that Turkey would not allow investigations north of the Brussels Line, throws responsibility on the Government. Turkey is accused of deporting, under particularly harsh conditions, a number of Christians settled in the region between the Brussels Line and the frontier claimed by Great Britain. The first answer of the Turkish Government was to deny the statement; the second was to the effect that if the deportations have taken place, they are no concern of Great Britain's or the League's, as the people in question are Turkish subjects. Now, in spite of the comparative indifference of the Mosul Commission towards the sufferings of the Assyrians, it may be expected that the Council of the League, which is strongly actuated by humanitarian motives and by idealism, albeit a chastened one, will interest itself in their fate, and the persecution of these unhappy people at a moment when the Council can be said to be settling their future status is a very deliberate rebuff administered by Turkey to the League. Incidentally the Turkish action makes the recommendations of the Mosul Commission appear particularly inept; for, after pointing out that the Assyrians within the Ottoman Empire were rather better off than the other Christians, it was "led to conclude that the most satisfactory solution would be for the Assyrians to accept the offer made by the Turkish delegate at the Constantinople Conference, that they should be allowed to return to their former homes." Even the proviso that the Assyrians must continue to enjoy the same local autonomy as formerly and that their safety must be guaran-

Digitized by Google

ceed by a complete amnesty seems, in the light of what has happened, to emphasise the Commission's failure to appreciate the facts of the situation. It would appear, therefore, that the Turkish Government has made up its mind for the present to refuse to have anything more to do with the League. Turkey has been out of her depth at Geneva, and her rulers at Angora are evidently too sensitive, and too uncertain of themselves, to face a diplomatic defeat with indifference or with a wise sense of relief that a tiresome question was out of the way. They may consider that their dignity requires them to flaunt the League of Nations and to throw down the gauntlet to Great Britain. If they do, it will not matter overmuch. The people of Great Britain, who have not allowed their feelings of innate friendliness towards the Turks to be affected even by the Great War, will not take to heart a few pin-pricks from a discomfited Turkey. If only two or three British newspapers can be prompted, either by more knowledge of the question or by shamefacedness at the mischief they have already done, to hold their peace on the subject of Mosul, the Turkish phase will pass. Those who have tears to shed should save them for the Assyrians.

The International Aspect.

Attempts are being made to apportion blame among the sub-Committee of three that recommended the Council of the League of Nations to submit the question of its competence to The Hague Tribunal. The fact that already the views attributed to one or other of the members of the sub-Committee are said to have been diametrically opposed to those that he actually held suggests that the effort to allocate responsibility is as idle as it is superfluous. Responsibility rests with the Council and not with the sub-Committee. It is more than likely—in view of the composition of the Council—that it was actuated more by concern for Western Europe than by knowledge of or concern for the Middle East. A striking feature of the Mosul controversy has been the very marked interest taken in it by Soviet Russia. The Moscow Government is generally credited with having been responsible—together with certain English newspapers—for the stiffening of the Turkish attitude. Certainly the well-dragooned Soviet press has for a long time past devoted the major part of its attention to Mosul. The League Council may have argued to itself that a decision unfavourable to Turkey at this particular moment might commit Russia to make good her intrigues at Angora; Germany in turn might be involved to the extent of being distracted from worthier causes, and consequently the Security Pact might be jeopardised. On the other hand, given the Security Pact signed, sealed and delivered, any threads uniting Russia and Germany would be at once snapped, and the Soviets would have to decide whether Turkey offered a sufficient substitute for Germany, or whether it might not be a shrewder move to affect a new outlook on life and try to qualify for membership of the League, in order to carry on subversive doctrines from within. In the latter case, Turkey would be dropped by Moscow and be left to carry on her quarrel against Great Britain herself. If the League Council has adopted this line of argument, it is a subtle one and, from the Council's point of view, would justify it in exposing the two disputants to immediate complications for the prospective advantages to be reaped by Europe as a whole.

M. Pashitch: Unifier of the Balkans?

Much will be forgiven the League of Nations, if it is found that its sixth session has been the means of laying the foundations of a better era in the Balkans. What has happened is that the meeting in Geneva has provided an opportunity for Balkan statesmen to come together without the necessity of preparing, for the benefit of their respective countries or of the political Opposition, formal agenda. Consequently, they have been able to emphasize points of agreement rather than to feel obliged to signal homewards their resolute stand on points of difference. This is an eminently sound beginning—far too good to be spoiled by foolish anxiety to build too rapidly upon it. If the respective Governments are satisfied that a Balkan *rapprochement* is possible, their first task should be to convince their own people of the fact, before making any attempt to convert the better understanding into a concrete agreement. The experience of the Greco-Bulgarian Protocol and M. Rendis' Security Pact endorses this warning. The key to the whole situation will be found in Yugoslavia. If M. Pashitch should have decided that there can be no better climax to a long and strenuous life of public service than to go down in a halo of glory as the Unifier of the Balkans, then much can be accomplished in a short time. He has already brought Serbs and Croats together. If the visit of the King and Queen to Montenegro should be followed by the despatch of M. Raditch with plenipotentiary powers to make peace with the Macedonians, there can be no doubt that Yugoslavia could at once establish a lead in the Balkan Peninsula, which all the States would immediately follow. The settlement of the Macedonian question would convince the Yugoslavs that there was no obstacle to an agreement with Bulgaria; Greece is waiting to be allowed to conclude a Greco-Yugoslav alliance; Roumania is the one country that can truthfully declare that she has nothing but feelings of neighbourly relations with and friendship for the other States of South-Eastern Europe. A diplomatic word from the Belgrade Government would enable Greece and Bulgaria to settle the outstanding question of a Bulgarian port on the Ægean Sea. Failing, however, a settlement in Yugoslavia itself, the goal of Balkan unity must still remain at a distance.

The Montenegrin Visit.

Now that Serbs and Croats have been officially reconciled, and King Alexander and Queen Marie have visited Montenegro, there is only one thing needed to complete a trilogy of welcome surprises for a country as weary of strife as the rest of the world—the pacification of the Macedonians. Let us hope that even this the veteran Prime Minister has now up his sleeve. It was a happy inspiration to time the Royal visit to Montenegro so that it coincided with the festivities in connexion with the restoration to the mausoleum on the summit of Mount Lovchen of the remains of Vladika Peter Nyegosh, which had been removed to Cettigne during the Austrian occupation. Peter II., who died in October 1851, was the last of the Prince-Bishops of Montenegro, a ruler who combined in his own person the triple rôle of priest, lawgiver and military commander; he was also one of Montenegro's poets and, as great-uncle of the late King Nicolas, is an ancestor on the maternal side of King Alexander himself. The official accounts of the festivities leave nothing to be desired, and we can but hope that the sore-tried Montenegrins will have seen in the pious act of their Sovereign taking his place among the Bishops in carrying the remains of Vladika Peter out of the Cettigne Church an earnest of his Government's desire to let bygones be bygones and to establish a new era for the little country. A still more convincing indication of a changed attitude in Belgrade was the King's proclamation of a complete amnesty to Montenegrin political offenders, made known in a speech in which he called upon all Montenegrins to collaborate for the common welfare of Yugoslavia. It remains only for the Yugoslav officials on the spot to give effect in the daily routine of Montenegrin life to the good intentions of the Government and the sincere and unremitting efforts of the King for the internal harmony of Yugoslavia.

THE WAHHABIS AND ISLAM.

Only fitfully, and almost by chance, are we allowed to look under the veil that from the beginning of this year has enshrouded affairs in Central and Western Arabia. Occasionally a stream of light is thrown from Syrian or Egyptian sources, but more often than not the Hashimite Agency at Cairo merely denies what has been said by the Nejd Representative at Damascus. It is all, at least to the dispassionate observer—such as the British Government in this internecine quarrel between Sultan Ibn Saoud and King Ali—very tantalising. Sometimes, it is true, Riyadh breaks the monotonous sequence by denying what Jeddah asserts, but for the most part this making of charges and counter-charges is just a diverting account of the happening of nothing. Recently, for instance, we have been regaled with circumstantial stories of the violation of holy places in Medina by the *Akhwan*, and only after a considerable time was the defence made by Ibn Saoud that no gunfire had been used upon the walls and buildings of Medina, and that the Wahhabis had no intention of defaming the tomb of the Prophet Mohammed. Still more recently we were treated to a report that Medina had at last capitulated before the Wahhabi invaders, and that Ibn Saoud hiself had broadcast the news of its capture from the wireless station in Medina. For repudiation of this apparent legend, however, Hashimite circles did not behave in so laconic a manner as the Wahhabis when charged with the sacrilege of Medina: they promptly issued a denial of the surrender, and announced that their two chief possessions, Medina and Jeddah, were yet in wireless communication with each other. As far as can be seen, therefore, the local situation in Arabia has altered but little in the last few months; either because he has insufficient reserves, so far from his native Nejd, or, more probably, because the taking of Medina and of Jeddah except by the most peaceful means would involve him in conflict with fellow-Moslems, Ibn Saoud has stayed his hand, and has allowed King Ali at Jeddah and the Emir Shakir at Medina to continue in their challenge of defiance.

But although the local situation may not have changed, it is possible now more clearly to delineate the attitude of Islam towards the Wahhabis. For the first time for a century, a *haj* has been held under Wahhabi auspicies, and although few really reliable accounts are available of the conditions prevailing at Mecca and on the routes to Mecca, it does seem to be a fact that since the pilgrimage Moslems generally have been more ready to look on the actions of Ibn Saoud with suspicion. The Puritans of Nejd may or may not have insulted the Holy City of Medina—in our view, the probability is that the extraordinary power of Ibn Saoud has been sufficient to prevent their doing so—but at all events the mere rumour that the tomb of the Prophet and of his uncle had been fired upon was sufficient to project a considerable part of Islam into the deepest grief. Egypt, it is true, indulged in no manifestations of sorrow pending the receipt of Ibn Saoud's satisfactory reply to King Fuad's inquiry—and then such manifestations were unnecessary; nor have we heard of any lamentation in Sunni Turkey. But in many quarters of India the official apologists of the Wahhabi régime, the Ali brothers, have been treated with contumely, and meetings of protestation at the violation of Medina have been numerous. Throughout Persia, also, the report that these fanatical Bedouin of the desert had repeated the offence with which their ancestors first shocked the Moslem world in 1810, was sufficient to cause a general strike of protest to be called; and in certain of the Shiah parts of Iraq there have been processions of indignation at the reported conduct of the Wahhabis. It would appear, therefore, that whatever the conquests of Ibn Saoud may mean, there is in them no immediate probability of a tightening of the bonds of Islam. In the Arabian Peninsula itself he may be completely successful in drawing laxer Moslems to his powerful creed, but in lands less subject to Bedouin influence a feeling of repulsion rather than of attraction seems to be dominant. Certainly his eclipse is not yet in sight; yet one cannot help comparing his present activities with similar Puritan activities, and reflecting upon their common, barren end.

At the same time it need not be supposed that, however limited geographically and politically the potentialities of the Wahhabis may be, a fresh spiritual impulse may not be sent through Islam. Assuming that Ibn Saoud has not really given offence to Shiah susceptibilities in the matter of Medina, would it not be possible that, by an astute (and probable) good-treatment of the numerous Shiahs in and about Medina, he might modify this traditional antagonism between the "Puritan" and the "infidel"? The Sultan of Nejd is a man who has immense notions of the power of Islam, and it is unlikely that he will confine his proselytising endeavours to those of the Sunni faith. If, for example, he could so persuade his followers that they should regard Shiahs as, say, Sunni and Shiahs regard each other in the Yemen, his position in Islam would be infinitely more commanding than it now is. Obviously there is no one to stop his making an attempt at religious unity in the Peninsula—the appeal the other day of King Ali calling upon King Fuad of Egypt to imitate the exploits of Mohammed Ali being a pathetic indication of how hopeless at the moment is the Hashimite cause—and the circumstances are in many ways much more favourable for a return by Moslems to the simple faith of the desert than they were during the last Wahhabi interregnum between the taking of Mecca (1801) and of Medina (1810). For one thing, the Wahhabis' objectives are in this century strictly limited by the presence of the R.A.F. between Palestine and Iraq; for another, they are now led by a man whose sagacity equals his sincerity. But how exactly they mean to take the rest of Islam into their confidence it is difficult to discover. The project of a general Moslem governance of the Holy Places which at one time Ibn Saoud was credited with entertaining appears to be very slow in materialising; nor have we seen any indication that the *Akhwan* would not like permanently to incorporate the Hejaz into their dominion. If, however, the Wahhabis aim at nothing better than political and consequent religious conquest, the end of their régime may be prophesied with confidence: upon the death of Ibn Saoud they will roll back to Central Arabia whence they adventurously and so gloriously came. But if, as we prefer to believe, Ibn Saoud is a man whose statesmanship is equal to the task which the fervour of his men has set it; if he can inform each *hajji* with some kind of Hanbalite zeal; if he can temper the effect of the ardour of his Nejdis upon the conquered tribes with the benefits of strong government, he will have left upon Islam an impress more considerable, perhaps, than any made since the advent of the Turks in Western Asia.

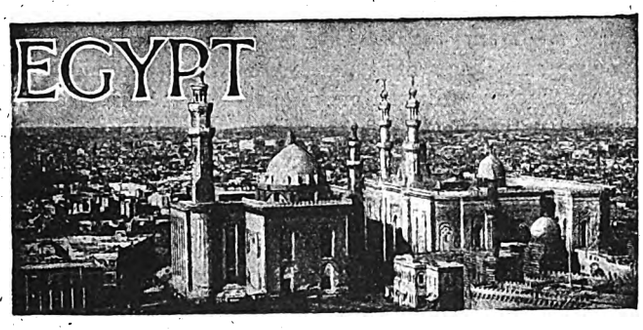
The Near and Middle East*

From Our Own Correspondents.



Cairo, September 20.

The Coalition Split.

Hopes that the Coalition split of ten days ago might still leave room for toleration, if not co-operation, between the former partners have now proved to have been ill-founded. The Unionists and the Liberal Constitutionals are now, if their respective newspapers, the *Ittehad* and the *Siyassa*, are faithful mirrors of the views of the parties which support them, almost as hostile to each other as to their oldest enemy, Zaghloul Pasha. The *Siyassa* is particularly skilful in attack, having spent almost its whole existence of three years in spirited offensives against the Wafd and its leader, and having behind it large party funds, is not compelled to trim its sails to suit every changing breath of popular opinion. For this reason it is able to support causes which are sometimes definitely unpopular, such as the religious issue over which it has lately defied all the sheikhs of Al Azhar. And, as the clever tactics of an infinitesimal opposition in the Chamber of Deputies showed last year, a bold front and a critical tongue, if judiciously employed, can upset the equilibrium of an overwhelmingly strong Egyptian Government. The present Ministry is far from being in the position of that of Zaghloul Pasha, and from the speeches which some of the Ministers have made during the past week it is evident that they are concerned over the opposition which they are now encountering. The Unionist Cabinet's expectation of life is, indeed, a poor one, and yet, since it is impossible, in present circumstances, to see where a better Government than that now in office is to come from, it must be hoped that anticipations of an early break-up of the present Ministry will not be realised.

Constitutional Irregularities.

Such an outcry as that raised over the arrest and subsequent treatment of Major Sheppard would not be possible in Egypt, since it is the custom here to arrest and detain pending trial persons who, similarly placed in Great Britain, would be bailed out immediately. The police and the Parquet exercise powers that would shock British ideas. In some cases these powers are illegally exercised, as, for example, in the case of fines which the police levy on drivers of public vehicles who are alleged to have broken traffic regulations. The police declare that their action is in the interests of the driver themselves, since taking the case before the Court would involve loss of time and, probably, a larger fine. This contention is probably correct in many cases, though it does not lessen the enormity, in British eyes, of the police acting simultaneously as prosecutors and judges. But it is a small matter compared with the astounding irregularities of almost every Government department.

Journalists' Duress.

A singular inconsistency in the matter of granting bail is now attracting the attention of local newspapers. The Editors of the newspapers *Minbar* and *Mahroussa*, together with a free-lance journalist, were recently arrested and cast into jail on a charge of publishing an article defamatory of the King, in his capacity of nazir of the Royal Wakfs, and also offensive to the judge who tried the now notorious Kaha Wakf case. These men have now been in prison for two months, and will have to remain there for at least another month before their case can be heard at Assizes. One is in hospital, while the other two, except in the matter of clothing, undergo the same treatment as any other prison inmate. The accused men have wealthy friends, and bail in any sum up to £1,000 apiece has been offered, but refused.

Bail of Alleged Murderer.

About the same time as these men were arrested three others were also thrown into prison, but their alleged offence was different, for they are accused of having murdered a woman, cut her body into four pieces, and dispatched it by train to a destination in Upper Egypt. One of the accused men is a dentist, and he, with the other alleged murderers, has been sent for trial, which will also take place at the October Assizes. But, in his case the committing magistrate has seen fit to release him on bail of £50. Is it surprising that the local Press has found some slight inequality in the treatment of the accused in these two cases?

7, Charles Street, LONDON, W.

ALBANIA.

Tirana, September 24.

A Ministerial Crisis.

Parliament was to meet this week; but its reassembling has been postponed in consequent of a sudden and unexpected ministerial crisis, the reasons for which have not yet been made public. MM. Cotta and Poga, Minister of

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Digitized by Google

Public Works and of Justice respectively, have sent in their resignations. The Minister of Finance (who is also Minister *ad interim* for Foreign Affairs) and the Minister of the Interior are both still abroad, the one in Paris, the other in Belgrade; and it is not yet known what attitude they will assume in the crisis.

The probable reason for the resignation of MM. Cotta and Poga is the extremely doubtful reception which, it is anticipated, Parliament will give to the measure for the ratification of the Agreement by which Sveti Naum and Vermosch are to be ceded to Yugoslavia. There is, as already reported, considerable resentment felt at Scutari over the cession of Vermosch; and public opinion has evidently been equally aroused on behalf of Sveti Naum, in the neighbourhood of Koritza. M. Cotta, it should be observed, is a Koritza man; and M. Poga is also from the South. It is quite probable, therefore, that they may be unwilling to identify themselves any longer with a measure which would lose them the support of their constituencies.

If Parliament refused to ratify the Agreement with Yugoslavia, an awkward situation would arise, and the position of the President would undoubtedly be weakened.

Resignation of M. Frasheri.

Another significant event has occurred in the contemporaneous resignation of M. Eshref Frasheri, Chairman of the Senate and ex-officio Vice-President of the Republic. M. Pandeli Evangheli, an ex-Prime Minister, has been appointed in his place.

M. Frasheri is the old leader of the Clique and, as already reported, he has been attempting to reconstitute this Society and to reconcile with the present régime those members of it who have hitherto been opposed to Ahmet Bey Zogu. M. Frasheri's resignation, therefore, is probably due to deeper reasons than those actuating the two Ministers. It is without doubt part of a political manœuvre which may have important consequences resulting in a broadening of the basis of consent for the present régime. If sucessful, however, it will entail inevitably the making of some concessions by the, at present, all-powerful President.

Return of M. Konitza.

Colour is lent to this view of the situation by the arrival in Albania this week of Mehmet Bey Konitza, the ex-Minister in London and Paris, who resigned his post after Ahmet Zogu's *coup d'état*. At the time he felt he could not serve under Zogu Bey, though he was never one of the latter's bitter opponents. He has always remained in close touch with M. Eshref Frasheri, who is a great friend of his. His return to Albania consequently is of considerable significance, when read in conjunction with the actions of his friend.

Mehmet Bey Konitza has had a long and varied experience of foreign affairs. He has already once been Foreign Minister. It will not be surprising if he is seen again in that capacity before long in a reconstituted Cabinet.

The Dowager Countess of Carnarvon.

Lady Carnarvon, the mother of the Hon. Aubrey Herbert, whose memory is gratefully preserved by all patriotic Albanians for the help he gave to the cause of Albanian independence, has arrived at Valona, bringing with her medical aid for sufferers from malaria, which assumes in Albania a very virulent form.

ROUMANIA.

Bucharest, September 17.

The Political Situation.

There is no apparent change in the political situation. The Opposition parties still continue to discuss in turn their chances of accession to power in the near future, while the Government Press from time to time protests mildly that the succession is not yet open, and that although the desire to come into power may be a very natural sentiment, yet, as Shakespeare has it, "they hold it not honest to have it thus set down." The Liberals are still determined to carry out their whole programme before retiring, and it seems very doubtful indeed whether anything is likely to put them out of office before the general election time in February next. It is true that they have not yet succeeded in obtaining any of the loans they wanted to help to re-establish the economic situation generally, and the railways in particular, and a good deal of popular criticism is directed, more especially against their foreign policy, on that account. On the other hand, most people are found to admit that it is more than doubtful whether any other party would have succeeded better, and that in all probability the country would have fared worse under the government of any of the other parties in the country.

Standardisation of Cereals.

One of the bills on the Liberal programme, which has not yet been passed is that for the standardisation of cereals. If this is carried, it will no doubt bring in its train many improvements, and will necessitate the building of silos and a general re-organisation of the grain trade. The bill, however, is not universally favoured, and it will be interesting to follow its fate through the Legislature.

Roumania and the League.

Great gratification is expressed in the Press at the election of M. Duca, the Minister for Foreign Affairs, to be Vice-President of the League of Nations, and it is felt that this gives Roumania a place of honour at the side of the Great Powers in this international body. When the question of the complaints of the Roumanian Minority peoples was raised at a recent meeting of the League M. Duca stated that he was able to give facts and figures to show that Roumania was treating the Minority populations with the greatest tolerance. In some respects this may be true. Unfortunately, however, with a population so little advanced as the Roumanians in the art of administration laws which appear moderately equitable on paper are apt to become harsh in the manner of their interpretation and execution, and it is this that gives rise to so much friction and bitter feeling. It may, therefore, fairly be said that a great deal of the fault lies not with the Government of Roumania but with the general backwardness of her people, who have not been accustomed, as have the minority populations, to live for centuries under the ordered rule of a power like Austro-Hungary.

The Bessarabian Exhibition.

The Chisinau exhibition has excited some popular enthusiasm during the last few days. It was opened by the King on September 8. The exhibition is intended to illustrate the fruitfulness of the Province of Bessarabia, which is principally devoted to the growing of cereals and tree fruits. Bee-keeping is also very common in this province, and considerable quantities of honey are produced, though mostly with rather primitive methods. It seems unfortunate that the exhibition should have been arranged in a year when the Bessarabian crop is probably the worst in the country, from lack of rain.

CYPRUS.

Nicosia, September 15.

End of the Summer Season.

Visitors have begun to leave the island. September 27, the date of a great annual fair and horse show at Omodos, one of the large wine-producing villages, is considered to mark the breaking up of summer and beginning of the rainy season. Many sojourners leave about this time, but those who can do so should stay on well into October, when the weather is still delightful, and the heat often still oppressive in the plains. Platres, a village a few miles below the Troodos camps, has grown into a large and fashionable resort, with many hotels. Visitors, chiefly Greek, devote themselves to card-playing, dances, concerts, etc., far more than to the attractions which nature offers in abundance. The Government offices are to return to Nicosia on the 15th or 16th, much earlier than usual. The Acting Governor, Mr. Fenn, is to leave on the 24th, when Sir Malcolm Stevenson is expected in time to take over, or soon after that date.

A New Wine Company.

A company has been formed by Greek and Cypriot capitalists for the manufacture of wines and spirits at Perapedhi, a village a few miles below the Platres and Troodos summer quarters. Here a factory was established and carried on for some years by Messrs. Chaplin, of London. They built extensive works, laboratories, and stores, and an attractive residence: and wines of very superior quality to those generally produced in the island were manufactured, grapes being bought from neighbouring villages. The new company proposes to develop the factory and to spend very considerable sums. There are some excellent wine and spirit establishments, especially in Limassol, and it is to be regretted that better arrangements could not be made for exhibiting and testing them at the Wembley Exhibition.

The Water Supply of Nicosia.

The Evkaf Department, to which reference was lately made, sank a series of wells in its property near the town hospital, Nicosia, and the use of the water has been allowed by the Evkaf to the town during the summer months. But it was found that there was simultaneously an appreciable diminution of the town supply, and in the opinion of experts—shared, it is said, by the late Director of Public Works—the opening of the Evkaf wells was the cause of the diminution *pro tanto*. It is hoped that some amicable and satisfactory arrangement may be come to regarding the rights. Otherwise it may be necessary to refer the matter to the law courts.

General News.

Voting for the new members of the Legislative Council for non-Moslems and Moslems is to take place on October 9 and 12 respectively.

The large American house of A. C. Stocking, New York, has established a department for the sale of Cypriot products, locust beans, raisins, and many other goods and sales on commission. It will be under the direction of a Cypriot, named Plato Myrianthopoulos.

A Belgian company engaged in work connected with artesian borings in Egypt has offered to carry out work in Cyprus on certain terms, which, it is said, are not likely to be accepted.

THE REFUGEE SITUATION IN MACEDONIA.

[We have received from the Save the Children Fund the following report upon relief work in Macedonia.—Ed.]

General Survey.

The refugee situation in Salonika and its environs has not shown any marked change during the past three months, but owing to the great concentration of people here both in the town itself and in the camps in the immediate neighbourhood, the need for general relief is still very pressing on account of the fact that the majority of the refugees remaining in this area are town dwellers who, unfortunately, are in a much worse plight than those belonging to the agricultural class. The latter, poor as their resources may have been, have at least had the advantage of going on to the land, of having a home in which to live, and the opportunity to work, while the urban class—small tradesmen, labourers, merchants and others—are having the greatest difficulty in establishing themselves in some sort of business or other. As the town of Salonika is now being re-built and new shops and offices, houses and public buildings are being erected in every quarter, it is true that many of the men refugees have found employment as carpenters and bricklayers; but the total number of refugees here is so great that hundreds of others seek in vain for some permanent work which will help them to get established and to lead normal lives again. Given health and strength, the younger men are able to find at least some work from time to time, but there still remains the great problem of the women and children, thousands of whom are solely dependent on charity. It is roughly estimated that in Salonika alone there are 80,000 refugee widows and children—a small army of poor unfortunates for whom life has become but one continual and arduous struggle to gain sufficient even for daily existence. The only assistance given by the Government is a small grant of one drachma per diem to all widows and orphans, and in families certified as "very poor" this grant is made only to children under 16 and to adults over 65 years of age. The drachma to-day is equivalent to 0.72d. only, and with the principal article of food, bread, at 8 drachmas a loaf, it is readily seen what a very short way such an allowance can be made to go.

With no other means at their disposal, thousands of refugees are daily finding it increasingly difficult to live. What possessions they had on their arrival in Greece have now dwindled down to but a few personal belongings, chiefly clothes which, through long usage, have now become in most cases so threadbare that they will afford practically no protection against the bitter cold which usually prevails in this region during the period, November to February.

While the agriculturists are, for reasons stated above, better off than the urban refugees, yet there are numbers of families in the country districts who are leading, and will be leading for some considerable time to come, a very precarious existence. We refer here chiefly to those refugees who have been sent to outlying districts in western Macedonia, where land was not received in time for the new tenants to sow a crop for this year's harvest. Last year the Government distributed in this area a great deal of grain as a food supply for those refugees who having arrived too late to sow, had to wait until 1925 before being able to reap a harvest, but this year no such distribution is taking place, and in consequence numbers of refugees who are not yet properly settled will have a very difficult struggle to carry on through the winter months. Then again there are several groups of refugees who, although

Digitized by Google

they sowed this year, lost all their crops in a severe hail-storm which took place in the Lepsista area just before reaping began. These people are now in particularly straitened circumstances, for any means they had at their disposal when they received their land were all used up in expenses in connexion with cultivation.

The Save the Children Fund, which is the only organisation undertaking the rationing of refugees in this area, can deal with but a fraction of the number of people who are in urgent need of help. For the moment we are economising our rations as much as possible in order to be able to increase during the winter weather, which is exceptionally severe in western Macedonia.

Refugees from Bulgaria.

By the end of October the exchange of refugees between Greece and Bulgaria is to be completed, and there now remain about 4,000 people to be returned from each of the respective countries. Refugees from Bulgaria come either by boat from Varna or Bourgas, or by train direct to Salonika where they are immediately concentrated in the large refugee camp at Harmankeuy. As the barracks in the camp are all full, many of these people are put under canvas until such time when they are sent inland to be settled. The refugees from Bulgaria are allowed to bring with them most of their personal belongings, and some even arrive with their cattle, carts and agricultural implements. Owing to the large influx during the past fortnight, we have had temporarily to increase our food issues at Harmankeuy by 1,000 rations, the majority of which will be given to the women and children in the poorer families. The health of the Greek refugees from Bulgaria is on the whole very good, but many go down with malaria on their arrival in Salonika.

Housing.

Although the Colonisation department is still pushing forward the construction of houses for the agriculturists in the country districts, the shortage of houses for the refugees in the town is still very acute, and large numbers of people are still crowded together in mosques, schools, and warehouses. Every available building is full. In the camps the barracks are taxed to their utmost capacity, and hundreds of families are living under the most trying conditions. Very often a family of six or seven members will have to occupy a floor space of not more than three or four square yards, the walls of this so-called room being marked off by strips of old blankets hung from the ceiling. At Kalamaria, one of the largest camps, we have frequently spoken to refugees who have been living under these conditions for the past three years. "When are we going to have a home?" they ask wearily. "How long are we to live like this? There is no comfort, no privacy here," and indeed it is comfortless existence for these poor unfortunates, the majority of whom were accustomed to live in good houses built on their own properties in Asia Minor. Let it be remarked here that the local authorities are straining every effort to deal with the housing problem, and are constructing new dwellings as fast as local conditions will allow. As soon as a new house goes up it is immediately taken, and there are still thousands of refugees on the waiting list.

Health of the Refugees.

Although there are many cases of malaria in some of the camps, the ravages caused by this dread scourge—for such indeed it is in this part of Greece—are not so great as they were last year, when the mortality among the refugees was particularly high. At Lembet camp, on the outskirts of Salonika, there are at present some 400 to 500 cases of malaria and about 150 cases of dysentery. This is the worst camp for sickness, and the hospital is usually full with fever cases. Last year the mortality in this camp was very heavy; but now, owing to improved sanitary conditions and to the reconstruction of the barracks (many of these buildings were without either doors or windows during the severe winter of 1923), conditions of living are much better. Our hot milk issues from the "Ione Stavridi" milk station to numbers of young children and to many of the sick women in the barracks are greatly appreciated.

Need of Clothing.

One has but to pay a visit to a camp like Lembet to realise how badly off hundreds of the refugees are for clothing. It must be remembered that most of the refugees from Asia Minor, and in particular those from the Pontus, arrived in Greece with no other clothes than those in which they stood up, and since there has been no money to purchase such things as clothes, the only garments these unfortunate people possessed have, after two, and in many cases, three years' wear, been reduced literally to rags. In the winter months the need for more clothing and blankets will be still greater, and it is to be hoped that further shipments will be forthcoming so that our issues may be increased during the cold weather. In the mountainous districts of western Macedonia there are numbers of refugee women and children who will tramp in bad weather over rough country for seven or eight hours to one of our clothing distrubutions in the hope of being one of the lucky ones. The gift to these people of even one or two warm garments is just as valuable as the issue of a month's rations.

Recommendations.

Although we are at present feeding some 9,000 people in Salonika, we still receive daily numerous applications for help, and now that the winter is approaching there will be an urgent need to increase our ration strength in some of the districts where there is a high percentage of women and children refugees without support.

It is particularly hard for us to turn away many of the old people who wait at the kitchen doors in expectation of getting something to eat, people who are so poor that they are reduced to asking alms in the street.

It is most important, too, that our milk stations continue functioning throughout the winter months, for the issues made from them are of particular value to the sick women and undernourished children.

In view of the approaching winter we would make a special appeal for more clothing and blankets, for many of the refugees are still in tents and dilapidated barracks, where there is but little protection against those bitter winds which sweep across Salonika from the Vardar Valley, winds which bring in their wake a temperature so intensely cold that, during the winter of 1923, it was no uncommon occurrence for refugees insufficiently clad and living in old barracks and open buildings, to succumb from exposure. (Signed) H. W. H. Sams.

The Save the Children Fund Administrator,
Salonika.

PATRIARCHATE OF ROUMANIA.

The Bucharest correspondent of *The Times*, writing on September 27, states:—

The Œcumenical Apocrisiary, Mgr. Joachim, Metropolitan of Chalcedon, and Mgr. Germanos, Metropolitan of Sardis and Chancellor of the Phanar, sent by the Œcumenical Patriarch, Mgr. Basil III., to recognise the creation of the patriarchate for the Roumanian Orthodox Church, arrived in Bucharest from Warsaw yesterday. The delegates will be the guests of the Roumanian Patriach, Mgr. Miron Cristea, while in Bucharest. The Apocrisiary and the Chancellor officiated at a great ceremony in the Patriarchal Church this morning, and afterwards the *Tomos* of recognition, signed and sealed by the Œcumenical Patriarch, was read in Greek and Roumanian. Ecclestiaistical dignitaries and Cabinet Ministers were present at the luncheon given by the Roumanian Patriarch. The Patriarchate of Roumania was created by an Act of the Holy Synod last February and was subsequently recognised by the Roumanian Parliament.

THE PERSIA SOCIETY.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

MOSUL: A SUGGESTION.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I had several opportunities, when in Turkey lately, of discussing the Mosul question with very important Turks. It was made quite clear to me that the young Turk Republic wants England's friendship and help while building up the new nation.

The present Turkish Government is founded, and lives, on Nationalism. The Government has promised its supporters that Turkey, which has already lost so much territory, shall not lose Mosul. Hence the fight for Mosul is really one for its own existence—the existence possibly, of the Republic as such, with its desire for progress and the benefits of Western methods, for it must not be forgotten that there is an old Turk Party still in the country awaiting its opportunity, a party with supporters amongst the fanatical, who abhor progress, and many who have lost position and power.

If we are satisfied that this New Turkish Republic should be supported, then, rather than a fresh period of chaos in Turkey, we must recognise its serious difficulty if its Government should fail to retain Mosul for Turkey.

The English refusal to allow a referendum has been noised abroad in Turkey as proof that England knows that Iraq could not retain the territory by a vote of the people, and this makes it more difficult for the Turks to give way.

Cannot a compromise be effected, beneficial to both parties?

The Mosul question has, to all intents and purposes, been withdrawn from the feeble hands of the League of Nations. The time is, therefore, opportune for direct negotiations and, provided our Government has the desire for a settlement, the Foreign Office could be instructed by the Cabinet to handle the matter on broad and generous lines.

Might I suggest that a solution should be possible, provided:—

(1) Turkey is given the area to N. and N.E. of the surveyed line for the Aleppo-Mosul-Baghdad Railway from Nizibin past Chilparat to Mosul and thence to the junction of the Great Zab River with the Tigris (this is only the continuation of the boundary between Turkey and French mandated Syria as far as Nizibin, and has similar physical and other qualities). The boundary to continue along the Great Zab River as far as its turn N.W. towards Rizan, whence it might proceed N.E. by E. towards the Kaleh Shin Pass on the Turco-Persian border as demarcated in 1913-1914.

The Turks would thus get Mosul and a large tract to N.W. and N.E. of it.

(2) A Treaty of Security is made between England, Turkey, and Iraq, defining boundaries and guaranteeing each from aggression by the other for, say, 50 years—longer, if possible. Persia could join in later. Nothing which might cause delays should be considered now.

(3) A Commercial Treaty is concluded between the three Governments providing security for the commercial interests of all the parties in each other's territory, thus stimulating trade between them, and new development.

(4) Turkey obtains a fresh loan to assist in settling outstanding claims and for definite works, such as the water supply and sanitation of Constantinople and Angora, rebuilding of Smyrna, harbour development, and so on.

(5) Early adjustment is made whereby portions of Turkey's pre-War borrowings will, in future, be carried by her former territories, such as Syria, Palestine, Iraq, the Hejaz, Transjordan, and so on.

I do not suggest that the proposed boundary is as good from a military point of view as that urged by Mr. Amery, but I do contend that a security pact with a friendly Turkey is a better safeguard against war than any scientific boundary line, however difficult its physical features may be.

I further urge that such a happy issue as is possible by again making a friend of Turkey would help in more ways than one towards the resuscitation of England's prestige in the East.

With the Turks, Arabs, and Egyptians knowing that we are their true and best friends, we should have gone a long way towards allaying the bitter feelings aroused amongst the millions of Mohammedans in India, who are still sore at the loss of the Caliphate and the break-up of the one great pre-War Mohammedan Power, and the uncertainty regarding the Holy Places in Arabia.—I am, etc.,

PROPOSED CAIRO-KANO FLIGHT.

The Air Ministry has made arrangements for the dispatch this autumn from Cairo to Kano, in Nigeria, of a flight of three Service aircraft from No. 47 Squadron of the Royal Air Force stationed at Helouan, Egypt. The flight is being undertaken for the purpose of gaining experience in long-distance flights over tropical countries where few facilities in the way of ground organisation required by aircraft exist, and with the object of allowing Nigeria to see the capabilities of British aircraft. The route to be followed will pass through the Sudan, French Equatorial Africa, and past Lake Chad to Kano, the capital of Nigeria. The places to be visited for refuelling, etc., will be Aswan, in Egypt; Khartoum, El Obeid, and El Fasher, in the Sudan; Abecher and Fort Lamy, in French Equatorial Africa; and Maidugari and Kano, in Nigeria. The flight over French Equatorial Africa has been rendered possible by the courtesy of the French authorities, who have assisted in the arrangements made.

The organisation of the flight is being undertaken by Air Vice-Marshal Sir Oliver Swann, Air Officer Commanding, Middle East. Squadron-Leader A. Coningham will be in command of the flight, which will start about the end of October.

MISSION TO ARABIA.

Sir Gilbert Clayton, formerly Chief Secretary to the Government of Palestine, left London last Thursday for the Middle East at the head of a Nejd-Iraq Frontier Mission. His departure in no way indicates any change of policy on the part of his Majesty's Government as regards interference in any religious dispute in that region. The task of Sir Gilbert is connected with the adjustment of frontiers as between Ibn Saoud, Sultan of Nejd, and the boundaries of the British mandated territories of Iraq and Transjordan.

THE PALESTINE ORIENTAL SOCIETY.

The *Journal* (Vol. V. No. 2-3) of the Palestine Oriental Society contains, among other things, a copy of the Presidential Address by Dr. Max L. Margolis, and interesting articles upon "New Light on the History of Jaffa," by S. Tolkowsky, and "Animals in Palestinian Folk Lore," by Stephan H. Stephan.

Book Reviews and Notes.

MOSUL AND ITS CREEDS.

"MOSUL AND ITS MINORITIES." By Harry Charles Luke. (London: Martin Hopkinson and Company, Ltd. 10s. 6d.)

Mr. H. C. Luke wields a scholarly and attractive pen. In describing the many creeds that are to be found in Mosul he has ample scope for indulging both his scholarship and his gift of descriptive writing. The opening pages, indeed, may set the reader wondering whether poetic imagery is to take him not merely to Damascus, but all the way to Mosul. He need have no fears, however, for he is quickly brought up against a narrative that holds him to the end, impresses him with the knowledge and research on which it is based, and leaves him with almost as vivid a picture in his mind as if he had accompanied the author on his tour.

The Arabic form of Mosul, we are told, is a word meaning "the meeting place," and the town is, in truth, like the province, a meeting-place of languages and creeds. The League of Nations Commission in its report laboured hard to let the Turks down lightly in regard to their ethnical claim to Mosul. Mr. Luke is more brusque: the majority of the population, he writes, is Moslem and is composed of Arabs and some Kurds, but includes no Turks; the minority comprises Jews, an occasional Mandaean and Yezidi and, above all, a great variety of Christian sects. In connexion with the latter a striking phenomenon is the number of Christian bishops. Here are to be found the Patriarch of the Nestorians (except when he is at school in England), the spiritual head of the Chaldaeans know as the Patriarch of Babylon, a Jacobite bishop, a bishop of the Syrian Catholic Church, and a bishop of the sect of Mandaeans, or Christians of St. John. Chief among the Christian sects are the Nestorians, and three chapters of the book are devoted to the Assyrian Christians, who are now called upon to bear further persecution at the hands of the Turks. The growth of this Church of the East is traced in a most interesting way from the earliest times; the part played by a spirit of nationalism is well brought out, and provides a likely background to the great missionary efforts that established the Nestorians from China to Cyprus and Egypt. They kept the torch of Greek culture which they had inherited in Syriac translations, burning in the Middle East and, handing it on to their Arab masters, were thus the indirect means of imparting such of the culture of mediæval Europe that reached it through the Saracens. But the Nestorian Church, which once counted its bishops by hundreds, is now reduced to four, one of whom bears the title—pathetic memory of a great past—of "Metropolitan of India." The hereditary character of the Patriarchate is explained as being the means devised by the people for avoiding internal conflicts and enabling them to hold their own amongst hostile surroundings.

"Mosul and its Minorities" is a mine of information on the creeds of the Middle East, and not the least useful chapter is the historical survey of the separation of the Churches. A quaint instance of the human mosaic throughout the ages in this part of the world is given in the derivation of "Chelebi," the title of the Grand Master of the Order of Dancing Dervishes, now abolished by Republican Turkey. The word is said to be a Turkish or Tatar corruption of the Arabic *salib* (cross, crucifix), applied in the Middle Ages by the Turkish tribes of Central Asia to the only Christians with whom they were wont to come in contact, namely to the Nestorian missionaries and clergy; and as these were usually men of learning, the name was gradually given to cultured people in general and in this way came to be applied to the great Moslem dignitary who invested the Sultans of Turkey with the sword of Osman. Again it will be news to many that Lamaism owes its monasticism and its ritual to imitation of the practices of early Nestorian Christians. Of the Yezidis Mr. Luke has a more personal account to give than the members of the Mosul Commission, but he confirms their conclusion that these replicas of the bearded Assyrians are to all appearance of Kurdish stock and speak a Kurdish dialect.

Everyone who is at pains to approach the Mosul question from all points of view will do well to read this book, which makes no reference to the controversy but does give an indication of the wide moral responsibilities of the British Government. Some excellent photographs are included in the volume.

GOVERNANCE OF THE HOLY PLACES.

"COME VA RISOLTA LA QUESTIONE DEI LUOGHI SANTI." By Romolo Tritonj. (Rome: Edizione della "Rossegna Italiana." Lire 15.)

Signor Tritonj is a vigorous exponent of extreme Roman Catholic views on the steps to be taken to settle the old and, truth to tell, scandalous quarrels among the Christian sects over the Holy Places in Palestine, now that the country has come under the ægis of the League of Nations. His book is a remarkably well-sustained piece of propaganda, apparently intended to prove that, if any other sect has any rights at all, it can claim them only as a matter of grace from Rome. His knowledge of the last thousand years' history of Palestine is so thorough that he is able to bring out with perfect clearness all that sustains his brief, while concealing what can be said against it. This we take, from long experience of Near-Eastern propaganda, to be considered perfectly legitimate. Incidentally he falls into very curious errors about the aims of England, based on his ideas about the High Church party of the Anglican Church. He credits England with being ready to go all lengths to help the Orthodox Church to get the upper hand in the Holy Places with a view to gaining their favour and recognition of Anglican orders and finally to anglicanising the administration of these shrines. Even if the Anglo-Catholics had these ambitions and were willing to take part in the intrigues hinted at in this book, surely it might have occurred to Signor Tritonj that, in no circumstances would the British Parliament allow them to have their way.

As regards a solution of the problem, we cannot agree that the Mandate for Palestine ought to have been given to Italy, and still less can we conceive a successful internationalisation of the Mandate. Our author hankers after one or other of these measures, but realises that it is too late to apply either of them now. Still less can we see any hope from the remedy he actually proposes. A Commission, divided into two Sub-Commissions, each heavily weighted in favour of Rome, is to be set the task of deciding, by a majority of votes, how the ownership, administration and rights of worship in each shrine are to be distributed, after which the Commission is to become an international body for the administration of the Holy Places, entirely independent of the Mandatory Power.

Why anyone should prefer the terrible stirring up of mud and the reopening of old sores involved in proceedings of such violent injustice to the gradual working of wise statesmanship, it is hard to guess. We cannot, anyhow, believe that Signor Tritonj is speaking in any way as the mouthpiece of the Vatican. C. S.-W.

YUGOSLAV ROYAL TOUR.

The following details are supplied by the Belgrade Correspondent of *The Times* in connection with the Yugoslav Royal tour through Macedonia, Montenegro, and to the Adriatic coast:—

The King and Queen of Yugoslavia arrived at Spalato on September 29. They will remain in the Spalato district until October 3, when they will go along the Croat coast to Sushak, returning by train to Belgrade on October 7. The journey will be made on board the Karageorge. There will be great festivities everywhere, and naval manœuvres will be held off Cattaro Bay. In Cettigne, Ragusa, and Spalato there will be a parade of numerous troops collected from different parts of Yugoslavia.

THE DORSET YEAR-BOOK.

The twenty-first issue of "The Dorset Year-Book," is a most creditable production, finely illustrated, and exceeding, even, the standard of its predecessors. The Hon. Editor, Mr. Stanley L. Galpin, has brought together an astonishing number of readable articles by Dorset men, of which one in particular—"The Desert March," by Robert Harding, which describes an experience of the 1/4th Dorsets in 1916 in Mesopotamia will appeal especially to readers of The Near East and India. It is, by the way, satisfactory to notice India and Iraq so prominent in the membership list, but the Hon. Secretary (274, Gresham House, Old Broad Street, E.C.2.) will be glad to receive further names of "Dorset Men Beyond the Seas."

AN ENGLISH SCHOOL IN ATHENS.

An English High School for boys has been established in Athens (7, Rue Caplanon), under the headmastership of Mr. A. Mayor-Metcalfe, B.Sc., B.A., formerly headmaster of the English High School for boys in Constantinople. As special arrangements have been made for the instruction in the English language only—as distinct from the ordinary curriculum—the school should also serve the useful purpose of providing a centre for spreading a knowledge of English among the rising generation of Greeks.

IRAQ MILITARY COLLEGE.

The second year's training of cadets at the Iraq Royal Army Cadet College began recently, and a third platoon was added to those which began instruction last summer when the college was opened. The syllabus is based on Sandhurst, but the course is longer, being for three years. In due time the college will provide the new Iraq Army with young officers born, educated, and trained in the country. A certain number of vacancies will be reserved each year for the sons of tribal sheikhs. The new Army will have British instructors.

Ismail Pasha Sidky, who recently resigned office as Egyptian Minister of the Interior, has telegraphed his acceptance of the Egyptian Government's proposal that he should retain the presidency of the Western Frontier Boundary Commission, and it is expected that he will begin negotiations with the Italian Government in the middle of October.

EGYPTIAN (ARABIC) SELF-TAUGHT

A most useful book for visitors to Egypt.

Containing:

Travel Talk. Railway. Steamboat. Motoring. Cycling. Hotel. Classified Vocabularies. Conversations. Simple & Practical Phrases. Naval and Military Terms. Officials' Ranks and Titles. Correspondence. Amusements. Aviation. Photography. Pronunciation. Grammar. Money, etc. Illustration of Coinage.

NEWS IN BRIEF.

Switzerland has signed a treaty of arbitration with Greece and a treaty of friendship with Turkey.

The Maharaja of Kapurthala left Kingston (Jamaica) on September 22 in the R.M.S. Oroya on his way to Europe.

A Poona telegram states that the King and Queen of the Belgians visited the famous Buddhist cave-temples at Ajanta on September 14.

The Shah of Persia and his suite have arranged to leave Paris to-day, sailing to-morrow from Marseilles for Bombay, *en route* for Teheran.

M. Carapanos, Greek Minister to Italy, has been appointed Minister to France in succession to M. Politis.

The new Greek Minister to Yugoslavia, M. Pelychronides, arrived in Belgrade to-day, and the Yugoslav Minister, M. Gavrilovitch, is expected to leave shortly for Athens.

Two Soviet destroyers, the Petrovski and Nosamojnik, arrived at Naples on Saturday from Constantinople, and will stay two days. Various entertainments have been arranged.

The members of Major Court Treatt's motor-car expedition from the Cape to Cairo have arrived at Kondoa, Irangi, Tanganyika, and are expected to reach Nairobi in a fortnight.

Ziwar Pasha, the Egyptian Prime Minister, arrived in Paris on September 22 from Aix-les-Bains. It is understood that he intends to stay about a month in Paris before returning to Egypt.

Mr. Bolton, Chief Commissioner of the North-West Frontier Province, is leaving India in December on six months' leave. Colonel W. J. Keen, Political Officer, will act as Chief Commissioner in his absence.

A Reuter's Patna message states that the working committee of the Central Khilafat Committee has decided to send a delegation of about six members to the Hejaz to confer with Sultan Ibn Saoud regarding the convocation of a Moslem World Conference.

The King has approved the appointment of Mr. E. L. L. Hammond, C.S.I., C.B.E., I.C.S., to be a member of the executive Council of the Governor of Bihar and Orissa, in succession to Sir Hugh McPherson, K.C.E., C.S.I., I.C.S., who is resigning his office early in December.

The Belgrade *Vreme* announces that Dr. Ninchitch, the Yugoslav Minister for Foreign Aairs, is going to Paris from Geneva, instead of M. Pashitch, the Prime Minister, who was to have gone from Monte Carlo. M. Raditch will also visit Paris.

The King has approved the appointment of Mr. Sidney Reginald Daniels, I.C.S., and Mr. Barzor Jamshedji Dalal, I.C.S., to be puisne judges of the High Court of Judicature at Allahabad in the vacancies which will be created by the retirement of Sir Theordore Caro Piggott, I.C.S., in October, and the appointment in November of Mr. Louis Stuart, C.I.E., I.C.S., to be Chief Judge of the Oudh Chief Court.

When sentence was awaited at Athens on Friday morning in the case of a former officer in the Greek Army named Anghelides, accused of the embezzlement of 1,500,000 drachmæ (£4,500) belonging to the Government, against whom the Public Prosecutor had demanded the infliction of the newly-decreed maximum punishment of hanging, it was announced that the accused man had committed suicide in his cell by taking cocaine.

THE WEEK AT HOME.

London, Tuesday Morning.

The Bogey of Communism.

"These be 'mazing times," as Baroness Orczy used to say, and the world seems upside down. People appear to be walking in their sleep, haunted by the spectre of Communism. Fearfully they whisper: "The Reds are after us," and, if they are Unionists: "Why doesn't the Government strike them down?" Retired soldiers and sailors bestir themselves to barricade their position and to ensure the continued supply of caviare and Oxford marmalade; and the *Observer*, with the most affecting flow of words, stumbles fondly in an attempt to follow the labyrinthine channels of the *Daily Mail's* sage counsels. Communism: the Reds: Bolshevism: the weakness of the Government—such are headlines which appear monstrously capital in the nightmares of the bourgeois. What is it all about?

A little light, perhaps, will be thrown on the temper of the country by the meeting this week at Liverpool of the Labour Party. There, it is said, the Communists, undaunted by their failure to gain admission the last time, will seek again to become members of the Labour Party, and those who are supposed to know imagine that their attempt will come very near to success. Such a contingency is, of course, extremely distasteful to the "constitutionals" of the Labour Party, such as Mr. Ramsay MacDonald, who has made a somewhat belated endeavour to rally bourgeois opinion around him by condemning the Communists, for were "the wild men" to succeed in gaining for the workers what such devotees of the proletariat as Messrs. Thomas and Hodges have failed to achieve, the job of the politicals would naturally be gone. Quite safely, therefore, it may be said that there are no worse enemies of the "direct actionists" than the ordinary humdrum Socialists.

The Unionst Party, again, has a meeting next week at Brighton, at which an attempt is to be made to ginger up the Government into a more repressive attitude towards the Communists. This foreshadowed condemnation of the revolutionaries is, in fact, the one red flush on a political programme of spotless placidity.

English Communism.

Quite frankly I do not believe in all this parade of fear and tirade of fulmination against the Communists in this country. Many readers, I know, will be grieved to hear it said, but my opinion is that there is no completer oxymoron in the world than is conveyed by the words "English Communism." The thing that is so often called Communism here is nothing of the sort. Mr. J. H. Thomas, who is distrusted by thousands of working-men in this country to an extent incredible to many of those who approved of his work when he was in office, was howled down the other day by simple trade-unionists of his own trade-union: and all the papers called this Communism! The very suggestion that one section of the proletariat may strike out of sympathy with another section is, again, called Communism! Do the journalists who write this, and the bourgeois who meticulously hang on every word that falls from these journalists' eversharp pencils, really see in their dreams every miner and transport-worker savagely forsaking the company of his wife and children for the less alloyed joys of Karl Marx? Do they seriously contend that every working-man who fought in the War (not heightening thereby his opinion of foreigners), and who since 1918 has had the misfortune to decline again into the ranks of the proletariat, is really moved by the taunting of Slav or Semitic lips? Is there among them no ex-officer to tell them of what stuff English soldiers were made, and who it is, they or the non-combatant politicians and leaders of industry, who should most be made to suffer in the inevitable post-War poverty?

This, I admit, is a treatment of the question on a purely general basis, but it is precisely on such a basis that many people are basing their extravagant anxieties. As often as not, the concrete fears of the bourgeois vanish into the smoky air of the suburbs on the first contact with real examination. A mental colour-specialist is what they need, to tell them that it is the greenness of their own vision which makes them so often see red.

The O.M.S.

It gives one a real pain, therefore, to see, not the formation, but a public appeal on behalf, of an already formed association called "O.M.S." (Organisation for the Maintenance of Supplies). This is an unofficial organisation, which would, in case of a serious trade dispute, immediately place its services at the disposal of the Government. Its object is to maintain supplies and vital services in the event of a general strike. Upon its executive committee are the names of Lord Jellicoe and Sir James Rennell Rodd, and others which one was very much less surprised to see.

The O.M.S. has been blessed by the *Daily Mail* and the *Observer*; it has had its back patted by the *Morning Post;* several papers have stroked the hair of its head up the wrong way; and others have successively declined in politeness towards it until the final comment of the Communist Party was reached—"the most definite step towards organised Fascism yet made in this country."

Quite patently the community is not so rabid over the spectre of Communism as these retired soldiers and sailors would have it. Broadly speaking, the community is perfectly content to see the Government of the day (and, incidentally, it does not fail to notice that the O.M.S. brings out its standard in the régime not of a Labour but of a Conservative Government, although it might naturally have been thought that the "direct actionists" would try their games on with a Labour Government in power) dealing with any emergency that may arise. It is inevitable that the O.M.S. should disclaim political or party aims, and aggressive or provocative intentions, but for how long is the oppugnance of its personnel to be kept at a requisite state of enthusiasm? It can be preserved only in the breasts of those who before the formation of the organisation were anti-trade-unionists. The pretence, therefore, that it is not an essentially class-movement is rather thin. It is, in plain effect though possibly with not plain intention, a strike-breaking scheme. It is the movement of a minority against a minority; and when and if a clash comes between them, it will be for us, the majority, to decide.

After all, the slogan of "the community comes first" is one that has meant many different things at different times in our history. Now there is, as far as one can discover, no obvious content with the way in which the great

industries of this country are at the moment being managed, and it is certainly not for the unlearned in the conflict to say that this or that view of the management of industry should prevail. The time for volutary action against the strikers is after, not before, they have been proved wrong. To say that those who would join in a general strike must of necessity be wrong seems to me possible only to those who have very definite opinions upon the future of England, and, particularly, upon what social and political systems that future should rest. England was a great nation before she was a capitalist nation, but one would imagine from the words of some people that her future greatness was inextricably bound up with the preservation of the present system in every detail. Personally, I am reactionary enough to believe in the genius of the British people to deal with each social emergency as is arises.

The Mining Trouble.

Poor Mr. Baldwin is having a very rough time at the hands of the Rothermere and Beaverbrook Press because he has confessed that, just at the time when these two proprietors' creatures were wearing the muscles of their arms thin in throwing mud at him, he desisted from his habit of studiously hanging on every word which they wrote. Even the miners' latest squabble over what the subsidy agreement really meant is attributed to the Premier's weakness or stupidity. And the fact that he has stood up to Mr. A. J. Cook in the dispute has not diminished their horrid croaks in chorus.

This is by no means to say that the outlook in the mining industry is hopeful, or, indeed, that the prospect of a fresh election to test Mr. Baldwin's popularity is any too remote. Not only have the miners boycotted the Samuel Commission, but certain mine-owners in the North of England have also refused to have anything to do with it. The miners' step has been widely advertised, but unequal publicity has been given to these owners' action. That perhaps is natural enough; but does this partial boycott mean that the Royal Commission's recommendations will be disregarded by both parties? We shall probably know more of this when the Miners' Federation confers on October 9.

Conformity and Nonconformity.

So much has been heard of the reunion of the Churches in this country that the decision to discontinue the Lambeth meetings between the Anglicans and the Free Churchmen might be found the cause of great disappointment. From an official Free Church summary of the present position, however, it appears that the principals are agreed in most of the essentials, and that what remains to be done now is the persuasion of their congregations to these beliefs. "In vital and fundamental matters of faith," for example, a large measure of agreement was obtained, and the Free Churches are to join with the Anglicans in moral, social, religious, and evangelical work. The Joint Committee also agreed that, though an episcopacy (so long the stumbling-block of Nonconformist Churches) was essential in a united Church, it should be of a "constitutional" character, in which elements of presbyteral and congregational order were equal. In the matter of recognition, again, the Anglicans conceded "the explicit and considered recognition of non-episcopally ordained ministers as (a) evangelical, (b) sacramental, and (c) not schismatic but within the Church." But the snag appears at the last, on the question of "authorisation." The Anglicans still insist that Free Church ministers accept ordination—at least in the form known as *sub conditione*—at episcopal hands: upon which insistence the Free Churchmen split from the episcopal representatives.

What is happening now, therefore, is a developing in all the Protestant churches of this country of the spirit contained in the first three clauses of agreement, what time the best minds in both the Churches, Anglican and Nonconformist, cast about to find some means of obviating ordination for the question of "authorisation."

From an outside point of view (and one which even *The Times* supports), it would seem that the Anglicans' concession that "ministries which imply a sincere intention to preach Christ's word and administer the Sacraments as Christ has ordained, and to which authority so to do has been solemnly given, are real ministries in the Universal Church" leads straight to the Nonconformist conclusion that any re-ordination of such ministers is unnecessary.

The Liberals and the Land.

It appears that the presumption that Mr. Lloyd George's land campaign was a Liberal campaign was over-hasty, for several Liberals have already declared against it, in advance of its fuller (and, one hopes, more informed) exposition. One curious thing about both sides—pro-landlord and anti-landlord—is how they equally appeal to the authority of Lord Bledisloe. It was rather amusing, therefore, to see, in a letter to *The Times*, how flatly he disconcerted both sides, by declaring that his remedy has been and always will be, not the abolition of land-owners, but "in their large numerical increase and the encouragement and development of their productive activities"!

The most unfortunate thing about the campaign, however, is not whether Liberals do or do not approve of it, but in the tendency to make of it a party affair. There can be no solution of British Agriculture if party politicians get hold of it.

Theatrical Productions.

London at the moment has plenty of theatrical interest. An extremely interesting experiment in nerve-driving has just been launched at the Ambassador's by the American dramatist, Mr. Eugene O'Neill, whose "Anna Christie" so moved theatre-goers here a year or two ago. His "Emperor Jones," in which the chief part is played by a wonderful singer of negro-spirituals, Mr. Paul Robeson, has gained much praise from the best critics in London.

Of quite another, and much more disputable kind, is Mr. Caradoc Evans' "Taffy," a play in which the character of the Welsh is held up to far more scorn than ever Synge held the Irish character. Apart from its racial interest, however, it does not excite much attention.

There are other things, too. Mr. Nigel Playfair, for instance, has found it possible to lay his hand on his heart and to produce simultaneously such a sincere effort as Mr. Ackerby's "Prisoner of War," and Mr. Michael Arlen's noxious and pretentious version of "The Green Hat."

Mention of this last perversity reminds one that the dramatised novel is obviously to be the feature of theatrical productions for the immediate future. A version of Mr. Somerset Maugham's "The Moon and Sixpence" has just been produced; and, too, a revival by the Lena Ashwell Players of Mr. Arnold Bennett's "The Great Adventure" is shortly promised.

PERSONAL AND GENERAL.

TO-DAY

October 1, 1925 (New Style).
September 18, 1925 (Old Style).
Rabia I, 13, 1344 A.H., of the Moslem Calendar.
Tishri 13, 5686, of the Jewish Calendar.

The Greek Minister has returned to London from Paris.

The Maharaja of Jhalawar left London last Thursday for Paris on his way to India.

Viscount and Viscountess Willingdon have returned to 5, Lygon Place from Geneva.

Ex-King George of Greece returned to London from Italy on September 26.

The Bulgarian Minister returned to London from Geneva on September 26.

The Roumanian Minister in London has returned to 50, Grosvenor Street from Geneva.

Sir George Lloyd, the High Commissioner-elect for Egypt, returned to London last week from Scotland.

The two sons of the Crown Prince of Persia have arrived in London from Paris for their education in England.

Mr. Amery, Secretary of State for Dominion Affairs, returned to 112, Eaton Square from Geneva on September 27.

Major General Lord Edward Gleichen and Lady Edward Gleichen, who are motoring from Scotland, have postponed their arrival at 35, Catherine Street till October 3.

A Private View is being held to-day (October 1) of Mr. Borough Johnson's water-colours and drawings of Jerusalem at the Goupil Gallery, 5, Regent Street, W.1.

Lady Birdwood, wife of Field-Marshal Sir William Birdwood, Commander-in-Chief in India, and Captain C. B. Birdwood, left London last Thursday by the P. and O. special train to join the s.s. Rawalpindi at Marseilles for Bombay.

The will of Mr. Philip Glynn Messent, C.I.E., M.I.C.E. (63), of Grosvenor Hill, Wimbledon, S.W., formerly Chief Engineer to the Bombay Port Trust and Consultant Engineer to the Trustees of the Port of Aden (net personalty £32,890), has been proved at £36,961.

The Begum of Bhopal, who has come to England to discuss the question of her successor, arrived in London last Sunday with her youngest son, Hamid-ullah Khan, whom she is anxious to have appointed as her heir. During her stay in London her Highness will stop in Portman Square.

PROMOTIONS, APPOINTMENTS, ETC.

The King has approved the following appointments in the Diplomatic Service:—

Mr. William Edmund O'Reilly, H.B.M. Minister to Guatemala, to be H.B.M. Minister to Albania. Mr. O'Reilly has also served in Belgrade, Cettigné, and Sofia.

Mr. Edmund St. John Debonnaire John Monson, Counsellor at his Majesty's Legation in Teheran, to be H.B.M. Minister to Colombia. Mr. Monson was formerly at Constantinople and Teheran.

Mr. Archibald John Kerr Clark Kerr, Acting Counsellor in his Majesty's Diplomatic Service, to be H.B.M. Minister to Guatemala. Mr. Kerr has served in Teheran, Tangier, and Cairo.

EGYPT
SUN-BATHED LAND OF LEGEND

When making plans for your Winter Holiday remember the Call of Egypt, a country for ever bathed in golden sunshine, warm, health-giving, cheering. Added to this are the unique attractions of imperishable monuments of a glorious past and its kaleidoscopic life of Oriental cities where visitors find the acme of comfort in modern hotels and diversions of every kind.

The best months to visit Egypt are October to December, when the climate is ideal and special cheap facilities for visiting Luxor and Assuan are available. Egypt is only five days from London.

Particulars of fares, tariffs, etc., of all principal Travel Bureaux and Tourists' Agencies. Write for "Egypt and the Sudan," a copiously illustrated brochure, free on application to Egypt Promotion Association, 9 Quality Court, Chancery Lane, W.C.2, or P. O. B. 990, Cairo.

IN WESTERN THRACE.

By "Repat."

I.—The Musician.

It was at Demotika, in Western Thrace, that I came across the Musician. On a sweltering hot day in June and at the hour of the midday meal in a ramshackle open-air restaurant. For in Thrace, as in other neighbouring localities, the ordinary conveniences of life, as known to the true Westerner, are, and in my opinion will always continue to be, ramshackle. Not that in general prosperity the Greeks in Western Thrace are not far ahead of their Turkish neighbours just across the Maritsa in Eastern Thrace, but this does not apply to the comforts of life, which remain very, very awkward for want of the wish to alter.

We had entered the restaurant, I and some of my Greek colleagues engaged on refugee work. But I myself had little hope of getting much to eat beyond disguised lamb, which as a rule appears in about fifteen items of the twenty which may compose the bill of fare. However, there was good Salonika *beer*, and that made up for much.

Two or three other tables were there, one occupied by the eternal military and another by local employees of the town. Nothing was doing on my part until a long draught from the blessed Salonika brewery had trickled down, and then I turned at the sound of a piano tinkling. The music was good, and I wondered what enterprise brought such a thing to such a place and at that time of the day.

I saw a white-haired head bent down and almost touching the keyboard, under a wooden shanty exposed to the full glare of the sun. We listened for a quite considerable period, and then, after a pause, we beckoned to him. He did not, however, respond immediately, but said "wait," and whispered a few words to a small urchin (his son), who shortly after came back with a violin. Thereupon the musician performed two or three set pieces on the violin and accompanying himself at the same time with remarkable ingenuity on the piano. A third performance ensued, with a flute replacing the violin, the notes of the flute being entirely manipulated, and the flute held, by the left hand.

For three-quarters of an hour we listened, and then got the story, which can be condensed into a few lines.

A refugee from Adrianople and formerly the proprietor of three houses in that place. Now lodged in one room in an outhouse in the purlieus of the restaurant, with wife and no fewer than five little boys, who picked up odd jobs. Himself getting blind.

I suppose I must, during the course of my peregrinations of the last eighteen months, have seen some hundreds of thousands of refugee families, and the above is only a sample of many and even worse cases. Thanks to the loan (mainly subscribed in Great Britain), the whole aspect of Macedonia and Western Thrace is gradually being changed into a place of smiling and prosperous villages with a homogeneous population; but this takes time, and much suffering has ensued and will ensue until the task is finally regulated.

II.—Comotini.

When I arrived at Comotini (Western Thrace) and essayed to secure a room in the local "hotel," the fat proprietor confronted me from behind his backgammon board, where he was immovably fixed. As far as I could make out, amidst the rattle of the dice, I *could* have a bed. So I stumped up the staircase and saw "the bed," one of three in a room which could comfortably contain but one. As the sample of hotel "guest" in these regions does not make agreeable company for anyone fastidious, I had to submit to the usual rapacity hereabouts and "take" the three beds. Shortly after I reposed myself for the afternoon, to the accompaniment of some roomless ones snoring in the stifling and inferno-like passage outside.

Such an hotel. Ramshackle as ever, but filthy, indescribably filthy, as likewise most of the other occupants.

At about five o'clock I sallied forth to my lawful occasions, that is, to see how the local refugees were faring in this place, Comotini, formerly and more generally known as Gumuljina. In Balkan and semi-Balkan (and by the latter term I include much a quite long way west round the Adriatic) countries, it is necessary to obliterate traces of former nationalities. Thus if we were Balkan, it might, to exaggerate somewhat, be appropriate to re-shristen Baghdad—Georgetown, and Jerusalem—New Canterbury. However, that is as may be, and when I sallied forth, the fat man was still backgammoning with his comrade. He was obliging and wanted to arrange dinner for me suitable to English tastes; so said he had got beef and would send round to a local store at once for pickles, or, as he called them, *picklees*. I said it was too hot for pickles, and suggested some bug powder as more fitting the occasion.

He rattled his dice, and his very large paunch shook the table with applause.

After satisfying my lawful occasions, I did return to dinner, and there, lo and behold were our brave backgammoners still enduring; I even went to so-called "bed" to the chuckle of the beloved dice, and I suppose that they are still hard at it.

I imagine that the management of the hotel was mainly left to the wife and two rather stout-calved daughters, who, however, as soon as the guests were served, rushed off, very elegantly gowned, to the local cinema and promenade, where they probably remained till all hours. As for mine host's day, I calculate it rather like this:—Midnight to 4 a.m., backgammon; 4 a.m. to midday, sleep; midday to 2 p.m., an enormous meal: 3 to 6, sleep; 6 to midnight, backgammon. Cigarettes, coffees, *oozoo* (mastica), and odd scraps of food throughout the day.

I happily stopped only one night in Comotini, and then journeyed on to Xanthi (old name Eskiji), where in that prosperous tobacco land I fortunately found a Bosch pension, clean and well-ordered. So we do really like to come across the Bosches sometimes; they *are* efficient.

KING FAISAL.

King Faisal of Iraq, whose health has much improved during the last few weeks, is now able to take fuller advantage of his stay in England. Last week His Majesty paid a visit to Eton College, in company with Sir George Lloyd, and Ja'afer Pasha, Iraq representative in London; Friday he spent at Wembley, and on Saturday he was present at the football match between West Ham and Arsenal at Upton Park. King Faisal was profoundly impressed with the British Empire Exhibition; any one of the units composing the Exhibition, he imagined, might have its counterpart at other exhibitions, but for the general conception and in its setting he could picture nothing finer, nothing more impressive. His Majesty was present at the Zeebrugge model display and at the Tattoo.

King Faisal expects to leave London for the Continent next week, as soon as it has been decided where is to take a "cure."

MEDITERRANEAN FLEET CRUISE.

The stay of the Mediterranean Fleet, under Admiral Sir Roger Keyes, at Volo, was extended until September 28. On leaving this anchorage on the western side of the Ægean, the Fleet will carry out a revised programme for the rest of its cruise. The Queen Elizabeth goes to Jaffa from October 2 to 6, and then to Alexandria and Suda Bay. The First Battle Squadron, First Cruiser Squadron, and the Seventh Destroyer Division go to Milo from October 1 to 4, and will return to Malta on October 6. The Third Battle Squadron and First Destroyer Flotilla will visit Nauplia from September 30 to October 7, afterwards going to Suda Bay. The Third Cruiser Squadron, Third Destroyer Flotilla, and the hospital ship Maine, depot-ship Greenwich, and repair-ship Assistance will proceed to Ægina Island on the same dates, afterwards rejoining the other battleships and destroyers at Suda Bay. The whole Fleet will be back at Malta on October 22 with the return there of the Queen Elizabeth.

Indian Affairs.

MR. GANDHI AND THE INDIAN CONGRESS.

The Indian National Congress was started in 1885, with the declared object of making India a nation and of cementing firmly the union between England and India. In 1907 the extreme wing revolted against the leadership of the older men, and a free fight ensued at the Congress meeting at Surat, with the result that the Congress passed wholly into the hands of the extremists: until, in 1920, it appointed Mr. Gandhi as its virtual dictator.

Elsewhere in this issue, appear comments on the most recent decision of the Executive Committee of the Congress. This is not to be confused with the Congress itself which meets annually, during the Christmas holidays, at a centre selected in the course of the previous year's meeting. The annual meeting is attended by a large number of delegates, generally about 3,000 in number, who are elected by the various "Provinces," the boundaries of which were given in THE NEAR EAST AND INDIA of September 17. The committee consists of a small number of the leaders, who carry on the executive work of the Congress between the annual meetings; but, until the rise of the Gandhi era, their decisions were not binding on the Congress, except in routine matters, and they had to be confirmed in full meeting. During the height of the non-co-operation movement, the power of the Committee to speak for the whole Congress was formally affirmed: and Mr. Gandhi was appointed dictator: any order given by him, or any decision arrived at by him, was binding on the Congress—except that he was forbidden to enter into negotiations for co-operation with the Government of India. Mr. Gandhi's power was first seriously shaken by the "Council Entry" party of the late Mr. C. R. Das: and all that Mr. Gandhi could accomplish was the passing of a resolution which, while continuing to assert that abstinence from taking any part in the councils of Government was still the true ideal, yet permission was granted, to those who were unable to reconcile this ideal with their conscience, to follow their own methods: and thus to adopt active non-co-operation, from inside the Councils, in place of the passive method of refusing to recognise their existence. Mr. Gandhi, however, succeeded in pursuading the Congress to adhere to his policy of the "charka"—the spinning wheel: and altered the electoral qualification for selecting delegates to the Congress, from the money contribution of four annas a head, to the production of a certain amount of hand-spun cotton yarn, which was to be collected monthly and used for the manufacture of hand-woven cloth. Even here, however, Mr. Gandhi's success was incomplete—a saving clause was put in, under which persons "unable or unwilling" to contribute their quota of yarn might be exempted: Mr. Gandhi suggested that, in such an eventuality, they might get other people to spin the required amount of yarn for them. Even this pretence has now gone by the board: the Committee have definitely decided to abandon the "spinning franchise" and to return to the monetary contribution of four annas a head.

This resolution marks the final defeat of Mr. Gandhi. His enormous personal ascendancy, the belief in his saintliness—even in his power to work miracles: it was confidently asserted, when he was put in jail a few years ago, that no jail could hold him against his will; but his continued presence in jail, after the death of a preliminary belief that the person in the jail was not Gandhi himself, but a simulacrum representing him, led to the irresistible conclusion that he was there willingly, until such time as it should suit him to pass the bolts and bars of the prison: these have given him a longer run than is customary with Indian reformers. While he was in jail, there were some murmurings, even among the elect: if, as was believed, he could effect his exit at any moment, why did he not do so? There were not wanting suggestions that, having got his movement into such an unholy mess, he thought that his absence from the scene would be the best way of trying to let it right itself, without the risk of exposing his own reputation to some damaging blow. Now that he is out of jail, though he has put up a brave fight, he must acknowledge himself beaten. He has often asserted that, if he found that his policy failed to command assent, he would abandon the area and "retire to the Himalayas," there to spend the rest of his life in meditation; but, among the Mahatma's many admirable qualities, a certain mundane vanity is observable. He, who has been in the limelight so long, cannot bring himself to abandon the stage. His saintliness remains, and the personal veneration of the simple—one may except the more prominent of his political followers from that category: and these he will doubtless continue to enjoy, even if his political leadership passes from him. It is not clear whether the Committee still wields plenary powers, or not, since their withdrawal from Mr. Gandhi: probably not; but, in that case, it is quite certain that the annual meeting will approve of the Committee's resolutions, and Mr. Gandhi's last remaining rampart will have fallen.

CURRENT TOPICS.

The Maharaja of Kashmir.

The Maharaja of Kashmir died on September 23, at the age of 75, after a titular reign of forty years. Two years after his accession in 1885, he abdicated and a Council of Regency was formed, under the Presidency of his younger brother and presumptive heir, Sir Amar Singh, to carry on the government of the State. In 1891 the Maharaja was himself made President of the Council of Regency of his own State—Sir Amar Singh becoming Vice-President: a peculiar arrangement that continued till 1905 when, with certain restrictions, the Maharaja's ruling powers were restored: the restrictions being finally withdrawn towards the end of the War. Sir Amar Singh died in 1909 and the heirship presumptive descended to his son, Sir Hari Singh: the Maharaja having no son of his own. The Hindu religion lays down certain religious ceremonies, including the lighting of the funeral pyre, that must be carried out by a son: so that it is usual, among Hindus of position, to adopt a son when a man has none of his own. A few years ago, the Maharaja followed this custom and adopted a connection of his own—the brother of one of his feudatory princes—as his "spiritual" son: and is known to have wished to revoke the acknowledgement of Sir Hari Singh as his heir, in favour of the boy so adopted. This aspiration, however, was not fulfilled, and the succession of Sir Hari Singh remained undisturbed and has now been formally confirmed by his accession.

Kashmir is the most notable instance in India of a predominantly Mohammedan population being ruled by a Hindu dynasty: as is Hyderabad of the reverse. Well over eighty per cent. of the Nizam's subjects are Hindus: and about seventy per cent. of the Maharaja of Kashmir's subjects are Mohammedans. They have, however, been described as "tepid" Moslems, whose religion includes a strong undercurrent of Hinduism: this is observable to a greater extent than in other parts of India, though there is no doubt that hundreds of years of association with Hindus have, in many districts, tinged Indian Mohammedanism with Hindu ideas: there are still, for instance, Mohammedan villages in the United Provinces whose inhabitants keep Brahmin priests and consider themselves benefited by their prayers. The Hindus of Kashmir are almost entirely concentrated in the province of Jammu, the most southerly province of the State, whither the Maharaja and his Court migrate, from the summer Capital of Srinagar, to spend the winter.

Indian Appointments.

It is announced that Mr. S. R. Das, the Advocate-General of Bengal, has been selected to succeed Sir B. N. Sarma, whose tenure expires in October, as a member of the Viceroy's Executive Council: and that Mr. E. L. L. Hammond, Chief Secretary to the Government of Bihar and Orissa, will succeed Sir Hugh McPherson, in December, as a member of the Executive Council of the Province.

Digitized by Google

Mr. S. R. Das is a first cousin of the late Mr. C. R. Das: and, as was the latter, is an eminent and successful lawyer. He never agreed with his cousin's politics, and has been a prominent advocate of co-operation between British and Indians. He also showed himself particularly active in attempting to wean the old Bengal revolutionaries from the error of their ways, and is persuading some of the most prominent among them to devote their undoubted talents to the work of combating Mr. Gandhi's propaganda. The Advocate-General of Bengal holds a rather peculiar position in the legal world of India, since he is the official adviser, not only of his own Government, but also of the Government of India, on points of law. To the layman, it would seem natural that the Legislative Department of the Government of India should perform this function; but, in practice, they do not do so; their explanation being, that it is their business to draft laws, but not to interpret them. Mr. Das seems to be marked out for the Law Membership of the Executive Council; but, if so, this will involve a shuffling of the present portfolios.

The appointment of Mr. Laurie Hammond will be universally welcomed, not only in his own Province, but among the host of friends and admirers whom he owns throughout India; who will hope that it foreshadows his succession as Governor to Sir Henry Wheeler, whose tenure will expire, in the ordinary course, in April, 1927.

Assembly Resignations.

In last week's issue, it was stated that the Nationalist members of the Legislative Assembly were considering a proposal that they should resign their seats and seek re-election, as a protest against the action of the Council of State in rejecting their amendment to the Government resolution on the Reforms and accepting the original resolution. A cable from India says that it is understood that 35, out of the 36 members of the Swaraj Party who were present at the last session of the Assembly, have agreed to tender their resignations: and that fourteen members of the Independent Party have reached a similar decision. There are, altogether, 29 Independents in the Assembly: and it is said that, if twenty consent to resign, the decision of the party will be in favour of resignation. Though the total strength of the Swaraj Party in the Assembly is 45, nine members not having attended the Simla session, the practical unanimity of those who did attend it leads to the presumption that all the Swarajists will resign: and, if the ultimate decision includes the Independents as well, the result will be a general election in miniature, doubtless with the effect of leaving things exactly as they are: it is unlikely that the re-election of the resigning members will be even opposed, and practically certain that no opposition can be successful.

It was originally reported that Mr. Patel, the recently elected President of the Assembly had resigned his membership of the Swaraj Party on election to that post: but this seems to have been incorrect. Later reports say that he resigned the Vice-Presidency of the Party, but not his membership of it. Presumably, therefore, he is the one exception to the otherwise unanimous vote, in favour of resignation, of the members who attended the Simla session: and he will doubtless adhere to his decision, even if all the other members of the party should resign.

The National Congress.

The All-India Congress Committee, which has been sitting at Patna, in Behar, has passed a number of resolutions; some of which will doubtless be welcome to its supporters, though others will be less so. In the former category one may include a resolution sympathising with the Chinese and protesting against the employment of Indian soldiers in the suppression of their "movement for freedom": as well as a resolution condemning the United States Government for having refused a passport to Mr. Saklatvala. In the latter category may be placed the decision finally to abolish the "spinning franchise" for the Congress, which will be a blow to Mr. Gandhi: and the rejection of Mrs. Besant's "Commonwealth of India Bill," which will be a set-back to her hope of being able to represent it as a scheme commanding the support of political India as a whole. It is, indeed, significant that the resolution in favour of the Bill, when brought before the Committee, failed even to find a seconder; so that, if not unanimously rejected, it seems that the minority in its favour cannot have been more than a single vote.

The "Indian soldiers," whose use against the Chinese was condemned, are, of course, the Shanghai municipal armed police, who are recruited in India. They are mostly Sikhs, though they also include—or, at any rate, did, a few years ago, include—men of other Indian races. It is a common belief, at any rate in India, that there is a British Concession in Shanghai and a garrison of Indian regular troops—as is the case in Tientsin; whereas the fact is, of course, that the Shanghai Municipality functions in the International Concession, and is not by any means exclusively British: while its armed police, though they happen in fact to consist of British Indians and to be commanded by a British officer, are an "international" force and take their orders from the international Municipal Committee.

Communal Tension.

A serious Hindu-Mohammedan riot occurred at Aligarh, in the United Provinces, on September 23. The population of Aligarh is about three-fifths Hindu and two-fifths Mohammedan: but the latter have an importance beyond their actual numbers owing to the existence in the town of the famous Mohammedan Anglo-Oriental College founded fifty years ago by Sir Sayid Ahmad. Several persons are reported to have been killed, and the total casualties are put at from 170 to 200: the cabled reports say that "details are lacking in consequence of the censorship."

The belief, that appears to obtain widely outside India, in the existence of a perennial censorship in that country, is one that is constantly in evidence. The censorship instituted at the outbreak of the War continued for some little time after its close, but finally came to an end in August, 1919: since when, there has been no censorship in India at all: and it is absolutely certain that none exists, in Aligarh or elsewhere, at present. During the "Bolshevik" trial at Cawnpore last year, Communist writers in Europe made a great parade of the facts having "leaked out in spite of rigorous censorship"; whereas the fact was that the trial was very fully reported in the newspapers of India, from day to day, and its proceedings were open to everyone who wished to hear them. The truth is, no doubt, that the authorities are awaiting a trustworthy report on the occurrence and its results, before publishing an official version: and that, until inquiry has been completed, it is impossible to give any reasonably accurate estimate of the casualties. It is equally certain that both parties to the dispute are doing their best to obtain publication of their own version, not only of the origin of the riot, but of its effects on their "peaceful and oppressed" co-religionists, with the object of obscuring, in the interests of their own community, any successful attempt at an impartial estimate of the real facts. In such an effort, the pretence of a "censorship" is a useful asset: but it is remarkable that it should be accepted, contrary to what ought to be perfectly well-known facts, by presumably impartial observers transmitting information to England.

The Bombay Mill Strike.

When we went to press last week, the reported number of strikers out, in Bombay, was 45,000: at the time of writing, it is 145,000 and only five of the 82 cotton mills in Bombay are working. It can evidently only be a matter of a day or two before these also follow suit, and the strike becomes complete. The accuracy of our belief that the strike was originally engineered as a political manœuvre is rendered more probable by the fact, reported by cable from Bombay, that no attempt is being made to initiate any discussion between the mill owners and the operatives: it would, indeed, seem that both sides have decided to leave things as they are, and to leave the question of a resumption of work to the Government: if the

Digitized by Google

latter consent to abolish the Excise duty, the mills will resume, but not otherwise. The owners appear to view the situation with equanimity, owing to the existence of unprecedently large stocks on hand: and the operatives are reported to be leaving Bombay in thousands, for their villages, rail and steam accommodation being taxed to the utmost to cope with the exodus. As was to be expected, a cable has been received in India, purporting to be sent by the Soviet Textile Workers' Union of Moscow, containing fraternal greetings to the strikers and announcing the dispatch of money for their assistance; but, if the true position is as it appears to be, this particular Bolshevik gesture seems likely to be a cheap one, and it is improbable that it will be thought necessary to make any attempt to implement the promise of a subsidy.

Development of Burma.

An article in the Trade Supplement of *The Times* says that the potentialities of Burma are probably greater than those of any other province in the Indian Empire. For the development of her wealth two things are particularly needed—capital and improved means of communication. As regards the latter, an elaborate road programme is in hand and an extensive railway scheme has lately been sanctioned, including a main line from Moulmein through the mineral and rubber bearing districts of Tavoy and Mergui and then on to the frontier of Siam, where it will link up with the Siamese system and thus establish railway communication with the Straits Settlements and Singapore.

Had it not been for the enterprise of the European firms established in Rangoon, Burma would have been in a bad way; in a recent speech, the Governor (Sir Harcourt Butler) produced statistics to prove that, without them, taxation of the population of Burma would have been very near breaking point. Though the advanced politicians in Burma do not appreciate this fact or desire its further improvement, the future prosperity of the Province demands plenty of outside capital: and this is likely to be provided as soon as the road and railway programmes approach completion. Prospects for commercial and industrial enterprise in Burma are bright, and well organised and well managed concerns will earn a good return.

At an Agricultural and Co-operative Conference recently held in Mandalay, two industries—out of the many awaiting development—were specially recommended for attention: the cultivation of sugar and coco-nuts. Parts of Burma are thoroughly suitable for the cultivation of sugar cane; but the industry, to be really profitable, needs to be conducted on the central factory system, and for this much capital is necessary. India is the largest importer of sugar in the world, so that a market for all the sugar that could be grown in Burma seems to be assured. The coco-nut palm thrives to perfection along the coast line of Burma, but at present there are not enough home-grown nuts to meet the demand, and about £150,000 worth are imported annually. India also imports large quantities of coco-nuts from Penang and Singapore: and, if Burma produced a sufficient quantity, her favourable geographical position would enable her to undersell both. To grow coco-nuts on a wholesale scale requires capital, for the palm takes from six to ten years to come into bearing; but it is considered certain that, if the capital could be found, the profits would be large.

Bomb Explosion at Simla.

The startling news of the explosion of a bomb near the lines of the Gurkha detachment at Simla, by which three persons were killed and six or seven others injured, three of them very seriously, has been followed by further information which seems to show that the occurrence was accidental, and not the result of a premeditated outrage. Examination of the fragments proves that it was a Mills' grenade that exploded; and this is a form of missile that might well have been in the possession of one of the soldiers, either as a curiosity or as an article of commercial value. Since the War, a regular trade in Mills' grenades has sprung up along the North-West Frontier of India: not only in the British Army pattern, but also in imitations of it, made in the Kabul workshops. It is unlikely that a Gurkha, whose home is far removed from the N.W. Frontier, would have kept a Mills' grenade, if he had managed to make himself the possessor of one, for purposes of sale; though possible, for the Pathan rifle thief has a wide range which might well include Simla, and all is fish that comes into his net: at the same time, it is difficult to believe that any soldiers could have kept a Mills' grenade as a curiosity, for it is no novelty to the present-day soldier. A Mills' grenade breaks, on explosion, into such small fragments that it is always difficult to be sure that a few may not have remained unaccounted for, after bombing practice: and this presents an opportunity that the thrifty soldier is not always slow to recognise.

As a matter of fact, however, grenades are not particularly popular weapons beyond the frontier: they are useful for attacks on British picquets, or in close range actions, such as sometimes occur in frontier warfare; but the Pathan usually prefers to carry out his operations, particularly when the matter in hand is a personal blood feud, at long range. One calls to mind the dictum of a Pathan soldier who told his officer that he had made a good score on the rifle range—five bull's eyes, an inner and an outer. The officer said that he supposed the marksman had begun with the outer and progressed to the bull's eye, having once found which he did not leave it: in which case, his score was a proper matter for congratulation. But the Patham did not agree: he said his first shot had been a bull's eye, and that this was the only useful way to shoot—"In my country, unless you make a bull's eye with your first shot, you are unlikely to have a chance of firing a second."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 10.

Bolshevist Menace in India.

Although the political atmosphere of Bengal has been unperturbed by any new development during the past week, the politically minded have found food for thought in a debate in the Council of State on a motion for consideration of a Bill to repeal special enactments, including the Bengal State Prisoners' Regulation of 1818. The Council is usually spared the tedium of long harangues, but on this occasion it was called upon to listen to a dissertation on "repressive" legislation. Repression, a tag of the Swaraj Party, has been found very effective in raising enthusiasm among the student classes, and has been laboured in connection with the Bengal Ordinance; but, in a meeting of some fifty substantial gentlemen, it is not surprising that these tactics left them cold. Sir Maneckjee Dadabhoy vigorously opposed the motion and said that the Acts were essential for the preservation of the State from anarchy. Weight was added to his words by facts put before the Council by the Home Secretary, Mr. Crerar. Government, he said, had documentary proof to show that attempts had been made and were being made by Communist elements in China to secure connexion with India: and the German Government had requested the Government of India to take back Indian Communists whose activities were proving dangerous to the German State. This they were compelled to do, but he asked whether Government would be right in allowing them to continue their propaganda in India. Reason prevailed, and, on the motion being put to the vote, it was defeated heavily. Once again the bluff of the Swarajists is called; the political arrests in Bengal had been turned into capital by the extremists and while the wisdom of the legislation is apparent from the cessation of anarchical practices since it was introduced, the Simla debate will make it clear to the doubters that the action of Government was something more than the high-handedness of bureaucracy. It is time India realised the difference between law and order and the blandishments of the revolutionary element in their midst.

The Answer.

The promised debate on the future of the Reforms took place during the week in the Legislative Assembly. Sir

Digitized by Google

Alexander Muddiman, in a short but powerful speech, moved a resolution that the Assembly recommend to the Governor-General in Council to accept the principles underlying the Majority Report of the Reforms Enquiry. To this Pandit Motilal Nehru mover an amendment requesting the Governor-General to move Parliament to make a declaration embodying fundamental changes in the Indian Constitution. Summarised, these changes stipulate that all powers regarding the revenue and property of India should be vested in the Governor-General; the India Council to be abolished and the position of the Secretary of State be reduced in status to that of a Colonial Secretary, with the exception that for an indefinite number of years he should retain extraordinary powers with regard to expenditure under Military, Foreign and Political heads, and would be empowered to meet liabilities already incurred. In India, unitary responsible Government is demanded for the Provinces, subject only to residuary powers vested in the Central Government. Franchise is to be widened, but no details are given as to how this is to be accomplished. The Central Government will have full powers in all matters except the Military, Foreign and Political Services, which, for a number of years, will vest in the Governor General. In the meantime, however, the Indian Army is to be nationalised as soon as possible: and, at the end of a given period, the Indian Legislature will be in a position to revise the Constitution as it deems advisable. The amendment is the outcome of a compromise between the Swaraj and the Independent parties which was reached the day before the debate took place, which may perhaps account for its nebulous nature. It is designed to unite the scheme of the Independents and the Swarajists and, under the clever management of the Pandit, there is little in it which is repugnant even to the Liberal Party. As a piece of vote-catching, it is one of the smartest things that has been seen for a long time. Despite the indulgence of the Pandit in heroics in the shape of threats that, if the bureaucracy did not assist India in securing its freedom, they would have the unpleasant spectacle of India wresting its freedom from their unwilling hands, several Liberals voted with the independents and Swarajists when the Government motion was defeated by 72 votes against 45. The Extremists are loud in their insistence that the majority vote is the voice of India, but what is the significance? As a reply to Lord Birkenhead's speech, the amendment will carry matters no further; if anything, a set-back will result. The *Bengalee* deplores the amendment which it describes as inconsistent and futile. It is sheer bluff and should be treated as such.

Markets.

After a steadier tendency at the beginning of the week, the Jute market closed strong on publication of the forecast figures which, contrary to general expectations, showed a distinct decline over last year's returns. Hessians, in sympathy, have advanced through a brisk demand for September and October deliveries, for which a large business has been concluded. The indications previously reported, that a revival in the Piece-Goods market might be looked for at some not too distant date, show further signs of fulfilment, as stocks are steadily being liquidated through demand on account of the coming "Puja" festival. A slightly more hopeful view may be taken of the future of the Tea market if the steps to restrict outturn materialise and, in view of this, the interest displayed for certain of the better qualities at this week's sales resulted in an advance in prices, though the tone generally was irregular. The August returns show a decrease of one million maunds over the same month of last year. Another dull week on the Stock Exchange is to be reported: Jute shares have eased further as a result of the high price of raw Jute and unless a drop occurs or an improvement in finished goods takes place a still lower level of share values appears probable. Teas have been marked down and at the lower rates a fair inquiry has developed; but, with the heavy surplus stocks now being carried, the prospects of the industry cannot be said to be bright. A limited interest has been apparent in coal shares, but cottons have been neglected; in neither of these shares may any immediate improvement be expected.

The quiet but steady demand for Rubbers has continued and, with the optimistic reports from London and the Straits, a livelier market may be looked for in the future. Investment stocks have found fairly ready customers without displaying any particular feature. Money remains plentiful with Exchange steady.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, September 10.

The Boon of Holidays.

In Calcutta, September is a fairly strenuous month with jute and tea still in full swing. In Bombay we are waiting for the arrival of the first bales of the new cotton crop in the middle of October: and till they come down there is nothing very much to be done. So it is a merciful dispensation of Providence that September is a month full of Bank Holidays for Hindu and Parsee festivals. The very frequent festivals of Christians, Hindus, Mohammedans, and Parsees, all of them scrupulously observed by the other communities as Bank Holidays, are apt to be a nuisance when trade is active: but in the dead times of September, when Bombay is stagnant and the climate of Poona and Nasik, at the top of the Ghats, is full of attraction, they come as a great relief.

The Cotton Trade Dispute.

A desultory argument on the reduction of wages in the cotton industry still continues, but nothing appears to have been done by either side collectively, and there are certainly no signs of anything like a general strike. In fact, when one reads the morning telegrams with their threats of coal strikes in England, shipping strikes all over the world, riots in China, and war in Syria and Morocco, one is forced to the conclusion that very few places are at the moment so peaceful and contented as India in general and Bombay in particular.

It is true that our friends the labour leaders in England are doing their utmost to bring this state of affairs to an end, by reminding the Indian coolies of their condition of slavery: and a fresh invitation to them to assert their rights has been issued this week by Mr. Swales at Scarborough. As has been shown before, there is employment for all, and it is in the power of every Indian working-man to improve the conditions of his life as soon as he likes. But, as long as he is content to base his standard of living on what he can earn on three days of the week (with possibly a fourth day added to make a little more for drink and gambling), he is not likely to improve his position.

It is a problem the solution of which does not lie in the increase of wages. To double wages would mean the halving of work, without any other benefit to the workman. All serious employers of labour are perfectly conscious of the problem, and are working on it all the time, if only because they know that the only thing necessary for the immense prosperity of the country is the free circulation of part of the enormous earnings. To talk to a Labour representative of uneconomic conditions is not to gain favour in his eyes: because the expression is too often used in a wrong and selfish sense. But the state of affairs in India is altogether different from that of Europe: and our problem begins at the other end, with the difficulty of raising the working-man's standard of living, instead of that of providing him with enough income to maintain it.

The distinction seems a real one, and the solution is being attempted by employers of all nationalities in India. But the intervention of English labour leaders is the less likely to be helpful, because their motives are suspected: and it is freely suggested that their object is to increase the cost of Indian labour for the benefit of their own trade unions rather than ours.

The Monsoon.

By the middle of September it is possible to guess the results of the monsoon fairly closely. Conditions in the Punjab and Upper India appear to have been excellent all through. But in the bulk of the Bombay Presidency, especially Gujarat and the Deccan, an unusually early start has been followed by very short rains throughout July and August: and conditions in the dry belt of the South Bombay Deccan—the collectorates of Dharwar, Bijapur, Sholapur, and Ahmednagar—must be serious. We have, of course, moved a long way since the days of Kipling's stories, and famine relief is nowadays organised to run a very prosaic course: and it is probable that no very special efforts will be necessary this year. But it is certain that the unfortunate dry belts have had another year of drought and scarcity.

In Bombay itself the course of the monsoon has been most unusual. After heavy rain up to June 15, there has hardly been a single really wet day. On the other hand, there has been no pronounced break, and every day has seen a succession of short and sharp showers. These showers have been ample to keep the Konkan—the strip of land between the Ghats and the coast—well supplied, but there has been no force behind the Bombay monsoon to take the rain up country.

Bombay's Water Diviner.

Meanwhile, after a somewhat acrimonious debate in the Legislative Council, Major Pogson has been appointed water diviner to the Bombay Government on probation. The opposition was based on two arguments—first, that there was no such thing as the finding of water, and secondly, that if there were, it was a divine gift not to be sold for money.

The fact seemed to be that Major Pogson has worked up a power which appears to be latent in most people, as one finds when one experiments in a genial spirit at a house party, to a very high degree of efficiency. He has had plenty of experience in the past in the way of private practice, and has to my personal knowledge been remarkably successful on several occasions. Apart altogether from the rather mysterious functions of the divining rod, his experience has no doubt given him a highly developed instinctive knowledge of the ways of subterranean water: and this knowledge, whether it is a divine gift in itself, or the expert development of a power that we all possess in some degree, is likely to be extremely valuable in the dry belts of the Deccan. And as, after all, every power we possess—the art of reading and writing, for instance—may be described as the exploitation of a divine gift, the argument of the opposition does not seem a very weighty one.

THE INDIAN MAIL.

Punjab Electrification Schemes.

A report on the water power resources of the Punjab and neighbouring States, giving the result of detailed surveys undertaken between 1922 and 1924, has just been issued by the Punjab Public Works Department. Sites on the Indus and its five main tributaries—Jhelum, Chenab, Ravi, Beas and Sutlej—were thoroughly explored, the general policy being to discard sites that, for one reason or another, were considered unlikely to be of much economic value, and to concentrate on those where power can be developed with a maximum of value to Indian industries. It is recommended that the first to be developed, of the many possible undertakings discussed in the report, should be one that would serve the southern part of the Province, from Lahore to Delhi: the northern part, from Peshawar to Rawalpindi, being dealt with later on. Figures are given to show that a total power of 1¾ million kilowats could be economically developed, nearly half of which would be provided by the Beas: work has already been sanctioned, and its about to begin, on one of the sites offered by that river. An addendum by Colonel Battye, R.E., Superintending Engineer, Hydro-Electric Circle, is appended to the report, in which he discusses the policy that ought to be followed in the systematic development of resources of such immense potential value. He considers that this should provide for a centralised and unified system, and that it should be brought about by State control in preference to private enterprise. For this purpose, he recommends the creation in the Punjab of a new Department of State ad hoc, to be prefaced by the appointment of a small expert Committee to examine the whole question and to draft the necessary legislation.

Besides the ordinary uses to which the development of electric power is generally applied, there is an additional one of special importance to be considered in India—the assistance that can be given by it to canal irrigation. It is reckoned that, on the average, canals only provide water for about half the acreage actually commanded by them, and that this can be greatly increased by a sound system of power pumping. This provides an additional argument in favour of Colonel Battye's plea for State control: irrigation in India is entirely controlled by the State, and the provision of hydro-electric power, which is likely to be largely utilised to supplement canal irrigation, ought to be co-ordinated with it as closely as possible.

Nearly half the wheat grown in India is already produced in the Punjab: and this amount will be largely increased when the great Sutlej Valley irrigation scheme comes to fruition in the comparatively near future. If to this is added the improvement in irrigation that would follow on a skilful use of hydro-electric development, the agricultural prospects of the Punjab will be bright indeed. The Punjab Government has been quick to recognise the necessity for improved communication that this economic development will entail, and road, railway and tramway projects have already been drawn up to meet it, some of which are to be put in hand immediately. It is intended that railway construction shall be undertaken in connexion with electric development, with a view to the utilisation of the latter, at any rate eventually, as a means of propulsion.

Chittagong Harbour.

The Bengal Government has sanctioned a proposal, put forward by the Chittagong Port Trust, for a loan of fifty lakhs of rupees, most of which is to be expended on dredging. At present, the bar prevents steamers entering the port except at high tide, and this necessarily detracts from its usefulness as the only Indian port on the eastern shore of the Bay of Bengal, and the natural outlet to the trade of that part of the Province of Bengal that lies east of the Brahmaputra River.

This decision indicates robust faith in the future of Chittagong, and a determined effort to preserve it: one that, moreover, will have to be persisted in if the port is to be saved from what would otherwise certainly be its ultimate fate of extinction. For there is no question but that Chittagong is slowly silting up; or that, in the ordinary course, another fifty years or so would find it in the last stages of a fight to preserve its existence. The action now taken may prove the means of rescuing it altogether from such a fate: and should, at least, defer it for a long time to come. But it is unlikely to shake the faith of those who believe that the natural eastern port of the Bay of Bengal will eventually be found in Burma rather than in Eastern Bengal: such a place, for instance as Akyab, in Burma, about 150 miles south of Chittagong: whose existing roadstead is capable of improvement into a really fine harbour. Among the railway projects that await effective consideration in Burma is one for a line from Prome, on the Irrawaddy, which is linked by rail with Rangoon, to Akyab: if this line were to be constructed, the improvement of the port of Akyab would be an almost necessary corollary. Akyab would then become the western port of Burma, and the existing Eastern Bengal railway to Chittagong would certainly be extended to Akyab, which would, with equal certainty, then complete with Chittagong for the seaborne trade of Eastern Bengal. To all appearances, such competition could have but one result—the decline of Chittagong.

But such a forecast depends on a number of hypotheses which, after all, may not be translated into fact for many years to come. In the meantime, Chittagong is putting its house in order, and its action will certainly put off the evil day, even if the march of events seems bound to defeat it in the end.

Assam Tea Industry.

The report on the tea industry of Assam for 1924 is an encouraging one. There was a small decrease in the actual production, compared with 1923, of approximately 450,000 pounds—more than half of which was in green tea; but prices ruled higher than in the previous year, and the market continued very brisk. Some difficulty was experienced in obtaining labour, and this is considered to have been due to the general prosperity among the classes ordinarily recruited, as well as to competition by other industries; but the total number of employees rose by a little over 3,000. The lower production appears to have been due to rather unfavourable weather conditions: for the area under tea increased by 1,000 acres, and the total number of gardens increased from 891 to 906, including thirteen new gardens opened during the year.

Agricultural Progress.

The *Pioneer* (Allahabad), in welcoming Lord Reading's announcement of measures to improve what he described as the basic industry of the people of India, draws attention to the fact that the elected members of Indian legislatures, being mostly townsmen, have displayed very little interest in agricultural progress. They have, in the Legislative Assembly, pressed for the creation of a mercantile marine and for State subsidies to industries of minor importance, but have done nothing to advance the prospects of agriculture. The apathy of legislators was reinforced, during the non-co-operation period, by active attempts to interfere with the work of the officers of the Agricultural Departments: pickets were stationed on the roads to turn back cultivators who were on their way to demonstrations of improved methods of agriculture, or to agricultural shows organised for their advantage, and efforts were made to paralyse the Departments by fomenting discontent among the subordinate staff—presumably in furtherance of the campaign described by the no-co-operators as "constructive work in villages." In spite of apathy and opposition, the results achieved by the Departments have been astonishing; but it is, says the *Pioneer*, a deplorable fact that many of the most skilled officers have left India within the last two or three years and are now to be found improving crops in South Africa, Australia, Uganda, Nigeria, and the West Indies, their services having been lost to Indian agriculture.

For this loss the extremist politicians, who are always asserting that the poverty of the Indian peasant is due to foreign domination, have been directly responsible: it is to be hoped that those of them who are to be found in the Legislatures will now grasp the opportunity offered by the Viceroy's announcement, and will do their best to remedy the evil effects produced by past opposition, and by present apathy, on the interests of the "dumb millions of India" whose champions they claim to be.

Rupee Notes.

It is nearly a year since the Government of India announced their decision to cease printing one-rupee notes; but it appears that their withdrawal is proceeding very slowly, as the "man in the mud hut"—at first very suspicious of their introduction—has got used to them and is unwilling to give up their use. A few years ago, the European, whom duty or sport took away from the towns among unsophisticated villagers, always thought it necessary to equip himself with a bag of heavy silver rupees with which to make his daily payments; but latterly this has not been the case, the rupee note being freely accepted almost everywhere. Anyone who should arm himself, in England, with a bag of several hundred florins would readily understand the convenience that the European in India found in the one-rupee note; but, for a considerable time after the introduction of the latter, the village "bunnia" traded on the peasant's distrust of small paper money by refusing to give full change in coin for a rupee note: and, improbable as it may seem in the case of notes of so low a denomination, forgeries were extensive. The Indian peasant is notorious for his propensity to hoard: one of the most popular forms of hoarding being the turning of silver coins into ornaments for his women folk: but the obvious unsuitability of flimsy paper money for the usual form of hoarding—burial underground—and its lack of intrinsic value, in view of the popular affection for the one-rupee note, cannot but lead to the belief that the peasant is at last beginning to realise, in some degree at least, the economic disadvantages of hoarding. It is interesting to recall that one of the chief reasons given by Government for discontinuing the notes was, that the rupee note was more expensive to produce than a silver rupee; for the life of the former was so short that printing had to be continually kept going, whereas the silver rupee, once issued, was good for at least half a century.

INDIAN EXCHANGE.

London, September 27.

The rupee market has been quieter since our last report, and rates have remained very steady in London at 1s. 6 5-32d., with business done at 11-64, and occasional lines for a little way ahead at 1s. 6 3-16d.

We should call the market round about 1s. 6 3-16d. for delivery within a month, as, although some business has been put through at a fraction lower, the chief fixtures between the banks and merchants have been done at the higher rate.

In India quotations have been 1s. 6 5-32d. for telegraphic transfer, with a tendency on the Bombay side to mark the rate 1-32 lower; but this never became effective, as 5-32 was always available both in Calcutta and Bombay, with very little doing.

On the Calcutta side next to no business has been transacted owing to the Poojah holidays.

Last Thursday the Imperial Bank of India raised its rate of interest by 1 per cent., making it now 5 per cent., and the firmer tendency in money is, no doubt, due to the large demands which had to be met in connection with the movements of the jute crop.

Forward rates are 1s. 6 7-32d. December and 1s. 6¼d. January, but the market is quiet.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

For freight and particulars, apply to:—

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning.

The Greek Currant Crop.

I understand that this year's Greek currant crop amounts to no more than 133,000 tons or 30 per cent. less than last year's yield. Prices for currants have reached almost the pre-War level, being about 34s. per cwt. duty paid for Pyrgos, 37s. for Amalias, 38s. for Patras, and from 50s. to 60s. for Vostizza. A much keener demand for currants is looked for this year, particularly in view of the dearer prices for sultanas, which are now quoted at from 80s. to 90s. per cwt.

Greek and Australian Currants.

It is rather curious that although Australia is a grower of currants, she has not so far been as successful with them as with sultanas, and, in fact, has lost ground in this direction of late. A few years ago Australian currants were of a quality good enough to compete with the best Greek product, Vostizzas; but now, so I am informed, the best Australians do not realise the prices paid for Pyrgos. It would be interesting to learn the explanation of this. Possibly under Australian climatic conditions the life of a vineyard is much shorter than in Greece.

Another Wembley?

Could we stand another year of the Exhibition? Personally, I doubt it, despite the large attendances, for half the virtue of exhibitions lies in their novelty, and I am sure that it would not be possible to change the exhibits so that the curtain would rise again next year on an entirely new Wembley. The query is prompted by an interview given last week by Mr. Ben Tillett, a member of the Exhibition executive. Mr. Tillett strongly favours the reopening of Wembley "on lines that may be approved by experience, but with the same outlook and objects as at present"; but he does not merely desire a third act, he would have Wembley "preserved as a national memorial," as "it has become part of our daily life." I scarcely know what to say to this. The idea of an eternal Wembley is rather overwhelming. Still, this is the age of innovations (I was going to say *novarum rerum*, but as a supporter of Mr. Baldwin I realised in time that the use of that idiom would be most ominous), and for aught I know to the contrary a perpetual exhibition may be practical. I fear, however, that it would be rather an expensive experiment.

The B.I.F. Grant.

I gather that a main use that will be made of the grant made by the Government to the British Industries Fair will be for publicity in newspapers published abroad. I only wish it could be found possible to adopt the suggestion I made in these columns recently, and utilise some of the money in bringing over representatives of some of the Near Eastern countries. Just by way of an experiment for the coming Fair, one buyer might be invited from each of the four Balkan countries—Greece, Yugoslavia, Roumania, and Bulgaria. If the experiment were found, and I am confident that it would be, to have justified itself, a larger scheme could be undertaken the following year to include countries such as Palestine, Iraq, Egypt, and Syria. The plan I have advocated for the present occasion would cost very little, and if the choice of the representatives was sound, the resultant gain would be very great. It would not be so much a question of immediate orders but rather of the after results. It is essential, if the Fair is to produce the best possible effect on British trade development, that there should be the widest possible knowledge abroad of its nature and of the character of the exhibits generally. Every one of the official visitors would be in a sense a traveller for British goods on his return, for he would tell his business acquaintances of the Fair, and those who were on the look-out for some special variety of goods would know where to go for them. The idea at any rate is worth trying, and the existing trade depression affords the best possible reason for launching out in new and untried directions.

A British Success.

My readers will be interested to learn that one of the largest contracts for steam road rollers placed since the War has fallen to this country. The contract, which has been obtained by Marshall, Sons and Co., of Gainsborough, is for supplying the Greek Government with 100 engines of the "Marshall" latest Class "S" series. Brief details of the engines are as follows:—Each engine will have compound cylinders, with piston valves and radial valve gear. Each boiler will incorporate the "Marshall" patent anti-incrustation firebox with cambered crown-plate, and every road wheel will have its hub and spokes combined in one steel casting. Each engine crank-shaft will have ring-oiler bearings. An "Allen" three-tine scarifier will be attached to each engine. The news is calculated to rouse enthusiasm in the hearts of the Athenians. With the advent of the steam-rollers there will be some hope that the magnificent chaussée that connects the capital with Phaleron will be kept in adequate repair, and the drive to Kephissia will be smoother.

BANK OF ROUMANIA LIMITED
(Founded 1866).

A CHALLENGE TO THE WORLD IN QUALITY AND PRICE!

Come to the Great British Industries FAIR

ORGANISED BY H.M. DEPARTMENT OF OVERSEAS TRADE AND HELD AT
LONDON & BIRMINGHAM – FEBRUARY 15th–26th 1926

THIS great national exhibit of British Manufacturers will be the finest display of quality goods the World has ever seen. Merchants and Buyers throughout the world are cordially invited to attend. Practically every branch of British commercial enterprise will be represented and nothing left undone to meet the requirements of all visitors. Don't neglect this vital opportunity to secure your supplies of British manufactured goods.

The Fair will be held in
LONDON at the WHITE CITY and in BIRMINGHAM at the EXHIBITION BUILDINGS, CASTLE BROMWICH.

Full particulars and Invitation Tickets may be obtained from the nearest British Legation, Consulate or Trade Commissioner or on request from
THE DEPARTMENT OF OVERSEAS TRADE,
35, OLD QUEEN STREET, LONDON, ENGLAND, or
THE SECRETARY, CHAMBER OF COMMERCE, BIRMINGHAM, ENGLAND.

Schedule of Exhibits LONDON

Brushware.
Chemicals and Drugs.
China, Earthenware, Stoneware and Glassware.
Fancy Goods.
Fancy Leather Goods, Leather, etc.
Foodstuffs and Beverages.
Furniture and Basketware.
Jewellery, Silverware, Cutlery, etc.
Musical Instruments.
Scientific and Photographic Goods.
Sports Goods, Toys, etc.
Stationery and Printing.
Travelling Requisites, etc.

Schedule of Exhibits BIRMINGHAM

Agricultural Machinery.
Brassfoundry, Hardware and Ironmongery.
Brewing and Distilling Appliances.
Construction, Building & Decoration.
Cooking & Ventilating.
Engineering in all Branches.
Fishing Tackle.
Guns, Saddlery and Harness.
Metals.
Mining Appliances.
Motors, Motor Cycles, Cycle Accessories, Perambulators.
Power, Lighting and Heating.

The Egyptian Season.

This is the period when the thoughts of those who are in a position to do these things begin to turn towards the attractions of a winter in the valley of the Nile. There is something in the atmosphere of Egypt which draws the tourist as no other place does, and one may say indeed that so far as can be seen Egypt has quite regained her pre-War position as the premier resort for the tourist who wishes to go a little further afield than the south of France or Italy. It is not difficult to understand the fascination of the land of the Pharaohs, with the attractions held forth by delightful tours up the Nile and participation in the joys of a Cairo season. This year the outlook seems particularly favourable for Egypt, for the normal influx of tourists will probably be considerably increased round about Christmas by those who wish to proceed southward to the Sudan for the opening, which it is expected will be performed by one of the Royal Princes, of the Makwar Dam.

Armenian Loan Project.

The latest move of the League of Nations in furtherance of post-War reconstruction is to appoint a commission to consider the question of raising an international loan of £900,000 for the settlement of 25,000 Armenian refugees in the Armenian Soviet Republic. The object is laudable enough, but the flotation of a loan for such a project would seem to be a rather hazardous undertaking. I assume, however, that Great Britain will not be concerned in any question of a loan, even if it be small in amount, for we need our resources now for projects of development and for loans to countries which can be said legitimately to come within our commercial sphere. The country to which the League should look for such a loan is undoubtedly America, who cannot be said to have shouldered her fair share of post-War responsibilities, and equally has a positive embarrassment of the riches of this world. Bearing in mind America's lenient attitude towards ourselves over the debt settlement I shall look forward with keen interest to the loan negotiations if the League does approach the United States.

Russian Coal Competition.

The sympathy so freely extended by British Labour at Scarborough to Russia would be humorous in other circumstances. The great problem of the worker in this country, in fact of all classes, is the critical situation in the coal industry, due to a variety of factors which are well known. But while the Bolshevists continue to pose as the friends of the working man in this and other countries, and lose no opportunity that presents itself of stirring up trouble, they are not above showing a commercial astuteness which for sheer unscrupulousness is, I should say, without a parallel. Thus they are taking advantage of the coal position to sell their coal at a loss in the Near East markets in order to deprive us of these markets and secure them permanently for themselves. Thus while they extend the hand of sympathy to the British worker they use the other to undermine his position. It is satisfactory to find evidence on all sides now that at last the true character of the Bolshevists is in process of being realised.

The Motor Cycle Trade.

I visited the Motor Cycle Show last week, or rather endeavoured to do so, for the surging crowds made anything in the nature of a dignified pilgrimage round the stands quite out of the question. In the case of the more popular exhibits one was lucky indeed if one was able to catch a fleeting glance at the stand. When the vastness of Olympia is borne in mind it speaks volumes for the way in which motoring (I use the word in a comprehensive sense) has become the sport of the million in this country. For the exhibits I have nothing but praise. It seemed, looking at the long array of exhibits, as if the manufacture of the motor-cycle has reached perfection, and yet next year I suppose we shall have a whole host of improvements and innovations. The Show was a wonderful tribute to British enterprise, but if the idea of a trade depression seemed an impossibility at Olympia, it has to be remembered that the motor-cycle industry has the ever-growing home market to lean upon.

Conditions in Persia.

Elsewhere in this issue will be found some extracts from a most interesting report on the trade and industry of Persia by Mr. R. H. Hadow, M.C., Secretary in charge of Commercial Affairs at the British Legation, Teheran. He points out that for the past two years it has been the policy of the Persian Government and its American advisers to attract foreign capital and to obtain a loan for road and railway construction and the development of agriculture. These things depend, of course, on a country's financial position, and there is no doubt that an improvement has gradually been effected in this case, and that while the revenues have exceeded expenditure since the American mission took over the direction of the country's finance the expenditure appears to be decreasing while the revenues are increasing. The need for foreign capital in Persia needs no emphasis. The country is at present mainly undeveloped. Apart from mineral oils her exports mainly consist of raw materials, while more than half of her imports consist of manufactured articles. Adequate development would mean increased purchasing power, which in its turn would mean that Persia would play a greater part in the world's markets.

COMMENTATOR.

BULGARIAN 6 PER CENT. LOAN of 1892. COUPONS and DRAWN BONDS due January, 1924,
MAY NOW BE DEPOSITED.

NOTICE IS HEREBY GIVEN to BONDHOLDERS that COUPONS and DRAWN BONDS due as above may now, and until further notice, be DEPOSITED at the IMPERIAL OTTOMAN BANK, COUPON OFFICE, 25, AUSTIN FRIARS, E.C.2, between the hours of eleven a.m. and two p.m. (Saturdays excepted), for payment under the same conditions as those which governed the payments of the coupons and drawn bonds due January, 1916, to July, 1923.

COUPONS and DRAWN BONDS DUE JULY, 1924, and JANUARY, 1925, and COUPONS DUE JULY, 1925.

NOTICE to BRITISH, FRENCH, DUTCH, ITALIAN, BELGIAN, SWISS, SPANISH, and AMERICAN BONDHOLDERS.

BONDHOLDERS of the above nationalities whose bonds were held by any of such nationals before 8th July, 1922, and the number of whose bonds do not appear on any of the lists of numbers of bonds the coupons of which were paid in 1916 in Bulgaria, Germany, or Austria, are ADVISED that, in accordance with instructions received from the Bulgarian Government, COUPONS and DRAWN BONDS due as above may now, and until further notice, be DEPOSITED at the IMPERIAL OTTOMAN BANK, COUPON OFFICE, 25, AUSTIN FRIARS, E.C.2, for payment at the rate of 32 per cent. of their nominal value in the most appreciated currency mentioned on the bonds.

In the case of bonds whose number appear on the above-mentioned lists, holders are required to present to the Bulgarian Legation in London the following documents:

1. Certificate of nationality.
2. Documentary evidence that the bonds were acquired before 8th July, 1922, showing the specific numbers of the bond.

The Bulgarian Legation will then decide whether or not the numbers of such bonds can be removed from the said lists.

In the case of bonds the coupons of which were paid in French francs under the agreement of 1921, holders are required to submit a declaration to this effect signed by a banker or stockbroker, together with a declaration of nationality.

Coupons and drawn bonds which are the property of other holders may also be deposited, but are subject to special conditions, particulars of which may be obtained at the Imperial Ottoman Bank as above.

NEW COUPON SHEETS.

BONDHOLDERS are HEREBY NOTIFIED that under a Convention signed on the 23rd June, 1925, DRAWINGS of the BULGARIAN SIX PER CENT. LOAN of 1892 have been TEMPORARILY SUSPENDED from 1st April, 1925.

Holders are requested to lodge without delay the coupons due 15th January, 1926, now in their possesion, which coupons will be utilised as talons, and in exchange for which new coupon sheets will be issued commencing with the coupon due 15th January, 1926. Depositors will be duly notified when the new coupon sheets are ready for issue, and they must then present their bonds at the Imperial Ottoman Bank to be stamped.

Forms for listing the above-mentioned coupons and drawn bonds, i.e., January, 1924, to January, 1925, and the coupons due July, 1925, also the coupon due January, 1926, for use as a talon, may be obtained from the Imperial Ottoman Bank, Coupon Office, 25, Austin Friars, E.C.2.

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended September 26 states:—

Another great change has taken place in the underlying conditions of this market during the past week. The American Agricultural Bureau Report published on Wednesday evening gave the condition of the crop as 53.8 per cent. and the estimated yield 13,931,000 bales. The latter figure was an increase of 191,000 bales on the previous report and was considerably in excess of market estimates, and led to a sharp fall in raw cotton prices. Rapid fluctuations such as have taken place during the past two or three weeks are, of course, very disturbing to business and leave prospective buyers in a state of doubt as to what they should do for the best.

Yarn.—The circumstances referred to above had the effect of considerably hampering business in this section, and the amount transacted will probably not show any increase over recent weeks. Nevertheless, there is a definite improvement in the tone. There are still some weak sellers, but spinners as a whole are holding firmer to their quotations, and whilst values are lower the fall is not to the full extent of that in raw cotton.

Cloth.—As the American Bureau Report was expected to be "bullish" there was quite a fair activity during the first two days of the week. The publication of the actual figures naturally brought negotiations to a standstill for the time being, but yesterday again saw the development of a good inquiry, although actual bookings were by no means in satisfactory proportion thereto.

News from India has been more favourable and business for that market is gradually developing. There is nothing fresh to say with regard to China, whilst for Egypt and the Near East transactions have not been on the same scale as recently. There has again been a good demand for Germany in respect of goods which it is possible to get into that country before the new import duties come into force next month.

Raw Cotton.—There is little to add to what has already been mentioned in this respect. The American Bureau Report stated that 4,276,000 bales had been ginned to the 15th instant, as compared with 2,663,000 at the same time last year. There is nothing fresh regarding the new Egyptian crop. Closing quotations yesterday were as follows:—American Middling, 12.91; Egyptian Fully Good Fair, 28.00.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended September 17, state:—

Since our last report the futures market has been rather active with a marked upward tendency; the net changes on the week are: Sakellaridis, 2.28 dollars up for November, 2.25 dollars up for January, 2.25 dollars up for March; Ashmouni, 1.71 dollars up for October, 1.65 dollars up for December, 1.58 dollars up for February. The week's firmness may be attributed to the steady advance in New York, a better demand from abroad, and to the somewhat unfavourable news coming from up-country regarding the Sakellarides crop. Ashmounis have been dealt in extensively, commercial houses have been buying these contracts against their sales to spinners, growers and interior merchants being the sellers. As regards Sakel, transactions have been in general of a speculative character, the unfavourable news of the progress of the crop having induced short covering. The demand from abroad has been rather good for Ashmouni but poor for Sakellarides, the Continent has continued to be the principal buyer of the former variety. The week's receipts amount to 142,513 Cantars against exports 47,552 Cantars; the stock stands at 561,389 Cantars.

Spot: Minet-el-Bassal has been an active market this week and sales amount to about 12,800 B/s, of which we estimate 1,900 B/s Sakel, 9,300 B/s Uppers, 1,250 B/s Zagora, 250 Pilion, and a few bales of White.

Sakellaridis: A fair business has been done mainly in high grades though a small business in the medium and low qualities has also been put through. Spot differences are generally easier. Medium qualities are practically exhausted and very dear.

Ashmouni and Zagora: A good business has been done covering all grades. Medium and low qualities are very scarce and hard to buy. Spot differences are unchanged for Fully Good Fair, markedly dearer for the grades below Fully Good Fair, and rather stiffer for the better grades.

Pilion: A moderate business has been done in the good grades, parities of which are unchanged.

Brown: Is neglected and no business is reported.

White: A few bales only have changed hands. Quotations of spot are nominally easier.

Crop, 1925: The news received from the Delta about the Sakel crop reveals a serious change in the situation. It now appears that the cool weather we had in August and early September has unfavourably affected the opening of the bolls. The condition varies almost from field to field, and under the circumstances it is almost impossible to estimate the lateness of the crop: about fifteen days, however, appears to be the most probable figure. Apart from this delay, damp and fogs have occurred which did not clear until late in the morning, the result being a severe expansion of the pink boll worm attack in a good many districts. Uncertainty now prevails about the final yield per feddan for Sakel, but should the weather keep warm during the next few weeks a great improvement in the situation may result. As regards Upper Egypt and the varieties other than Sakel planted in the Delta, reports denote normal and/or above normal conditions pointing to a satisfactory production both as regards quality and quantity.

ROUMANIAN POSTAL DEVELOPMENT.

Among the Bills to be submitted to the Roumanian Parliament this autumn session is one for the introduction of postal orders which, it is proposed, shall come into force on January 1, 1926. The system contemplated would seem to be a combination of cheques and postal orders, as a minimum deposit of 2,000 lei is spoken of. At first only two towns of issue are contemplated, Bucharest for the Old Kingdom and Bessarabia and the Bukovina, and Temesvar for Transylvania and the Banat. Ultimately the intention is to extend the system throughout the country.

British Consular Reports

V.—PERSIA.

The following extracts are taken from the report on the trade and industry of Persia by Mr. R. H. Hadow, M.C., Secretary in charge of Commercial Affairs, British Legation, Teheran:—

It is the declared policy of the Persian Government and its American advisers: (a) to attract foreign capital for co-operation with local landed or merchant interests in development of the country's natural resources and the establishment of modern industries for the supply of the population's needs; (b) to secure from abroad a loan sufficient to permit of construction or completion of modern roads or railway systems throughout the country and development of Persia's agricultural resources on improved lines.

In the course of the financial year ended March last the estimated public revenue amounted to about $5\frac{3}{4}$ millions sterling, and for the year ending March, 1926, the estimated revenue is £5,732,260 at the present rate of exchange. The revenue is increasing under the present régime. One-third of the revenue comes from the Customs, less than half that amount from the direct taxes, and third on the list, providing 10 per cent. of the country's income, are the royalties paid by the Anglo-Persian Oil Company. If to this amount be added the hidden assets provided by the company's operations in Persia, it will be found that the country benefits very materially by this oil concession. Sixth on the list of revenues is opium, of which the curtailment of production is serious for the country. Since the American Mission took over the direction of Persia's finances the revenue has exceeded the expenditure, and actual expenditure appears to be decreasing while revenue increases.

Persia, it is pointed out, is an undeveloped country, dependent for her manufactured goods upon foreign countries. Fifty-four per cent. of her imports consist of manufactured articles, a large proportion of which are textiles. Nearly 36 per cent. of Persia's imports consist of cotton, woollen, or mixed tissues. Imports of sugar and tea are important, and these items, together with textiles, form the backbone of Persia's import trade. Although during 1923-24 period the value of the imports (exclusive of live animals, precious metals, etc.), has increased as compared with 1913-14, the weight of merchandise imported has diminished by over one-third. It is generally recognised that the last pre-War year was one of exceptional prosperity in Persia, being the peak of a regular trade cycle, and the gradual increase in imports year by year since 1922 would appear to indicate that the purchasing power of the population is slowly increasing; but the enhanced price of all necessities has materially reduced the quantity of imports which Persia can absorb.

Several of the minor items of Persian import trade are worthy of notice. In the first place the country re-exports a considerable amount of cotton and woollen piece-goods, mostly to Soviet Russia or Trans-Caspia. Secondly, although her northern provinces are rich in rice, total absence of proper means of transport make it necessary to import for consumption in the south of the country an amount equal to three-quarters of the total quantity exported from the North, and Persia pays for this quantity more than she gets for the larger exports.

Among the country's minor needs is cement, of which Persia has none for the construction and upkeep of her buildings, bridges, and similar public works, former imports from Russia having almost ceased. Were it possible to establish a local cement industry it should prove remunerative, as the cost of transporting so heavy an article makes its price too great to permit import in large quantities into north or central Persia.

Easily first among the exported commodities stands mineral oil with its derivatives, forming one-half of the total export trade. Next in order of importance come carpets, the trade in which is almost entirely in the hands of British and American firms, the latter in particular having largely increased their looms recently. Third comes opium, to which reference will be made later, followed by raw cotton and raw wool.

First among the countries trading with Persia, Great Britain owes her position largely to the economic prostration of Russia, whose wares in 1913-14 accounted for 60 per cent. of the total trade as against Great Britain's 21 per cent. To-day the position is reversed, Great Britain's share being 75 per cent. and Soviet Russia's 18 per cent. The latter is, however, as will be shown making considerable strides in North Persia, and is extending its activities to other parts of the country. Great Britain's predominance in imports is chiefly due to the value of her cotton and woollen trade, the former being also by far the largest import into Persia. The following table shows the value of the imports of the principal classes of cotton textiles during 1922-23 and 1923-24, together with the chief sources of supply:—

Imports and their Sources.	Year ended March 30. 1923. Krans.	1924. Krans.
Cotton fabrics, plain or figured, unbleached, bleached, dyed, printed or woven, of dyed threads—		
Total imports	193,418,758	203,091,994
Of which from—		
United Kingdom and other parts of the British Empire (except India)	123,936,137	111,357,909
British India	63,197,543	76,817,068
Russia	2,167,938	6,156,373
Turkey	1,428,416	4,142,795
Italy	2,050,849	3,376,719
Cotton yarns—		
Total imports	18,739,478	18,234,656
Of which from—		
United Kingdom and other parts of the British Empire (except India)	7,126,059	6,425,002
British India	10,166,584	9,679,130
Japan	1,075,890	1,911,145

Although these figures serve to emphasise Great Britain's dominating position in the piece-goods market a year ago, it should not be assumed that the competition of other producing countries is not developing rapidly in Persia as in other Eastern markets. The increase of imports from other countries is in itself an indication of growing competion, and more recent figures would show that Italy and Soviet Russia in particular are entering the cotton and mixed piece-goods trade with great vigour, and have in several markets already made a bold bid for supremacy in print, flannelettes, cheap shirtings, and grey cloth. France and Belgium are, moreover, increasing their supplies of woollen or mixed woollen and cotton goods to Persia, and a considerable part of the products shown as originating from Turkey are believed to be of German origin, Constantinople being only the distributing

THE SOUTH INDIAN RAILWAY CO., LTD.

NOTICE IS HEREBY GIVEN that the next ORDINARY GENERAL MEETING of the South Indian Railway Company, Limited, will be held at the Offices of the Company, 91, Petty France, Westminster, S.W.1, on Wednesday, the 7th October, 1925, at 12 noon, for the purpose of receiving the Directors' Report and Statements of Accounts for the year ended 31st March, 1925, and for the transaction of the ordinary general business of the Company.

The Transfer Books will be closed from Thursday, the 17th, to Thursday, the 31st day of December, 1925, both days inclusive, for the preparation of the half-yearly Warrants.

Transfers will not be received at the Office while the Books remain closed.

The Warrants payable on and after the 1st January, 1926, will be forwarded to the Proprietors on the 31st December, 1925.

By order,

ALEX. MUIRHEAD,
Managing Director.

Company's Offices:—

centre, whence these goods come to the Tabriz market via Trebizond. Manchester is also feeling the increasing competition of Indian piece-goods, particularly in South Persia, where, owing to the stagnant state of the market, due largely to its dependence on opium as an article of export, none but the cheapest cloth is able to find a remunerative market. Owing to the prevailing acceptance of the last port of shipment as the place of origin, it is impossible to say accurately what proportion of the goods marked as Indian in the Customs statistics is actually of Indian manufacture; but so far as reliance can be placed upon the official Customs statistics they show that India is rapidly catching up with Manchester in the supply of certain grades of cotton goods to the Persian market, and that in some cases the Indian share is apparently almost equal to that of Manchester products. In the case of foreign competition, a good deal of the progress made by these countries is generally ascribed to more plastic financial accommodattion and acceptance of comparatively small trial orders for special goods which are either coming into fashion or have so far been the speciality of other places, with a view to receiving larger subsequent orders when the quality and price have been found by the importer to be satisfactory. This enterprising spirit is particularly a feature of the Italian manufacturer, and has made good results, especially in Tabriz. As the Persian market for cotton and woollen goods is worth, roughly, five million pounds sterling, this accommodating spirit would appear to be worth while, provided that it is consonant with proper business methods.

America's principal contribution to the Persian import market during the year 1923-24 consisted of motor cars, such as the Ford, Dodge, or Buick, the value of such imports amounting to over £28,000, as against £4,700 during the preceding year. Next in order of importance come mineral oils and their derivatives, in which America is apparently able to compete with the domestic product in south Persia, particularly for the supply of lubricating oils and grease.

As against an import trade to Persia valued at £78,000, America bought from Persia during the same year carpets to the value of £1,087,000, benzine valued at £68,000, intestines of approximately the same value, furs and skins, gum, opium, dried fruits and other merchandise bringing the total value of the Persian export trade to the United States of America for the year 1923-24 to £1,311,000.

The most noticeable decrease in the percentages of Persia's foreign trade for the year 1923-24 occurred in the case of Egypt, but the difference was due almost entirely to the decrease in mineral oils and kindred products, previously consigned in the first instance from Persia to Egypt by the Anglo-Persian Oil Company; these products being now apparently sent direct to their various destinations. Egypt took over £84,000 worth of Persian tobacco, an increase of over 100 per cent. over the figures for the preceding year. As against this increase Persia imported from Egypt nearly 50 per cent. more sugar than during the preceding year.

Imports from Iraq to Persia for the year 1923-24 increased in kran value but not in sterling equivalent, being valued at £197,000. Exports to Iraq diminished by over £22,000, as compared with the preceding year, being valued at £750,000. This trade, which is almost entirely a transit trade between Persia and Europe or America, consists largely of carpets, piece-goods, and sugar, which are conveyed to their destination via the great distributing mart of Baghdad. The increased use of the Tabriz-Trebizond route in particular adversely affected exports via Iraq for north-west Persia.

The principal imports from Turkey during the year 1923-24 consisted of piece-goods, haberdashery, and kindred products, distributed from Constantinople and dispatched via the Trebizond and Erzerum caravan route to Tabriz and north-west Persia generally. These goods, amounting in value to £189,000, were largely the product of other countries, particularly Germany and Italy. Similarly the bulk of Persia's principal exports to Turkey, consisting of £503,000 worth of carpets and £24,000 worth of sheep's intestines, find their way to New York and to a lesser extent to the European markets.

Communications.

If a traveller were asked after his first journey through Persia what was Persia's greatest need, he would undoubtedly answer "roads." An analysis of the principal caravan routes passing through the interior of the country was made in the last commercial report, and it is therefore unnecessary to repeat the details given therein regarding (*a*) the Meshed-Duzhap road; (*b*) the Ahwaz-Ispahan caravan tracks; (*c*) the trade route from Kerman to Bander Abbas; (*d*) the Teheran-Meshed caravan and pilgrim route. Owing to the lack of funds work has unfortunately been impossible on the Meshed-Duzdap road, which is now a road only in name, in spite of the fact that travellers and traders have during the last three years paid large sums in road tolls and "navaghel." They are apt to resent the payment of these dues, amounting in the year 1923-24 to over £28,000 (1,274,325 krans), since they and their wares derive no benefit from the upkeep of other roads in far distant parts of the country, and no repairs are being carried out in eastern Persia.

On the Bushire-Shiraz road a certain amount of money has been spent during the last year in an endeavour to lessen the dangers to motor and other vehicles on the steep gradients and unguarded precipices which make the middle section of this road unfit for motor or wheeled transport, although motor cars and even lorries have managed to struggle over it with extreme difficulty and one or two serious accidents. Construction of this road was originally started by the South Persia Rifles, but the middle section was never finished and needs alignment, proper grading and the expenditure of considerable sums of money to make it a road in the proper sense of the word. The continuation of this main trade route between Ispahan and Teheran has been considerably improved by construction of two brick bridges between Qum and Ispahan, where traffic now follows the natural mountain track instead of the former post-road via Kashan, which is impassable to motor traffic.

During the past winter, which was exceptionally severe, this route, in common with most others in Persia, was completely blocked by deep snow and later by mud, particularly between Shiraz and Ispahan, where the plain on which Persepolis is situated becomes a morass in spring, no part of the road being metalled. Progress has further been made by metalling part of the Sultanabad-Hamadan route, along which passes a considerable portion of the exports of carpets and rugs on their way from the manufacturing districts of Sultanabad to the markets of Europe and America.

Agriculture.

Persia is to-day essentially an agricultural and pastoral country. Apart from mineral oils, her wealth lies in carpets, opium, raw cotton, fruits (chiefly dried), raw wool and rice in the order named. The first of these in-

dustries depends largely upon the continuance of cheap skilled labour and sufficient supplies of local cotton and wool at low rates. Although in itself an industrial product, the Persian carpet is therefore closely linked up with the agricultural and pastoral activities of the country. Russia has been shown to take with avidity, for the present, all the raw cotton that Persia can supply, though it is aparently of too inferior a quality, and Persia is too distant from other markets, to make its exports profitable, except in small quantities, to other manufacturing countries. Wool is also in keen demand, whether for carpet-making or for export to Russia and India at increasing prices.

Opium ranks third in importance among the exports to Russia, which for the year ending March, 1924, took sixty-five per cent. of the total supply, and during the same year increased her consignments from eight to forty million krans, almost the entire amount being consigned to Vladivostock. It is no exaggeration to say that the people of south Persia are to-day to a considerable degree dependent on this crop for their very existence. The Persian Government, in a recent memorandum addressed to the League of Nations, estimated that twenty-five per cent. of the entire population of Ispahan was dependent for its livehood on the production of opium in the district, and the same, though to a lesser extent, must be the case in the principal producing areas, namely Khorassan, Shiraz, Hamadan, Yezd and Burujird.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, September 17.

The Romano-Americana.

The Government's difference with the Standard Oil Company's concern in this country, the Romano-Americana, over the provisions of the new mining law appears to have been settled in a friendly spirit. This company has just had an unfortunate experience in the explosion of a new well at Moreni. After the explosion the well caught fire and continued to burn for over seven weeks defying all the ingenious attempts made to extinguish the fire. At last a long tunnel was bored some twenty feet below the level of the mouth of the well (which stood on sloping ground) and the oil was tapped before it reached the flaming mouth. This proved successful and the fire was extinguished on Sunday. September 13. The well reaches a depth of over a thousand metres and is proving an exceedingly rich one as from five to six hundred tons of oil are still flowing from it daily through the tunnel. The damage caused by the fire, however, is said to exceed a million dollars, though this may be an exaggerated estimate. The heart of the fire was so great that the ground for some distance all round it was baked as hard as a brick and there were cracks in it two metres in depth.

Improving Financial Position.

As regards the present financial position of the State, the revenues up to the present date have considerably exceeded the estimates and it is reckoned on the basis of payments encashed up to the present date that there may be a surplus balance of over a milliard lei at the end of the year. This is a good sign and M. Bratianu has reason to feel pleased with the results of his budget scheme.

ROUMANIAN TOBACCO PRODUCTION.

Statistics of tobacco cultivation in Roumania show that in 1924 there were 77,200 acres under the plant, of which 46,790 acres were in the Old Kingdom, 18,600 in Bessarabia, and 12,000 in Transylvania. The total production was returned at approximately 21 million kilograms as compared with 9,400,000 in 1923. The number of tobacco cultivators was 84,119.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended September 19:—

Sultanas.—The arrivals in the Smyrna market since the opening of the season are estimated at 9,730 tons, and the sales to date are put at 9,040 tons. Closing prices, Smyrna, per cwt. fig. London/Liverpool, are: Types 12, 60s.; types 13, 63s.; types 14, 66s.; types 15, 68s.; types 16, 72s.; types 17, 76s. The market is firm and prices are steady. The best qualities show an upward tendency with a probability of higher prices next week. The general tone of the market is strong owing to the shortage in supplies.

Figs.—The arrivals are estimated at 69,878 bags, and the sales to date are put at 59,729 bags. Prices have been maintained at last week's level, and supplies are now reaching the market regularly. The shortage of fine qualities is becoming more marked each week.

NEW ANCHOR LINE STEAMER.

The launch will shortly take place on the Clyde of the new steamer Britannia for the Anchor Line's Indian Service. This vessel will have a displacement of 10,000 tons and accommodation for 150 first-class passengers. It is intended that she will commence her maiden voyage from Liverpool on March 16 next.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. California for Bombay (Liverpool, October 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Dorsetshire for Port Said, Colombo, Madras, and Calcutta (London, October 3).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, October 7).

British India Line.—S.s. Madura for Bombay and Karachi (London, October 9); s.s. Manela for Colombo, Madras, and Calcutta (London, October 10).

Cunard Line.—S.s. Phrygia for Gibraltar, Oran, Algiers, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, October 10).

Ellerman "City" Line.—S.s. City of Simla for Calcutta (Birkenhead, October 12).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 17); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 6). (The last steamer of the season for Sulina, Galatz, and Braila.)

P. and O. Line.—S.s. Ranchi for Bombay (London, October 2); s.s. Nyanza for Colombo, Madras, and Calcutta (London, October 3).

Prince Line.—S.s. Lancastrian Prince for Malta, Alexandria, Jaffa, and Haifa (London, October 3); s.s. Egyptian Prince for Malta, Alexandria, Jaffa, and Haifa (London, October 24).

ENGINEERING TOPICS.

(By Our Engineering Representative.)

The Coming Motor Show.

The end of next week will see a great influx into London for the Motor Show, which, with its appeal to all classes, has the effect of giving this city an additional and quite distinctive season at the outset of autumn. The show is, of course, international in character, and thus gives the visitor an opportunity of comparing the merits of the best British and foreign makes, and as the great Paris show is not being held this year it follows that Olympia will be more than ever the outstanding attraction for motorists and potential car users the world over. As motoring is increasing by leaps and bounds not only in this country, but wherever the roads will permit of it, it needs no great powers of prophesy to suggest that Olympia will be most unpleasantly crowded throughout the show.

It is really amazing looking back over the comparatively few years that the motor has existed to see how automobilism has developed. Only a little time ago the owner of a motor was rather a unique figure, but now one assumes that a person motors unless one is given to understand the contrary. The growth of motoring is the reflex of the rapid development of the industry. The most enthusiastic pioneer would have thought it impossible, unbelievable, that within such a few years sound reliable cars would be at the command of practically every section of the community, and that the number of motor vehicles in the world, not including motor cycles, would total in 1924 no less than 21,265,000. In 1924 the estimated number of motor vehicles in the United States of America was 17,592,000, in Great Britain 771,000, in Canada 639,000, and in France 575,000.

The position occupied by Great Britain in the automobile world is further illustrated by reviewing the licences issued during the following years: 1922, 534,000; 1923, 635,000; 1924, 756,000; and 1925, 888,000.

The figures showing the returns of the ratio of population per car are very interesting. They are as follows:—United States of America 6, Canada 14, New Zealand 21, United Kingdom 57, France 69, Trinidad 198, Germany 272, Italy 409, Japan 2,645, India 7,497, Russia 8,896, and China 39,695. These figures show not only the way in which motoring has spread but also the scope for its further expansion. The proportion of cars to population in the United States is remarkable, but it has to be remembered that the country is particularly suitable for the growth of motor traffic. The figures for Great Britain are scarcely less surprising, and in view of the traffic conditions here some people naturally wonder whether we are not approaching within measurable distance of the limit as far as motor vehicles are concerned. Certainly if we ever reached anything like the American proportion the traffic conditions would be indescribable.

The features of interest of the coming show will be many and various. With engines of 2, 4, 6, and 8 cylinders, operated by either poppet, sleeve or overhead valves; air and water cooled motors; some fitted with twin carburetters; it can easily be understood why there are so many different makes of cars. It is almost superfluous to mention that the 4 cylinder still plays a very prominent part, and many firms concentrate their energies in perfecting this popular and well-tried engine, which still remains the favourite with a large number of motorists, notwithstanding the advance that has been made in the six cylinder motor. Six cylinder cars will be shown with some very fine coachwork, at prices which will make them one of the principal attractions of the show.

Last year the front wheel brake, balloon tyres and the saloon type of body provided outstanding features. This time front wheel brakes will form a standard equipment in the specification of the majority of cars, and will not be classed as an extra. That the balloon type of tyre makes for smooth riding and saves the chassis from road strain is undeniable. The saloon type of coachwork will again be very much in evidence. It was prophesied that the saloon would sweep the open car off the road, but the so-called open car is still very much alive. It is a misnomer to term this type of car "open," for it no longer exists. In its place is a vehicle which is furnished with an equipment which speedily converts the open character of the car into a storm-proof vehicle.

If the exhibits offer the car designer an opportunity of demonstrating to the world his mechanical genius, what must be said of the coachbuilder? It must be admitted that the coachwork is a strong factor in the choice of a car, and at Olympia exquisite examples of coachwork will be seen on the various stands. There is an indication that the type of body which before the general adaptation of the side curtains to the touring car was christened "All-weather" is coming into its own. It fell out of favour largely in consequence of it being extremely difficult to make this type rattle-proof and of light construction. These drawbacks are entirely eliminated to-day and many improvements have been incorporated, which no doubt will make the all-weather type a keen rival to the saloon. Ingenious methods of lifting back the windows when not required, rattle-proof sash frames, lightness of construction, and novel methods of easily raising and lowering the hood, are but a few features which this new type of body will reveal at the Show.

COMPANY NOTES AND REPORTS.

SOUTH INDIAN RAILWAY.

The report of the South Indian Railway Company for the year ended March 31 last, states that the capital expenditure during the year amounted to Rs. 40,11,307, and was chiefly incurred on engineering works 67 lakhs, mainly for the provision of additional facilities at stations for dealing with increased traffic, the strengthening of bridges, remodelling of certain stations, and the new locomotive and carriage and waggon workshops. The above outlay includes a credit of Rs 7,09,300 on account of customs duty refunded by the customs department as a result of the Privy Council's decision in the Great Indian Peninsular Railway case, and about 2 lakhs of rupees due to the sale of rolling stock to Podanur-Poliachi Railway. There was a reduction of 22 lakhs of rupees in suspense account mainly due to restricted indenting from Home and purchasing in India, issues of stores from existing stock, writing down of values of surplus and obsolete stores to scrap rates and charging off amounts to final heads of account. The outlay on construction works amounts to Rs. 16,23,095.

The gross earnings were Rs. 4,96,15,859, while the working expenses were Rs.2,70,16,014 the net earnings being Rs. 2,25,99,845. Compared with the previous year, there was a decrease of Rs. 10,88,064 or 2.15 per cent. in the gross earnings, chiefly due to breaches, a decrease of Rs. 18,92,710 or 6.55 per cent. in the working expenses, and an increase of Rs.8,04,646 or 3.69 per cent. in net earnings. In the year under review, Rs. 24,40,614 were expended on account of renewals and replacements of permanent way, works and rolling stock, as against Rs. 31,76,065 in the previous year.

The company's share of surplus profits for the year 1924-25, amounted to Rs. 7,82,446. Amount retained in India to meet Indian income tax and super tax for 1925-46 Rs. 1,19,132. Balance remitted to London Rs. 6,63,314. At an average exchange of 1s. 5.9705.d per rupee, realising £49,666 19s. 10d. In addition to the guaranteed interest of 1¾ per cent. for the half-year to June 30, 1925, an interim dividend of 2 per cent. from surplus profits was paid, less income tax, on July 1, 1925. The Board now recommend that, for the year 1925, there be paid from surplus profits, on January 1, 1926, a final dividend of 2½ per cent., making, with the guaranteed interest of 1¾ per cent., a total payment for the half-year ending December 31, 1925, of 4¼ per cent., less income tax. The total distribution for the year will then be 8 per cent. (4½ per cent. from surplus profits, and 3½ per cent. from guaranteed interest).

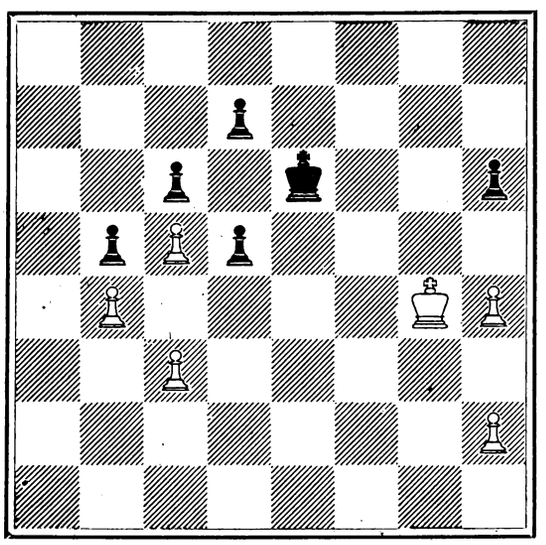
CHESS.

By "CARO-KANN."



PROBLEM No. 15.

White to play. What result?

Solution to Problem No. 14:—1, K—B3, P—K4; 2, PxP, P—Kt4; 3, K—Q4, K—Q2; 4, P—B5, P—Kt4; 5, K—Q5, P—Kt5; 6, P—K6 (ch), K—K2; 7, K—K5 and wins.

There is not much news yet. The winter season opens at the City of London Chess Club on October 21, with a simultaneous display by Mr. F. D. Yates, while the following Tuesday sees the commencement of the tournaments with the first round of the Gastineau Cup, the Club Championship.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade. 35, Old Queen Street, S.W.)

EGYPT.

Road Roller.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of a road roller 6-8 tons load to be driven by paraffin or petrol (internal combustion), required for Public Works Ministry, Cairo. November 1.

Internal Combustion Pumping Units.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at the site of Mex Pumping Station of two 500 B.H.P. internal combustion pumping units. Copy of the specification and drawings may be obtained against payment of P.T. 50. December 1.

Portland Cement.— The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 4,000 metrical tons Portland cement. October 21.

TURKEY.

Brass Rods.—Tenders are invited for the supply and delivery of brass rods of various sizes. Tenders are to be submitted to Angora by October 27 next. (D.O.T.)

The Roumanian duty on imported coal was raised on September 12 from 65 lei per ton to 400 lei.

It is estimated that Roumania's sugar beet harvest will yield this year about 170,000 tons of sugar, against 105,000 tons last year. This will enable Roumania to export for the first time a small amount of sugar.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended August 31 amounted to £E9,244, making the total from April 1 £E116,601.

An order has been placed by the British India Steam Navigation Co., Ltd., with Mesrs. Barclay, Curle and Co., Clyde, for a vessel of about 8,500 tons deadweight, and a contract has also been given for a vessel to Mesrs. Hawthorn, Leslie and Co., Tyne.

The directors of Harrisons and Crosfield recommend a final dividend of 20 per cent., less tax, on the deferred ordinary shares, making 30 per cent. for the year. Holders of these shares will have the option to take up at par deferred ordinary shares to the extent of one-half of the amount of this final dividend, less income-tax. The meeting will be held on October 15.

THE DRUSE REVOLT.

The Druse revolt is running its expected course. As soon as the French were able to obtain reinforcements and to take the field in adequate force the rebellion was doomed. The Druses could rely on little encouragement from their neighbours; a few initial successes gained them some adherents, but when these could not be repeated, the inevitable separatist tendencies began to assert themselves. The French under General Gamelin have relieved Sueida, and the Druses are reported to be fleeing in various directions. Interest now attaches to France's future policy in Syria. She can stamp out the rebellion, and leave the Druses with little inclination to rise again for many years. In so doing, however, she may sow the seeds of unrest elsewhere. A wiser policy, it would be thought, might be to recognise that the revolt was not started without some provocation, however petty in itself, and, as soon as French authority has been reasserted, to introduce a system of administration which has a better chance of meeting native aspirations than the system represented by Captain Carbillet.

CIVIL AVIATION.

It had for some time been the general impression that civil aviation in Great Britain was not making the progress that one expected, but the figures that have been published for the first working year of Imperial Airways, Limited, prove that we are even farther behind our foreign rivals than we feared. For the year ended March 31, 1925, Continental passenger traffic in British machines was only about 60 per cent., compared with 79 per cent. for the previous year—French and Dutch machines have gained where ours have lost. This decrease is attributed to our lack of modern commercial aircraft, but whatever the reason, it is a little disquieting. Of course, it is no secret that we hope to make good our losses in the long-distance flights over our Colonies or mandated territories, and it is hoped that even in Continental or cross-Channel traffic we may, by the end of next year, be holding our own.

The Roumanian Minister of Finance has appointed a committee to considered the question of the introduction into Roumania of a service of cheques and postal orders.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Iraq and Britain.

Gratitude does not often figure among the commodities subject to international exchange. For this reason the obvious note of sincerity that characterises the message sent by the Iraq Senate to the British Government, in the person of the Secretary of State for the Colonies, differentiates it from the majority of communications of this nature and makes of it a significant contribution to the Mosul discussion. The Senate, runs this message to Mr. L. S. Amery, feels very proud to express its thanks and gratitude on behalf of the people of Iraq for the keen interest and concern taken in the defence of its vital cause for the preservation of the northern regions of the country. His untiring efforts, it continues, do only reflect with honour on Great Britain's adherence to its pledges. More important than any mere acknowledgment of the fact that the British Government is fighting solely for the cause of Iraq in the Mosul controversy is the deliberate endorsement by the Iraqi Parliament of the prolongation of the British Mandate, for twenty-five years, if need be. The advantages to the country may be obvious; but in view of the strong nationalist spirit that prevails among the Arabs and has manifested itself in particular in Iraq, it is a testimony to the common sense of the inhabitants that they have persuaded themselves that independence and British assistance, based on a treaty, even with a formal Mandate in the background, can exist side by side. It is to the interests of both countries that this friendly, and to Iraq invaluable, relationship should be maintained unimpaired.

The Government and its Critics.

Some straight talking from authoritative quarters on the subject of Great Britain's dispute with Turkey over the Mosul frontier was necessary, and the Secretary of State for the Colonies has lost no time in taking up the challenge of a prejudiced section of the Press, which has been falsely accusing the Government of breaking pledges and has been adopting every possible "defeatist" argument to strengthen Turkey's position. One of the worst offenders, because it knew better, has already shifted its ground, and, being unable to answer a single point in his speech, is reduced to charging Mr. Amery with bad temper. If ever there were occasion for following St. Paul's injunction to be angry, without sinning, and not to give place to the devil, it would be in regard to what Mr. Amery very rightly described as "the reckless disregard of the elementary facts of the situation, of the honour of their country, and of the possible consequences of Press campaigns which were little short of a direct incitement to Turkey to break her treaty obligations, to defy the decision of the League of Nations, and to make an unprovoked attack on a territory under British protection." The alleged pledge that has formed the basis of the attack on the Government's policy in the Mosul dispute was never given. On the other hand, Great Britain has given solemn pledges to the people whom she has liberated from Turkish rule that she would never allow them to be restored to that rule; she has pledged herself not only to found, but to uphold, a free Arab State; she has pledged herself by treaty to maintain the independence and the integrity of Iraq, and she is responsible to the League of Nations for its peace and security. It is as the direct outcome of these pledges that successive Governments have been forced to the conclusion that the policy of scuttle is impossible, not only because it would be dishonourable, but also because it would involve political and military dangers and difficulties far greater than those involved in the fulfilment of Britain's obligations. Arguing from these premises, Mr. Amery has experienced no difficulty in convincing any unprejudiced student of the Mosul question that no other course was open to Great Britain than the policy which he supported so cogently, and unanswerably, at Geneva.

Turkey and the War Scare.

There can be no greater fallacy than to suppose that Great Britain, in supporting the Iraq cause up to the hilt, is actuated by any lack of friendliness towards Turkey. The Angora Government has been given abundant evidence of the British Government's desire to improve the

Digitized by Google

relations between the two countries, and at no time has it been afforded from any official or responsible quarter the least indication of the likelihood of Great Britain yielding ground on this Mosul question. It has preferred, however, to pin its faith to underground promptings and the campaign of a notoriously irresponsible section of the British Press; on the strength of these it has committed itself to an impossible attitude and has tried to whip up public opinion in Turkey in support of a policy to which the bulk of the nation remains entirely indifferent. The result, it must be admitted, has been to place the Angora Government in an extremely difficult position. In order to push its bluff to the farthest possible limit, it has given wide publicity to military movements towards the Iraq frontier, while its Press is bidden to represent these preparations as measures of national defence. By some subtle process of reasoning territory which has not been in the possession of the Turks for seven years is represented as part of the Turkish Republic, which Great Britain is preparing to wrest from her grasp. In spite of this supreme effort at self-deception, the Turkish Army as a whole, we believe, will remain on the defensive, and no great harm will come to Iraq or to Turkey, if the League of Nations and Great Britain remain true to themselves. It would be a thousand pities if the Angora Government, in pronouncing a decree of divorce between Islam and State, should be the means of causing the Hoja to be forgotten and of banishing a sense of humour from the Republic; but in this question of the Mosul frontier it has taken itself too seriously, and the effort to sustain its point of view in the Turkish Press is beginning to wear very thin. When all other devices have failed, Turkey will do well to remember that she can always fall back on friendly relations with Great Britain to rehabilitate herself in her own eyes and in those of the world.

Greece's Constitution.

The establishment of a republic in Greece on April 13, 1924, necessitated a revision of the Constitution, and to this end the Chamber elected in December, 1923, turned itself into a Constituent Assembly. This body, however, elected under conditions that prevented it from enjoying the support of the country as a whole, had not progressed far with its work when General Pangalos in June took over the reins of power. A Constitutional Commission was then appointed to draw up a Constitutional Charter, with strict injunctions not to take too long over it. It has now completed its labours, and, after considerable public controversy, during which members of the National Assembly recorded their vote against promulgation, the Charter has been promulgated by the Government. A number of provisions which commended themselves to the Assembly for Greece's Constitution have been omitted from the Charter, notably the creation of a second Chamber, or Senate. Simultaneously the Assembly has been dissolved. The latter had few friends outside its own ranks; but its dissolution raised technical questions of legality, and political leaders opposed to General Pangalos are loudly contesting his right to dissolve the Assembly. On the other hand, there is a wide consensus of opinion that a fresh general election held under strictly fair and impartial conditions is the only way of clearing up the political situation. A violent attack has been made on the Government in the form of a proclamation to the Greek people by M. Papanastasiou, who was Prime Minister for a short period in 1924 and was the chief champion of the movement for the immediate establishment of a Senate. Legal proceedings are stated to have been instituted against the leader of the Republican Party for this attack. At the same time one or more editors are on trial for criticising the Government, and the general situation in Greece suggests that the management of the Republic causes the responsible head to lie as uneasy as ever did one that wore a crown in the country.

Minorities in the Balkans.

A conference, it is stated, is to be held during this month at Geneva of delegates of various national minorities in Europe, with a view to urging their claims to autonomy, or at least to the recognition of their languages especially as a medium for education. The usefulness of such a gathering, if it is to be held, will depend on the measure of restraint with which the case of the different minorities is presented; and it is to be hoped that the delegates will be more concerned to evolve in concert practical policies than merely to indulge in oratorical efforts calculated to arouse the enthusiasm of those whose disabilities they are emphasising. In time we believe the minor Powers of Europe will come to realise how much more they stand to gain by a liberal policy towards minorities in regard to the use of their languages. To-day more than ever the economic factor is all important in the internal harmony of a State. Where a minority is given absolute freedom in regard to the use of its language, it lacks the incentive to propaganda that repression affords, and it will be obliged to use the language of the majority, because in that tongue it finds a bigger market for the earning of its livelihood. In this connexion it is of interest to find that the opening of a Kutzo-Vlach school at Gorna-Jumaia in Bulgaria has been made the occasion of further evidence of the re-establishment of cordial relations between Roumania and Bulgaria. At this particular town there existed already a Turkish school and a Jewish school in which instruction is given in the pupils' own languages. It is safe to infer that the youthful Gorna-Jumaians will all speak Bulgarian as well, and they will be far less inclined to nurse grievances against the Government, when they find that in no single particular are they worse off than their Bulgarian neighbours.

THE OPENING OF THE MAKWAR DAM.

We learn that H.R.H. the Duke of Connaught has notified his willingness to perform the ceremony of the official opening of the Makwar Dam in January, 1926, provided that his medical advisers raise no objection to his visiting the Sudan at that time. The Dam has actually been in operation since last July, but at that season of the year any official ceremony was out of the question.

The King and Queen of the Belgians arrived at Simla last Saturday and were met at the station by the Viceroy, Lord Reading.

According to the *Izvestia*, the work of the Mixed Commission, which is to establish the new frontier between Turkey and the Union of Soviet Republics, has been successfully concluded. The Commission has been at work since last March.

THURSDAY, OCTOBER 8, 1925.

TURKEY, RUSSIA AND PERSIA.

There is probably a considerable amount of truth in the contention of a correspondent who, in a letter that we published last week, pointed out that no small part of Turkey's difficulty in regard to the Mosul question is due to the fact that the Turkish Government has made too many promises to the nation about its unalterable resolve to retain something that it does not possess. It is also quite true that Great Britain would prefer to see the present régime in Turkey continue than that it should make room for a period of chaos. Great Britain, however, cannot be expected to break her pledges to Iraq and to stultify her position in the Middle East merely to help Mustapha Kemal Pasha and his Cabinet out of a difficulty of their own contriving. In more ways than one the discomfiture of the Turkish Government over the Mosul question may well prove a blessing in disguise. In the first place it is quite evident that the Turkish people as a whole display little or no interest in the fate of the vilayet, and, although the Government may make itself look foolish and give a handle to its political opponents, it has the satisfaction of knowing that no responsible person in Turkey will seriously contend that the Turks can or ought to go to war over Mosul. Secondly, it will be a useful lesson to all Turkish Ministers and Presidents to tread more warily in raising popular expectation in regard to matters outside their own control. But by far the most important service that the baulking of the Government's plans will confer on Turkey is that it will free the Republic once more from subservience to Soviet Russia. Moscow has used the Mosul dispute, as it used a few years ago Turkey's war with Greece, to pose as the only friend on whom Angora can rely, and once again Turkey is in danger of committing herself to the Soviets to a greater extent than she would think of doing, if the Government had not rushed into this particular quicksand. The interest of Soviet Russia in stirring up trouble between Turkey and Great Britain is obvious. In the event of the two countries being involved in war—Soviet diplomacy is not deterred by the unlikelihood or impossibility of its aims being realised—Moscow would without doubt consider the moment opportune for carrying into effect its long-laid plans with regard to Persia. The Angora Government is well aware that it would be an evil day for Turkey, if Soviet Russia were to take possession of the Azerbaijan province of Persia; yet it has been playing with fire to a dangerous extent, for no better reason than that it fears the effect on its own position of a diplomatic defeat over Mosul. A symptom of its misgivings was shown in the suggestion put forward by Rushdi Bey in Geneva for a Security Pact between Turkey, Iraq and Great Britain, to which Persia might be invited to become a party. Ostensibly such a pact would be designed to remove Iraq's fears of Turkey; more likely, the idea was prompted by a genuine desire on Turkey's part to secure an adequate safeguard against Russian aggression, which in its sober moments Angora fears as much as ever Constantinople did.

Any disappointments that Soviet Russia is experiencing over the setbacks to Communism in Europe must be compensated by the apparent way in which the situation in Turkey and Persia has been playing into her hands. Although we cannot endorse the recommendations put forward by the writer of a letter published on another page for helping Persia to save herself from the northern menace, it is difficult to challenge his diagnosis of the position in that country. A strong man was needed in Persia and Riza Khan has achieved wonderful results; but his régime is essentially a one man's effort, calling for a master mind at the helm, and in the nature of things there can be no guarantee of a continuation of his strong government when his directing genius has been removed. On the contrary there is every reason to expect a sharp reaction, if only because, in order to obtain the notable improvement in the general condition of the country that stands to his credit, he has had to antagonise many interests, whose power for retaliation has been curbed without being destroyed. Riza Khan is on the horns of a dilemma. He was bound to appeal to the nationalist instinct, if ever Persia was to do justice to herself, and nationalism entailed a complete break with the two countries that had previously loomed so large on the Persian horizon. Soviet Russia made a great parade of her withdrawal, and at once proceeded to worm her way back into the country in the furtherance of her own designs. Great Britain withdrew reluctantly, because she desired to see a strong and independent Persia and knew full well that the Persians unaided would never reach that goal. For a short space of time the rise of Riza Khan lent colour to the belief that British fears about Persia would be belied by the event. The activities of Soviet Russia, however, emphasize the limitations under which Riza Khan is working. It is not given to one man in the short space during which he can serve his country to raise it from the depths of helplessness into which Persia had fallen and to make it reasonably secure against all possible dangers. There is no indication at present that the reforms inaugurated by the Prime Minister have established a form of government that can be relied upon to carry on with its own momentum. If he lives long enough, the necessary machinery may be created, but the outlook for his country would be improved if he could introduce a system of educating Nationalist Persia that was not dependent on the life of one man.

Apart from the danger to Iraq itself of a premature withdrawal of Great Britain's assistance, it is to be hoped that nothing will occur to interfere with the present relations between the two countries. Iraq affords the interesting object lesson to-day of a people as well satisfied as a whole with foreign guidance as any nation is with the particular Government of the day. There has been no whittling down of the Iraqis' desire for independence; but circumstances have provided them with an object lesson which has materially modified the opinion so strongly emphasised a few years ago that Iraq had already found her feet as an independent State and could dispense with further help from Great Britain. It is true that the latter's attitude towards Iraq has also changed. British adaptability has adjusted itself to new conditions, and a state of affairs is gradually being evolved which will prove that there need be no incompatibility between foreign guidance or supervision and national independence. The Iraq experiment might with advantage be taken to heart in Egypt and in Persia. Both countries ardently desire to stand alone; yet whether they recognize the fact or not, neither under present world conditions could be sure of safeguarding its independence single-handed. There is no question of Britain's playing in Persia the part that she has been called upon to play in Egypt and in Iraq. But if, as a result of the removal of their one strong man, the Persians find themselves losing, in a welter of revolution and chaos, the ground that they have recently gained, the time may come when they will look across the border to Iraq and see a nation, numerically inferior and starting with none of the advantages that have been theirs, rapidly surpassing them in contentment, prestige and prosperity, merely because it was willing to accept a helping hand in its early days. For Turkey too the picture of an eagerly Nationalist Iraq able to reconcile her aspirations for independence with a treaty insuring British help and guidance must clash strangely with the doctrine so perfervidly preached by a pliable Press of a Great Britain set on conquering the world, or at least the weaker nations in it. If Iraq and Great Britain can pull together long enough, the Iraqi nation will in time have no need to fear comparison with the Turkish or the Persian.

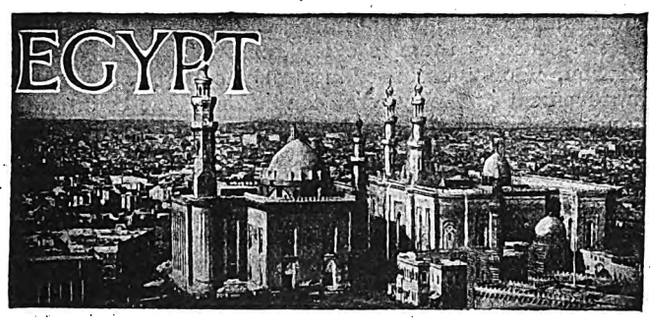
The Near and Middle East*

From Our Own Correspondents.



Cairo, September 27.

The Press on the Cabinet.

If newspaper opinion were as powerful in Egypt as it sometimes appears to be in other countries, the present Unionist Ministry would be on its deathbed. Never has an Egyptian Cabinet had a worse Press. Of all the vernacular journals only one, and that the property of the Unionist Party, has a good word for the Government. All the rest are abusive, though from various standpoints. Wafd organs declare the Ministry to be unconstitutional, the Nationalist *Akhbar-Lewa* affirms that the country's rulers have delivered themselves, body and soul, into the hands of the British, while the Liberal Constitutional *Siyassa*, all the more bitter because until lately the party which it represents was a partner in the Governmental coalition, is in no wise daunted by repeated official *communiqués* denying its statements, but returns every day to the attack, provided with some new ammunition. Only the Syrian-owned *Mokattam* and *Ahram* preserve a tolerantly neutral attitude.

The Draft Electoral Law.

The draft Electoral Law, with its imposition of tests and consequent reduction of the electorate to not more than sixty per cent. and possibly less than forty per cent. of its former total, is the principal grievance of the Opposition, which, moreover, doubts whether the Government has any intention of putting even this law into operation in the near future. And such doubts are not without justification, for, even if the Unionist Cabinet were determined to hold elections at the earliest possible moment, it is difficult to see how it could do so within twelve months from the present time. The draft law, it is stated on the best authority, will not be out of the hands of the Government's legal advisers for another two months at least, while after its promulgation at least another six months will be necessary for the preparation of the new registers. That reckoning, which takes into account only what is stated to be the absolutely minimum delay, would give the earliest polling date as somewhere about the end of June, a time of year when nobody wants elections which, indeed, are unthinkable between April and September.

A French Orientalist.

The Arabic Press has lately been very excited over what it calls "the appointment of a Frenchman to teach Arabic to Egyptians." The excitement has been caused by the nomination of M. Casanova, a French Orientalist, to the chair of Arabic in the new State University, and even the explanation of the Rector of the University that the post requires a scholar learned not in Arabic alone, but in all the Semitic tongues, and that there is no Egyptian so qualified, has not altogether satisfied the critics.

All Saints' Church.

To-night Bishop Gwynne will preach the final sermon in All Saints' Church, which will thereafter be handed over to the contractors, who will very quickly have the old building down and the foundations laid for another of the huge apartment blocks of which Cairo is now rapidly becoming full. The reasons for leaving All Saints' are many and strong. For one thing, the old church is falling down, apparently because the foundations are giving way, and, for another, the increasing din of traffic in Sharieh Boulac often drowns the voice of the officiating clergyman for all but those in the forefront of the congregation. Nevertheless, All Saints' has been the spiritual centre of the British community here for very many years, and its passing will be keenly regretted.

ALBANIA.

Tirana, October 1.

The Retiring British Minister.

The British Minister, Mr. Eyres, who has held his post for nearly five years, has retired, and his place has been taken by Mr. O'Reilly.

The latter will not find it an easy task to succeed so distinguished a predecessor; for the part which Mr. Eyres has played in Albanian affairs has been exceptionally notable. Endowed with wide experience of the Near East and an extremely forceful character, Mr. Eyres succeeded in imposing his personality on those responsible for the government of the newly-created, budding State, to which he was accredited as first British Minister. His influence extended far beyond the sphere which it is usually possible for the Minister of a Foreign Power to enter; and this influence was invariably exercised in a disinterested endeavour to help Albania in every possible way to consolidate her independence and her social cohesion. Albania has every reason to be profoundly grateful to him, although he has come in for much bitter criticism by the enemies of the present régime on account of his close and intimate relations with the actual President.

Indeed, during the attempted rebellion in 1922, Mr. Eyres's prompt action saved the Government of which Ahmet Zogu was at the time Minister of the Interior and virtual Chief. The forces of the rebels were closing about Tirana, when Mr. Eyres, motoring up at breakneck speed and in the nick of time from Durazzo, appeared in the capital, and at considerable risk to his life (for bullets were flying about the place with dangerous frequency) obtained an audience with the rebel leader, Zia Dibra, whose forces had already occupied a portion of the town. Mr. Eyres succeeded in persuading this patriotic but misguided old mountaineer that he was but the instrument

Digitized by Google

of a conspiracy which boded no good for his country, promising him at the same time a safe pardon if he retired from the scene. The advice was accepted, the capital was saved, and Ahmet Zogu was thus enabled to collect his forces and to concentrate his attention on the remnant of the rebels, whom he easily disposed of. Ahmet Zogu holds, in fact, that Mr. Eyres thereby saved his life; and thenceforth he always gave the British Minister his confidence.

It was not surprising, therefore, that when Zogu, in June, 1924, was thrust from power by the next armed rebellion, the new Government of Monsignor Fan Noli regarded Mr. Eyres as a *persona* by no means *grata*. The life of this Government, however, was short lived, and when Zogu returned in triumph towards the close of the year, the old intimacy between the two was resumed.

It has, indeed, appeared to many a mistake on Mr. Eyres's part—this identifying himself so strongly with one party, but events as they have turned out must be said to have largely justified him. If he committed mistakes, he has at least the satisfaction of having done much to secure for Albania her present frontiers, and to have upheld the prestige and dignity of Britain in a conspicuously high degree throughout very troublous times. His help, too, in the long negotiations by which the Anglo-Persian Oil Co.'s concessions came at last to be ratified, was invaluable. His backing of Ahmet Zogu in this connection showed great foresight. Mr. Eyres certainly deserves unstinted gratitude from his country.

The New Minister.

Mr. O'Reilly comes to Albania with an unprejudiced mind. He has been Minister in Guatemala for over a year, before which he held the post of Minister in Bolivia. He is not, however, without Balkan experience, having been Chargé d'Affaires in Sofia before the War, and attached earlier in his career to the British Legation at Cettigne.

Drilling at Valona.

It is announced that drilling operations are to commence during the course of the present month near Valona, for the purpose of testing the commercial value of the Anglo-Persian Oil Co.'s concession.

The Ministerial Crisis.

The resignation of MM. Poga and Cotta, Ministers of Justice and Public Works respectively, was soon afterwards followed by that of M. Mufid Lipohova (Minister of Foreign Affairs and of Finance) and of M. Tseno Beg (Minister of the Interior). Similarly, the resignation of M. Eshref Frasheri, Chairman of the Senate, has been followed by that of several other Senators.

It is now clear that the occasion of the Ministerial crisis is the agitation in the country against the cession of Sveti Naum and of Vermosch to Yugoslavia, in the face of which there is a general flight from the responsibility of ratifying the agreement between the Albanian and Yugoslav Governments. Parliament, which was to have met on October 23, still lacks the necessary quorum—and for the same reason—to enable the session to be opened.

Meanwhile it has been found possible to form the following stop-gap Ministry:—

M. Tutulani (Orthodox): Minister of Justice and, *ad interim*, Minister of Foreign Affairs.

M. Musa Juka (Mussulman from Scutari): Minister of Public Works and, *ad interim*, Minister of the Interior.

M. Sulejman Starova (Mussulman): Minister of Finance.

M. Tutulani was Minister of Justice under Ahmet Zogu in 1923.

As reported last week, the causes of the present crisis lie deeper than the question of the disputed territories. The Government of Ahmet Zogu has from the outset found itself very largely isolated, while the cession of territory to Yugoslavia and the concession granted to Italian interests for creating the National Bank—both of them unpopular measures—have led to considerable dissension lately among the President's own adherents. Consequently, it has become a matter of paramount importance for the latter to find means for broadening the basis of consent to the present régime.

Broadening the Government.

The recent amnesty, which excluded, however, all those who figured at all conspicuously in the revolution which drove Ahmet Bey from office in June, 1924, was a first step in this direction. Two other currents meanwhile have been set in motion—the one, already alluded to last week, under the direction of M. Eshref Frasheri, having as its object the revival of the "Clique," many ex-members of which, belonging to the more moderate members of the Opposition, are still in exile; the other, initiated by the President himself, who dispatched an emissary, M. Fazli Frasheri, two months since to Boston, U.S.A., to confer with M. Faik Konitza, head of the Albano-American organisation known as the "Vatra."

M. Fazli Frasheri has now returned, bearing with him a number of conditions representing the views of those, whether in America or in Europe, in touch with M. Faik Konitza—the acceptance of which by the President would make possible a reconciliation with the present régime. These conditions include:—

1. The formation of a broad-backed Ministry to preside over new elections.
2. The disbandment of Ahmet Bey's voluntarily recruited gendarmerie.
3. New election freely conducted.
4. The new Parliament to reappoint the executive members of the Senate and to reconsider various clauses of the actual Constitution.

Conversations are now continuing between the President and M. Fazli Frasheri with a view to seeing whether it may not be possible to arrive at an agreement. Some of the above conditions are, however, obviously difficult, if not impossible, for the President to accept.

M. Eshref Frasheri's initiative may after all turn out the more convenient bridge. His opposition friends, headed by the Orthodox ex-Regent M. Petsi and MM. Sefi Vlamasi and Ali Klissura, have formed a new "Patriotic League," which may be regarded as an attempted metamorphosis of the Clique itself. The most interesting plank in the programme of this group, the acceptance of which presumably is one of the conditions of a reconciliation, is the accordance of wide power of local self-government to districts. By this means they have secured the support of the Catholic hierarchy.

M. Mehmet Konitza, ex-Minister in London, brother of M. Faik Konitza of the "Vatra" on the one hand, and old friend of M. Eshref Frasheri on the other, has arrived, as already reported, at Tirana. It is not surprising, therefore, that all eyes are at present turned on him; and experienced diplomat that he is, it is quite possible that through his agency some compromise will be arrived at involving both the moderate opposition groups.

It should be noted in conclusion that Monsignor Fan Noli is not included among the friends of either the "Vatra" or the "Clique." No compromise is possible in his case at present. With him are associated MM. Bedri Bey and Mustapha Kruja. M. Hassan Pristina, the Kossovo irredentist, would also, it appears, be excluded from any reconciliation. The latter's colleague, however, M. Rexjep Mitrovitza, is said to have adhered to the Patriotic League, whose headquarters are at Bari.

ROUMANIA.

Bucharest, September 28.

Political Activities.

The approaching re-opening of Parliament has revived the activities of the Opposition parties and more especially of the Coalition group formed by the National Transylvanian Party, who are in hopes of succeeding to the Government on the fall of the Liberal Cabinet. Their brilliant successes in the elections for the Chambers of Agriculture have given them the greatest encouragement, and they are at present labouring to produce a definite working programme to which all sections of the party will subscribe. On the one hand the Peasant Party includes some fairly advanced sections, such as that from Bessarabia which is somewhat tarred with the Bolshevist brush, and on the other the Transylvanian Ministries have each their own special interest, and all have a wholesome dread of Bolshevist influences, so that certain concessions will have to be made all round. Two items of their proposed programme are of special interest abroad. One of these is their determination to make a serious attempt to come to an understanding with the Soviets on the subject of the union of Bessarabia with Roumania, so that diplomatic relations may be resumed and the ghost may be laid of Bolshevist attacks on the Bessarabia frontier. The other is their avowed intention of abolishing all the existing laws which hamper foreign capital in this country, and of giving every facility to foreign capital to co-operate in the exploitation of the various sources of wealth afforded by the soil of Roumania. This would mean a complete reversion from the policy of the present Liberal Government, which is to acquire as large a share as possible not only of the profits made by any foreign enterprise in this country, but also of their administration.

The climate and natural wealth of Roumania are such that under a good Government, with a just administration, she might become a perfect paradise. Unfortunately, however, there is no rose without a thorn, and the thorn of the Roumanian rose is *baksheesh*. Will she ever succeed in eliminating it? To do so she would have to adopt a system of *grafting* more in keeping with the principles of natural science than with the practices of doubtful finance.

The Nationalist-Peasant Coalition.

So far as one can judge, the intentions of the Nationalist-Peasant Coalition Party are honest, but whether they have any leader capable of steering them through the shoals of intrigue, both outside and within their own ranks, seems doubtful. A very Napoleon would be needed at the present juncture who could dominate the whole party by the force of his personality and by his practical energy. It is to be hoped, however, that the commonsense and honest intentions of the Coalition Party will bind them together and induce them, should they succeed to the Government, to sink minor differences for the sake of their common aims.

Copsa Mica Munitions Factory.

It may be remembered that some months ago the Liberal Government came to an agreement with Messrs. Vickers for the founding of a munitions factory at Copsa Mica, a small station in Transylvania on the main line between Bucharest and Budapest, about two hours on the Roumanian side of the Hungarian frontier. More than half of the capital was to be provided by Roumania in accordance with the law for commercialisation of State enterprises, and the remainder by Messrs. Vickers. Unfortunately, the Roumanian subscription list has not yet been filled, and it has not been found possible to raise the necessary capital in this country, so that the project would appear to be in abeyance for the moment.

Bucharest Municipality.

If the fall of the Liberal Government brings in its train the replacing of Dr. Costinescu, Mayor of Bucharest, his departure will no doubt be lamented by a large section of the community, for he has certainly done much during his three years of office to clean up the city, and he has several large schemes on foot for its further improvement, and for the increase of its supplies of water and electric current. There are rumours that he is on the eve of signing or has just signed a contract with an important American financial group for a loan of one million dollars, part of which is to be used for the above purpose and part for the improvement of the streets generally.

In some of the main thoroughfares, such as the Boulevard Bratianu, old buildings are being pulled down and the streets widened. Work has been resumed on the building of the new University building, which in its unfinished state has so long been a blot on the landscape, and now the outer walls of most of it are finished. Its architecture is simple and inoffensive.

Concessions have also been granted for several lines of electric omnibuses. These are a kind of long waggonnette with Ford engines. They run at frequent intervals along various routes and supply a much felt want, as the tramways were entirely inadequate to cope with the passenger traffic and did not reach nearly all the residential quarters of the town.

BULGARIA.

Sofia, September 28.

King Boris's Speech.

The most important political event which has occurred for several months was the speech delivered by King Boris at a gathering of Army officers at the Palace. The speech was directed towards the Army in that it expressed confidence in the loyalty of officers and men towards the Constitution. But there were one or two other significant sentences, notably that wherein King Boris, after dwelling on the troubled domestic situation, made an appeal to the governing powers to attempt real reconciliation between Bulgarians.

The speech was given a mixed welcome. The majority of the Opposition papers praised it as a timely utterance on the part of the Chief of State. Governmental papers adopted a rather reserved attitude, and one or two writers hastened to impress on the public that no especial significance must be attached to the King's words. The fact remains, however, that the best independent opinion holds the view that King Boris, in making such a speech was actuated by extremely patriotic motives, because since ascending the throne he has never, until the present, publicly spoken his mind. There is, of course, no doubt whatsoever that reconciliation between the different

political groupings in Bulgaria is a *sine qua non* if the future development of the country is to progress along normal lines. Opinions differ on how this reconciliation can be reached. Some people aver that the Communists and Agrarians are altogether outside the pale, and that it would be folly to have any dealings with either of these parties. Other people believe that the Government could at this stage usefully encourage the moderate section of the Agrarians and thus gradually permit of a broad coalition, Communists excepted, coming into power. A third view is that neither of the above-mentioned eventualities can come to pass as long as the Zankoff Government is in office. It is not the business of a foreign observer to say what would be the best thing for Bulgaria, but when the Sobranye reassembles at the end of October it is hoped that the Government's position will either become impregnable, or, failing that, M. Zankoff will decide to lay down his mandate.

Geneva Conversations.

Telegrams from Geneva indicate that Serbs, Bulgarians, Roumanians, and Greeks are indulging in friendly conversations regarding the settlement of inter-Balkan disputes. M. Zankoff has met M. Pashitch, and it is reported that the meeting was very cordial. One must be pardoned for being sceptical regarding these events on the side of Lake Leman. When Balkan politicians, and other ones too, go to Geneva they seem to have different mentalities from those which they possess at home. But unfortunately they spend the greater part of their time at home, so that Geneva mentalities have little chance of triumphing over the home point of view. It may, of course, be that there is really something behind all these conversations, but it is much more probable that they are only polite manœuvres which will have no consequence whatsoever on future events.

Allied Military Control in Bulgaria.

It is announced that Bulgaria has requested the Council of Ambassadors in Paris to withdraw their Military Organ of Control, which has been stationed in Sofia for the last few years. In their Note the Government point out that the Bulgarian Army is now demobilised and disarmed according to the terms of the Peace Treaty and that the maintenance of Allied officers in the capital of the country has thus become superfluous. It is not known what the Council of Ambassadors will decide to do, but possibly military control will pass into the hands of the League of Nations. If this were to happen, no officers would be stationed in Sofia, but from time to time officers belonging to neutral States would visit Bulgaria.

News in Brief.

The British Minister, the Hon. W. A. F. Erskine, has gone on leave. During his absence Mr. Stevenson will act as Chargé d'Affaires.

Three Italian Army Air pilots, who are carrying out a round-Europe flight, spent three days in Sofia this week.

A delegation of 50 Bulgarian deputies and others has been visiting Budapest, where they have received a very cordial reception.

PERSIA.

Teheran, September 10.

Bombardment of Medina.

The great event of the past few days has been the National Day of Mourning for the supposed bombardment of Medina. Though the bombardment has since been officially denied, the occasion was deemed a suitable occasion for demonstrating religious unity. The mass meetings were attended by many thousands, but were marked by no untoward incidents, thanks to the excellent military and police arrangements.

Civil and Military Administration.

According to the newspapers, the Premier in his recent speech at the War Office, announced his intention of now paying closer personal attention to military organisation, more especially with a view to removing any causes of friction between civil and military administration. With this object he has deputed Murteza Khan, Governor of Teheran, to proceed on special inspection duty in the west, and another high officer will probably be appointed for the east. The appointment, and the idea actuating it, are yet another sign of the close personal attention of the Premier to matters of detail affecting good administration, and will go far to remedy a source of much grumbling in the Provinces. Severe penalties have also been threatened against military officials found guilty of abusing their privileges and powers.

Cost of Living.

The dearness of living in Teheran has long been notorious amongst Europeans. It arises from many different causes, chief amongst which have been the high value of the kran in comparison with European money, and the increased cost of transport compared with previous rates. The cost of even the most elementary luxuries is excessive, and though the kran is gradually moving to a more reasonable level of exchange the cost of motor transport and of similar modern essentials is prohibitive. The essentials of life have, however, been comparatively cheap owing to lack of means of export in good years, and cultivation round Teheran was more than ample for the needs of the City. But this year the outlook is far from reassuring in most centres of population and especially Teheran, owing to general shortage of crops, and great scarcity is predicted.

In Khorassan alone the harvest was fairly satisfactory, but transport rates from there to Teheran are roughly £40 a ton, and so prohibitive.

The Urgency of Capital.

The above conditions explain the growing anxiety of the country to create adequate communications, especially railways, and to attract capital.

Unfortunately past and recent experience has not tended to encourage private enterprise, though the introduction of capital is generally admitted to be an urgent necessity. In this connection the failure to date of the French silk proposition, and the Eastern Transport contract, are to be deplored, as both were generally regarded as extremely advantageous to the country.

The Eastern Transport mail contract failed apparently on the question of a monopoly of passenger traffic, and has now been given on open terms to the newly opened military "Pehlevi Bank," which is hurriedly creating the transport necessary to carry out its undertaking. Meanwhile the Eastern Transport Company maintains a regular and efficient service such as has never existed on the Baghdad road previously.

Recent Legislation.

Persia is fortunate in having so clear a distinction between Ordinary and Ecclesiastical Law as was laid down in the Fundamental Laws of 1906-07. The Ministry of Justice controls all judicial power, and is the arbiter, where necessary, on whether any case shall be referred to Ecclesiastical Courts. There is, therefore, no religious difficulty which could prevent Persia's having as efficient a legal system as any other country. Till recently, the main obstacle to progress has been the lack of modern Codes or Acts, to regulate and to meet the needs of modern commercial transactions. The recent series of Acts passed by the present Mejliss, i.e., "The Law of Registration," and "The Commercial Act," together with the new Penal Code now in course of preparation, will, it is hoped, go far to remove the many complaints current against the legal system.

The Commercial Act recently passed by the Mejliss is

in force, and marks a great step forward in Persian administration, coupled as it will be with a modern Penal Code and system of Registration.

The Commercial Act is in three parts, dealing respectively with Company Law, Bills of Exchange and Brokerage and Bankruptcy. It is modelled on the French Code with considerable alteration to suit established conditions, and is extremely comprehensive.

Now that the Legislature has set up a modern code for regulation of commerce, it is hoped it will apply itself with equal energy to remedying the vital defect in commercial transactions of to-day, which is the inefficiency, if not futility, of the present "means of execution." The Commercial Act with its clear definition of offences, removes any excuse for delay in legal execution of decrees. The recent appointment of Prince Firouz, himself a qualified lawyer, as Minister of Justice, should result in much improvement of the existing legal machinery, and much is hoped for from his energy and experience.

The present Mejliss has certainly deserved well of the country, and left many marks of its industry. A large number of important Bills still await its consideration, the most important of which is the Railway Bill. The latter is still in course of drafting and unlikely to appear before the return of Dr. Millspaugh from America in the middle of this month. The original idea of building it by State enterprise has fewer exponents now, and the advantages of private enterprise are becoming better appreciated, in view of the need for attracting capital for other schemes of national advantage.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

THE SOVIETS AND PERSIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Recent reports from Russia suggest that we shall witness, in the coming months, renewed anti-British activities on the part of the Soviet in the Near and Middle East. For this reason and because the maintenance of Persia's independence is essential to the protection of Britain's interests in southern Asia, it is necessary that we should prepare ourselves, by sound political action, to meet any developments in that country unfavourable to her continued integrity.

Persia possesses two instruments whereby she may defend her independence: namely, her Army and the tribes to be found within her borders. The former is, at present, better organised to resist foreign encroachment than has been the case for many generations. Under its present leader it could be counted upon to delay a hostile force; but, in the event of the disappearance of this leader at the outset of any struggle in which it might become involved, it would be of no more than doubtful value, since there is no prospective successor to the position now filled by Reza Khan, the soldier and statesman. Moreover, in the event of the regular forces being employed for any length of time in active operations against well-equipped and disciplined troops, such as those which the Soviet have now at their disposal, the Persian Government would find it impossible to replace the war casualties, as the non-tribal inhabitants of Persia, amongst whom recruitment is now carried out, although patriotic in sentiment, differ from the tribesmen in that they possess few, if any, martial instincts, while, on the other hand, the latter cannot be inured, without difficulty, to the monotonous existence of soldiers of the line or to the obedience of orders from others than their accustomed chieftains. Recruits, therefore, would require much training before they could be of any service to a Government not possessing the highest prestige. For the same reason, the influence of the Shiah divines, which might be exercised against invaders from the north, would be of no avail in the face of superior military forces.

The tribal elements, if employed in the rôle best suited to them, that is to say, constant guerilla movements against the enemy, would form a weapon which might be used with ultimately better effect than the Army; but a good understanding between their leaders and the central authority would be essential to the co-ordination of any action which they might take and to their continued employment throughout any extended period. Unfortunately, Reza Khan has alienated the sympathies to himself of the tribal chiefs by his recent efforts to terminate their virtual autonomy; but it should be realised that his successes in this direction could not have been achieved but for the lack of cohesion between the tribes and their inability to procure external support against him.

It may be assumed that, at present, the Soviet's policy regarding Persia is to await a favourable opportunity for a *coup d'état* at Teheran and then to remove by violent or other means those now in power, introducing into their places individuals amenable to dictation by Moscow. Success in this would be followed, automatically, by the dispatch of Governors with similar tendencies to the provincial capitals. These measures, to be of lasting effect, would require some support by Russian troops, to assist in which there have been in readiness, for a number of years, many facilities necessary to the rapid seizure of the important strategical positions in northern Persia. The Russian railway system has been extended to Tabriz, whence there is easy access to the areas commanding the Turkish frontier and the low Garwa Shaikh Pass into northern Iraq. The port of Enzeli (Pehlevi) is at the mercy of the Caspian fleet; and from that town there is a first-class road of Russian construction to Kasvin and Hamadan, possession of which cities, together with the Aveh-Sultan Bulagh Pass (mid-way between the two), would sever the north-western provinces of Persia from the capital. The Russian naval station on the island of Ashurada, seven miles from the mainland in the south-eastern corner of the Caspian Sea, commands the landing-stage at Kara Su, where there is a Russian fishing station constructed in such a manner as to be easily convertible into barracks or a base camp. This port has been connected by a road, suitable for use by all arms, with the provincial capital at Astarabad (18 miles distant), whence a mounted force could, in twenty-four hours, place itself astride the Teheran-Meshed road, thereby cutting the only lateral line of communication between northern and north-eastern Persia to the north of the great waterless desert which extends southwards to Kirman. The positions commanding the Ashkabad-Meshed chaussée, also constructed by Russians, are within easy reach of the frontier; and a Russian descent in any force upon northern Khorassan would be an operation presenting no difficulties.

We may now consider whether the tribal elements, if properly handled, could assist materially in any attempts to hold up further encroachment towards the Persian Gulf and the Indian frontier. Extending through southern Persian from the Iraq border to the confines of Afghanistan there are, in the mountain districts, a number of formerly independent or partially independent confederations which retain a considerable measure of warlike spirit. Their chiefs are naturally averse from anything resembling Communism and, lacking sympathy with the present Persian Government, would look to Great Britain for support against Russia. In the hills to the west of Kirmanshah is the Guran confederation of Kurdish tribes, which includes the notorious Kalkhani and the Sinjabi, Ali Illahi by religion, who have been Anglophil at heart for many years, although they opposed General Baratoff's advance towards Qasr i Shirin during the War. of Kirmanshah are the Dilfan Lurs and the tribesmen of the Wali of Pusht i Kuh; and west of Isfahan are the Bakhtiari and Kuhgalu. In the province of Shiraz are the Qashqai and Qashquli tribes under the Saulat ud Daulah, who, through our alliance with Russia, was drawn into action against us in 1918, but is now interested financially in an important British commercial enterprise in southern Persia. Between Shiraz and Kirman are the tribes who, under the leadership of the Qavvam ul Mulk, rendered us good service during the War; and between the desert east of Kirman and the Afghan border are the territories of the Amir of Kain who has been friendly and helpful to us in the past.

These tribes, if united by service to a common cause and, if necessary, supplied with munitions or other assistance in the event of hostilities between Persia and the Soviet, would form a considerable impediment to southward movements of Russian troops; but arrangements for action on their part and for co-operation between the diverse elements cannot be achieved by the Persian Government while she pursues her present internal policy. British influence with their leaders, however, if carefully exercised, could produce the results required and, at the same time, deter the tribes from acting in any untoward manner against the peaceful development or independence of Persia under her present rulers.

In an emergency it might not be possible for us to support Persia actively by placing in that country, at short notice, a force able to meet an enemy in the field; and it is certain that only failure could result from attempts to organise joint action on the part of the tribes, if deferred until after initial Russian successes. Thus, since there is no reason why closer relations between the British Government and the southern tribes should be inconsistent with our desire, in our own interests, to respect the integrity of Persia as a Sovereign State, it is to be hoped that Reza Khan may be brought to realise that his interests are identical with our own and that he will remember that the most pressing danger to his position lies in the probable consequences of his plausible attempts to improve the conditions affecting the independence of his country. The reorganisation of the Empire has not, as yet, produced any material change in the psychology of those whom the Prime Minister would call up to defend her, and, if the Soviets continue in their present policy, they will strike, it seems certain, before Persia has passed through the transient stage between mere aspiration and genuine ability to protect herself unaided.—I am, etc.,

"Nazir."

THE FUTURE OF THE HEJAZ.

To the Editor of The Near East and India.

Sir,—In your leading article entitled "The Wahhabis and Islam," published in your issue of October 1, you make no mention of the possibilities and perhaps the desirability of the Shereef Ali Haider's assuming the rulership of the Hejaz.

Although Ibn Saoud was reported to have announced earlier in the year that the rulership of the Hejaz should be undertaken by Ali Haider, the latter has received no official intimation to that effect from the Wahhabi leader. On the other hand, Ibn Saoud has shown the greatest consideration towards any of Ali Haider's family who happen to be living in Mecca, and mention of the desirability of Ali Haider's accepting the throne of Mecca has freely and repeatedly been made both in the Moslem Press of India and that in other countries of the Near East.

The alternatives for Ibn Saoud appear to be:—

(1) To retire and allow King Ali to regain the country;

(2) To call a pan-Islamic conference, as he once stated was his intention; or

(3) To continue his dictatorship in Mecca.

If he did (1) it would be with a great loss of personal prestige, and it is not a step he would be likely to take.

If he did (2) it would cause him a certain amount of embarrassment in view of the recent reported actions of the Wahhabis in destroying sacred edifices and pursuing their puritanical tenets to such an extent that anyone found smoking is punished by death. These reports may be greatly exaggerated, but they nevertheless serve to produce bad feeling. The possibility, therefore, of such a conference being called appears remote.

If he did (3) and thereby ultimately capture both Medina and Jeddah, his position would soon be harassed by insuperable difficulties which would not tend towards the tightening of the bonds of Islam, a policy so necessary for the peace and tranquillity of the Near East.

However much one may, in some respects, admire Ibn Saoud, one cannot help feeling that the fanatical and antiquated beliefs of his subjects will never harmonise with the great Moslem "Renaissance" which to-day is so apparent throughout the world. Islam must progress, and no puritanical outburst will deter her from adapting herself to the march of civilisation. It would therefore appear desirable that one with a broader outlook, yet holding the finest ideals of the Islamic Faith, should be the custodian of the sacred places.

If, then, Ali Haider should appear in Mecca, it might relieve Ibn Saoud of embarrassment—for Ali Haider is the only Arab leader who could come to some diplomatic and peaceful understanding with Ibn Saoud—it would be welcomed by the majority of Moslems and might reasonably produce a settled condition throughout Arabia.—I am, etc.,

"Champion."

PICTURES OF JERUSALEM.

The latest English artist to have succumbed to the lure of the Holy Land is Mr. Borough Johnson, who visited Jerusalem this summer and is now exhibiting at the Goupil Gallery, Regent Street, the products of his work. Mr. Johnson has not attempted to do more than indicate the spiritual atmosphere of the Holy City; for the most he pleasantly suggests, or dispassionately regards, the intensity of life that underlies its tenderness. One is not, for example, made to feel the magnificent reverence of the Church of the Holy Sepulchre; nor is there any endeavour on the part of the artist to emphasise particular emotional experiences in his seeing of such things as "The Beggars at The Holy Sepulchre Church," "View towards Gethsemane from the Haram," or "The Church of the Nativity, Bethlehem." Once, however, he makes a notable departure from this impartial outlook—in the very beautiful "The Church of St. Helena," and his success in this makes one regret a little the studied objectiveness of the majority of his water-colours.

But Mr. Johnson can draw. His "A Russian Archimandrite," a pale, straight, bespectacled face, is a fine work indeed; and there is considerable skill in his "Outside Herod's Gate." His is certainly an exhibition not to be missed by anyone who has had the fortune to visit the Holy Land, and who does not wish to lose his or her remembrances of Arab shepherds and markets and gateways, of Russian nuns and priests and gardeners, and, above all, of the Churches which are the glory of the City.

SALONIKA FORCES' SERVICE.

Over two thousand members of the Forces that served on the Horse Guards Parade at noon last Sunday in commemoration of the signing of the Armistice with the memoration of the signing of the Armistice with the Bulgarians on September 30, 1918. After placing a wreath on the Cenotaph a large number of those present attended a reunion luncheon in the Drill Hall of the "Queen's Westminsters," Buckingham Gate.

THE ROYAL ASIATIC SOCIETY.

On October 13, at 4.30 p.m., at 74, Grosvenor Street, Sir Denison Ross will read to the Royal Asiatic Society a Paper entitled, "The Shirley Brothers in Persia."

According to a recent law passed by the Mejliss all military and civil titles have been abolished in Persia.

SIR GEORGE LLOYD ON EGYPT.

In honour of the Rt. Hon. Sir George Lloyd, G.C.S.I., G.C.I.E., D.S.O., High Commissioner Designate for Egypt, a luncheon was given by the Royal Colonial Institute, at the Hotel Victoria, on September 30. A numerous company included Lady Rogers, Sesostris Sidarouss Bey (Egyptian Chargé d'Affaires), the Hon. John Huxham (Agent-General for Queensland), Sir Robert Ho Tung, Sir Campbell Rhodes, C.B.E., Lt.-Colonel Sir Henry Galway, K.C.M.G., D.S.O., Sir Frederick James, K.B.E., C.M.G. (Governor of the Windward Islands), A. Jennings, Hon. Sir Francis Newton, K.C.M.G., C.V.O. (High Commissioner for Southern Rhodesia), Sir Charles McLeod, Bart, Right Hon. Earl Winterton, M.P. (Parliamentary Under-Secretary of State for India), Lady Lloyd, Right Hon. the Earl of Meath, K.P., G.C.V.O., G.B.E., Right Hon. Sir Joseph Cook, G.C.M.G. (High Commissioner for the Commonwealth of Australia), Right Hon. Sir Hamar Greenwood, Bart., K.C., M.P., Lady Greenwood, D.B.E., Sir Benjamin Robertson, K.C.S.I., K.C.M.G., C.I.E., Sir John Miller, K.C.S.I., the Hon. George Fairbairn (Agent-General for Victoria), Alderman Sir George Truscott, Bart., Senator General E. A. Drake-Brockman, C.B., C.M.G., D.S.O., Mrs. Eccles Snowden, and Lt.-Colonel R. Eccles Snowden (Agent-General for Tasmania). Sir Godfrey Lagden, K.C.M.G., presided.

After the toast of "The King and United Empire," the Chairman announced that a telegram had been received from the Egyptian Minister, Aziz Izzet Pasha. It was sent from Lausanne, and read—

"Will you kindly present our deep regret for our unavoidable absence from this function both to the distinguished guests and to those present? The High Commissioner has my sincere good wishes for the success of his mission. I am confident that with his well-known sagacity and capacity he will strengthen still more the friendly relations between the two countries."

"I am sure," the Chairman said, "that we all welcome the very charming telegram from the Egyptian Minister."

Proposing the health of "Our Guest," the Chairman called attention to Sir George Lloyd's wide experience of Eastern countries, and said that on his retirement from the Governorship of Bombay the Press recognised the success of his administration and constructive policy. That kind of policy was rare and of high value. Egypt had many problems and required the best efforts they could make and the best man they could send. Probably nobody they could select would be better than a capable English gentleman like Sir George Lloyd, who had no axe to grind and whose heart was in his job. There was no royal road to the solution of such problems as were to be found in Egypt, but time and patient endeavour would do very much to ease, if not to settle them. In a charming volume in his possession, "The Book of the Blues," he found that in 1899 and 1900 a certain Mr. G. A. Lloyd steered the Cambridge boat to victory, on the second occasion in "record" time. They hoped he would steer through the great difficulties of his new situation with equal success. Referring to Lady Lloyd, whom they were very glad to see present, Sir Godfrey continued: "It is a curious thing that I find in *United Empire*, the journal of the Institute, a paragraph relating that when Lady Lloyd was in Bombay she was on one occasion opening a new pier which was named after her. In the course of her speech, thanking the generous donor for the splendid gift, she likened him to the possessor of a magic ring at whose command wonders were produced in a night. I wonder if she has got a mystic ring of her own that may help her husband to perform marvellous things in the land of Egypt."

The Rt. Hon. Sir George Lloyd, replying to the toast, said:—"Mr. Chairman, my Lords, ladies, and gentlemen: I am sure that the crowds at Putney many years ago could not have given me a more cordial send-off than you are giving to my wife and myself, and we are both of us more than grateful for the kind references which you have made to us. My fellow members of this great Institute, I thank you very much for the honour you have done us both in asking us to be your guests this afternoon, on the eve of our departure for Egypt. I think among the many valuable functions which this Institute carries out, there is none more happy or more fortunate than the custom of entertaining any one of us who may be going out to, or who may be coming back from the fulfilment of some mission of importance to the Empire, whether it be colonial, diplomatic, or other, and I can assure you that this occasion and your good wishes are very deeply appreciated by both. I cannot, however, pretend to conceal from you that I should find it much easier to speak to you interestingly on the completion of my task rather than on its inception, and this is especially true in regard to the particular task with which I have been entrusted at the present time, for the situation in Egypt, in outward presentation at any rate, has been changing sufficiently rapidly lately to make it impossible for anyone at home to speak without a due measure of restraint, and you will, I am sure, understand my difficulty and not measure my appreciation of your hospitality by the length of my speech or by the prudence of my remarks.

"I have been much impressed during the time which has elapsed since my appointment to succeed that great soldier, Lord Allenby, with the evidence I have had of the widespread interest taken by the people of this country and indeed of the whole Empire, in respect of Egyptian affairs and our policy in that country. This evidence has been sufficiently striking to cause me to speculate a little as to its causes, especially when this interest is displayed at a time when domestic affairs are of so grave and absorbing an interest to us all.

"Two things perhaps—both, I think, very characteristic of our people—may account for it. One is that curious, instinctive, and selective capacity which exists in our people—the product no doubt of long and ingrained training in political affairs—for the quick recognition of problems affecting the safety and welfare of the Empire. It is at once recognised that the Suez Canal is the very spinal cord of many and most important connections between the head of the Empire and some of its most important parts, that on its security and its free and equal operation to all nations depend not only our maritime connections, but the work and wages and markets of every man and woman in the islands—that the Suez Canal strategically and commercially is almost as vital as are the Dover Straits, and that, therefore, all problems affecting the security of the Canal are not only Australasian, Indian, or African problems, but actually English domestic problems, as intimately concerned with their daily welfare as a Free Trade or tariff problem in this country itself. Another cause of this interest lies perhaps in the memory of the past and of that group of Englishmen who worked for Egypt in the last half century and who made England's

name honoured in Northern Africa; great soldiers, for instance, who freed the peoples of the Sudan from the terrors of Mahdist oppression and wrong, great engineers like Sir William Garstin, whose instructed and patient labours have brought wealth and prosperity to all the Nile valley, and above all of that one great figure who towers above all others in the making of modern Egypt—Lord Cromer. In all the long pageant of Egypt's story and amongst all the men of renown who through the centuries have played their part upon that stage of drama and romance, Lord Cromer's portrayal of an Englishman's work abroad for another nation stands out monumentally. His supreme achievement was in securing the good of Egypt through England and in placing the welfare of Egypt and her peoples before all other considerations. As the foe of all tyranny, as the friend of a liberty prudently advanced in due conformity with the progress of the country and as the patient counsellor in all perplexities, he recognised always—in the words of President Cleveland—that he was "dealing with a condition, not with a theory"—words which are too often forgotten by slipshod and shallow idealists in the world of to-day. To-day for England his task of administration has given place in the main to that of diplomacy, but none the less his great qualities of sympathy with Egypt's aspirations and his solicitude for all that made for her development still serve as an example to inform the minds and guide the actions of Englishmen like myself who are going out to that country.

"The logical results of half a century's work in Egypt are being tried out on the anvil of Egyptian experience to-day, and their issue must have great importance not only in Egypt, but far beyond it. In this connection I cannot help referring to the news this morning regarding the resignation of that great soldier and administrator, the Maréchal Lyautey, to whose superlative achievements in Moroccan administration I, like every Englishman familiar with his work, would desire to pay our tribute of honour and admiration. No one who has any knowledge of the difficulty of the task he set out to achieve or who has followed closely the work he has done can doubt that he is one of the greatest administrators that has figured on the African or Oriental stage for many decades, and one of whom France is justly proud.

"In conclusion, ladies and gentlemen, let me only add this, that whilst I fully recognise the difficulty of the task before me, I believe that the due reconciliation of the vital interests of this country in Egypt with the natural and legitimate aspiration of the people in Egypt themselves can be brought about most surely by making Egypt feel that England is her best friend and stoutest and wisest counsellor. If that, in a phrase, were a policy, that is my policy. At the end of that road indicated by mutual service and good will—at the end of that road only, as I think—lies the goal for the proper and right aspirations of both Egypt and her greatest friend, the British Empire."

The Rt. Hon. Sir Hamar Greenwood, Bart., M.P., proposing the health of the Chairman, said that as one who had recently come back from Egypt, he could not but personally wish the High Commissioner and Lady Lloyd success in that country. He had found Egypt one of the quietest countries he had ever visited—certainly one of the most prosperous. He hoped and believed that under Sir George Lloyd's administration Egypt's alliance with England and her continued progress and prosperity would be assured. He had great pleasure in proposing the health of the Chairman, not because he or Sir George Lloyd were in the "Book of the Blues," but because both were in the wider and more essential book of the Empire—the book of red, white, and blue.

The Chairman acknowledged the toast and the proceedings then terminated.

A violent earthquake, accompanied by continuous rumbling, is reported from Mount Alagos, 13,454 ft., in the Kars region of Armenia. A number of enormous boulders have fallen into the valley. Nomads living in the mountain caves are fleeing in panic.

THE WEEK AT HOME.

London, Tuesday Morning.

The Liverpool Conference.

The Liverpool Conference ended, to all appearances, in the complete discomfiture of the Communists. Every time that the revolutionaries raised their heads they were promptly quelled by some Parliamentarian; in fact, on no occasion did the "gradualists" (as the evolutionaries are now called) fail to get their way. The notorious Mr. Pollitt, the Communist, the kidnapping of whom a few months ago caused such a sensation, could make no headway at all; for Mr. Ramsay MacDonald, on the other hand, it was roses, roses all the way. It would seem to have been made patent to everybody that the Labour Party is a constitutional party, so patent, indeed, that certain anti-Socialists have accused the Labour members of creating a vast stage plot to hoodwink the bourgeoisie upon whose votes they depend. However that may be, certain it is that in the country generally there is a decrease in the perturbation which has since the Scarborough Conference, when more violent expressions of antipathy to the present industrial system of this country were indulged in, been so profoundly exercising the minds of ordinary citizens. It is now felt that the British working-man is, after all, not so insane a person, and the renewed ascendancy of Mr. Ramsay MacDonald as head of the Labour Party is explained as illustrating this fact. Satisfaction with the strong line taken by various Trade Union leaders, particularly by the miners' leaders, towards the Extremists, has been immense; and the view is now fashionable that all possible avenues should be explored with a view to persuading the Socialist Parliamentarians that Communism should be kept, not only out of their own party, but out of Great Britain as a whole. And yet—there are still many people who regard the affairs of this island as once more in the melting-pot. Such observers are by no means convinced that the Liverpool Conference represented the real strength of Communism in this country; some of them, indeed, are fain to point out that really "evolutionary" is as bad as "revolutionary," for both aim equally, though by different methods, at the substitution of the present industrial system by another. To these, no number of anti-Communist Labour Conferences or professions of peaceful intention would make the slightest difference: they feel that battle is in the air, and they believe profoundly in the virtue of throwing down the gauntlet and getting in the first blow. What is more, they endeavour to substantiate their case by pointing to a mass of evidence which would seem to show that the youth of the working classes in this country is being educated and brought up with bitterness in its heart. The line of argument which is adopted seemingly is that the time to prevent the poisonous fruit from maturing is the present.

The O.M.S.

To this last category of citizen the letter written by the Home Secretary in blessing of the Organisation for the Maintenance of Supplies (the O.M.S.) and published last week in all the newspapers caused the utmost gratification. It had already been stated that all classes had hastened to join the Organisation, and the knowledge that it now has, not only the sanction but the encouragement of a prominent member of the Government, has afforded to its supporters a pleasure which the frank disapproval, by both the Parliamentarians and the Communists, on the part of the Liverpool Conference, has done little to diminish. Whether this difference in attitude towards the O.M.S. indicates a mental gulf between the Labour Party and the parties who perhaps reasonably may be supposed to have provided the majority of the O.M.S., or whether it would argue merely a difference in the basic grounds of judgment, does not yet appear. It would seem, however, that this diametrical opposition of views would hardly tend to make for unity of feeling in the event of emergency measures taken in time of a general strike. Possibly, it is with some such consideration in mind that various com-

Digitized by Google

mentators, albeit practically convinced of Sir William Joynson-Hicks' accuracy in describing enrolling oneself in the ranks of the O.M.S. as "a patriotic act," are striving to look further than the immediate present, and, instead of implicitly apportioning blame before the crisis arises, to prevent the occurrence of such a crisis. This attitude—quite different, by the way, from that of the Labour Press, which at once has stigmatised the O.M.S. as a Fascist organisation, or of the Liberal Press, which believes it to be "a mischievous proposal" and describes the Home Secretary's letter in support of it as "almost incredible"—seems to be gaining currency in many unexpected quarters. Whether this attitude has been moulded in the light of the Labour Party's opposition, or of the Liberal's criticism of Sir William Joynson-Hicks' action as having caused the Communist Party to gain from Whitehall almost as much as it has lost at Liverpool, or of independent inquiry into the qualifications of members of the O.M.S. and of similar associations, it is idle, in the absence of definite information, to speculate. But the defeat of "the Reds" at Liverpool has apparently emboldened many sympathisers to review the O.M.S., and the result is that, although there may not be an abundance of critics to support the Liberal demand that the Home Secretary's blessing of the O.M.S. be withdrawn (on the ground that State measures taken by a Conservative Government are compromised already), there exists now a wider tendency to "hasten slowly," in order that the larger cause of peace may not be jeopardised. The varying receptions of the O.M.S. may, indeed, have afforded them an object lesson. Yet it is no sense of reflection that the Home Secretaryship is the grave of many a politician's reputation, but rather with the natural and national desire to substitute rational for irrational thinking, or, rather, once more to use reason rather than instinct, that the more level heads of the country, following upon the wisdom creditably displayed at Liverpool, are attempting to assert themselves.

The Coal Industry.

From the tantalising obscurity surrounding the present and the future of the British coal industry three facts last week emerged. First, for one month the subsidy promised by the Government in order to keep the industry going has cost the taxpayer over one million and a half pounds; secondly, that the Powell Duffryn collieries in South Wales, always regarded as one of the best-equipped companies in the kingdom, have closed down in four of their pits; and lastly—one reserves the least bad for the end—the Coal Commission is due to begin its public meetings next week. The Commission has almost finished its preliminary survey, which of course was essential to inquirers who previously knew nothing of the coal-mining industry, but which seems to an anxious public to have been all too long. For public opinion appears to have the gravest doubts about the future of the coal industry; there are, indeed, pessimists who declare that the prosperity of the industry is now wholly a thing of the past. According to their view, anyone, even in the boom years when advantage was taken of the anthracite strike in America and of the occupation of the Ruhr, could have foretold that Britain's overseas markets had disappeared. Not only that, but that temporary boom was, in their consideration, positively bad for the industry, for it both led the inventive German to develop the lignite industry and to general depression in the British coal industry as a reaction from the prosperity of 1923. Such observers, whether they attribute the decline in the industry to the increased use of oil and of water-power or to the unsettlement in various portions of the world and the inevitable decrease in industrial production, seem, moreover, to be convinced that the shrinkage in our coal trade is permanent. They deplore, therefore, the fact that new men are being attracted to the mining industry, and, if they are very financially minded, often add as aggravating factors to the present *impasse*, the lowering of the German miner's standard of living or the currency policy of the British Government. How much truth there is in this hopeless view of the situation it is precisely the business of the Coal Commission to determine. If there is any considerable element of truth, the Commission may well be the instrument of one of the most striking revolutions in the recent economic history of this country—the change from mining to some other occupation. It may be found, on the other hand, that the main cause of the trials in the industry is financial or political, and that with the stablisation of the exchanges and the improvement of international relations, a sufficient recovery is fairly to be entertained. But until the Commission has issued its report there will continue to be much misgiving and perplexity on the part of the outsider. Unfortunately, it cannot be said that every facility in investigation has been afforded the Commission.

The Bank Rate.

The Stock Exchange has been having a gay time recently, for on top of the rubber boom came the announcement last week of a reduction of the Bank Rate from 4½ to 4 per cent. This, together with the encouraging result of the Liverpool Conference, had the effect of making stock markets very buoyant. The reduction seems to have caught the majoriy of financiers by surprise, for not only is the autumn season generally reckoned as unpropitious for changes, but the fact had just been published that the first half of the current financial year had ended with a disconcertingly large Budget deficit. However, the matter is no fit one for discussion by a mere layman, who does not even take sides in the furious controversy that has arisen over Britain's return to the Gold Standard. Yet it does appear that the worst fears of the opponents of the Government's policy—fears relating to extensive gold withdrawals—have as yet been unrealised, albeit the true key to the situation is to be found in the effect of present economic conditions upon the Bank Rate rather than *vice versa*.

The Film Industry.

For many months now it has been held by the more knowledgeable men in the kinematographic industry that only a policy of Protection can save the country from being snowed under by the invasion of American films. One large company here at least has consistently advocated the legal compulsion to make a film programme 50 per cent. British; and last week the Government of Victoria insisted that in every programme shown in the picture palaces of that particular region there should be a thousand feet of British film. The last step is regarded as a convincing indication of the willingness of the Colonies to help the Mother Country—that, indeed, was already proved by the decision of the Commonwealth

PERSONAL AND GENERAL.

TO-DAY

October 8, 1925 (New Style).
September 25, 1925 (Old Style).
Rabia I, 20, 1344 A.H., of the Moslem Calendar.
Tishri 20, 5686, of the Jewish Calendar.

The Gaekwar of Baroda left London last Thursday for Paris.

The Earl of Altamont will leave England to-morrow for India.

Viscount Chelmsford will return from the Near East in about a week's time.

The Indian Empire Club will hold a dance on October 24 at the Hyde Park Hotel.

Princess Ileana of Roumania left 50, Grosvenor Street last Friday for Heathfield, near Ascot.

Dr. Ugo P. Mifsud, Head of the Ministry of Malta, has arrived at the Carlton Hotel.

The Afghan Minister left London last Thursday evening for Berlin. He will return at the end of this week.

Viscount Molyneaux is a passenger to India in the Orient R.M.S. Osterley, which left Tilbury last Saturday for the East.

M. N. Mishu is relinquishing his post as Secretary to the Roumanian Legation in London and is shortly leaving for the Continent.

Veded Bey, the newly-appointed Secretary at the Turkish Embassy, arrived in London on September 30 from Angora.

Sir James Aird and Sir Thomas and Lady Smith were among the passengers in the P. and O. s.s. Ranchi which left London last Friday for Bombay.

The Maharaja of Patiala left London at the end of last week on a visit to the Duke of Sutherland at Dunrobin Castle, Golspie, Sutherland.

Sir George Lloyd, the newly-appointed High Commissioner for Egypt, accompanied by Lady Lloyd, will leave London *en route* for Cairo on October 11.

Prince Antoine Bibesco, Roumanian Minister to the United States, left London last Saturday for Paris, spending a few days there before returning to Washington.

Sir Geoffrey de Montmorency, who has been ill in London, has now recovered, and left last week for India to resume his duties as Private Secretary to Lord Reading.

Lady McRobert and her son, Sir Alasdair Workman McRobert, sailed from Liverpool last Saturday in the Cedric for New York on the first stage of their journey round the world.

Among the guests entertained at luncheon by Major-General Sir Courtenay Manifold at the Ritz Hotel on September 30 were the Yuvaraja of Mysore and Major-General Sir Herbert and Lady Uniacke.

Sir Henry Lloyd, Sir Dawson Miller, and Sir Frederick and Lady Rowlatt were among the passengers by the P. and O. boat express which left Victoria last Thursday to connect at Marseilles with the Naldera.

The eighth anniversary of King Fuad's accession to the throne of Egypt will be celebrated to-morrow (October 9). King Fuad succeeded his brother Hussein as Sultan in 1917, and became King of Egypt on March 16, 1922. In celebration of the accession, Sesostris Sidarouss Bey, the Egyptian Chargé d'Affaires, will hold a reception at Claridge's Hotel to-morrow (Friday) from 4 to 6.30 p.m.

Mr. R. C. Vernon, C.B., of the Colonial Office, has been appointed to the post of Financial Adviser to the Government of Iraq, a position which has been vacant for some time, and he left England on September 30.

Mr. S. R. Das, Advocate-General of Bengal, accompanied by Mrs. Das, left London last Thursday to join the Indian mail steamer at Marseilles, to take up his new appointment at Delhi as Law Member of the Government of India.

A wreath was laid at the Cenotaph in Whitehall last Thursday on behalf of the Begum of Bhopal, her Highness being present at the ceremony and assisting in placing it. A wreath was also laid by her son, Prince Hamidullah, and another on behalf of the Begum's staff.

Digitized by Google

THE WEEK AT HOME.

(Continued from page 436.)

Government of Australia to exempt all British films from import duty. One will perhaps be permitted to doubt, however, whether this is quite the most infallible solution to the admittedly sorry plight of the British film industry. For Great Britain is hardly concerned to exclude American films as such: it is concerned to exclude bad American films, of which there is a distressingly increasing number. That is to say, British films are to be encouraged, not because they are British, but only when they are good—any other plan is, it would seem, bound to fail. One knows that competition with American films is generally extremely unfair, but the resolving of that injustice would scarcely appear to lie in the providing of a market for British films, however bad they may be. Surely the way in which to avoid the grosser evils of the American films is to insist, first of all, upon the quality, not the quantity of British films?

A New Concert Hall.

Concert Halls do not abound in the West End; even what there were were not always very comfortable. But the transformation from the old Steinway Hall in Wigmore Street to the new Grotrian Steinweg Hall is, nomination apart, a most happy change, for in it acoustics have not been sacrificed to added comfort. It was opened last week, and one of the first concerts to be given in it was a pianoforte recital by Mr. Walter Gieseking. This pianist is a genuine artist and philosopher, very much at one, moreover, with his mellow-toned Grotrian Steinweg pianoforte. For him there is none of the challenging technique, the grand attack of the virtuoso; rather does he delight in the twilight and in the half-lights of his instrument. His is an admirable reticence, yet it does not wholly solve his problems. It is a kind of obscurantism that he indulges, and while that is very pleasing in the filmy guesses at truth which Debussy in his Preludes made, it is inapt for the clear intellectual penetration of Busoni. Yet why cavil at an artist because he is incomplete: has Hardy the ability to write a humorous story, or Yeats an epic?

Art Galleries.

The autumn art season has begun, and most of the galleries are busy with collective or one-man shows. Some have made a good start. The Leicester Galleries, for example, are holding simultaneous exhibitions of "portrait interiors" by Sir John Lavery and of Mr. Neville Lewis's paintings of South Africa—the refined contrasting notably with the rude. Sir John's work must be sufficiently well known to readers of this journal (only one of his Moroccan sketches, a charming "Palace in Fez," is included in this collection), and a certain number of his works now being hung have been shown before. But there are much excitement and entertainment to be obtained from these brilliant representations, particularly from the home of the Asquiths at Sutton Courtney. Mr. Lewis, though much younger than Sir John (he was at the Slade School just before the War), is, if anything, even more stimulating. His types of men and girls of Natal, Zululand, Basutoland, Pondoland, and so on, are done with extraordinary command of and insight into facial expression: the beautiful head, for instance, of "A Native Housemaid" has been painted by a psychological student as well as by an artist. Nor is it only in his representations of negroes that Mr. Lewis compels admiration, for his portrait of "A Cape Malay Hajji" contains a perfect suggestion of this remote Moslem's stern faith. Emphatically this is a show to visit.

Another very interesting exhibition is to be found at the St. George's Gallery, Hanover Square, where a collection of contemporary English water-colours has been made. Side by side with renowned names like Bone, Walcot, McBey, Charles Holmes, and so on, the less steady generation, David Jones, Walter Taylor, Colin Sealy, and others, are given a very good and instructive chance. This show alone is adequate disproof of the assertion that English water-colour is dead. Recorder.

BOOK REVIEWS.

A TOURIST'S TRAVELS IN THE NEAR EAST.

"WANDERINGS IN THE BALKANS." By Dudley Heathcote. (London: Hutchinson, 21s.)

An observant tourist with a ready pen may be justified in jotting down his impressions in the form of short articles for the daily Press, or may even read up the politics of the country he is in and spread himself without much harm in an article in one of the monthlies. But he should think twice before he puts these ephemeral notes into the form of a singularly handsome volume adorned with fine photographs. The reader is apt to feel that he is not getting what he hoped for. The author is apparently even now under the impression that Hungary, Czecho-Slovakia and Roumania are in the Balkans He proves that the Roumanians are Latins from the fact that they still wear sandals exactly like those worn, not by the Romans, but by the Dacians whom the Romans under Trajan conquered. He is very fond of the Dacians, whom he finds once more in Dalmatia of all places, which is "the very soil where Dacian mothers bore those herculean giants who fought as gladiators in the arenas of Rome." His first four paragraphs on Bulgaria inform us that Bulgaria is (the italics are our own, for the words italicised are typical) "*in fact* the only country that is paying us reparations." Further we are told of "the Palace" at Sofia where "King Boris and his Cabinet are trying to find a solution of the Macedonian difficulty." As a matter of "fact" Bulgarian Cabinet meetings are not held in the Palace. We are reminded of the last Derby where the Cockneys dubbed Ptolemy II. "Tomly" when we read, not once only but twice in the text and also in the index of the town of "Roustouk." These indications will perhaps be enough to show the kind of fare we are offered, with many annoying French words and tags introduced without rhyme or reason and many repetitions of "certain it is" applied to statements often of doubtful accuracy. Still, the book is a very handsome one, and its pictures are very good indeed. C. S.-W.

AN INDIAN'S PHILOSOPHY.

"MY BROTHER'S FACE." By Dhan Gopal Mukerji. (London: Thornton Butterworth, Ltd.)

The publishers say that "this narrative is, first and foremost, a study of India, and reveals the real soul of the country in all its dignity and ancient serenity. . . . There is, throughout the book, a beauty so urgent, and so alive to atmosphere, as to make it a notable achievement."

This may be so, to those who understand (or profess to understand) Indian metaphysics: most of whom, one suspects, are like Mr. Pott's young man who used the "Encyclopædia Britannica" for his article on Chinese metaphysics, by the process of reading for China under the letter C, and for metaphysics under the letter M, and combining his information. To a Philistine like the present reviewer, the later chapter in the book, that treats of Ghond the Hunter, is readable, at any rate in parts: of the rest, he is inclined to echo the remark of the Dragoon in "Patience"—"Why, it seems to me to be nonsense": and to expect, from the initiated, the reply, "Nonsense perhaps; but oh! what precious nonsense."

BOOKS RECEIVED.

"Islam and Its Need." By Dr. W. Norman Leah. With Foreword by Rev. S. M. Zwemer. (London: Marshall Brothers. 6d.)

"Jahangir's India." By Francisco Pelsaert. Translated from the Dutch by W. H. Moreland, C.S.I., C.I.E., and P. Geyl, Litt. D. (Cambridge: Heffer and Sons, Ltd., 8s. 6d. net.)

CURRENT TOPICS.

"Burma for the Burmese."

The Government of Burma has obtained the assent of the local Legislative Council to two Bills, one of which authorises an ingress tax on every non-Burman arriving in that country by sea, while the other gives power to expel from Burma criminals of any nationality other than Burmese, after conviction for certain specified offences. The debates on these two Bills were characterised by considerable racial feeling: the Indian members of the Council maintaining that they were directed against Indians, and the Burmese members making little secret of their agreement in this opinion. The Indian members have petitioned the Viceroy to disallow the Bills, in particular the second, and the vernacular and Anglo-vernacular press in India has taken up the matter strongly: their main argument being that, so long as Burma remains a Province of the Indian Empire, she has no right to place obstacles in the way of the entry into, or continued residence in, Burma of persons hailing from other Provinces of India. They argue that it is unthinkable that Madras, for instance, should raise a barrier against immigration or residence by Bengalis: and declare that, if these Bills are allowed to become law, their existence will amount to an admission that Burma is entitled to treat herself as a separate entity and to regard her future as definately set apart from that of the rest of India.

The official defence is stated to be that, as there are, including Europeans, a hundred nationalities in Burma, the argument that the Bills are solely directed against Indians is absurd. This defence, however, reminds one of the action of some of the Southern States of America who, after the Civil War, passed a law that no one, whose grandfather had been ineligible to vote at elections, could himself be eligible to do so. This legislation was challenged as unconstitutional, since its effect was to disfranchise all the freed slaves and was obviously passed with that object alone; but the challenge was successfully met by the argument that the law contained no mention of negroes, but impartially disqualified all persons, without reference to race or nationality, whose grandfathers had not been eligible to own a vote.

It must be admitted that the Indians have the better of of the argument, though the facts are on the side of the Burmans. Racial and linguistic divisions in India are wide enough; but the distinctions, even between the Aryan North and the Dravidian South, are insignificant compared with that between Burma and India. Not only in race, religion and language, but in habit, custom and outlook, Burma is a nation apart: and, if it is necessary to admit that this legislation is, as its Indian opponents assert, the thin end of the wedge for "Burma for the Burmese," even by doing so one is but admitting that it is a move in the direction of what practically every Burman, and a large majority of her non-Burman well-wishers, regard as the eventual solution of the problem of Burma—not only desirable but inevitable.

Civil Service Examinations.

The Civil Service Commissioners announce the names of those candidates who obtained the first twenty places in the recent examination for the Indian Civil Service. The number of candidates who offered themselves for the Indian Civil Service alone was 64—47 of whom were Indians. Candidates for more than one service, one of which was the Indian Civil Service, were: Home, Indian, Colonial 29: Home, Indian 12: Indian, Colonial 14. There were thus, in all, 119 candidates who declared for India either as first, second or third choice. The Home and Colonial Services attracted 70 candiates who did not include India among their choices: for the former, it is interesting to observe that 31 were women, two of whom were successful. Examinations for the Foreign Office and Consular Services were held concurrently with those for the Civil Services, and attracted 43 candidates, some of whom also gave other choices, among which was the Indian Civil Service. Of the candidates mentioned as obtaining the first twenty places for the Indian Civil Service, twelve—to judge by the names—are Europeans and eight are Indians; but, of the twelve Europeans, one also passed for the Home, Colonial and Consular Services: three for the Home and Colonial: one for the Colonial and Consular: one for the Home: and two for the Colonial: leaving only four who passed for the Indian Civil Service alone. It will be interesting to see how the others exercise their choice.

Sir William Schlich.

By the death of Sir William Schlich, there passes the man who was the real parent of Indian forestry. Though he left India so long ago as 1885, his work has lived and prospered amazingly: so that, looking back on the interval of forty years, he himself must have been astonished at the great edifice that has been reared on the foundation that he so well and truly laid. The Indian forests now form a great and rich asset of the Government of India: and, if the present work of conservation and development is allowed to continue unchecked, they will, before many years have passed, reach an importance many times greater than they furnish at present. Among the roll of distinguished forest officers who have brought about this result, and whose labours India will gratefully acknowledge in future, no name will deserve more honour than that of Sir William Schlich.

Sir Frederick Whyte.

In our issue of September 17 we cast doubt, in consequence of what appeared to be unimpeachable evidence, on the accuracy of the cabled statement that Sir Frederick Whyte had been asked by the Government of India, as her agent, to undertake an investigation into the relations between Central and Provincial Government in various parts of the world.

The current mail, however, brings a report of the actual words of the Home Member of the Government of India (Sir Alexander Muddiman) in a speech made in the Legislative Assembly. "The Government of India have recently availed themselves of the services of Sir Frederick Whyte, who has accepted our invitation to investigate and report to us on the relations between the Central and Local Governments in other parts of the world, with special reference to the relations that obtain between the Central and Provincial Governments in India. The evidence he will collect may be useful, and will be placed before the Royal Commission whenever it is appointed."

This is precise enough: and one can only suppose that, though the invitation was definitely given and accepted, the nature of Sir Frederick Whyte's inquiries will be as suggested in our previous note; that is, that he has consented to undertake, in such spare time as may present itself during his return journey to England by the route that he had already mapped out for himself—Australia, the Far East, and North America—an unofficial investigation, the results of which he will place at the disposal of the Government of India for use in the event of the latter considering them (as the Home Member said they "may be") likely to be of assistance to the Royal Commission of 1929—or earlier date.

The New Maharaja of Kashmir.

"An Indian Correspondent" has furnished certain English newspapers with a diatribe against Maharaja Sir Hari Singh; whose accession he declares to be regarded by Hindus as illegal and invalid, in view of the adoption by the late Maharaja, of a "spiritual heir"—between whom and a temporal heir Hindu law is said to recognise no distinction. The action of the Government of India, in confirming Sir Hari Singh's succession, is therefore described, in accordance with recently invariable precedent, as "an interference with religion and a gross breach of Queen Victoria's solemn promise" in the proclamation of 1858. Sir Hari Singh is also declared to be responsible for the failure to introduce certain promised

Digitized by Google

reforms in the State, which are enumerated as the selection of State subjects for training in Indian and British institutions: the inauguration of new industries for the benefit of the "intelligentsia": the establishment of a High Court of Judicature for Kashmir: and the enhancement of the salaries of "low-paid staffs, clerical and menial, in the Government offices." This "defiance of the people of Kashmir" (over 70 per cent. of whom are, incidentally, Mohammedans, to whom the niceties of Hindu law are matters of no moment) has the support of the Government of India who have been "bought" by a series of bribes existing, of course, only in the imagination of the correspondent—the new Maharaja is said to have undertaken to raise the embargo against the acquisition of landed property by Europeans ("to repeal the law which prevents land-grabbing by Europeans in Kashmir"), to have promised "concessions for working the Kashmir oil-fields to influential persons," and to be intending to build a railway from Rawal Pindi to Srinagar —the implication, in the latter charge, being, no doubt, that this will facilitate the "land-grabbing" campaign: and, most heinous of all, to have spent, during the past four years, "twenty per cent. of the revenues of his State in entertaining European guests": oblivious of the fact that, if anyone had done anything of the sort, it could only have been the man in command of the revenues of the State—i.e., the late Maharaja.

The "Correspondent" is, one may guess, almost certainly a lawyer, whose hopes of a job in the "High Court of Judicature" have been dashed: whose sons and nephews have been disappointed in the matter of State scholarships and appointments in the management of State industries: and whose poor relations, hangers-on, and dependents have failed to obtain increases of pay in posts in the "low-paid clerical and menial staffs" of the State offices. But, as things go in India at present, if he has been an administrative failure, he seems to have all the qualifications for a successful politician.

The Bombay Mill Strike

It is reported from Bombay that the previously orderly self-repatriation of the strikers to their villages has been disturbed by an attempt, on the part of a large crowd of mill hands, to rush the station platform and to enter trains without paying for tickets. They threw stones, not only at the railway officials who attempted to withstand them, but also at passing trains: and the police had to be called in to restore order. Before this was done, a number of lamps and windows had been broken, and several railway employees had been severely handled. The Bombay message reporting the facts says that this occurrence shows that the strikers are "getting restive"; but such a deduction is not one that should necessarily be drawn from it. It was stated, in a recent issue, that $2\frac{3}{4}$ million passengers had been detected, in one year, to be travelling without tickets: the total number who actually did so being probably considerably greater. The Indian passenger is a person of almost limitless patience: he ordinarily arrives at the station several hours before the train, by which he proposes to travel, is due to start: and, if there is no room in that particular train, he contentedly camps out in the large enclosure that, in India, represents the third class waiting room and waits for the next. At times of pressure, such as on the occasion of an important festival at some particular centre, extra trains have to be run to cope with the traffic—even luggage trains being sometimes pressed into the service: and, on such occasions, it is no uncommon sight to see a train arrive at a station the platform of which is packed from end to end with intending travellers, while the accommodation on board it is already crowded to suffocation. A pitched battle between the "ins" and the "outs" then ensues: active and enterprising assailants clamber on to the footboards of the carriages and succeed, perhaps, in inserting inside the window an arm or a leg, with which they cling desperately to any object, animate or inanimate, round which they have managed to twine it: while the front ranks of the defenders man the breaches and maintain a desperate defence against the invaders. In time, the turmoil sorts itself out, and the train proceeds, for the same drama to be re-enacted at the next stopping place. But even the patience of Indian third class passengers has its limits: and when, as was doubtless the case at Bombay, they find themselves in strong force, and train after train has gone away without them, they are apt to try a mass attack when a favourable opportunity presents itself: and, on such an occasion, they are quite likely to neglect such meticulous preliminaries as the buying of tickets. When the Akali trouble was at its height in the Punjab, large mobs of excited Sikhs not infrequently rushed the trains and took possession of them en bloc: defying the small staff of railway employees to prevent them from doing so or to eject them after they had done so. In such circumstances, the members of the mob who had decided to rush a train would naturally ask, why trouble to take a ticket? Their proceedings were illegal, any way, and would be properly dealt with, under the bye-laws, by "removal from the station precincts by any servant of the Company": the absence of a ticket could not increase the penalty and, as the penalty would obviously be unenforceable in view of the disparity in numbers, it was better to take the chance of getting their ride free No doubt the Bombay strikers have arrived at the same conclusion: which does not argue the likelihood of their becoming riotous quâ strikers, but only quâ passengers wanting to get home as soon as possible.

The Akalis' train-rushing exploits were carried out almost exclusively at small wayside stations, where opposition could not be effective; it is, of course, a different proposition at a large terminus like Bombay, where the first line of defence—the railway employees—is strong and well disciplined, and where the police are within call to reinforce the first line in case of necessity. It may be expected, therefore, that, the initial surprise attempt having failed, it is unlikely to be repeated.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 17.

The Reforms Debates.

The defeat of Government in the Legislative Assembly on the subject of the Reforms has been boomed by *Forward* and the *Amrita Bazar Patrika* as being the "voice of India," but the decision of the Council of State has given a clear indication of the extent to which the decision of the Lower House was representative. An amendment almost identical with that of Pandit Motilal Nehru was lost by a majority of 28 votes to 7. If the decision of the Legislative Assembly could be called convincing, the defeat the Swaraj-Independent caucus has now sustained is even more so. Both the extremist organs are loud in their abusive denunciation of the Council of State and it is surprising that, in the rejoicing which followed the Pandit's victory, the possibility of the Bill being thrown out was lost sight of. Both papers now agree that the expected has happened.

A significant feature of the discussions is indicative of the change which is taking place in Indian public opinion. Motilal Nehru's amendment conceded one point, in that he did not demand a Government entirely cut off from the British Constitution; the advance he called for was along British lines, and in this respect it finds a point in common with the proposals made by Mrs. Besant to which so many Indians put their hands. The Council of State, with a greater sense of responsibility, know that India is not prepared for the great stride the Pandit advocates, and its success in the Assembly may be put down in the main to the ideal of all Indians, the attainment of self-government. Taking this ideal as a definition of the term "Swaraj," the movement will never die; but a time will come when India will realise that the quickest road is not always the most sensational, and will then regain the self-respect which her extremist leaders have lost for her. The threats, which the Swaraj party are so fond of uttering, only serve to make India look foolish in the eyes of the world and detract from the weight of any opinion which they accompany.

Miscellaneous Matters.

Another week of political quiet has passed in Bengal; Sen Gupta is on a tour and is reported to be in Dacca, where nothing of particular interest has occurred, although an effort was made to revive a flagging interest by taking the Swarajist leader from the railway station in procession. It is becoming increasingly obvious that Calcutta has little time and no respect, such as was shown to the late Mr. Das, for the new leader.

There is some talk of organising candidates for the Council of State elections which are to take place shortly, but there is little definite news of the tactics which it is proposed should be adopted. The Bihar Provincial Congress Committee have turned down a proposal that the Congress constitution should be revised so as to allow of its running candidates for the various Indian Legislatures, and this will probably be revived before the All-India Congress Committee which will meet at Patna next week with Mr. Gandhi in the Chair.

The *Amrita Bazar Patrika*, ably assisted by the *Bengalee*, is engaged in asking questions: and these relate to the Swaraj funds. An appeal made by Mr. Das in the latter part of last year resulted in the collection of a sum of Rs. 2,25,003 7 as. 11 pies, according to the acknowledgments which appeared in the columns of *Forward*. The members of the Finance Committee, in a statement they have made, give the figure as a little more than Rs. 2,17,000,—a discrepancy of about Rs. 8,000. Of the total sum, Rs. 1,25,000 was an investment in the plant of *Forward*, the income presumably to be devoted to village work, but only Rs. 92,219 reached the Bank. It is explained that of this sum more than Rs. 10,000 was represented by dishonoured cheques, thus reducing the bank balance to Rs. 81,282 15 as. 3 pies. Rs. 25,000 was paid to Mr. Das for clearing past debts of the party and for current political expenses; but details of the expenditure under these heads is not forthcoming. A loan of Rs. 3,100 was made to the Bengal Provincial Congress Committee, and Rs. 2,000 was spent in village reconstruction work; but, here again, details are not given, although they are promised for January of next year. The villagers appear to have had a particularly thin time and the very pertinent questions which are being asked will not act as an incentive to liberal giving when another appeal is made. It may well be asked, if the Swaraj Party are incapable of safeguarding a comparatively small sum of public money, how can they be expected to be efficient custodians of a nation's interests?

The Age of Consent Bill.

Child marriage in India has been one of the outstanding differences between the civilizations of the East and of the West, and, when an attempt was made some thirty years ago to bring the marriageable age of girls under legislation, the outcry in Bengal was perhaps unprecedented. The orthodox section of the Hindu community were at loggerheads with their more liberally-minded brethren, who view the measure with a degree of approval : and large processions of barefooted Hindus wended their way to the temple of the goddess Kali where prayers were offered for giving good sense to the King. While the Legislative Council was sitting at Government House, it was surrounded by a multitude of people blowing conch shells and singing songs, to such an extent that the Legislators could not proceed and the police had to intervene. It is interesting to recall that this agiation saw the inception of the idea of boycotting British cloth, as a protest against what was looked upon as interference with the Hindu religion.

The present session of the Legislature has seen the introduction of a Bill to increase the age of consent of girls from 12 years to a minimum of 13 years and, although some opposition was met with, there was no panic. The question of religious interference did not arise, and the Bill was passed. The sign is a hopeful one and points to the fact that slowly but surely Indian conservatism is giving place to common sense. Further evidences are provided in the increase in the number of adherents to the creed of the Brahmo Samaj, which abolishes the purdah system and gives more freedom to women. Is it too much to hope that, within the next few years, a saner view will be taken of the political problems of India? The extremist element are constantly inventing new bogies of which "repression" is perhaps the chief. A well known Mohammedan, writing in the *Statesman* to-day, states that any relaxation of the responsibility of Government, by transferring their powers to the demand of the majority, would mean the betrayal of the Mohammedans. "We have had enough of Reforms," he says, "and do not wish to try any more the bitterest effects of a Mob-raj which, apparently, is the practical meaning of Swaraj to-day."

Markets.

A considerably firmer tone has been apparent during the last week in the Jute market with a further upward tendency at the close. A good business is reported also in Gunnies; but this market has not been as active and, though steady, has not shown as large an advance in rates as in the case of Jutes. Steadily rising prices are reported from the Mofussil, thus giving an indication of the probability of higher rates here. Rumours of the inaccuracy of the forecasts have been spread by the "Bears," but there appears to be little possibility of the final figures exceeding the forecast to any appreciable extent. The piece-goods market has been dull with little business passing. A general appreciation has taken place in the rates bid at the Tea sales here this week and, with the London market more cheerful and with the possibility of restriction in the near future, there is every indication of a further improvement. From the reports to hand, another decline in stocks is expected at the end of the month: and, whether or not restriction comes into force, the present heavy surplus of stocks has every chance of being cleared by the early part of next year.

The Share market opened better but, owing to the rise in raw jute without a corresponding increase in the manufactured article, an easier tendency developed at the close. The chief feature of interest was the decided improvement in Teas, in sympathy with the better outlook for the commodity, and most of the better shares were dealt in at higher rates. Rubbers also continued strong with little scrip offering; Cottons have been neglected, but there has been a certain amount of interest in Coal shares at about previous levels. Government securities and the miscellaneous group remained unchanged with slightly less inquiry. There has been no alteration in money rates, with abundant short money available at 1½ per cent.; Exchange has ruled firm, and Banks have sold heavily to the Government at 1s. 6 3-16d. to cover export bills.

RECENT DEVELOPMENTS IN THE COTTON INDUSTRY.

(By Our Bombay Correspondent.)

Bombay, September 18.

The strike duly began in several of the mills on Tuesday, when we at first received rather lurid reports of stone-throwing and incendiarism. But, though there is, no doubt, a good deal of pressure being put on those still working to join the strikers—which is signified in the usual manner by heaving stones through the windows of the mills which are carrying on—conditions have in no way got out of hand, and the total damage done in the fire was under £20.

There are many different views as to the probable length and extent of the strike; but many people consider that it is likely to be a long one: extended on the one hand by the labour leaders, who spring up from the ground on such an occasion, and on the other by the undisputed fact that to close the mills for a month or so would suit the owners very well.

There is as yet hardly any properly recognisable organisation of labour, owing to the fact that Indian labour is not educated up to the point of maintaining and subscribing to Trade Unions in its times of prosperity: and the so-called Unions merely spring up like mushrooms at the beginning of a strike, under the guidance of some pushing

Digitized by Google

young lawyer who has no claims to a proper comprehension of the conditions and problems of labour. This is a state of affairs for which there can be no remedy except by a general improvement in the conditions of life among the lower classes. Speaking generally, the mill owners would welcome the existence of responsible representatives of the men: but they cannot, for obvious reasons, provide the men with a representative, because it is the whole essence of the thing that a Trade Union should be absolutely self-supporting. The result is, sooner or later, that Government has to step in and take up the case on behalf of inarticulate labour: and several strikes have been settled on those lines in the past. But this is by no means an ideal solution: and it all comes back once again to the fact that it will take a long time to build up among the labouring classes of India a degree of intelligence in any way comparable to that which has established the Trade Unions in Europe and America.

Excise.

Meanwhile at Simla Sir Purshottamdas Thakurdas chose his opportunity well, by bringing up his resolution for the suspension of the Excise Duties for the remainder of the current year, on the second day of the strike. With the exception of the Madras contingent, which seems to have retired without recording a vote either way, the non-official members, of all communities, returned a unanimous vote in favour of the suspension, and the resolution was carried by 57 votes to 32.

Sir Basil Blackett's speech, which is no doubt not reported very sympathetically in the Bombay Press, does not read very convincingly. His argument, that it would cause difficulty by throwing the Excise Department out of work, is not considered unanswerable in Bombay; nor is his taunt that, if the cotton mills ask for a subsidy in a proper way, the question will be considered. The last suggestion is a little unfair. The cotton mills consider themselves entirely independent and do, in fact, in anything like reasonable times, pay, in other ways, more than their fair share of the revenues of India: and it is difficult to see how the removal of the Excise, which it is believed is not imposed on such an industry anywhere else in the world, would constitute a subsidy.

It was stated in the Assembly that the Excise Duty represents 8½ per cent. in the whole cost of manufacture (excluding the raw cotton): and it is payable immediately on all production irrespective of the prospects of early realisation: and how far this operates as a handicap in face of an import duty of 11 per cent., charged on the surplus production of Japan at the time of importation, is a question which probably presents itself in a different light to Bombay and Simla.

These are, of course, merely the views of Bombay mill owners on an imperfectly reported speech: and, as Sir Basil Blackett has probably plenty of experience of the fact that the decisions of Treasury officials are not always popular even with other Government Departments, he is not likely to be seriously disturbed by the complaints of industry.

THE INDIAN TERRITORIAL FORCE.—2.

(By Our Simla Correspondent).

In my last letter I dealt with the early history of the Indian Territorial Force and with the verdict of the Committee which at the beginning of the present year examined its state of efficiency. According to their report the measure of success achieved by the Force so far has been very limited; for in respect of its existence as a second line to the Regular Army, they maintained that hardly a single unit was worth the money which has been expended upon it, while as regards its object of providing a means to enable patriotic Indians to learn how to defend their country they held that it had been almost a complete failure. After carefully investigating the causes of these unsatisfactory results, the Committee came to the conclusion that it was necessary to start again almost from the beginning, if this latter object was to be achieved. While recognising the secondary object of the Force as a second line, they declared their firm opinion that its main function was to spread a martial spirit among Indians and to lay the foundations of India's national army of the future. These are high ideals, and their realisation is by no means as easy as it may seem at first sight. Yet those who set up these ideals have outlined a definite road by which they may be attained. Basing their scheme primarily upon the idea that the spread of the military spirit and military ideas must come through the normal system of education, they laid it down as their view that the University Training Corps were the foundation upon which the future Indian national army must be built up. At present these Corps are still in their infancy. In some Universities they have been accepted with keenness and have already reached a creditable standard of efficiency; in others they have to struggle with the apathy of the students. But the experience gained in the more efficient Corps is enough to show what can be done with a little encouragement. The first essential is therefore to develop these Corps and to stimulate the interest of the University students in them; for their members will later go into the world to their various avocations, and will carry with them the knowledge of and enthusiasm for military ideas which they have learnt during their training in their ranks. This alone should go some distance towards spreading the seeds of a military spirit over wide circles of India's population which to-day have no interest in anything to do with the Army and no realisation of the citizen's duty to be prepared to defend his country in case of emergency. The seeds will be sown among them; whether or not they will fall on stony ground rests, of course, with the people themselves.

When, in due course, the University Training Corps are fully developed, the time will be ripe for a further extension of the Committee's programme through the special urban battalions of the Force: in which those members of the University Corps who are residing sufficiently near to their recruiting areas, and whose enthusiasm has not waned, will be able to carry on their military training, with the definite knowledge that, whereas at the Universities they had no liability for service, they are now liable for actual military service in time of crisis, not only for the internal defence of India, but also, in certain circumstances, for operations overseas. The Committee have proposed that such battalions shall be formed at once and shall, at the start, be open to all educated men; but they foresaw that, if these units were to be trained on the same system as is in force in the Territorial Army in England, they could be of but little military value in an emergency unless their members had had some previous training before joining them. There is a vast difference between the man who joins the Territorials in England and the young educated Indian who may at present wish to join the Indian Territorial Force. The former has been brought up in an atmosphere of strict discipline both at home and at school; he has very probably also had some form of military training in a School Cadet Corps. The Indian boy, on the other hand, has in most cases missed the advantages both of the disciplinary and the military training. As a result the Committee, while recommending the early formation of units of this kind in large centres, foresaw that it would be necessary for them eventually to be recruited solely from those boys who have had previous training in University Corps, as otherwise they will never be capable of performing the full service for which they are liable.

Nor do the Committee imagine that the changes which the system they advocate is ultimately intended to bring about can be accomplished all in an instant. They have declared definitely that the spread of the military spirit can only be accomplished by a series of stages which must be spread over a number of years and must start from the bottom with the education of the young idea. They show no desire to see the various processes hurried; for they have recommended that, while the development of the military spirit among educated Indians is in progress, the battalions of the Force which are at present recruited from the same classes as the Regular Army should continue to exist in order to fulfil its function as a

Digitized by Google

second line. But they definitely look forward to a time when the educated Indian will be imbued with a new spirit which will fill him with a desire to fit himself to defend his country. What that time comes, if ever it does, the second line to the Indian Army will be recruited, not as at present from the classes of hereditary soldiers, but from these educated young men who have come to realise the duties and privileges of citizenship which at present make but little appeal to them. The moment will come when India will be judged capable of conducting its own civil affairs as part of the Empire without outside assistance. When that time comes she must also be prepared to undertake the responsibility for her own defence, which is the natural corollary to the grant of complete self-government. The Shea Committee have formulated a scheme by which such a state of military preparedness may be reached: and, if the Government accept the Committee's recommendations, it will rest with Indians themselves whether or not they are able to reach the goal which has been set before them.

INDIAN COMMERCIAL NOTES.

The monsoon is now drawing to a close and its value can be appraised. Considering the general apprehension of the Indian bazaars, which counted on a poor monsoon after four good ones, and the gloom of the meteorologists, who were struck by the abnormal and inauspicious conditions of early 1925, this year's rainfall in India has not been by any means bad. The early start, a week or ten days before the normal opening in the second week of June, did not bode well. Thereafter the South experienced too much rain and the North-West too little. Later, these defects were remedied. Then came an ominously long break in the middle of August, from which at one time recovery was problematical. That would have been a failure indeed. Fortunately the monsoon current revived on September 21, just as apprehension was giving place to despair; and the latest reports, although they indicate uneven distribution throughout India, and shortage in the Punjab and the Deccan (the despair of the meteorologist), are on the whole good.

We are now in a position to estimate the prospects of the coming export season. The jute crop is admittedly short, but not so short as the official prophets gloomily foretold. The Continent is badly caught, and is forcing up the price; but high prices will undoubtedly call out supplies in excess of the official estimate. Last spring's wheat crop was short. Local wheat prices are soaring beyond the world's market levels, and those in the know in India even prophesy imports to fill a gap, rather than exports from a known surplus. But the next spring sowings are assured, and this knowledge has a wonderfully relaxing effect on stocks and a steadying effect on prices. Oilseeds are fairly plentiful and cheap. The rice position is difficult and interesting. Last January's crop was good on the whole, but Indian prices are too high for the world's markets. In this case the blame seems to lie not so much with the monsoon or any shortage of local stocks as with the rupee. At 1s. 6 3-16d. business, which could have been put through with a profit at 1s. 4d., is impossible. However, one man's dope is meat to his fellow; and the British manufacturer scores where the East Indian merchant loses.

THE INDIAN MAIL.

The Coal Trade.

The mail brings an account of a paper, read at the first annual meeting of the Geological, Mining and Metallurgical Society of India by Rai Bahadur A. C. Banerji. He referred to the present difficulties of the coal trade, in which increase of production and decrease in demand played the chief part. It is to be noted that Sir Charles Innes, when introducing the bill in the Legislative Assembly for the establishment of a Coal Grading Board, said that, as compared with the pre-War period, the Indian output of coal had increased by 4½ million tons a year, while the sales had decreased by 2 million tons. Mr. Banerji said that the normal annual increase in coal raisings had averaged about 200,000 tons for many years past: and held that one of the chief causes of the decreased demand was the development by several of the great Indian railways of coal fields of their own, from which their needs were largely supplied, so that they had almost entirely ceased to come on the ordinary market as buyers. He held that this, since most of the railways were now owned by the State, amounted to Government interference wih private trade: and that, if it was not possible to stop this altogether, any further development of railway owned collieries should, at least, be forbidden. He referred to the charge, brought against Indian coal mines, that the decline in exports was largely of their own making, owing to the poor quality of the coal supplied during and immediately after the War; though he apparently did not admit the justice of the charge. As matters were a present, he declared that nothing except the highest class of Indian coal could compete in the Singapore market: and that in Bombay, Karachi, Columbo and Madras, Indian coal could not compete with foreign coal at all, unless it received protection, which would have to include rebates and a reduction in freight charges in India. As the Government of India has rejected the recommendations of the Indian Coal Committee in these directions, it does not seem likely that any such relief will be obtained. But, whatever the cause, the fact remains that the average price of Indian coal has fallen from ten to five rupees per ton, and the value of coal shares has, in many cases, reached a very low figure.

Mr. Banerji then proceeded to discuss the matter of Indianisation on the superior staff of Indian coal mines. Most of the shallow seams had now been worked out, and deep seams required managers with better scientific attainments; but there was not yet a sufficiently large number of Indians with proper training such as was, at present, only obtainable in Europe or America. The Government of India were starting a mining school at Dhanbad, though this could not be ready to receive pupils for another four or five years: and scholarships for the study of mining were granted by Provincial Governments and by private associations. At present these were not particularly popular, probably because the men trained abroad did not find, on their return, much opportunity of earning a livelihood in India in their profession; but the Government of India had already begun to Indianise the inspectorates of mines and, if qualified Indian candidates became available, would perhaps be prepared to Indianise the establishment of local superintendents on State Railways also. He dwelt on the importance of the mining industry to India, and urged young Indians, whose bent led them in that direction, to qualify themselves to take charge of their own mines.

Extremist Propaganda Methods.

Ibn Saud has denied the story of the bombardment of Medina: and, on the strength of this denial, Shaukat Ali has written to the Press saying that "the mischievous cable reporting bombardment of Medina and damage to the Holy Prophet's tomb, turns out, after all, to be one necessity of guarding against the likelihood of Amir Ali's He adds that he has cabled to Ibn Saud making the characteristic suggestion that "it is feared that there is necessity of guarding against the likelihood of Amir Ali's forces desecrating the Prophet's sanctuary and foisting the blame on the Nejdis": and advising him, in view of such an eventuality, to take impartial witnesses with him "when entering Medina."

This is a suggestion of a kind that one has learned to expect from propagandists of Shaukat Ali's kidney—if it ultimately proves impossible to deny that the holy buildings at Medina have been damaged, then the damage will be ascribed, not to the immaculate Ibn Saud, but to the treacherous defenders of Medina, the partisans of King Ali. A similar fiction has been invented in the Bombay cotton strike, where the strikers threw stones at the mills which, in the early days of the strike, remained at work. As such a proceeding was incompatible with the picture, drawn by the extremist Press, of peaceful and non-violent workers spontaneously withdrawing their labour from the mills en masse, it was calmly de-

Digitized by Google

clared that the stone throwers were "agents provocateurs" suborned by the police. A somewhat similar manœuvre was made use of in the early days of the Akali disturbances in the Punjab. It was asserted that an aeroplane had flown over Amritsar and dropped bombs on the Golden Temple: and this rumour caused some excitement in the Sikh regiments. A deputation of Indian officers was therefore sent to Amritsar, to see for themselves whether the shrine had sustained any damage or not. They returned and reported that it had sustained none whatever, and the excitement was allayed: only to receive a further stimulus, a few days later, by the publication of an Akali explanation, that the facts were as originally stated, but that, owing to the peculiar sanctity of the shrine, the bombs, when dropped, turned to water, so that the Temple remained undamaged in spite of the criminal attempt of the Government aeroplanes to destroy it.

Jute Forecast.

Advices from Calcutta say that the figures of the final official jute forecast have aroused commercial distrust in the Government methods of calculation. Statistics of the last ten years show that the forecast has invariably been an underestimate—varying from 150,000 bales in 1917-18 to no less than three million bales in 1921-22. The worst official effort, however, has not been anything like that achieved by the writer of these notes in the issue of September 24—when the authority, on which he relied, seems to have divided his figures by two. As a matter of fact, the suggestion of "commercial mistrust" in Government figures is calculated to cause some amusement to those in the know: since the big merchants always hope that the forecast figures will be inaccurate, but will be accepted as accurate by those who are not in the know; when those who are will come by their own.

Babu English.

About a generation ago, Anglo-Indians were moved to laughter by the publication of a memoir of a distinguished Bengali judge, which abounded in unintentional humour. The last hours of the subject of the memoir were described in detail: how he "remained sotto voce" for several hours until the hopes of the watchers by his bedside were raised by his face being "illuminated with the fascinating beams of a simper": and so on. A specially charming example of a similar "nice derangement of epitaphs" is to hand in an Anglo-Indian newspaper received by the current mail. A member of the Poona Municipality, in moving a resolution, used unparliamentary words against the Brahmin community, which he was called upon to withdraw; and the report says that he finally consented to do so only after he had been "threatened with dismemberment."

The Indian compositor is—often, it must be admitted, justifiably—puzzled by the use of abbreviations; which, if he does not himself understand them, he thinks it necessary to elucidate for the benefit of his readers. One remembers official notes of one's own where a manuscript reference to "R.A. barracks" appeared in print as "the Revenue and Agriculture barracks": and a statement that the cost of certain commodities had risen from 19.12.3 to 27.9.6 (the writer having omitted to put in the explanatory letters Rs. (rupees) before the figures) was shown, in print, as a rise from December 19, 1903 to September 27, 1906; but the record, in this respect, was perhaps achieved by an Anglo-Bengali paper, in the last year of the War, which gave a list of names in an official gazette, were appointments of "Bar to M.C." and "M.C.," were announced under the headings "Barrister to Member of Council" and "Master of Ceremonies" respectively.

INDIAN EXCHANGE.

London, October 5.

Since the date of our last report quotations have moved within narrow limits and the markets in Bombay and Calcutta have remained stationary at 1s. 6 5-32d. for telegraphic transfers, with few buyers under 1s. 6 3-16d.

At the higher rate Government has again met the moderate requirements of Banks and others for immediate delivery to the extent of about £300,000, it is reported.

Government is not disposed, however, to purchase for delivery ahead—a very sound policy, no doubt, which offers no encouragement to those inclined to speculate in forward rates.

A fairly large business had already been booked here and in India in August and early September for deliveries from January to March, but the announcement that the Indian Government would take measures to prevent exchange rising has almost stifled the inquiry for forward business.

Cable advices from India indicate that markets are quieter, and it is not unusual to see a lull at this time of the year, before cotton begins to arrive in the Bombay market. Some confirmation of this may be inferred from the last weekly return of the Imperial Bank, which showed that the trade demand had fallen off by 140 lakhs of rupees.

The value of money in the open markets may be taken as the surest indication of business activity, and as short loans have been fixed for a month at 2½ per cent. per annum, there can be very little demand for money. The parlous state of the cotton industry in Bombay obscures the outlook; but it is not unreasonable to assume that there will be no dear money in India this season, even if a welcome turn for the better takes place in the cotton position.

The rupee market in London has been very quiet; there are buyers of T.T. at 1s. 6 11-64d., with sellers at 13-64 and occasional business for cash at 3-16 to a moderate extent. At this rate there are more buyers than sellers.

Forward rates are unchanged at 1s. 6 7-32d. November-December, 1s. 6¼d. January, and 1s. 6 7-32d. February T.T. with a very poor inquiry.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Commercial and Financial Section.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning.

An Electrical Scheme for Greece.

Last week I was able to give details of an important Greek contract given to this country. On the top of that comes the news that a Trade Facilities issue is likely to be made shortly in connection with a comprehensive electrical scheme for Greece, the negotiations in regard to which are understood to have been now completed. The loan will be two million pounds, and the scheme will include the erection of a power station, tramway electrification, and street lighting in Athens and district. The company concerned with the scheme is the Power and Traction Finance Company. This concern, it will be recalled, was established a few years ago under the auspices of Cammell, Laird, and Co., Sir William Arrol and Co., the English Electric Co., the North British Locomotive Co., John Brown and Co., and the Prudential Assurance Co., for the purpose of carrying out public works projects. I do not suppose there is any part of the Near East where foreign competition for the carrying out of works of development is keener than in Greece, a fact which is no doubt to be attributed to the regularity with which Greece has always met her foreign commitments. Thus Greece has enlisted the aid of American capital for the development of the water supply of Athens, while a Belgian group has just obtained a contract for the construction of three new railway lines of a total length of 250 miles. It is emphatically satisfactory to know that British enterprise is also going to play its part, and it may be hoped that this development will have the effect of drawing renewed attention to the opportunities that the Near East holds forth.

Sudan Plantations.

It was expected that the report of the Sudan Plantations Syndicate would contain proposals for the reorganisation of the Syndicate's capital, and this has proved to be the case. The present issued capital amounts to £600,000, and it is now proposed to offer the balance of the authorised capital amounting to £150,000 in £1 shares to the shareholders at £3 per share. It is further proposed to raise the nominal capital to £2,500,000, and to capitalise the greater part of the existing share premium reserve. The review of the past year shows that the Syndicate continues to make satisfactory progress. For the twelve months there was a net profit of £162,885; and with the balance brought forward the total is £339,451. A final dividend is proposed of 3s. per share, less tax, making the distribution for the year 25 per cent., leaving to be carried forward £184,450.

Roumania's Note Issue.

A recent statement of the National Bank of Roumania gives the note issue in circulation as 20,153,603,000 lei. With an estimated population of 16,500,000 this figure gives the note circulation as 1,222 lei per head of the population. Expressed in pounds sterling, this means about 25s. per head. The corresponding figures before the War were approximately 125, lei or £5 per head. The difference explains the present restriction of the Roumanian market for foreign goods, and incidentally the difficulty of the country in paying its foreign debts; but the precise bearing of the figures on the question of the real extent of deflation might be hotly argued by opposing schools of thought. One of the difficulties that the Roumanian Government has to contend with, it must be remembered, is the tendency of the population to hoard money. The evil is not as great as it is, say in India, but the Roumanian does like to have money about him, even though he may not intend to spend it. Consequently an increasing amount of notes issued is always out of circulation.

Mails to and from Greece.

Arrangements have at last been made between the Greek Government and the Companie Internationale des Wagons-Lits, for the transport of mails to and from Greece. Owing, I believe, to the influence of Greek shipping interests all mail matter between Western Europe and Greece has been conveyed by sea between Italy and Greece, with the result that the service has suffered from infrequency, if not from irregularity. On the three days a week when the Wagons-Lits run direct from Paris to Athens there will be a through mail service; on other days postal matter will be conveyed by the Orient Express to Kuleli-Burgas at the junction of the frontiers of Bulgaria, Greece and Turkey, and will there be transferred to the Greek railway system. The innovation should materially help the Greek business world. Greece will feel herself in still closer touch with "Europe" when she has a daily Wagons-Lits service to and from Athens, equipped all the way with a restaurant car. The part of the journey between Nish and Athens has long been a source of weariness to the traveller.

Foreign Competition.

We have heard more than enough of engineering and shipping contracts that have been snatched from us, so to speak, by foreign rivals who have quoted prices far lower than our firms could possibly do and still make a profit, but we have heard too little of the real reason for the difference in some instances between British and

BANK OF ROUMANIA LIMITED
(Founded 1866).

Digitized by Google

foreign quotations. I refer to the matter because an adequate understanding of the position cannot but lead to great hopes for the future. In very many cases, of course, the adverse exchanges combined with lower wages have been responsible, but in a number it has been simply the fact that our rivals quoted prices which meant a loss for themselves, merely in order to secure the business with a view to possible future advantages. One competitor it is now reported has made a loss on the past year of just under a million sterling, mainly because of losses on building ships. Obviously no concern can continue that process indefinitely, and with the disappearance of unreal quotations our firms will have their opportunity. Indeed, it would seem that the tide is turning already, for not only are foreign contracts being secured now with much greater freedom than in recent months, but in one or two cases they have been obtained in the face of the most strenuous opposition. All of which gives one cause to view the future with greater optimism than might have seemed justified a bare few weeks ago.

British Films.

The step taken by one of the Dominions to further the use of British films by insisting on the inclusion of at least 1,000 feet of them in every programme, is to be welcomed as a move in the right direction, but more than that it is impossible to say. Actually it does not take us very far, for in the first place 1,000 feet of films only constitute about one-sixteenth of the average programme, and secondly the difficulty is to obtain British films. As soon as the British film producing industry is established on a firm basis it will be time enough to consider the compulsory use of a certain percentage of British films in a programme, but one would imagine that it would then be unnecessary, for, judged by the standard of quality, the competition that British films have to face on the part of America is not very formidable.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

Greek Finances.

A reply to the criticism recently levelled against Greece's financial policy has been made by the Greek Minister of Finance, M. Cofinas. He maintains that the depreciation in the drachma can scarcely be attributed to an increased note circulation, as this is due exclusively to issues made against deposits of exchange which are represented by the proceeds of the Refugee Loans. The notes thus issued, he states, will be withdrawn as the assets of the Refugee Loan are utilized. He further maintains that an increased note circulation was rendered essential to cover the Budget deficit of 700,000,000 drachmæ for 1924-25, and declared that if it had not been for the deficit the exchange would have remained at 250 drachmæ to the pound, and that had the additional notes been issued for commercial needs, given, of course, that there was no deficit, there would have been no depreciation of the currency. As regards the outlook he says that the future is assured by the expected Budget surpluses and by ear-marking special taxes for the reduction of the floating debt and the note circulation. It cannot be said that the explanation clears up the situation. As a matter of fact, it is a rather contradictory statement, for we are told first that the increased note circulation was due to issues made against exchange, and secondly, that it was necessary to cover the Budget deficit. Obviously it can be due to each separately, but not to both together. What the Minister's statement does convey, reading between the lines, is that the criticism of Greek policy has been justified.

Harrisons and Crossfield.

A year ago Harrisons and Crossfield benefited from the improvement in the situation in the tea industry, and this time their report reflects not only the continuance of prosperous conditions in the tea industry but also the recovery of the rubber industry. Last year the net profits were £242,475 as compared with £192,711, and for the past year they amount to £276,902, and it is proposed to raise the dividend on the deferred shares from 25 per cent. to 30 per cent. As the recovery in rubber will only have its full incidence in the next twelve months it follows that an even more satisfactory report may be looked for this time next year.

Ottoman Railway Reparations Claim.

At the half-yearly meeting of the Ottoman Railway, from Smyrna to Aidin, the chairman, Lord St. Davids, referred to the question of the company's claim for compensation from the Turkish Government. At the last meeting it was thought, he said, that the question was on the point of settlement, but the Turkish Assembly rose in April without having ratified the agreement made, and they would not meet again until October, when it is hoped that the agreement will be ratified. "It was impossible," Lord St. Davids added, "to expect very much in the way of cash payment, and such advantages as they could hope to secure would be very considerably in the nature of obtaining greater latitude in the management of their own affairs. That would be a very important advantage to them." There was a great improvement in the receipts for the half-year, but this was mainly because the results in the corresponding period of the previous year were so different. Working expenses were high, and Lord St. David fears that under the altered conditions in Asia Minor they will always remain high. He stated that he believed that 20 years ago their railway was worked more cheaply than any railway in the world—at about 32 per cent. or 33 per cent., going up in exceptional years to 42 per cent. It was perfectly obvious that they could never get back to that level in view of the present prices of materials, wages, etc.

The Rubber Outlook.

It is some weeks now since I dealt *in extenso* with the rubber outlook. Nothing has occurred in the meanwhile to discount in any way the optimistic view taken of the

Digitized by Google

future. I have been, I must confess, among the most confident that the industry would ultimately justify expectations and save itself, and in so doing return a rich harvest to the long-suffering shareholders, and events would seem to suggest that everything I have written is in process of being justified. The commodity remains firm, while the prices of the shares advance week by week, encouraged in their upward course by the promising interim dividends that continue to be declared with unfailing regularity, indicating a bounteous return in the course of 1926. It is not my function in these columns to point out specially promising shares, and if it were I should hesitate to do so, seeing how far the advance has already gone, though there are shares which have not fully participated in the forward movement. Still, I have no doubt that we shall see higher prices yet, for one reckons an average yield of 10 per cent. in the case of rubber shares, and measured by that criterion there is obviously room for further progress; but from now on fluctuations are likely to become more pronounced until the commodity attains stabilisation for the time being. It has always to be borne in mind, however, that rubber is an uncertain proposition, as, indeed, all commodities are, and while the outlook seems clear for 1926 and 1927, events may bring prophecy to naught, and those therefore who have already made substantial profits might be well advised to take them and leave something for *les autres*.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Cotton Yarn, Etc.—The Director-General, Prisons Department, 43, Sharia El Bostan, Cairo, invites tenders for the supply of cotton yarn, cloth, chalk marking, backs harness leather English, bristles, paint, fire hose, belting, tools, and various articles. November 23.

Crane.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply and installation of a movable crane, capacity 3 tons. November 3.

INDIA.

Girder Bridges and Flange Plates.—The Madras and Southern Mahratta Railway Co., Ltd., 25, Buckingham Palace Road, London, S.W.1, invite tenders for girder bridges, comprising 120 spans of from 10 ft. to 60 ft. clear, a total approximate tonnage of 142 tons, 52 flange plates for girders, a total approximate tonnage of 15½ tons. October 20.

The brother of the Shah of Persia, the Queen Mother, and the Persian Princesses arrived in Marseilles from Paris last Friday and embarked in the Naldera, in order to return home via Bombay.

A message from Beyrout received in Paris last Friday, stated that the main detachment of the French column operating in the Jebel Druse reached Kharava at 10 o'clock that morning without any fighting.

NEWS FROM ALL SOURCES.

A Reuter message from Bucharest states that a Roumanian contract for railway engines has been given to the British firm of Baldwins, Ltd.

Bulgaria has accepted the British Government's offer to conclude a commercial treaty according most-favoured-nation treatment to both parties.

Colonel Kalfoff, the Bulgarian Foreign Minister, has returned to Sofia from Geneva, where he attended the Sixth Assembly of the League of Nations.

According to a Reuter message from Sofia, in view of the urgency of the refugee problem in Bulgaria, a new special department has been created for the prompt settlement of refugees.

After three days of debates the International Petroleum Congress in Bucharest came to an end on September 30. The delegates afterwards left for a week's visit to the oilfields, mining districts, and industrial establishments in various parts of Roumania.

It is reported that Roumania and Belgium have reached an agreement affecting Roumanian post-War private debts, contracted between November 11, 1918, and January 1, 1922, guaranteeing a deposit of 3.05 to 3.10 lei for each Belgian franc. The moratorium interest is fixed at 1½ per cent. per annum. Semi-annual payments of 7⅛ per cent. are to be made; the total to be paid in 26 years.

The Parliamentary Secretary to the Department of Overseas Trade has appointed Mr. J. W. Hills to be Chairman of the Credit Insurance Committee in place of Lieut.-Colonel the Hon. Sydney Peel, who has had to resign from the Committee on going to China as one of the British delegates to the Special Conference on Chinese Tariff Questions.

The Roumanian Government has postponed the completion of the agreement with an American group for a loan to the municipality of Bucharest pending the result of the negotiations regarding the settlement of the Roumanian debt to the United States, in hopes of getting better terms for the municipality.

The *Daily Telegraph* Athens correspondent writes that information received here from Holland states that the ex-Kaiser intends to buy back his former palace, the Achilleion at Corfu, which during the War was seized by the Greek authorities. It is said that he will apply for a permit to retire there, and pass the rest of his life on the beautiful Ionian island.

Saleh Evan Pasha, Egyptian Under Secretary of State for Public Works, arrived in London last week to select Consultant Engineers in connection with the big dam on the Upper Nile and in Egypt, and to settle the question of compensating Sudanese landowners whose property will be flooded if the project is completed.

77, LOMBARD STREET, LONDON, E.C. 3.

LLOYDS BANK now has the following Offices in INDIA, BURMAH and EGYPT, and can offer special facilities to merchants and others for transactions with those countries. It issues Drafts, Mail and Telegraphic Transfers and Letters of Credit, negotiates and collects Bills of Exchange, conducts Exchange operations, and transacts Banking and Agency business generally.

INDIA & BURMAH.—BOMBAY, CALCUTTA (2 Offices), KARACHI, RANGOON, DELHI, SIMLA, RAWAL PINDI, MURREE, SRINAGAR (Kashmir), GULMARG.

EGYPT.—ALEXANDRIA, CAIRO, TANTA, BENHA, MEHALLA KEBIR, BENI SUEF, FAYOUM, MINIEH.

Full particulars can be obtained from any of the Bank's Branches.

Digitized by Google

Shipping Intelligence.

BRITISH SHIPPING AND EGYPT.

Speaking generally, during 1924 there has been no fresh feature in the shipping world, and in spite of competition from State-owned and State-subsidised tonnage, the British shipowner continues to hold his own in much of the trade in and out of Alexandria (says Mr. E. H. Mulock, in his recent report on Egypt).

Trade with the United Kingdom, the Far East, and the Dominions.—The shipment of cotton from Alexandria to England and the import of cotton goods from England is entirely in the hands of British liners, so is practically the whole of the import of machinery and general goods from the United Kingdom. The transport of coal from England, and the shipment to England of cottonseed, oilcake, eggs, and onions, is open to competition from ships flying all flags, which naturally has the effect of keeping freights at a low level, and often at a very unprofitable one; but in spite of this, British tonnage predominates. Imports of flour from Australia and rice from Burma are usually carried in British bottoms, the bulk of the former ships being owned by the Commonwealth Government.

Trade with the United States.—The British shipowner has been almost entirely driven out of this trade, in so far as imports are concerned, by American-owned boats, the losses on which are understood to be high. As regards exports hence to the States, principally cotton, these are carried, roughly speaking, half by British ships, and the other half by Americans, in accordance with the arrangements which exist between the United States Shipping Board and the English liners.

Trade with Europe.—Both the French and the Italian Governments subsidise their Mediterranean regular liners very heavily, and the whole of the trade between Egypt and their ports is in their hands. With Germany, nearly all the trade is done by German boats. With Greece and the Near East, a proportion of the traffic is catered for by one British Steamship Company, whose activities are confined to the Levant and the Red Sea, but a large share of it goes to French, Italian, and Greek boats. The French and Italian lines trading in the Eastern Mediterranean are able to compete keenly with the British steamship company in question because, although their ships, which are maintained in a high state of efficiency, are understood to run at a heavy loss, they receive considerable subsidies from their respective Governments. Thanks to this factor the first-named Italian lines are also keen competitors in the Red Sea. This, however, is not all, as competition in the Eastern Mediterranean is further increased by the fact that many small boats of Greek, Italian and other nationalities, are able to quote freights considerably below those of the British steamship line.

The reiterated rumours that a German line contemplated inaugurating a service of passenger boats between Egypt and Europe have not as yet materialised, but this company organised occasional calls at Alexandria of liners carrying German tourists during 1924.

Although nothing has yet come of it, the last has by no means yet been heard of the project, first mooted by the Egyptian Parliament during 1924, for the creation of a national marine under the auspices of the Government. The avowed object of this scheme, which has been under serious consideration by the Miinistry of Communications, is economy on the annual cost of freight charged by the various European shippers of material and supplies purchased by the Government from abroad.

NEW ANCHOR LINER.

The twin screw turbine liner Caledonia which has been built by Messrs. Alexander Stephen and Sons, Ltd., at their shipbuilding and engineering works at Linthhouse, Glasgow, for the Anchor Line (Henderson Brothers, Ltd.), ran successful trials on September 25, on the Firth of Clyde. The liner has been built primarily for the company's service between Glasgow and New York, but will also be used for winter cruises and for occasional runs on their Bombay service. The Caledonia is, broadly speaking, a sister ship of the California, which was launched in 1923, but has improvements in the arrangement and design of the passenger accommodation. The vessel's principal dimensions are 570 ft. overall length, 70 ft. breadth, 39 ft. depth, and a load draft of 29 ft. with a gross tonnage of 17,046 tons, and a speed of 17 knots. She has been constructed under the special survey of the British Corporation, and to the recommendations of the International Convention for the Safety of Life at Sea, being divided by watertight steel bulkheads into 11 main compartments, which are sub-divided, the vessel having over 40 separate watertight compartments. A watertight double bottom is fitted and adequate provision is made for long voyages and world tours, there being capacity for 5,850 tons of oil fuel and 1,650 tons of fresh water. Accommodation is provided for 205 first-class, and 403 second-class passengers, and 800 third-class.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Liverpool, October 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Media for Port Said, Colombo, Madras, and Calcutta (London, October 17).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, October 21).

British India Line.—S.s. Madura for Bombay and Karachi (London, October 9); s.s. Manela for Colombo, Madras, and Calcutta (London, October 10).

Cunard Line.—S.s. Phrygia for Gibraltar, Oran, Algiers, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, October 10).

Ellerman "City" Line.—S.s. City of Simla for Calcutta (Birkenhead, October 12).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 17); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 6). (The last steamer of the season for Sulina, Galatz, and Braila.)

P. and O. Line.—S.s. Devanha for Bombay (London, October 8); s.s. Delta for Colombo, Madras, and Calcutta (London, October 17).

Prince Line.—S.s. Egyptian Prince for Malta, Alexandria, Jaffa, and Haifa (London, October 24).

Hungarian sugar refineries are conducting negotiations with Adriatic shipping concerns with a view to obtain freight rates which would enable Hungary to resume her pre-War exports of sugar, especially to India, Egypt, and Great Britain.

Motors and Motoring.

The new Clyno is a car of which one is likely to hear more in the near future. The design is excellent and the car has a smart appeaarnce, which is certain to commend it to the discriminating buyer who wants a moderately-priced, yet well made, British car. I have not yet had an opportunity of trying out the new 13 h.p. model on the road, although I have covered thousands of miles in the 11 h.p. model. If the new proposition is anything like its elder but less powerful sister, it will be all that anyone can expect for the money.

I note that four models are obtainable; the four-door saloon at £298; the coupé at £285; the four-seater at £260; and the two-seater at £245. The buyer will naturally ask what those prices include, and I may say that balloon tyres are fitted, 28 inches by 4.95 inches, a 12 volt lighting and starting set is provided, and as standard fittings there are: a Smith's eight-day clock; spring gaiters; petrol gauge; driving mirror; Smith speedometer; luggage carrier and Auster rear screen for the four-seater model; rigid side curtains; motor-driven electric horn; three-panel wind screen; dash lamp; calometer and automatic wind screen wiper. It will be seen that this generous provision leaves very little for the purchaser to buy before he takes the car on the road.

As regards the build of car, I may say that the engine is of the four-cylinder monobloc pattern, with side by side valves, water cooled with the thermo-syphon system. The bore and stroke are 69 by 100 m.m., giving a cubic capacity of 1,496 c.c. Lubrication is on the simplest system possible, by means of a plunger pump, and the gear-box gives three speeds. The changing of gear is by the usual side lever and gate quadrant. Suspension is by semi-elliptic springs in front and by cantilever springs behind. The chassis is swept in at the front so as to give ample steering lock and is upswept at the rear to give a low loading line and to provide ample clearance for the back axle, which is a special Clyno design and driven by spiral bevel. I do not know that I can add much to the above description, but I shall be only too pleased to send a complete description to any reader who is interested in this well made little British car.

A Show Competition.

Mr. S. F. Edge writes to me about a competition that he is introducing for his A.C. cars in connexion with the forthcoming show at Olympia. I give the outline of the scheme and hope it will be a reader of The Near East and India who gets away with Mr. Edge's £100.

Messrs. A.C. Cars, Ltd., are presenting £100 as a prize to the purchaser of a new A.C. car during Olympia Motor Show, who gives the best reasons for doing so. The terms and conditions will be announced in due course, but the rules covering the competition stipulate among other points that the entrant must have placed his order for a new A.C. car during the period of the Olympia Motor Show, October 9-17 inclusive, and must send in his reasons in writing for having bought an A.C. car.

The New Triumph.

The latest production of the Triumph Motor Co., Ltd., of Coventry—I believe I was the first journalist to mention their first car in the Press; I was motor editor on the *Financier* at the time—is a car that is claimed to offer unfailing service under all conditions of road and weather. The makers have just sent me some preliminary data regarding this car, and from the accompanying photographs I regard it as a smart and stylish-looking proposition. The specification of the chassis is as follows: engine, four-cylinder, mono-bloc, 15-50 h.p., detacnable head, 77.5 mm. bore by 115 mm. stroke; capacity 2,169 c.c.; mechanism entirely enclosed and readily accessible. Side-by-side valves; detachable valve cover plates; valves are interchangeable and are mechanically operated by a single chain driven camshaft; adjustable tappets; aluminium pistons. The dynamo and magneto are chain driven, the chain being automatically adjusted by means of an eccentrically mounted spring loaded jockey wheel. The cylinders are cast with the crankcase, which is split horizontally below the crankshaft centre, making the big end bearings and connecting rods readily accessible. The starting handle is detachable and the shaft is protected by means of a covered cap in radiator base. Unit construction engine, clutch and gear-box. The cooling is by pump and fan and the radiator is of special honeycomb design. Lubrication is by gear pump in sump supplying oil under pressure to crank and camshaft bearings and also to the camshaft driving chain. There is a pressure gauge connected to this oil supply on the dashboard. The clutch is of the single plate type, extremely flexible, self-contained, and operated by a ball thrust withdrawing device. The gear-box gives three forward speeds and reverse. Central change; speedometer drive from gear box main shaft. Ratios: first, 17.6; second 8.4; top 5.2 to 1. Reverse 21.7 to 1. The whole box is very accessible and readily removed from unit.

The chassis frame is of pressed channel steel; springs are extra long, semi-elliptic front and rear, and shock absorbers are fitted on each. Electric lighting and starting sets are provided, with speedometers, clock and horn as standard, and the tool kit is very complete. Overseas readers may be interested in the dimensions which I give in full:—wheelbase, 9 ft. 4 in.; track, 4 ft. 8¼ in.; overall length, 13 ft. 5 in.: overall width, 5 ft. 7 in.; ground clearance, 10 in. Weight of chassis, 13 cwts. approximately.

The Rolls Abroad.

Mr. Claude Johnson has sent me two wonderfully good photographs of the 'New Phantom" Rolls Royce car in overseas surroundings. I should like to reproduce them here, but unfortunately space is not available for the purpose. Quite a number of Rolls Royce cars have been sold in India and the Near and Middle East this year, and there is noticeable a great and growing curiosity amongst the more favoured inhabitants of that part of the world as to this car which has so high a reputation. G. B. B.

NEW COMPANY.

RUSSO-CAUCASIAN COMPANY.

The Russo-Caucasian Company has been registered as a private company with a capital of £100 in £1 shares. The objects are to carry on in South Russia, the Caucasus, the Near East and elsewhere the business of merchants, etc. First directors:—R. L. Benson, 24, Old Broad Street, E.C.2., merchant; R. R. Tweed, 48, Cannon Street, E.C.4, managing director of Baku Consolidated Oilfields. Registered office, 81, Cannon-street, E.C.4.

It is interesting to record that the Lopulco Pulverised Fuel system, the rights of which belong to International Combusion Limited of London, is to be installed in a new boiler of the Berlin electric light works on 12 large boilers. This order has been secured in face of the most exacting investigations by the German engineers into all known Continental and American systems of pulverised fuel. This following as it does the success of the Lopulco system at the electric light works in Paris, where repeat orders have been received, and the recent order which has been placed for Lopulco by the New York Edison Company, for what will be the largest power station in the world, namely 750,000 k.w., indicates the tremendous strides being made in the use of pulversied fuel.

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended September 24, state:—

Since our last report the futures market has been very active and wide fluctuations have been registered; the net changes on the week are the following:—Sakellaridis 2.88 dollars down for November, 2.75 dollars down for January, 2.70 down for March; Ashmouni, 1,21 dollars down for October, 1.30 down for December, 1.35 dollars down for February. The week opened with very firm markets due principally to an improved inquiry from abroad especially for Ashmouni, but a complete change in the position took place on Wednesday as a result of the drop in New York following the publication of the American Bureau report giving a condition of 53.8 and estimating the crop at 13,931,000 bales. The demand from abroad shows signs of expansion and although the major part of the demand is still confined to Uppers and Zagora a somewhat improved inquiry for Sakel is to be noted. It appears that there exist a few commitments for end of September shipment which the exporters are now fulfilling. The daily arrivals from the interior are now assuming important figures but they are still behind the corresponding quantities of last year owing to the lateness of the Sakel crop. Our opinion is that, for the time being, the Ashmouni market will more or less closely follow New York fluctuations. Owing to the reported success of the American long staple cotton crops, however, a slight narrowing in the difference between the two markets is probable as the season advances and the weight of arrivals is felt. As regards Sakel, although it is at present very difficult to give an opinion on the future course of prices the outlook is for somewhat heavy markets owing to the smallness of existing commitments with spinners compared with those at the same time last year, and to the rather poor demand ruling at present for this variety. The week's receipts amount to 188,077 Cantars against export 89,452 Cantars; the stock stands at 660,014 Cantars.

Spot: A good business has been done at Minet el Bassal this week and sales for the five business days amount to about 14,800 B/s of which we estimate 4,200 B/s Sakel, 8,500 B/s Uppers, 1.750 B/ Zagora, 300 B/s Pilion and 50 B/s White.

Sakellaridis: Considerably more interest has been shown in this growth and an improved business has been done. All styles have been dealt in but the good grades have attracted most attention. With the exception of Good which is cheaper, spot differences are unchanged but with a tendency to ease.

Ashmouni and Zazora: A good business has been done and all grades have been dealt in. Spot differences are unchanged for Fully Good Fair and Good, cheaper for Fully Good, but for the grades below Fully Good Fair, which are extremely scarce, they are very much stiffer and high parities have to be paid to secure cotton.

Pilion: A moderate business has been done. Spot differences are without much change.

Brown: is neglected and no business is reported.

White: A retail business has been done. Spot differences are quoted nominally cheaper for the good grades and inclined to harden for the medium and lower styles.

Crop 1925: News from the interior regarding the crops is somewhat better than last week. The Upper Egyptian crop and varieties other than Sakel planted on the Delta continue to be in a satisfactory condition. With regard to Sakellaridis, a small improvement is to be noted; delay still exists but varies widely from field to field; we estimate the delay, on average for all the Delta, at 10 to 15 days. It is difficult as yet to determine the consequences of the lateness of the crop, all that can be said at the moment is that it is exposing the plant to fogs and humidity and to a more intense attack of the pink boll worm. Favourable climatic conditions during the coming three or four weeks will limit or reduce the risk of damage; it may already be said with some certainty that as a consequence of the delay the final yield per feddan for Sakel will be inferior to that of last year, we are of the opinion, however, that the increase in the acreage referred to in previous reports will more than compensate for the deficit in the yield per feddan.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank, for the week ended October 3, states:—

Last week's American Bureau Report seems to have broken confidence in present values and business during the past week has been on a much smaller scale than recently. Such buying as has taken place has been chiefly for goods which can be delivered quickly.

The most important event of the week has been undoubtedly, the report issued by Mr. Pearse, the secretary of the International Federation of Master Cotton Spinners, as to the method by which the American Agricultural Bureau during his presence made up one of its estimates. The statements contained therein, if allowed to go unchallenged, are such as completely to destroy any confidence in reports coming from that source.

Yarn.—Spinners of American cotton have experienced an unsatisfactory week. Demand has been on a very small scale and poor prices are said to have been forced upon spinners desiring to do business.

The position of Egypt spinners continues to be a little better although here, too, negotiations are difficult.

Cloth.—In this section also there has been a marked falling away as compared with recent weeks. Buyers abroad seem to have bought only from hand to mouth except in cases where manufacturers in urgent need of orders have accepted very low prices.

Only a quiet business has transpired for either India or China and demand from South America and the Near East has been slow. Continental business is still fairly good and the Home Trade has shown a slight improvement.

Raw Cotton.—There has been no special feature during the past week. Demand for cotton in Liverpool has not been so brisk as was the case after the recent sharp fall in prices.

A further report from the American Agricultural Bureau on the condition of the crop as at October 1, should be published on the 8th inst., but, after Mr. Pearse's report of the way in which the figures are arrived at, the trade is at a loss to know to what extent they should be relied upon.

Closing quotations yesterday were as follows:—American Middling 12.72; Egyptian Fully Good Fair 28.20.

COMPANY NOTES AND REPORTS.

SUDAN PLANTATIONS.

The report of the Sudan Plantations Syndicate, Ltd., for the year ended June 30, 1925, states that the issued capital of the syndicate stands at £600,000. It has been decided to issue forthwith 150,000 shares, making the issued capital £750,000, as authorised. These shares, which will rank equally with the other issued shares for any dividend that may be declared in respect of the financial year ending June 30 next, will be offered for subscription, at £3 per share, to shareholders registered on the books on the 21st inst., in the proportion of one new shares for every four shares then held; fractions to be disregarded. At the forthcoming annual general meeting it is intended to place before shareholders proposals for the reorganisation of the syndicate's capital, including the capitalisation, by the issue of shares to the shareholders, of the greater part of the existing share premium account. The financial position remains satisfactory, notwithstanding the great demands made upon the company's resources in the past year for capital expenditure in preparation for the largely increased area to be cultivated during the coming season.

The Kassala Cotton Company Limited, in which the syndicate is substantially interested, is making steady progress, and the greater part of the past season's crop has been marketed at satisfactory prices. The shareholding in the Brazil Plantations Syndicate Limited, promises to become a valuable asset; that company has acquired upon favourable terms considerable areas of land suitable for cotton growing and is proceeding with their development. A small interest has been acquired in the Cambuhy Coffee and Cotton Estates Limited, and one of the syndicate's directors has joined the board of that company.

The subjoined table shows the cotton crops dealt with during the past season, and also the corresponding quantities of the preceding year:—

	1924.		1925.
Zeidab	3,088	...	2,814
Gezireh			
Tayiba	1,025	...	913
Barakat	1,887	...	1,425
Hosh	4,507	...	3,920
Wad el Nau ...	7,172	...	4,612
Total bales	17,679	...	13,684

The Zeidab Cotton Crop was practically disposed of before June 30 last, and about four-fifths of the Gezireh crop had been sold at that date. The remainder of the Gezireh cotton is entered in the balance sheet at a valuation made by the directors which realisations since made have shown to be conservative. The decrease in the Gezireh crop as compared with that of the previous year was due mainly to the unusually severe damage caused by insect pests. It is hoped that the measures taken with a view to reducing damage from this source in the coming season may be successful. Meanwhile, owing to the higher prices realised, the results are not less satisfactory than those of the previous year. The Sudan Government have succeeded in completing the construction of the Makwar Dam, and in consequence gravitation water is now available for the large area to be cultivated this season.

The profit and loss account for the twelve months, after deduction of all outgoings, shows a net profit of £162,884 12s. 9d., which, added to the balance brought forward from last year, viz., £176,565 14s., brings the total credit to £339,450 6s. 9d. The interim dividend of 2s. per share (10 per cent.) paid in June 3 last (less income tax) absorbed the sum of £60,000. The directors now recommend the declaration of a final dividend of 3s. per share (15 per cent.) on the issued capital of 600,000 shares, less income tax £90,000, leaving a balance to be carried forward of £189,450 6s. 9d., £339450 6s. 9d. Meeting Winchester House, E.C., October 28, 12 noon.

BARSI LIGHT RAILWAY.

The report of the Barsi Light Railway Company for the year to March 31, 1925, states that the net earnings, less Indian income-tax and super-tax, amounted to £54,135, or, adding exchange adjustments of £5,888, £60,023. After providing interest on the debenture stock, £5,600, and interest and sinking fund instalment, etc., on the Latur Extension Debentures, £5,652, there is left £48,771, plus £10,692 brought forward, making £59,463. The directors have transferred £8,834 to the reserve for equalisation of dividends, etc. (making £190,000), £3,500 to the taxation reserve as a provision for income-tax, and £1,000 to the staff provident fund. They recommend a final dividend of 3 per cent. with a bonus of 4 per cent. on the ordinary shares, making 12 per cent. for year, leaving £14,929 to be carried forward. As against the previous year, there is an increase of 129,382 in the number of passengers, and an increase of Rs.45,478 in coaching traffic and sundry receipts. The goods traffic shows a decrease of 19,156 tons and Rs.1,30,569. Meeting, Winchester House, October 14, 2.30 p.m.

ANGLO-PERSIAN OIL COMPANY.

At a meeting last week of the Board of the Anglo-Persian Oil Company, Sir Charles Greenway, chairman of the company, intimated his desire to be in a position to retire should circumstances at any time make the step desirable. It is announced that it is not the intention of Sir Charles Greenway to resign in the near future, but he has taken this step as a precaution to ensure that the affairs of the company shall not suffer from an unprepared-for change in the administration. Sir John Cadman has been appointed to succeed Sir Charles in the event of his retirement, and in the meantime has been elected deputy-chairman.

At the same meeting Mr. J. Douglas Stewart, the director in charge of the shipping interests of the company, and also chairman of the management committee, sent in his resignation on the grounds of ill-health, Mr. G. C. Whigham, a director of the Burmah Oil Company, was appointed to the vacant position on the Board.

HARRISONS AND CROSFIELD.

The directors of Harrisons and Crosfield, in their report for the year ended June 30 last, state that increased profits have been earned at home and abroad, and they consider the position of the company's affairs to be satisfactory. The net revenue amounted to £276,902, as compared with £242,475 for the preceding year, and after payment of the full dividends on the cumulative preference and on the preferred ordinary shares, and interims of 10 per cent. on the deferred ordinary and management

shares, the directors recommend a final dividend of 20 per cent. on the deferred ordinary, making 30 per cent. for the year, as against 25 per cent. for 1923-24, and the payment of a final dividend, less tax, on 500,000 management shares of £40,629. It is also proposed to transfer £10,000 to general reserve as before and £20,000, compared with £12,000, to income-tax reserve, the carry-forward being £75,736.

DANUBE NAVIGATION.

The report of the Danube Navigation Company for the year ended July 31, 1925, states that the net profit was £25,598, plus £2,679 brought forward. In view of the stabilisation of the Austrian exchange, currency dividends, interest, etc., accumulated to July 31, 1924—namely, £15,336—are also brought in, making available £43,613. £40,000 has been transferred to depreciation of investments, leaving £3,613 to be carried forward.

TEA COMPANIES.

The Panawal Tea Co. announces a second interim dividend of 10 per cent. actual, less tax at 4s. 1½d. in the £, for the year ending December 31, 1925. The dividend for the whole of 1924 was 30 per cent.

The Lethenty Tea Estates Association have declared a second interim dividend of 2½ per cent., less tax, on the ordinary shares, payable October 17.

The Pabbojan Tea Co. has declared an interim dividend of 10 per cent., less tax at 4s. 1½d. in the £, payable October 15 to shareholders registered September 29.

This year's Greek tobacco crop is estimated at 143,000,000 lb., an increase of 40 per cent. over the yield for 1924.

The contract concluded by an Anglo-American group for the drainage and irrigation of the Salonika plain was ratified to-day (says a Reuter message from Athens dated October 4) by Executive decree, as the National Assembly is dissolved. The group is headed by Mr. Franklin Remington, chairman of the Foundation Co., of New York, who secured the contract against rival German, French, Belgian, and Greek groups.

NEAR EAST MARKETS

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended September 26:—

Sultanas—The arrivals on the Smyrna market since the opening of the season are estimated at 12,670 tons, and the sales to date are put at 11,360 tons. Closing prices, Smyrna, per cwt. c.i.f. London-Liverpool are Type 12, 60s.; type 13, 63s.; type 14, 66s.; type 15, 68s.; type 16, 72s.: type 17, 77s. The market is quiet but with a strong undertone Business has shown some expansion resulting in the maintenance of values. Some advance has been paid for fine grades which have been demanded and are in short supply.

Figs.—The arrivals since the opening of the season are put at 97,962 bags, the sales to date being estimated at 89,717 bags. The market closes very strong. Sellers are very reserved. Shippers throughout the week have been obliged to buy below their requirements to avoid prices being further put up against them. The market, however, appears to be artificially kept under control. The procrastination on the part of shippers to cover engagements is a dangerous policy and may result later in a squeeze.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated October 1, state:—

Currants.—Prior to the arrival of first shipments of the 1925 harvest, considerable anxiety was evinced to unload the remaining unsold stocks on hand of the previous season, and under the influence of sustained pressure the early days of the period under review witnessed a further fall in values. This was accentuated by the attractive c.i.f. offers of new crop for early shipment, rendered possible by the weakness of the Greek exchange. The season opened with the arrival of s.s. Erato, bringing about 500 tons medium class for the market. Quality speaks well for the crop as regards colour and general attractiveness, although running on the small side. Some animation set in at the opening, but proved transitory, and only by repeated concessions in price was progress possible. Sales of cleaned varieties were made at 37s. to 38s. 6d., of Gulf uncleaned at 40s. to 42s., a few special parcels making up to 45s. S.s. Kantara with further supplies is discharging, and the first steamer bringing Vostizza, s.s. Phrygia, docked on October 1. Old fruit changed hands at 30s. to 33s., showing very good value. Quotations: —Pyrgos, 34s. to 35s.; Amalias and Patras (cleaned) 37s. to 38s.; Gulf and Panariti, 39s. 43s. Shade dried Vostizza selling on overland samples at 53s. to 60s., Smalls 53s. to 56s., ex quay terms.

Sultanas.—Smyrna—S.s. Etrib inaugurated the season with 5,000 boxes. Opening prices were considered satisfactory, as the quality is below the average of a normal crop, prices ruling 80s. to 90s. So far there is an absence of fine fruit. S.s. Lesbian and s.s. Cypria are following, but the quantities are reported to be quite insignificant for the time of the year. Cretans—some sales were put through on a forward basis at 82s. c.i.f., and at 95s. quay terms. The first arrival via the Continent was disposed of at 95s. to 100s. Australians have met a ready sale at advancing prices. Boards are now bare of first hand fruit. Closing prices were 72s. to 78s.

Figs.—The first small shipment of new season's goods per Etrib was mostly disposed of as follows:—large boxes 85s. to 95s.; small boxes, 90s. to 110s.; locoums, 115s. to 130s. Bags naturals realised 36s., while genuines were done at 27s. 6d. c.i.f. for September shipment.

The Egyptian State Railways, Telegraphs and Telephones, have placed a contract with Messrs. Hadfields, Ltd., for the supply of 3,000 waggon buffer shells unmachined.

DEVELOPMENT WORK IN THE GEZIREH.

An interesting glimpse of work in the development of cotton land on the Gezireh plain is given in the current issue of the Empire Cotton Growing Review by Mr. C. M. Hodgkinson.

When one has time to think of it, he writes, there is something romantic in converting this great stretch of formerly unproductive land into a plain, green with cotton. The initial work of development is, moreover, of a satisfactory kind in that it shows results according to the work put into it. When you are growing cotton, on the other hand, you work like a slave, and your cotton dies—at least it always seems to. Out in the blue one forgets the heartbreaking damage being caused some miles away in the old cultivation by bacteria and insects. It is, moreover, a good change from the daily routine on cotton where one is dealing with natives who are no longer strange to the work, and who know fairly well what to do, even if they do not do it. It is more interesting to deal with the quite raw material. They know nothing, and everything must be drummed into them. Some are keen, some disgusted with the idea of having to do a genuine job of work. Except during the few months of the year, when they sow and harvest their doura crop, it is hard to imagine how they originally spent their time, what they talked or thought about.

The ploughs start their work as soon as possible after the rains, and before they come the plots of land to be sown the following year have to be marked out and cleared of trees. They are called "trees" here, but in reality they are nothing more than small thorny bushes, rarely more that 2 feet high. However, what they lack above ground they make up for in their roots below. They are insignificant enough to look at, but if overlooked they make their presence felt on the unhappy cultivator that may cross their path. A pair of ploughs, working from sunrise to sunset without stoppages, will cover 30 acres or more in a day.

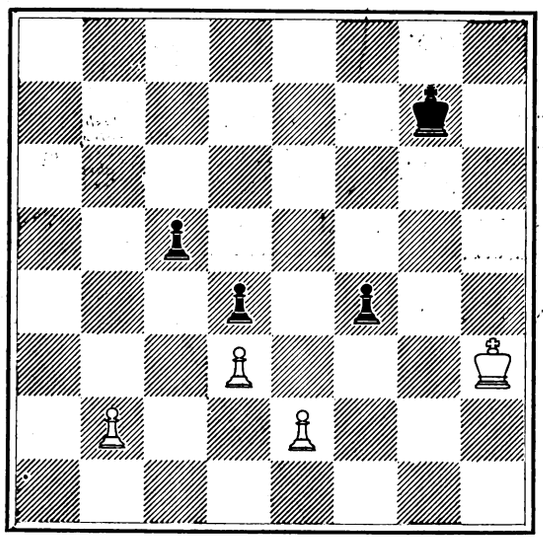
The allotting of the 10-acre plots (hoarshas) to prospective tenants is done, village by village, by the senior inspector of the area, accompanied by the block inspector. And long tedious days they are, seated in a mud house at a small rickety table and surrounded by maps, notebooks, coffee, and natives. Each landowner is entitled to one hoarsha, and any land remaining he allots to his sons, relations, and friends.

Their first job after receiving their 10-acre plot is to dig their minor irrigation channel—½ metre square in section, and 280 metres long. Of the whole year's work I think this is the job they like the least, and it takes many of them several months of grievous toil! Each tenant has also to build a straw house, a thing about which they really do know something. They are expert thatchers, and they appear to enjoy the work. There always is gathered a particularly cheerful group, from boys to old men, when a house is in course of construction. About March or April the ploughing engines return, this time to make the ridges on which the cotton will eventually be sown, and bulls afterwards plough irrigation channels across them, so that every hoarsha is divided into sixteen "angaias." Each of these is afterwards irrigated separately. The tenant makes up the channels and every ridge with a native implement called a torea. The hoarsha is then ready for sowing. To an Englishmen it does not seem that the tenant has much to complain about on the side of hard work, but to a habitual sunbasker it seems to be rather trying.

In these days the Gezireh swarms with large gangs of Sayidees, a race of people who live in southern Egypt, and who are introduced to this country when there is really strenuous digging to be done. Without them the Makwar Dam and the whole Gezireh scheme would have been almost impossible. They are very unlike the Arabs in every way; they have not their courteous manners, but they have a capacity for work which must make the natives gape with wonder. Their energy and the speed with which they can dig a canal is truly amazing. They simply eat earth! It is a pathetic sight to see a tenant toiling away alongside at a small channel which will probably take him months to finish.

CHESS.

By "CARO-KANN."



PROBLEM No. 16.
Black to play. What result?

Solution to Problem No. 15:—1, K—R5, P—Q3; 2, KxP, PxP; 3, K—Kt6 (if K—Kt5, P—Q5; 4, PxP, P—B5; 5, K—B4, K—B3 and wins, for the White King must look after the Pawn at B5 while the Black King is capturing the isolated Black Pawns; if 3, PxP, P—Q5; 4, PxP, P—Kt5 and wins), PxP; 4, PxP, P—Q5; 5, P—R5, P—Q6; 6, P—R6, P—Q7; 7, P—R7, P—Q8 (=Q); 8, P—R8 (=Q), Q—Kt8 (ch);; 9, K—R2, K—B2 and wins. There are many varieties on the main line indicated above which lack of space prevents my giving. The other main line is a defensive attitude on the part of White. It makes no difference to the result. 1, K—B4 (it is immaterial to which of three available squares White goes), K—B3; 2, P—R3, P—R4; 3, K—B3, K—B4; 4, K—K3, K—K4; 5, K—B3 (forced), P—Q5; 6, PxP (ch), KxP; 7, K—B4, K—B5; 8, K—B5, KxP; 9, K—Kt6, K—B5; 10, KxP, P—Kt5 and wins.

The production of the Steaua Romana, Burcharest, for September was 31,750 tons. This is the highest post-War production figure recorded, and compares with 26,380 tons for August. The total production for nine months this year 224,853 tons, as against 199,242 tons for the corresponding period of 1924. Well No. 4 Ceptura continues to produce up to 250 tons per day. On September 30, well No. 2 Runcu started flowing and produced 250 tons on that date, and on October 1 it produced 140 tons and is still in eruption.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen & Co., The North-West Tannery, The Empire Engineering Co., and the Nani Tal M T. Co. These Firms, by pooling their resources and centralising control, form a corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention

LALIMLI PURE WOOL

Makers of the famous Lalimli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPORE WOOLLEN MILLS CO., CAWNPORE

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO., CAWNPORE

COOPER, ALLEN AND COMPANY

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.

Everything in Leather.

COOPER, ALLEN & CO. CAWNPORE

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include:
Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Mosul and Mars.

The critics of the Government's policy in Iraq are anxious to connect Mosul with the God of War, but their discussion of the subject bears a strong likeness to the controversy over the planet named after him. It is equally remote from the facts in dispute, for the critics, having made up their minds what the issue with Turkey should be, refuse to listen to the spokesmen of the Government who point out that it is something entirely different. So long as a controversy is in this way being fought out on two widely separated planes, with no common ground in between, it is perhaps not to be wondered at that neither side shows signs of being converted to the views of the other. In ordinary circumstances an exchange of artillery fire between two forces out of range of one another would entail little harm, beyond the waste of material; but in the present instance, unfortunately, every shot fired by the attacking party is a present to the Turks and tends to prolong the real struggle between Turkey and Great Britain. Both Mr. Amery and Mr. Baldwin have tried hard to explain what was at issue at Geneva; but the critics will have none of it. They pretend that the British Government is where it was at any time between 1917 and 1921, with a free hand to decide whether it will evacuate the country immediately or not. In vain the Government points out that it has accepted, with the full concurrence of the nation, a mandate over Iraq; that it has a Treaty with Iraq, ratified by the Parliaments of both countries, which binds it until 1928 and then pledges it to renew the Treaty; that it is in honour bound to support Iraq and plead that country's case before the League of Nations. Each of these points is carefully ignored by the critics; but all manner of extraneous argument is cited as a reason why the Government should do something that it has no opportunity to do with violating a Treaty.

Tweedledum and Tweedledee.

The Mosul question will be debated in the House of Commons, and we can but hope that there at least Members will feel obliged to listen to the Government's case and will not be allowed to ride off on deep-seated prejudices or mere anti-Government propaganda, which form the basis of most of the present Press campaign. In the *Observer* we read that the "great point" in the question is one to which Mr. Baldwin makes not the slightest allusion. It continues: "Mr. Baldwin has the ultimate responsibility for a vast Asiatic Empire. In the era of Indian reforms friendship between Britain and the new Turkey is eminently desirable. Nothing prevents it but the Mosul imbroglio." The argument would be stronger, if India were predominantly Mohammedan, if the Turkish Republic had not abolished the Caliphate, and if it did not display complete ignorance of the Turkish character. It would be interesting to know why, in the opinion of the *Observer*, friendship between Turkey and Britain is possible after a war of the Turks' own seeking in which they were decisively beaten. It is possible, but only for one reason, and that is, because Britain has shown herself strong and the Turks respect strength. To-day among the nations of Europe Great Britain stands, in Turkish estimation, on a plane by herself, and Turkey feels the need of her friendship. The surest way of bringing Britain off that plane and making Turkey indifferent to her friendship is for the British Government to show weakness over the Mosul question and to prove false to her pledges to the Iraqis. Turkey can have for the asking the friendship of any of the other Great Powers of Europe, present or past. Why should she set store on Britain's friendship—as she most certainly does—if it were not for the fact that Britain in the past has not done the thing that the *Observer* and other critics of the Government are urging that she should now do? In the circumstances the country must be grateful to the paper for its decision, after wasting much powder, to "reserve our fire," until the decision of the League is given. That is precisely what all level-headed people wish that the *Daily Mail* and its echo, the *Observer*, had done in the first

Digitized by Google

instance; for all that this long-range firing at non-existent targets has accomplished is to encourage the Turks to believe that their bluff has some chance of proving successful. If the League's verdict is adverse to the Turks and they accept it, Tweedledum and Tweedledee have been frightened to no purpose; if the Turks declare war on Great Britain, it will then be time enough—and only then will a decision in its proper perspective be possible—to decide whether the British shall run away from them.

The Situation in Greece.

It is hardly a matter for surprise that some foreign observers in Greece find the political situation obscure. The promulgation of the fourth Constitution before it had been ratified by Parliament had been to some extent anticipated, in view of the Prime Minister's leanings towards direct action, and there was the precedent established in the case of a previous Constitution, when the tendency of the Constituent Assembly of that date to prolong its existence indefinitely had had to be arbitrarily checked. Even the dissolution of the Chamber evoked only a nominal protest. Considerable feeling, however, appears to have been roused by the omission to specify a date for the general election, and there are indications that the Government may find it prudent to change its intention to postpone the elections until next spring and to hold them towards the end of the year. Prosecutions of the Press have emphasised the bitterness of feeling between the hostile political camps, and it seemed, therefore, a sound move on the part of General Pangalos to quash the proceedings instituted against M. Papanastasiou, a previous Prime Minister, for a published criticism of the Government. At the same time the prosecution of the newspaper *Hestia* for an article which is understood to have been written by M. Michalakopoulos, General Pangalos's predecessor in office, has been indefinitely postponed. Against these steps, however, may be set the extension of martial law, hitherto confined to the Peloponnese, to the whole of Greece—a measure prompted, it is said, by the desire to exercise a preventive censorship over the Press and so to avoid trouble from this source—and the establishment of a Special Police organisation designed to keep watch on suspects and foreigners and to check espionage. Evidently things are not yet normal in Greece, nor are they likely to be until free elections have been held, and the Greek people can feel that they have again a voice in the government of themselves.

A Balkan Monarch's Opportunity.

The great value of the monarchical system in countries where political passions can run very high lies in the fact that the Sovereign is above all parties and can take a more dispassionate view of the national situation than can any politician struggling in the arena of party interests. By common consent King Alexander, by his tactful handling of the political deadlock with which Yugoslavia was confronted, has contributed in no small measure to the satisfactory developments that have recently taken place in that country. A few weeks ago King Boris broke through the reserve with which he has hitherto approached State affairs, and made a personal appeal to the military and political leaders of Bulgaria to set themselves to heal the unfortunate breach between the existing régime and the Agrarian Party, whose moderate wing has done nothing to identify itself with Communism. Last week it was King Ferdinand's turn in Roumania. Taking advantage of the ceremony of laying the foundation stone of a Church at Temesvar, he reminded the local authorities of the need for patience and tact, if all sections of the Roumanian people were to attain the moral union that they desired to see realised. Using words of significant directness, his Majesty pointed out that the military and civil authorities must not forget that all his subjects must be treated like brothers, and that these authorities should not expect to see the hand of friendship held out to them, unless they held it out themselves. The soundness of the advice is unchallengeable, and if it has escaped the notice of the peoples of South-Eastern Europe hitherto, it is because they have been brought up in the hard, rough school which sees safety only in the striking of the first blow. Gradually these peoples have to be brought to realise that a blow on either side may not only be unnecessary, but may even be an effective obstacle to the accomplishment of what they have in view.

Minorities in the Balkans.

In ordinary circumstances it would be expected that peoples whose whole history has been conditioned by the injustices suffered by themselves or by their nationals under alien jurisdiction would have been the first to ensure for minorities within their borders complete freedom from all the disabilities of which they themselves had occasion to complain before. Yet, if there is anything behind King Ferdinand's words, it must be that there is a tendency, at least in certain districts in Roumania, for minorities to consider themselves just as badly off as ever Roumanians did in the Austro-Hungarian Empire. An opportunity of giving practical application to King Ferdinand's advice would seem to be offered in Bessarabia, where three hundred persons are on trial for their share in disturbances at Tatar Bunar last September. The position here, it is true, is complicated by the proximity of Soviet Russia; but, generally speaking, it can be said that the best safeguard against the spread of Bolshevist doctrines in Bessarabia will be the contentment of the people with their new lot. The proneness of gullible peasants to believe what is told them is well known; and it may be that an initial discontent, helped by economic conditions, made these Bessarabians an easy prey to Soviet intrigue. The Roumanian Government has to guard against making these simple-minded folk martyrs and thus spreading discontent among Bessarabians.

King Faisal.

King Faisal of Iraq, whose health had materially benefited from his stay in England, left London last week for the South of France, where he will be for a short time before returning to Baghdad. It was merely a coincidence that his visit to this country coincided with the public attention now being given to the Mosul question. King Faisal was a sick man when he landed in England, and he has had the satisfaction of being able to confirm the opinion of his medical advisers that the treatment which he came here to undergo would restore him to a state of health which he had not experienced for a long time. Inevitably the present phase of the Mosul question has to be outlived without any action on the part of Iraq. King Faisal's Government had said its say to the League of Nations' Commission, and from that point onwards the dispute has been in the hands of the Council of the League. No political significance, therefore, could attach to the King's visit. As sovereign of an Allied State, enjoying a special relationship with Great Britain, he was assured of a cordial welcome, unofficially as well as officially, and he left well pleased with the time that he had spent in England. With the Iraqis the interests of Iraq come first, and it is part of Great Britain's task to convince them that those interests are indissolubly bound up with British interests in the Middle East. Two or three years ago Iraq had not had time to make up its mind on the subject. Recent events have convinced it of the fact. King Faisal's brother is an undergraduate of Oxford, and the King hopes that a vacancy will be found for his son at Eton College.

THURSDAY, OCTOBER 15, 1925.

MOSUL: IN PERSPECTIVE.

At the meeting held last week at Brighton, in connexion with the Unionist Party Conference, Mr. Baldwin urged that the Mosul question should be considered in its true perspective, and he proceeded to subject the question to a dispassionate analysis. To those who believe that the whole country is gravely exercised in mind over Mosul the cold measured terms in which the Prime Minister spoke on the subject will seem an inadequate, if not dangerous, method of meeting a political crisis *in posse* of the first order. Yet further reflection should show that Mr. Baldwin chose the only possible way of discussing the question. Sooner or later the British electorate must decide for itself whether it is going to retain essential British characteristics or whether it prefers to cultivate a temperament more typical of the Latin races. At no time has there been anything in the Mosul question about which it was worth while for the British public, still less for the British Government, to become excited. The attempt to stir up public misgiving has been based on a perfectly definite misrepresentation of fact—that Great Britain had pledged herself to evacuate Iraq in 1928—and on a pusillanimous appeal to fear, for it was urged that Turkey intended to declare war, and that for that reason Great Britain must cringe before the threatening Turk. Now, the British electorate as a whole has no liking for a crude falsehood; still less, if there is any talk of war, has it a fancy for showing the white feather. On the other hand, it is in no mood for wild ventures, and while refusing to be stampeded by the stunt-mongering section of the Press, it has indicated a desire to know something more about the matter. Let it be admitted at once that it is disconcerting to be told from several quarters that a British Government is deliberately breaking a formal pledge, and that it is adopting a course which some of its most prominent military advisers have counselled it not to take. But when proof is forthcoming that the allegation about a pledge is demonstrably untrue, there is justification for supposing that the utterances of prominent soldiers, no longer alive, have also been twisted for the purpose of anti-Government propaganda. It may be quite true that Field Marshal Sir Henry Wilson four or five years ago, dealing with a wholly different set of circumstances, uttered certain advice on the subject of Iraq. But the premises on which he based that purely military opinion do not exist to-day. The quidnuncs of a sensational Press do not stop to consider that the Government has military advisers to-day as well, if it should feel tempted to play with war from wholly frivolous motives.

It was to this un-English orgy of misrepresentation, pusillanimity and dishonesty that Mr. Baldwin applied the cold douche of an unemotional statement of facts. There is, indeed no occasion for heroics in regard to Iraq. Our presence there is an aftermath of the War, just as much as is the British debt to the United States. Great Britain would be much better off if she had not to pay a considerable sum of money to America every year. The British custom, however, is to honour one's bond, and it may be inferred that, in spite of a misguided Press agitation, Great Britain will honour her bond in Iraq. To withdraw from the country to-day would entail the violation of actual pledges—not imaginary ones—and would be a deliberate betrayal of a trust. Yet this is the course that the Government is urged to adopt on account of its dispute with Turkey and because it does not adopt it, it has been accused of being provocative. Mr. Baldwin, therefore, first of all analysed this dispute. All the pother is about the implementing of a treaty of peace. Under the Treaty of Lausanne, Turkey and Great Britain agreed that, if the disputed question of the frontier between Turkey and Iraq could not be settled by direct negotiations within nine months, it should be referred to the Council of the League of Nations. It was so referred a year ago, both parties agreeing in advance to accept the decision of the Council, whatever it might be. The Council sent out a special Commission to investigate and report, and during its recent session it has been engaged in considering that report and the case which both sides have laid before it. Is it the suggestion, Mr. Baldwin asked, that it is an act of provocation to state a case, as we are entitled to state it under the Treaty, or to base that case, as we have done throughout, upon the report of the League of Nations' own Commission? Apart from a mutual rectification of the frontier, there is no question of claiming territory from the Turks which is not under our control to-day. The vilayet of Mosul has constituted an integral part of Iraq, and has enjoyed the same administration, ever since it was liberated from Turkish rule by British troops. The legal right of Iraq to the province of Mosul is exactly as good as her legal right to any other part of her territory. In the Treaty of Alliance between Great Britain and Iraq it is expressly stipulated that negotiations for a fresh Treaty shall take place before the expiration of the Treaty. When, therefore, the report of the Mosul Commission involved a direct question as to whether the British Government was prepared to carry out the preamble of the existing Treaty and replace it by a new one, only one answer was possible, and the British representative stated that Britain did intend to implement the preamble and to continue to co-operate with the Government of Iraq to ensure the stability and progress of the country until such time as her help was no longer necessary.

There the matter can be left for the present. The decision of the League of Nations has yet to be given. All that took place recently at Geneva was that Great Britain argued the case on behalf of Iraq with knowledge and conviction, as she was morally bound to do. Unless the Council has some other surprise in store, its decision will either give the Turkish Government what it wants or it will not. If its award should be unfavourable to the Turkish claim, it will be known then how Turkey intends to take it. To attribute to-day warlike designs to the Turks is an insult to the honour of the Republic and is a suggestion that can emanate only from quarters unfriendly to Turkey. If the Turkish newspapers lend colour to the suggestion, it can only be said that a country ought not to be judged by irresponsible organs in the Press. The true perspective for which Mr. Baldwin appealed provides no place for the least uneasiness on the part of anyone in Great Britain. The less the knowledge of the subject, the easier the coining of epigrams and jeremiads. A good case can be made out for wishing that things had worked out differently, but that is at best a particularly foolish form of indulgence; and the wise man knows that in a matter where her hands are perfectly clean Great Britain has little to fear, if she remains true to herself and continues to honour the principles on which the greatness of the British race—that has nothing to do with territorial possessions—has been built up.

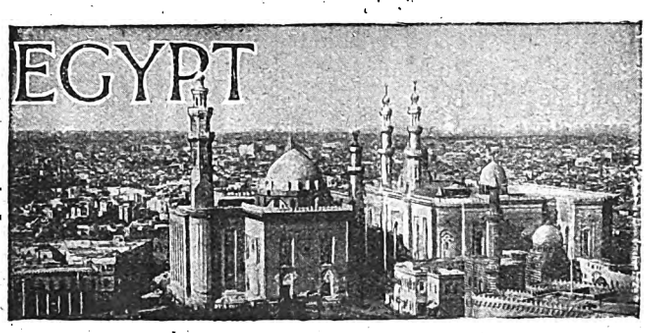
The Near and Middle East*

From Our Own Correspondents.



Cairo, October 3.

The New High Commissioner.

The Residency are moving up from Alexandria on October 17, so as to be ready to receive the new High Commissioner, and it is supposed that the Palace will follow suit shortly afterwards, as it is understood that Sir George Lloyd wishes to present his credentials in Cairo and not in Alexandria.

The Liberal Constitutional Party.

The Abdel Razek affair threatens to have even more far-reaching consequences than the break up of the Coalition which it produced. The withdrawal of the Liberal Constitutionals from the Cabinet has, in fact, been followed by discord in the party itself which may well affect its very existence.

For some time there has been considerable discontent in the party owing to the attitude, antagonistic to the Coalition and to those members who actively co-operated in the Coalition Cabinet, adopted by the party's organ. There has in addition been dissatisfaction with the manner in which the activities of the party were being directed, and certain members are alleged to have acted contrary to the accepted policy of the party. The whole question has been brought to a head by the resignation of Tewfik Pasha Doss, and an important meeting of the party will be held this evening to deal with the matter. The result of the meeting will, unfortunately, be known too late for inclusion in this letter, but there is every reason to believe that whatever decision is arrived at its execution will be postponed until various prominent Egyptians, friends of all those concerned in this internal quarrel, have returned from Europe and it has been possible to ascertain their views.

The plight of the Liberal Constitutionals to-day is not unlike that of our own Liberals, whom in certain respects they much resemble. Even its warmest friends are compelled to admit that the party has sadly disappointed expectations and has failed through lethargy, lack of leadership, and lack of party organisation.

Enquiry Office : CAIRO STATION. Tel. No. 6777.

To a very large extent the recent crisis was due to failure on the part of the Liberal Constitutional leader to realise its political significance, and if to-day the party finds itself at a disadvantage, it is because those directing its destinies have lacked political sense, have scorned throughout to carry on propaganda like their political adversaries, and have allowed themselves to be outmanœuvred. It is sincerely to be hoped that the party will weather this internal storm and that, profiting by the bitter experience it has had, it will reorganise itself on sensible lines, for, as the *élite* of the Intelligenzia, it should be able to play a very prominent part in the future politics of the country and constitute a salutary check to the two extreme elements which now dominate Egyptian politics.

The Egyptian Minister in London.

This week the vernacular Press announces the resignation of Aziz Izzet Pasha. No confirmation can as yet be obtained, and it is possible that the rumour has had its origin in a letter which the Egyptian Ministry of Foreign Affairs wrote to the Minister in London on the question of the recent escape of Prince Seif Eddin and to the tone of which Izzet Pasha is said to have taken exception. At the same time there may be some truth in the news, for it is know that Izzet Pasha has been ailing in health and that he would welcome the opportunity to escape from the strain of public affairs.

From every point of view, however, his retirement would be regrettable. During the comparatively short time he has been in London he has won considerable esteem, not only from those English people with whom he has come in contact, but also from his foreign colleagues, owing to his dignity, tact, and *savoir faire*. Only those in close touch with affairs realise the extent to which his personality counted in the re-establishment of friendly relations after what took place during 1924; and since the existence of good feeling between Egypt and England is now recognised as an essential factor—even those who accuse their fellow-countrymen of being friendly with the British are themselves constantly making efforts to improve their relations with them—it would appear to be highly injudicious to allow the retirement of the representative who at the present juncture is so markedly *persona gratissima* at the Court of St. James.

CYPRUS.

Nicosia, September 22.

The Emir Abdullah.

Ex-King Hussein, who is in good health, is expecting a visit from his third son, the Emir Abdullah, who rules in Transjordan, and resides at Amman. The ex-King is in frequent communication with his other sons, Ali, Faisal, and Zeyd, who has recently paid him a visit at Nicosia.

The Fez and the Police.

Another effort is likely to be made shortly to persuade the Government to abolish the red fez, now worn by Turks and Christians alike in the Police force, and to adopt some new form of cap. In the Ottoman Army a peaked cap is now worn, while another has been introduced into the Navy. Already some Turks in Nicosia, including an Ottoman Consul, have adopted hats, as recommended by Mustapha Kemal Pasha, President of the Turkish Republic, at Angora; so that the opposition to the fez, which affords no protection against the intense heat of the sun in the summer months, is now much stronger than it was.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

The Coming Elections.

The prospects of the candidates for seats in the new Legislative Council are now the absorbing topic of interest. The election of certain members in all the electoral districts seems to be assured. For Larnaca, e.g., M. Luke Pierides, who has been a fairly frequent visitor to England in late years, should be one of the elected. His father was for many years Mayor of Larnaca, and his grandfather, John Pierides, who was educated in England, was a distinguished student of the ancient Cypriot language and inscriptions, and of island archæology. He was sent to England as a boy, with several other Cypriots, during the critical times that followed the Greek rising of 1821. For Nicosia and Limassol some candidates are fairly sure of success. The Greek Archbishop has recently issued a long encyclical, urging electors to vote for the patriotic, "National" nominees, to the exclusion of the seven members of the late Council who have not found favour with the Greek Nationalists, and have been the subject of much criticism and vituperation in the Greek Press.

General News.

Large quantities of carobs have already been exported, especially from Limassol, the largest producing district: one steamer having taken 2,500 tons. Fairly large quantities of raisins are also being shipped.

Much interest is taken in the question who is to be the next Governor. Rumour, based on a statement in the Egyptian *Mokattam*, has it that it will be Sir Ronald Storrs. It is believed that the Governship of Sir Malcolm Stevenson will not be extended: but nothing is known.

Jerusalem, October 3.

Palestine Arabs and Syria.

As was anticipated, nothing whatever came of the proposed pro-Syrian rebel demonstrations, for which the Arab Executive asked permission three weeks ago. Perhaps the petitioners themselves expected nothing, and only intended to show a willingness to repay the Syrians the kindness which the Syrians extended to them by their reception of Lord Balfour in Damascus. Rumour has it that the only response to the petition by the High Commissioner was a suggestion that the would-be demonstrators be granted cheap tickets to Syria in order that they might hold their demonstrations there and see what would happen. Few signs are apparent of any really deep-seated sympathy with the Druses.

Arab Grievances.

The Arab Executive continues to pour in upon the High Commissioner petition after petition; they seem determined to recapitulate in as short a time as possible all the accumulated grievances—some real and some not—which have moved them during the past five years. But one new "grievance" they *have* produced, namely, that the Government has deliberately gone counter to the terms to the Mandate and the Palestine Constitution—which enact that, in all official items, such as coins, stamps, and so on, everything given in Arabic shall also be given in Hebrew, and *vice versa*. Encouraged by the success of the Urtas villagers in proving before the Jerusalem High Court the illegality of the Government's action in using part of the Urtas water supply, the Arab Executive are bringing an action against the Government, because in all Hebrew official translations and on the Palestine stamps, after the name "Palestine" it brackets the initials "E.Y." (Eretz Yisrael—Land of Israel), whereas in the corresponding Arabic title "Filastin" there is no such addition. The names, both in Arabic and Hebrew, are unnatural. The Arabs maintain that "Suria Junubiya" (Southern Syria) is the correct Arabic name of the country; but this name has been officially suppressed because of the danger of confusion with French Syria. The Jews maintain that the only name for the country in the Hebrew language is "Eretz Yisrael," and that to style Palestine in Hebrew "Palestina (E.Y.)" is precisely as if, in the English language, Great Britain were to be officially styled "Ecosse (G.B.)"—since "Palestina" is in Hebrew ears merely a foreign spelling of the name of a portion of the country which it is intended to name. "Palestina (E.Y.)" was, of course, only adopted as a compromise for the benefit of the Arabs who, as we can well comprehend, saw in the Jewish name "Land of Israel" too wholesale a begging of the question as to the meaning of "a national home in Palestine."

The "Wailing Wall."

The position of the Jews with regard to the "Wailing Wall" has again come prominently to the fore. The problem is whether the Jews should be permitted to place chairs and benches in the area facing the Wall. The question came to a head in the early summer three years ago (see THE NEAR EAST, June 15, 1922), when, as the result of complaints of Arabs living near by (who maintained that their lawful ingoings and outgoings were incommoded by the presence of these benches), it was officially decided that no chairs or benches might be used by the Jews. A week ago, on the eve of the Day of Atonement, the Jews had started their long day of fasting and praying before the Wall. Owing to the long ordeal before them and the rigid fasting rule, certain of the more aged Jews and Jewesses had provided themselves with chairs of sorts. Before long, the police came, and there was a horrid, unseemly scene, during which the seats were forcibly removed. Feelings were bitter three years ago, but nothing to compare with the present outburst of Jewish rage. According to the ruling of 1922 the Jews were in the wrong; a representative of the Government, in response to the prompt deputations of be-shawled, barefooted Jews, had to go and inform them that they might sit on cushions or even on empty petrol-tins, but they must not sit on chairs while holding their religious rites at the Wailing Wall.

The Jews seem determined not to let the matter rest at its present stage. Pending the formation of the League of Nations' "Committee on the Holy Places," the High Commissioner is empowered to decide matters in dispute, and the Jews wish this matter to be settled at once, and, of course, settled in their favour. They maintain that save during the régimes of Sir Ronald Storrs and the Emperor Hadrian, the rights of the Jews to practice their worship in the Wailing Wall area have never been restricted or questioned or hindered in any manner of way. Throughout the entire Turkish period they never—so they maintain—suffered any interference; whereas now, under enlightened British rule, they are made the victims of a senseless tyranny unparalleled even in Tsarist Russia.

It is impossible that any easy way out of the difficulty will be found. The Jews see only the ignominy of it—petty vexations on all occasions by the neighbouring Arabs, police bullying them at both the time and place they hold most sacred; the Arabs are minded to do their best to thwart any rights the Jews may seek to claim at this site; while British officialdom can only hold the position that "an order's an order" and must be kept.

A MASRI MEMORY.

By W. F. S.

The number of revelations since the War by genuine and imaginary secret-service agents would lead one to believe that there remains little, if anything, of interest to add to the enormous output of hair-raising literature on the subject.

Mindful of this fact, I propose to deal, in this little sketch, with the more comic aspects of the "hush-hush" profession, from the point of view of one who dabbled therein, more or less as a dilettante, in Alexandria, Cairo and the Canal Zone from 1916 onwards, in a desultory and sporadic fashion, until the Armistice.

It was not until the close of 1915 that any serious effort was made in Egypt to produce an organisation comparable with that which Great Britain already possessed in Allied, neutral, and enemy countries. Alexandria was chosen as the base of operations of the amorphous body which finally grew into being: it would be unfair to quote the title of the organisation, but it is only necessary to say that it was as unwieldy as everything else connected with it. Starting in a quiet way with a few junior consular officers and one or two stray archæologists (of these latter, however, one at least was to write his name on the Roll of Fame in no unmistakeable fashion) camouflaged in military and R.N.V.R. uniforms, it soon acquired such *vires eundo* that it spread its tentacles all over a large block of flats in one of the main streets of Alexandria. Extraordinary precautions were taken to veil the location of headquarters; need it be said that, as ever in the East, our neighbours soon knew far more about our business and movements than we did? And we were very inexperienced in those days.

Opinion was, in fact, divided among the staff on the best methods to use. The chief, one of the old school, never could get away from what he termed the "Hist!" method; the multitudinous precautions he took to cover his tracks were a source of much amusement to the staff, and no doubt of still more to the blond Danish tonsorial artist who used to attend to the charming young ladies from the Registry, through whose hands, of course, the greater portion of the confidential stuff passed.

On the other hand, some of the juniors were for adopting any easy, unconcerned attitude, and the sight of them sitting in the Windsor or Regina bar, more or less unsuccessfully attempting to carry off the nonchalant ingurgitation of a cocktail was amusing; the only too evident air of mystery which they wore was also not without its humours. Then there was the private whom they dressed up as a perfectly good officer and sent round the town on a roving commission. Job of jobs, indeed! Free "stass," free drinks: in fact, the positive encouragement to buy and "stand" the maximum amount of liquid refreshment. Alas, it was too good to last: the "temporary captain" soon over-rated his capacity for alcohol, and an unfeeling M.P. cut short a brief, but hectic career by haling the joyous sleuth off to the A.P.M. The subsequent scene between the latter and the Chief is another story.

Then, again, there were the "outside" and "inside" jobs: the former were tedious to the verge of monotony: endless cyphering and decyphering with constantly changing codes, endless skimming of the neutral and enemy Press, endless interviewing of mysterious and hybrid candidates for the post of "agent," and the like: the not inconsiderable accounts (one agent earned for a few short days, before he found his end in the Bosphorus, pay at the rate of £800 a week) were capably dealt with by a well-known British business man from Constantinople: the Registry was given over to the weaker sex, and as someone unkindly but truly remarked, every new addition to the staff entailed the engagement of two new-comers to deal with the extra work created by the latest arrival.

The majority of these ladies were engaged in London, and, since the advertisement obviously had to be very discreetly worded and the subsequent interview deal more with vague hints than with hard facts, some of those chosen arrived in Egypt with but the vaguest idea of the nature of their duties.

The "outside" jobs could certainly not be termed monotonous. The writer's own connexion with this organisation started "inside": but he lost little time in transferring to the "outside," in which the gamut of his experiences ranged from the supervision of the office cars and motor-cycles to dining and wining likely agents at Shepheard's or the Continental, and from loading Army petrol destined for our Intelligence motor-boats in Greek and Turkish waters to listening, from the uncomfortable vantage point of an ancient and bug-ridden Turkish bed, to the plotting of a dozen of the most desperate characters among the Nationalist party, seated round a table some six feet away.

This last little job merits perhaps further details, for it was an object-lesson in the advisability of finding out all about a show before you engage on it.

"Catch the midday train to Cairo and report to G.H.Q. at the Savoy Hotel: oh, and buy a fez on your way to the station" were the Chief's instructions, and thinking that nothing more than a pleasant trip to Cairo and a couple of hours' work listening to the conversation of some Turkish plotter or other in a Mousky café was on the programme, I bought the required fez and dropped into a seat in the Cairo diner, feeling reasonably satisfied with sleuthing as a profession.

G.H.Q. soon upset my calculations by handing me over to the tender mercies of a bearded Turk, who promptly proceeded to outdo even the Chief himself in the theatrical nature of the precautions he took. After doubling on our tracks so often that it took us a full hour to get from the Savoy to Ataba-el-Khadra, my guide finally fetched up before a tall, narrow building in the Mousky and whispered gloomily, "It is here." As he failed, in spite of my insistence, to enlighten me what was there, I followed him up to the top story, where an even more villainous-looking Osmanli greeted us. I was invited to crawl under an exceptionally dirty bedstead, which gave about a foot and a half "head clearance."

Cursing myself for not having brought a "gun," I crept under the bed, where I was joined by the bearded one. "They will be here soon: for Allah's sake, do not make a sound: listen and write down what they say: we are in danger." We were certainly in discomfort: what seemed like every available bug in Cairo, with re-inforcements from the villages, started to make a leisurely, but thorough investigation of my person. Just as things were getting intolerable, the door opened and "they" came in—a dozen of the biggest scoundrels and cut-throats in Egypt, among whom I recognised with mixed feelings a well-known Sheikh.

Our Calvary had begun: for four long hours did we lie under that foul couch, afraid to breathe—or to scratch, while the Nationalist crowd plotted and counterplotted, sang the Hymn of Hate (in Turkish) and, adding insult to injury (I had had no dinner), moved slowly but implacably through the endless courses of an Oriental meal.

And, half-way through, horror of horrors, what was that? Yes, a distinct snore, of that particular timbre which warns you that the next one will be an undisguised snort. There was only one thing to be done: if I let my companion go on, we were lost: if I nudged or pinched

him, he would infallibly start, and knock some portion of his person against the bed, and again we were lost. We were lying on a thin native quilt: locating the back of his neck, I got a good grip on it and forced his mouth and beard into the quilt, at the same time whispering fiercely in his ear. By the time he could articulate, he had wakened enough to grasp the situation. Phew!

When I got back to my room at the Continental, I I found that something like seventy of the Mousky animalculæ had decided that West is tastier than East . . . .

On another occasion, also in Cairo, my hiding-place was a native trunk, into which it was just possible for a small man to double, or rather quadruple himself. It was the month of July! After a time, becoming comparatively expert in the proper negotiation of close quarters, I decided to remove my tie, collar, and shoes. These, on my finally emerging from the trunk, my accomplice positively refused to allow me to don, alleging that one of the conspirators was returning immediately. I was therefore thrust out of the front-door, into one of Cairo's principal arteries, carrying the said garments in my hand!

The hunter hunted! The tables were turned on me with a vengeance, once, in Alexandria. We had come to suspect the confidential clerk of one of the leading Greek residents—a staunch pro-Ally, subsequently Greek Minister at Washington—of relations with the enemy, and I struck up an acquaintance with him. Dinners, picnics, moonlight trips to San Stefano—I was a thousand miles from suspecting that he had any idea it was not mere friendship, until, one day, in the garden of a quiet, isolated villa in Ramleh, I took an apparently harmless whisky, and my wife who was with me, an equally harmless-looking liqueur. "Rather strong," I thought after the first gulp, and added water: but at the second, I tumbled (figuratively and nearly actually), accidentally knocked my wife's glass out of her hand, took the first opportunity of emptying mine into the shrubbery, and alleging a forgotten appointment of the first importance, left, despite all my host's protests: fortunately, the cab was waiting, and we got back to the hotel just before collapsing (though we had both taken but a sip). Twenty-four hours of appropriate treatment left us none the worse, but our friend had left for Suez: besides, it was no good, we had no proof.

Secret Service, though it may be, and generally is, dangerous, affords you many a quiet laugh, particularly in retrospect.

KING FUAD'S ACCESSION DAY.

To celebrate the eighth anniversary of the accession of King Fuad I., of Egypt, Sesostris Sidarouss Bey, Egyptian Chargé d'Affaires, held a reception, followed by a dinner, at Claridge's Hotel on October 9.

Among those present at the reception were:—Prince and Princess Nicholas Galitzine, Prince Nader Mirza Arasteh, Lady Allenby, Lady Clanmorris, Ahmed Ferid Bey, Lady Clayton, Lady Mackenzie, La Baronne d'Orgeval, Lady Rogers Pasha, Sir Edward and Lady Boyle, General Sir George and Lady Milne, the Earl of Meath, Lord Headley, Colonel Lord Arthur and Lady Browne, General Sir William and Lady Harcourt, Brig.-General R. B. D. Blakeney, the Countess of Westmorland, Lady Napier and Ettrick, Count de Miremont, General Sir John and Lady Maxwell, Sir Henry McMahon, Sir Charles and Lady Walpole, Dowager Lady Boyle, Dowager Lady Raglan, Sir E. Denison Ross, Lt.-Col. and the Hon. Mrs. George Schuster, and many others.

At the dinner the guests present were:—General Sir J. Hanbury-Williams, Lady and Miss Hanbury-Williams, Sir Hamar Greenwood, Lady Greenwood, Sir Geoffrey Archer, General Sir John and Lady Maxwell, Sir Maurice Amos, Lady Scott Moncrieff, Mr. and Mrs. Montgomery, Mr. J. D. Gregory, Mr. and Mrs. Murray, the Hon. and Mrs. Mervyn Herbert, Mr. and Mrs. G. N. M. Bland, Mr. J. B. Monck, Mr. and Mrs. Tottenham, Russell Pasha and Mrs. Russell, Major Colin Hindley, Saleh Enan Pasha, Hamid Shawarby Pasha, Faid Sabit Bey, Moustafa El Sadek Bey, Madam El Sadek, Mr. A. Badawy, Mr. Soliman Sabet, Mr. Murad Heshmat, Professor Azzam, Mr. Gheit, and Mr. Radi.

ETCHINGS OF THE PALESTINE CAMPAIGN.

The fame as an etcher of Mr. James McBey, who is now holding an exhibition at the Galleries of the Fine Art Society, Bond Street, was, of course, established, before the War, before, that is, he had given to the world those biting memories of what he saw in the last two years of the War in France and in Palestine. It is, nevertheless, largely for the way in which he gave to History a visible record of the Australians' exploits in the Holy Land, that he now can claim the admiration of those to whom the masterliness of his sea-sketches and the detailed vivacity of his Moroccan studies may perhaps not have duly appealed.

Certainly his etchings of the Palestine campaign are amazingly fine. Look, for instance, at his "Dust—Beersheba" and the whole picture of the lot of these Anzac horsemen in November, 1917, comes at once before the imagination. Of his "Dead Sea" it may be merely remarked that when Mr. McBey touches water he touches beauty: all the dim mystery of this low sheet is there. Again, his representation of scenes in Sinai—"Midday Halt," a sketch of camels and the tents in July, 1917, "Strange Signals," showing two lean "Aussies" peering from their seats on camels into the distance, "Deserted Oasis," and so on—are vivid to a degree. There is a striking reproduction of "Gunfire—Mount of Olives, '17," eclipsed perhaps only by "Moonlight Attack." There is, further, the very effective "March on Jerusalem," showing the artillery moving through defiles in November, 1917; and there is "First Sight of Jerusalem"—a sight gained through the bursting of shells. "Jerusalem from Olivet" reveals a certain limitation in which artist, for it is action rather than architecture in which he is so strong.

Possibly only one who was a soldier can rightly appreciate the strength of his "The Sniper," which bears the mark of Kurd Hill, Gaza, October 31 1917: it is grimly alive. But what will be most notable in this collection of war scenes may well be the famous "Surrender of Jerusalem," in which the historic incident of December 9, 1917, when the remote inhabitants of the Holy City advanced from its walls to hand over to two British "Tommies," clad in shorts and full fighting kit, the immemorial keys of the town.

There are many other things than these memories of Palestine in Mr. McBey's etchings. It is interesting to note, for example, how he has progressed from the years before the War, represented here by numerous studies of Tetuan and Tangier. Then he paid great attention to detail; now he is swifter, more eliminating in his methods

THE HIGH COMMISSIONER FOR EGYPT AND THE SUDAN.

Sir George Lloyd, High Commissioner for Egypt and the Sudan, on whom the King conferred the honour of a Barony a few days before his departure for Egypt, left London, with Lady Lloyd, on Monday, with the intention of spending a few days in Paris before joining the P. and O. steamer Morea at Marseilles to-morrow. A large company had assembled at Victoria Station to bid farewell to Sir George and Lady Lloyd, among those present being Sir Geoffrey Archer, Governor-General of the Sudan, Sir Walter Tyrrell and Mr. Murray, representing the Foreign Office, Sidarouss Sesostris Bey, Egyptian Chargé d'Affaires, and the staff of the Egyptian Legation.

Book Reviews and Notes.

A FLYING VISIT.

"A FLYING VISIT TO THE MIDDLE EAST." By the Rt. Hon. Sir Samuel Hoare, Bart., C.M.G., M.P. (Cambridge University Press. 3s. 6d.)

In this small volume the Secretary of State for Air, Sir Samuel Hoare, tells the story of the visit paid by him and Mr L. S. Amery, Secretary of State for the Colonies, to Iraq last spring. It was in two senses of the word a flying visit, and rendered possible only by the fact that the whole of the travelling from Cairo to Baghdad and back, with separate journeys to Mosul and the Persian frontier in the north and to Basrah and Mohammerah in the south, was done in aeroplanes. In fifty hours of actual flying time, the "Whitehall tourists" covered 3,500 miles. To those who, as a result of a campaign of misrepresentation, are wondering whether Iraq from the British point of view is "worth while" we recommend this simple narrative of what the two Secretaries of State saw and did in the country. There is a welcome absence of political propaganda in the book, but here and there in its pages occur references which give food for thought to anyone who can read with understanding. For instance, among those assembled to meet the visitors in Mosul were found "two Englishmen with the indelible stamp of British N.C.O. impressed upon them. They had stayed on in the country after the War and set up a dairy business in the neighbourhood of the town." Not much thought is given by the advocates of "scuttle" to possible British interests in Iraq, with its trade with Great Britain rapidly catching up that between Great Britain and Turkey and with as many shareholders of the newly formed Dialah Cotton Plantations as there are in England, although their holdings are naturally on a much smaller scale. The account of a visit paid to Lady Surma, Chieftainess of the Assyrian Nestorians, gains an additional interest from the incidents of recent days, when Turkish hostility to these hapless people has broken out afresh. Although much in the public eye as persecuted Christians, the Assyrians (i.e., Nestorians) make first-class fighting material, and our author suggests that with further training and experience they will become an important factor in the defence of Iraq. Boy Scouts at Kirkuk open up a different conception of Iraq from that which some newspapers would inculcate when they publish a photograph of a railway running across a desert and label it as "the country that we are asked to fight for." Sir Samuel Hoare touches on the political side of his tour in pointing out that in the course of five years British expenditure in Iraq has been reduced from 38½ millions to less than four millions, and he adds: "I have every hope that in a not far-distant future we shall be able to make still further economies of a substantial character." He also lays stress on the advantages of Iraq from the point of view of the Royal Air Force, not only in the matter of maintaining law and order, but also as a wonderful training ground and for the provision of many unique opportunities for applying Air methods. Squadrons are engaged on survey and mapping work; there is the constant flying practice for young pilots, often under conditions that resemble active service. "No country and no Air service has reached anything like the amount of flying hours flown by the Air Force pilots in Iraq." Sir Samuel Hoare, however, would probably be the first to protest that his slight sketch was not meant to provoke political controversy. He is out to write "shop," but it is "shop" in the setting of the attractiveness of the problem presented by Iraq, and combined with it the enthusiasm of the tourist in covering new ground. In this connexion a special word of praise is due to the excellent photographs included in the book.

SINHALESE SELF TAUGHT

By Don M. de Zilva WICKREMASINGHE, M.A.

Epigraphist to the Ceylon Government.

In Sinhalese and Roman characters, with the English Phonetic Pronunciation. Containing the Sinhalese Alphabet, with transliteration and phonetic signs used; Table of Syllabic characters, Tonic Accent; Classified Vocabularies and Conversations; Outline of Grammar; Terms and Phrases for Travel, Commerce, Planting, Public Works, Fishing and Shooting, &c.; Numerals, Money, Weights and Measures, &c.

Red Cloth, 4s. net; Blue Wrapper, 3s. net. Postage, 3d. extra.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25.

"THE MOSLEM WORLD."

The October number of *The Moslem World* has as its leading article an important contribution by Professor D. S. Margoliouth, Litt. D., of Oxford, on the "Textual Variations of the Koran," exposing a popular fallacy that the Koran text is more accurate than that of the Old and New Testaments. The Editor gives the result of his recent investigations on Islam in South Africa and in a brief article also describes "Two Moslem Catechisms" published at Cape Town. The present condition of "Government and Religious Education in the Dutch East Indies" is summarized by Samuel MacF. Anderson, and the effect of such Western education in producing "Modern Types of Moslem Thought" by Mr. S. A. Morrison, of Cairo. Two other articles are "Baghdad To-day," by Dr. Calvan K. Staudt, and "Non-Conformist Moslems in Albania," by Margaret Hasluck. Medical missions find place in this number in the description of a new Moslem Hospital in Kansu, China, and an account of the evangelistic work carried on in one of the largest hospitals of Africa, by one of the staff, Dr. J. E. Bateman, of Cairo.

PICTURES OF TURKEY.

There is at this moment being held an exhibition at the Macrae Galleries, Fulham Road, S.W.3, which should appeal particularly to readers of this journal. For there Ali Sami Bey, who is Director of Evkafs at Constantinople, and who studied painting in Paris and was a Director of the Ecole des Beaux Arts in Constantinople, is showing some paintings and etchings that he has made of Turkey. So far as we know, he is the first Turkish artist so to exhibit in London.

It is still the Turkey of romance that Ali Sami Bey depicts; for there is little visible evidence of the psychological change that may have come over the Turkish nation. It is true that his largest work, "Old Turkish School," showing the form of tuition that obtained in the pre-Republican régime, has been made rather from his memory than from his immediate observation, but for the most part his landscapes are ones that might have been done at any period in recent Turkish history. Ali Sami Bey draws extremely well; he has a sense of character, and a very definite ability in reproducing the atmosphere, so to speak, of buildings. Old mosques and terraces and houses on the Bosphorus he especially delights in; and one particularly effective comparison he makes, in a painting called "The Two Old Ones," between an aged hoja reading in the garden of the Evkaf Museum and a hollow tree which is said to date back to Byzantine times. Ali Sami Bey's etchings are even more charming than his paintings, which do not always show such a balance of tone as is common in the West. Among these one notes particularly "St. Sophia," "A Cemetery on the Bosphorus," and "Moonlight—Golden Horn."

THE WEEK AT HOME.

London, Tuesday Morning.

The Prime Minister's Policy.

The annual conference of the Unionist Party was opened at Brighton last week, and the key note was struck by the Prime Minister, who made a comprehensive statement upon the achievements and the intentions, both at home and abroad, of the Conservative Administration. (Discussion on the fact that individual choristers subsequently wobbled from the pitch which he had set them, may, perhaps, be left to another occasion). Mr. Baldwin's speech, though received with apparent acclamation by the conference itself, has been variously commented upon by those whose conservatism is not quite of a piece with the Prime Minister's. But of that, more later. To one who is not violently moved by the cry of sectional remedies, it would appear that the bed-rock foundation of this speech was English common-sense. Eschewing the arts of the demagogue and the wiles of the showman, Mr. Baldwin undecoratively unfolded the tale of his Administration. Something, he claimed, had been done by this Government which was sometimes rebuked as *fainéant*: the Widows Pension Act, the working of the Food Council, housing. Again, intention balanced achievement in the matter of the reform of the House of Lords, agriculture, and economy. Upon what Mr. Baldwin said on the Security Pact and the Mosul question it is not within my province to deal, except in so far as to remark that his speech here again seemed to the ordinary observer (not the Sunday edition) to contain the soundest sense. And it was on the very burning problem of the Government's relations to Communism in this country that he most abundantly displayed his innate, unscared Englishness. Communism, he said, was a foreign production, begotten of ignorance out of misery. But just as America has shaken off this alien doctrine, so also will France; and so Great Britain. No minority would in this country be allowed to tyrannize over a majority, which, through the Government, was protected by legal means. It was upon this matter of using the existing legal machinery to crush the monster of Communism that possibly his most significant words were uttered: for not the Home Secretary, whose name was not mentioned in this speech, but the Attorney-General, who spoke recently of the chariness with which the liberty of the subject would be interfered with by a Conservative Administration, it was whom the Prime Minister praised and followed.

Its Reception.

Yet, whatever the rank and file at Brighton thought of their leader, it was already obvious on the day of the publication of the speech that many Conservatives were disappointed with it. First came those who complained that it contained no inspiring slogan, no ringing challenge to the time, no personal magnetism which might draw all men to *the* Party. On those whose ideal of leadership is based on Coalition rhetoricians like Mr. Lloyd George, Mr. Winston Churchill, Lord Birkenhead, and so on, the absence of any individual call came with chilling effect. Such commentators deplore the Prime Minister's elementary sense of the value of advertising, and almost fear that, through lack of hoardings and "stunts," their Party's virtues may be neglected by a forgetful public. A man of the nature of the Home Secretary, who puts more "pep" into the expression of his convictions, is more after their heart, for in studious modesty, they say, there is ample room for misunderstanding. Another objection that has been quickly levelled against the Prime Minister concerns his references to economy. His optimistic remarks on this hand have been brusquely described as fatuous, his praises of the Exchequer in having reduced taxation by one-third in the last five years as childishly deceiving. It is true, however, that most of this criticism in this direction comes through the gap which loyal followers of the Party feel to have been created in the absence of genuine and popular Conservative morning and evening newspapers. There remains the broader, less analysable, contention that Mr. Baldwin, though he has made a good case, has not inspired the confidence of his party. It is stated that evidence is to be found in his speech that his weakness is as marked as his good-will; and, it is argued, strength is the order of the day. There is no appearance, according to these disappointed Conservatives, that Mr. Baldwin is manfully grappling with the vast problems that have beset us; his reiterated desire to make good is, indeed, becoming a little monotonous in their ears; and they have recommenced, even, to think of a stouter, less compromising substitute. The time has come, they say, for a man with more grip and nerve to assume control of the buffeted ship of State.

Its Outcome.

Much of this criticism, however, is, no matter how honestly some Conservatives may imitatively indulge it, tainted at its source and therefore inconsiderable. The whole world—even as far as Angora—is aware that certain journals whose proprietors possess a culture which is scarcely equal, say, to that of Mr. Baldwin, and certain journalists whose servile ears are used as earth wires, are making a dead set against the Prime Minister. A propos of this, it is gratifying to record that a resolution at Brighton which condemned the personal Press attacks upon the Prime Minister was passed with extraordinary enthusiasm. There seems to be little doubt that among the humbler adherents of the Conservative Party the Brighton speech will have a steadying effect. The country wanted to know exactly what the Prime Minister thought of all the attacks that have in the past few months been made upon him; it was getting uneasy, not to say apprehensive. Now they know that until the country decides against the Government, as Mr. Baldwin said, "we stay where we are." And that's the Truth—if you think it is.

The Class War.

Argument concerning the desirability or folly of the institution known as the O.M.S. still continues: it has been raised to fever pitch, in fact, by two things—a letter which Mr. Ramsay MacDonald wrote to *The Times* inquiring whether there was an identity of views between the Home Secretary and the Prime Minister, and Mr. Baldwin's obviously pointed silence over the matter of Sir William Joynson-Hicks' relations with the O.M.S. That school of thought which all along opposed the formation of the O.M.S. as likely to provoke class-antagonism is naturally delighted with what the Conservative Premier said upon the danger of an industrial dispute

it was an utterance which, according to this school, might equally have been made by a wise Liberal or Labour Prime Minister. But Mr. Baldwin patently disappointed several Conservatives Letters have been pouring into the papers which suggest that, however creditably class-war Communism may have been ejected by the Liverpool Conference, its *vis-à-vis* still lingers in a considerable number of remote clubs and country houses. Other, more moderate Conservatives, have been at pains to point out that the principles of the O.M.S. are sound enough, but that it has not been made presentable because of the ambassadors and peers and admirals under whose auspices it came before the public eye. But the majority of the Party, it is manifest, are with the Prime Minister when he, as has been said, "always speaks like one who is aware that the five or six million young men who pulled us through the War are also, in the main, the men whose minds are expressed in the votes of every post-War Trade Unions Congress." They, like Mr. Baldwin, know that, if a Socialist Party were returned to power, a Socialist Home Secretary might enrol a special constabulary organised by a Socialist party committee, and, like the wise Englishmen that they are, remembering that what is sauce for the goose is sauce for the gander, prefer to work within the machinery that has served them in so many other historical crises.

The Liberal Land Report.

Mr. Lloyd George has been crusading over Scotland on a land campaign. Mr. Baldwin has described that land policy as a "cold linseed poultice"; another eminent Conservative, Mr. Garvin, has, in his sabbatarian illumination, described it as "the vigorous preparation of a very hot mustard-plaster." It is possible that the Prime Minister, who, as he recently confessed, was brought up on pickled onions, knows something more of agriculture than Mr. Garvin, who brought himself up on pickled politics: but that remains to be seen. According to Mr. Lloyd George, landlordism is in ruins and nothing in the way of doles or of subsidies can save it. What was the remedy? The acquisition of the soil by the nation. This was not nationalisation, for development of the soil would be left to private enterprise. The monopolist must be got rid of: it was an outrage that alien chiefs, who could not stand a Highland winter, should be lording the Highlands. This last reference was the inevitable particularisation of the speaker's general policy. That policy, as detailed in the rural report of the Liberal Land Committee, published last week, is to "cultivate tenure" as the panacea for present ills. According to these Liberals' view, cultivating tenure would secure for the landlord an income equal to the net income which he now derives from the land. The farmer, moreover, would have the legitimate rights of ownership without its risks, and the advantages of yearly tenancy without its insecurity. And for the British labourer, who is to-day the only landless peasant in Europe, cultivating tenure meant the recognition, for the first time in any British agricultural policy, of his real status and function in the industry and in the nation. Most of the comment upon this Report and upon Mr. Lloyd George's land speeches have been in two senses; first, a particular criticism, that security of tenure to the farmers is useless without security of price, and secondly, a general inference, that this remedy is Socialism undisguised, that there is now little to divide anti-Communist Labour from Liberal, and, therefore, that the two-party system is well on the way to being restored.

The Church Conference.

The Church Congress, which met at Eastbourne last week, had a very comprehensive programme, which dealt relations to the pressing problems of to-day. The Archbishop of Canterbury struck the key-note in his examination of the apparent indifference of the present age to Christianity. He found the main explanation of the falling off in the number of churchgoers to be in the poverty of the sermons that are nowadays preached, and it will not widely be doubted that he, whose Church is one in which the value and place of the sermon in worship are accounted high, was correct in his diagnosis. He pleaded for the restoration of the preacher—the kind of power with the masses in which the Nonconformists had so great an advantage over the Evangelicals. His exposition and his prayer for the better manning of the Church appear to have made a profound impression. But what those outside the Congress have been wondering is, whether the underlying principles of Christianity still have their attraction, whether, that is, it is merely, as the Archbishop says, the poorness of the Ministry which drives men into the indulgence of other attractions on a Sunday, or an indisposition to accept the fundamentals of their fathers' creed, by whomsoever they be expounded.

What is Art?

The ordinary man in the street, perplexed perhaps by the utterances of clerics and politicians at Eastbourne and Brighton, was able to read last week at least one speech that he could understand. This was by the Royal Academician, Mr. John Collier, who as has been said, "got back on the map" by a frontal attack on the Modernists in Art whom the ordinary man in the street so much loathes. To Mr. John Citizen it was delightful to see Mr. Epstein and the Hudson Memorial put in their improper places. Mr. Collier said that Rima was a horror. There was a danger that young men might take her as an ideal of female beauty. Hence the future generations might resemble this "bestial figure horribly mis-shapen." Nor did this fresh outbreak on the Hudson Memorial finish here: papers like the *Morning Post* were impelled to write leaders entitled, "Take it Away," and kinema favourites like Miss Betty Blythe had discreet photographs of themselves taken showing how Rima should really have appeared to the multitudes who might or might not have flocked to Hyde Park to see her. Perhaps it does not greatly matter. After all, Shakespeare still lives, though Tolstoy belittled him, Thomas Hardy has not relapsed into obscurity because of George Moore's criticism, Brahms is no less popular a song writer because Hugo Wolf pointed out his syrupyness. All artists have prejudices, though they are not so omnivorous as those of the ordinary man in the street. There must be disagreement in art, for, as Oscar Wilde said, it is only the auctioneer who should admire all schools of art.

The Tri-National Exhibition.

It was with a feeling of the imperious duty of preserving an open mind that one went to the recently-opened exhibition of "Tri-National" art at the new Chenil Galleries, Chelsea. The organisers there have hit upon the happy idea of showing us, not only whither our own artists are tending, but their inevitable yet largely unknown affinities with artists of other countries. The nations represented are British, French, and American; and that, as it would seem from this exhibition, is also their order of merit. It is amazingly alive, this show, but one needs to keep a cool head, to remember that painters love toying with forms and with colours as musicians love toying with sounds, that, there is, in other words, great fun, if nothing more, in a meaningless pattern. To treat all their pictures as serious works of art would be the heaviest kind of folly. But let it be said at once that the cloven hoof of the impostor does obtrude itself. For there is not only an abundance of superb Augustus Johns, there is a perfect plague of pitiful and inferior imitations. There is the cubist nonsense of Picasso, and there is the childish nonsense of Picabia. But what good things in compensation! Amazingly fine sculpture, for instance, by Dobson and Epstein and Heseltine (the last the best of the American artists), paintings by A. R. Thompson and Derain and Roger Fry, and drawings by Howard and Colin Gill and Roberts.

Recorder.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

PERSONAL AND GENERAL.

TO-DAY

October 15, 1925 (New Style).
October 2, 1925 (Old Style).
Rabia I, 27, 1344 A.H., of the Moslem Calendar.
Tishri 27, 5686, of the Jewish Calendar.

The Earl of Altamont left London last Thursday for Marseilles to embark in the Ranchi for India.

Sir Atul Chatterjee, High Commissioner for India, and Lady Chatterjee have returned to London from Geneva.

Abdulhamid Soliman Pasha, the General Manager of the Egyptian State Railways, arrived in Paris last week from London.

Sir Milne Cheetham, British Minister to Greece, who had been staying in London, left Claridge's Hotel last week for the British Legation, Athens.

Mr. Hoffman Phillip, American Minister to Persia, has arrived in London, and will be at the Berkeley Hotel for a few days before proceeding to Teheran.

M. Titulesco, the Roumanian Minister in London, who will head the Roumanian debt settlement delegation to America, leaves London this month for Washington.

Commander Gerassimos Vassiliades has been appointed Naval Attaché to the Greek Legation in the place of Captain Panas, who is returning to Athens to take up a naval command.

Ex-King George and Queen Elizabeth of Greece, last Sunday, concluded their visit to London and left for Paris, where they purposed staying a few days before proceeding to Roumania.

Sir Thomas and Lady Smith, Lady Wheeler, and the Hon. Mrs. Nixon left London last Thusrday by special train for Marseilles, to embark in the Ranchi for India.

The Maharajah of Patiala, last Friday, returned to London from Dunrobin Castle, Sutherland, where he has been the guest of the Duke and Duchess of Sutherland for the shooting. His Highness will remain at the Savoy Hotel with his suite until he leaves for India next Sunday.

The Duke of York will preside next Tuesday at the Royal Navy Club dinner to commemorate the Battle of Trafalgar. The gathering will take place at the Hotel Victoria, and Field-Marshal Viscount Allenby will be the guest of the evening.

Miss Gertrude Bell, Oriental Secretary to the High Commissioner in Iraq, has left England for Baghdad. On the night before her departure, Miss Bell was present at a dinner given by the Secretary of State for the Dominions and Mrs. Amery to King Faisal.

The Hon. Harold Nicolson has been appointed Counsellor of Legation in Teheran, and will shortly leave London to take up his new duties. Mr. Nicolson, who, incidentally, was born in Teheran, has for many years been in the Department for Balkan Affairs in the Foreign Office, and is also well-known as the author of several books: "Paul Verlaine," "Tennyson," and a novel, "Sweet Waters," which was based on knowledge of Turkey gained in the British Embassy at Constantinople.

KING FAISAL OF IRAQ.

On October 7 King Faisal placed a wreath on the Cenotaph. He was received at Buckingham Palace by the King last Thursday morning. King Faisal left England last Friday for the Continent.

ENERGETIC YOUNG MAN (25), four years commercial experience Near East; used to indep. responsible work; knowledge French, Persian, Turkish, seeks (preferably similar) post. Sound references.—Box A1, c/o "The Near East and India."

Indian Affairs.

THE NATIONALIST DEMAND.

The papers to hand this mail from India show—what did not appear from the cabled reports—that the fundamental difference between Nationalist and official ideas as to the future of the Reforms lies in the Preamble to the Government of India Act. The full text of the Nationalist amendment, that was passed by the Legislative Assembly and rejected by the Council of State, is given elsewhere in this issue; and the *Bombay Chronicle*, in its comments on the proceedings of the Assembly, says that clause (h)—which gives power to amend the Constitution—"would involve the eradication of the insolent preamble of the present Act, which gives Parliament the right to judge the time and manner of each advance." In moving the amendment, Pandit Moti Lal Nehru said that no greater tribute could be paid to the judicial mind which Lord Birkenhead and Lord Reading had brought to bear upon the most important questions that they were considering, than was implied in the fact that, after months of full and free discussion, they arrived at no decisions whatever; but, in Lord Birkenhead's statement in the House of Lords, the effect of the preamble of the Act of 1919 was declared to be permanent and static. "That," said the Pandit, "is a view that we cannot accept in any circumstances. Our position is that the fundamental principle on which a constitution for India is to be based must be the principle of self-determination. We are absolutely clear on that point, but Lord Birkenhead appears to be equally clear that this principle cannot be applied to us. If that be so, then good-bye to all hope of settlement." He went on to explain how the Nationalists proposed to give effect to their point of view: though India had not yet arrived at the proper stage of organisation to have the capacity for civil disobedience, yet "when there is no alternative open to us, we must take that road, however long and weary. Civil disobedience may not come for years, but it has to come some day, and the sooner we begin our preparations the better. The struggle for freedom once begun must, sooner or later, have its appointed end: and that end is no other than the achievement of the fullest freedom. It remains to be seen whether England will share the credit of that achievement by wilingly giving a helping hand, or suffer that achievement to be wrested from her unwilling hands. These are the only alternatives, and it is for England to choose." Lord Birkenhead's suggestion that Indian politicians should concentrate on preparing a constitution that should meet with general acceptance by all parties in India, which would then receive careful consideration from the British Government was, therefore, based on a postulate—the sanctity of the preamble—that the Nationalists did not accept: and their answer to it was to be found in the amendment, which had been deliberately framed to express the common view of Swarajists, Independents, and Liberals. The Pandit declared that, had it been drawn so as to express the Swarajist view alone, it would have been different: but, as it stood, it represented India's minimum demand. Incidentally, he condemned Diarchy as "a mad scheme of speculative constitutionalists," the failure of which was admitted even by Government, who yet asked Indians to continue to work it.

The Nationalist rejection of the preamble has merely been ignored by the Government of India. In introducing in the Council of State the original resolution that had been defeated, by the adoption of the Nationalist amendment, in the Legislative Assembly, the mover said that all responsible public opinion, however divergent in other matters, was agreed or, at least, was prepared to accept the preamble as the basis of all practical discussion. Parliament, and the tribunal that Parliament was to set up to examine all claims and all evidence, must be satisfied as regards every step that it was proposed to take. The co-operation invited and required by the Secretary of State and the Viceroy was not a stipulation made by one party to the negotiation, but the statement of a fundamental condition for the solution of the problem that lay before both parties, without which neither could succeed in solving it. The rejection of the Nationalist amendment by the Council of State was looked upon by the extremist Press as a foregone conclusion: which it tried to discount by denouncing the Council as a "political infirmary," a "museum of political fossils," and a body that "is not moderate, not even reactionary—it is merely stupid." But it is interesting to observe that one of the leading Moderates in the Council, while supporting the Government resolution, did not advocate the complete rejection of the amendment, but only its deferment to the proper moment: "let us," said Sir Dadabhoy Maneckjee, "wait for the Royal Commission to be appointed and then place these demands before that Commission. Meanwhile, let us accept the resolution of the Government." The suggestion of another leading Moderate, that the Government resolution should be accepted with the addition of a rider that the Viceroy should consider and recommend the appointment of a Royal Commission, or other suitable agency, not later than 1927, was not only opposed by Government, on the ground that it could not commit itself to any fixed date, but also by the supporters of the amendment "because the rider implied acceptance of the preamble" and—in one case—"because no Royal Commission was needed to find out what India wanted—the Assembly had informed the world of that." The Nationalist view was similarly ignored by the Viceroy himself, in his speech at a farewell dinner given in his honour by the Indian community at Simla on October 6. In replying to the speech of the chairman, which included the expression of the hope that, before his retirement next spring, the Viceroy would be authorised to announce "a generous gesture by the Imperial Government regarding Indian constitutional progress," Lord Reading said that Lord Birkenhead's speech in the House of Lords constituted the most generous gesture imaginable, and that he regretfully realised that the appetite for generous gestures grew with their receipt. He declared that he was not only disappointed, but surprised that "the political sagacity of India did not rush to seize the hand that was held out from England and did not grasp it warmly." Even if such a response was accompanied by a reiteration of the opinion that the advance to self-government ought to be faster, at least it should be admitted that the only avenue lay through the British Parliament, who could be trusted to respond generously to a generous offer of co-operation and good will. In the course of the same speech, Lord Reading also said that he "gladly acknowledged that the vote during the Reforms debate in the Legislative Assembly had cleared away doubt and established the fact that Indians wanted Government on a Parliamentary basis as conceived by England, and not an Oriental constitution."

The position is, then, that the Nationalists have definitely repudiated the claim of the British Parliament to be the final arbiters of India's destiny: and their proposal, to resign their seats in consequence of the rejection of their resolution by the Council of State, is intended to create the impression that "the country" is behind them in this repudiation, and in the form in which they profess to intend to give effect to it. *Forward* (Calcutta), the organ of the late C. R. Das, gives expression to this policy in the following words: "Sir Alexander Muddiman had the impudence to assure the House that the door of acceleration will not open to menace, still less will it be stormed by violence. Is it to be inferred, from these words, that the Government are counting on our physical helplessness in the presence of superior odds to force co-operation out of us? If they entertain that notion, they are mistaken. The country has, through its leaders, repudiated violence as a political weapon: but they are not so hopeless or so helpless as their opponents think. The Swarajists, now with the whole country behind them, must pursue their programme of national work and prepare India for civil disobedience." The Government of India, strong in the belief that civil disobedience is only a wordy threat that can never be implemented, meet the Nationalist repudiation of the preamble by the simple process of ignoring it: and who shall say that they are not right?

Digitized by Google

But, if the future holds a Labour Government, not only in office but in power, in England, it is as well to remember that, on September 30, the Labour Party Conference at Liverpool passed a resolution recognising the right of the Indian peoples not only to full self-government but also to "self-determination": and asking that "a conference should be called of representatives of the various Indian parties with a view to the immediate application of a Constitution in accordance with the wishes of the Indian peoples." The Labour Party, by their signal defeat of the Communists, have published to the world their acceptance of Parliamentary methods in their efforts towards progress: it may be wondered whether they realise that, in supporting the claim of Indian politicians to self-determination, and to the immediate application of a constitution of their own making, they are supporting a negation of the right of the British Parliament to have any say in the matter. It is true that the Constitution, supported in the resolution, is to be one framed "in accordance with the wishes of the Indian peoples"—not with those of the Indian politicians; but it may be doubted whether its adherents understand how wide and deep is the real divergence between the two.

CURRENT TOPICS.

India at the Church Congress.

The discussions at the Eastbourne Church Congress included two striking pronouncements on India: one by Lord Willingdon, the other by Mr. B. C. Allen. It is permissible to think that the latter, which strictly confined itself to facts, provided a wholesome corrective to the former, which dealt mainly with generalities.

Lord Willingdon said that, if the white man was to bring healing and contentment to the peoples of the East, he must discover some means of doing so by peaceful methods and not by the clash of races. The War had roused the people of India to a sense of nationhood and to an intense desire to have more control over the management of their own affairs. He was convinced that the only solution lay in treatment, by the white races, of the coloured races in a spirit of absolute equality. Years ago, the white man had been placed in the position of a trustee, but his wards were now rapidly growing up. Even for their own good, the white man could no longer dominate them: the most he could do was to try to guide them tactfully past particular dangers: and he had now to meet them on terms of absolute equality. If he would only do that: if he would alwys act in the spirit of giving equality of opportunity to those who are coloured, the latter would respond with enthusiasm, and disagreement would vanish. Such a spirit could only be expressed by always carrying into our relations with the coloured races the principles and teaching of our Christian faith.

Mr. Allen said that there was a strong feeling among a considerable section of English-speaking Indians, which, for want of a better term, might be called nationalist. But the size of that community was considerably less than one per cent. of the population of India. Though they had an influence out of all proportion to their numbers, it neither penetrated far nor persisted for long. Their power to stir up the masses could not be disputed, but an edifice of unrest, so erected, could not endure because it was built upon sand—the grievances which agitated political India did not touch the mass of the people. Writers spoke of the existence of political questions on which "all India is at white heat and absolutely one"; whereas the fact was that fully 95 per cent. of the population neither knew nor cared anything about the matter. In no vernacular with which he was acquainted was there any word for "Indian"—neither the word nor the idea existed. In spite of all the fuss and fury of the political arena, Englishmen were still wanted for the administration of the country and the conduct of its business. Political India was young, and there was no need to be unduly disturbed by the exuberance of youth. He did not ask our young men to go out to India in any missionary spirit he was not sure that this was quite the right spirit for an administrator. Nor did he ask them to leave an assured career at home—if they knew of a "better 'ole," by all means let them go to it. But this he did say, that it was not easy to find work bringing a fuller reward in every sense of the term, work more thoroughly worth the doing.

It is true that the "absolute equality" of which Lord Willingdon spoke is not yet to be found in administrative India: but, in the higher official posts the scales are already beginning to be weighted in favour of the Indian. Not only every Englishman in India, but practically every member of the Indian intelligentsia, is fully aware that the sole claim to office of the holders of some of the highest administrative posts (as Ko-Ko says, "Such as Tut-tut-tut and Whatsisname, and also You Know Who—but the task of filling up the blanks I'd rather leave to you") is the fact that they are Indians; on a footing of absolute equality they would not have stood the faintest chance of selection: and it is these officials, more than the ordinary run of their fellows, whom it has been one of the special tasks of the English administrator to "guide tactfully past particular dangers"—especially the danger of avoiding decisions and preferring to let things slide. Socially, of course, the theory of absolute equality is far more repugnant to Indians than it can ever, by any possibility, have been to even the most intolerant of Englishmen; but this, however much one may deplore it, is not susceptible of alteration by anything that Englishmen can do: not even by the completest change in their "angle of vision" that has always been one of Mr. Gandhi's most insistent demands—one to which he will now be able to claim a distinguished convert in Lord Willingdon.

The Bombay Mill Strike.

The latest cables seem to show that the mill strike in Bombay is now complete, and that all the mills have ceased working. It is said that an improvement in the piece-goods market coincided with the declaration of the strike and that the stocks on hand in the mills, which amounted to about 200,000 bales at the beginning of August, only 9,000 of which were cleared during that month, have been reduced during September by no less than 50,000 bales. The increased demand appears to be confined to Indian goods and not to include Manchester goods—the reason for which seems to be that such foreign-made goods, as are specially in demand, are being fully supplied by Japan. Indeed, figures recently made avilable, of the imports of yarn and piece-goods into India for the three months April to July of this year, foreshadow a further decrease in imports from the United Kingdom and a further increase in those from Japan. During the financial year 1924-25, the imports of yarn into India from the United Kingdom and Japan respectively were 20,760,000 and 32,325,000 pounds: and of cloth, 1,600 million and 155 million yards: while, during the first three months of the financial year 1925-26, the figures are—yarn, 4,860,000 and 16,160,000 pounds; and cloth, 416 million and nearly 67 million yards. If the rest of the year keeps up the average of the first three months, this will mean a decrease in the share of the United Kingdom of over six million pounds of yarn and 35 million yards of cloth, and an increase in the share of Japan of over 16 million pounds of yarn and 45 million yards of cloth.

When the Bombay mill operatives' deputation to the Governor of Bombay urged the advisability of short time working in the mills rather than a cut in wages, the Governor explained that short time working, which entailed suspension of all the work in the mills for an agreed number of days per week, was bad for the industry as a whole; because, even at the existing time of depression, there still remained a good demand for some of their products, for which extensive forward contracts were in existence. The strike must necessarily have led to the cancellation of these contracts: and the recovery of a demand for the products of Indian cotton mills in general, which is what seems to have followed on the strike, has spurred into activity the previously tepid desire of the mill owners to end it. It is said that some of the owners are even considering a withdrawal of the decision to reduce wages, in hopes of getting the mills started again in order to compete with the new demand: and the figures given above make it pretty obvious that, if they are unable to do

Digitized by Google

so, the consequent gain to imported goods will favour Lancashire considerably less than Japan, which is now recognised to be the most dangerous competitor in the cotton trade, not only to Lancashire, but to India as well.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 24.

The Council of State.

On the eve of its dissolution, the Viceroy congratulated the Council of State on the achievements of its five years of office, and said that the members had established a record, which would endure as an example, in the exercise of the powers entrusted to them by the Constitution. Their task has been no sinecure, so far as the latter portion of their term has been concerned: and this is not surprising, when the action of the Assembly in regard to the bill for the regulation of the use of firearms in riots and disturbances, and the vote in connexion with the Muddiman Committee report are taken into consideration. The political classes of India have begun to realise the amount of real power which has been vested in them as a result of the Reforms Scheme: and this consciousness tended to hotheadedness in some of their later deliberations, in which the Assembly did not stop to consider what the results would be; for instance, they ignored the fact that the use of firearms is primarily necessary for the preservation of law and order, and as such does not affect the law-abiding citizen in any way. Similarly, had the Assembly been called upon to put their recommendations on the Muddiman Committee report into practice, it is safe to say that not one of them would have known how to start about it. It is here that the Council of State has proved its usefulness. Its members, despite what the extremist press say to the contrary, are men who have a real stake in the country and hence look to its best interests. During its term of office the suggestions of the Lower House have received careful consideration: and, if they have been for the well being of India, they have met with little opposition. In common with Second Chambers the world over, its task has been a thankless one; it has been criticised and abused freely, and any revision which has gone against the Swaraj element has been attributed to ulterior motives. *Forward*, in its usual wild style, would make it appear that the Council has been working merely to earn the "well-done" of the Viceroy on the termination of its labours. The *Amrita Bazar Patrika* sarcastically remarks that, "the Council of State should not be regarded as a mere gramophone. If it obeys the master's voice it is not due to any compulsion, but is due to its concentrated wisdom, experience and sobriety of judgment."

The members of the Council of State will return to their constituencies with the knowledge that they have fearlessly acted up to their convictions; whether their efforts have met with the approval of the voters is hard to say. The Swarajists are busy endeavouring to set up their own candidates; but, with the changes which are taking place almost daily in the extremist ranks, it is too early to predict the outcome. Internal bickerings have been the undoing of the Swarajists in the past.

The Quest of Sensation.

Sensation is the life blood of the Swaraj movement, and the period of monotony which has followed the death of Mr. C. R. Das has been found somewhat perturbing to the Swarajists. When a stalwart supporter of the extremist cause such as the *Amrita Bazar Patrika* has so little sensational "copy" that it sets about investigating the Swaraj Party Funds, it becomes clear that normality has gone too far. Sen Gupta, the new leader of the Swaraj Party in Bengal, has failed to raise public enthusiasm to the correct pitch; Gandhi made several gallant efforts to no purpose, and even the coup planned by Pandit Motilal Nehru for the defeat of Government on the Muddiman report has come to an inglorious conclusion.

A slight stir was caused at a meeting during the week-end, at which several patriots ventilated their grievances against the Tramway Company of Calcutta and resolved that, whenever possible, they would patronise the army of small Indian-owned buses which have appeared on the streets. In this connexion one speaker referred tenderly to the fact, that the buses which were run by the Tramway Company were fitted with solid tyres, and hence riding in them was very prejudicial to health by reason of the bumping! There was no counter suggestion, however, that there should be a return to *Swadeshi* methods in the shape of bullock cart transport, which is perhaps a little surprising.

Pandit Motilal Nehru must have been deeply shocked by this attempt at frivolous sensationalism, particularly when the Independents were championing his cause by suggesting that, as a protest against the action of the Council of State, they should join with the Swarajists in a wholesale resignation from the Legislative Assembly. To have secured a number of by-elections would have roused the country from its lethargy and, judging by the enthusiasm with which the proposition was taken up, there seemed to be every hope that the spectacular would happen. After thinking the matter over, several of the members of both parties felt that, although their leaders would have little difficulty in retaining their seats, the smaller fry might be less successful: and consequently the glamour of resignation has passed. At a meeting of the Swaraj Party at Patna, the Pandit announced that the Independents were not quite sure of themselves and had not been able to decide to resign in unity, and he thought the resignations would not materialise. There is no mention of difficulties with any of his own party, but it is broadly hinted that very real doubt exists in the Swarajist camp. All this from the self-styled leaders of a nation which claims that it is ready for self-government!

The Congress.

Although Mahatma Gandhi was not a success in his meddling with the political affairs of Bengal, he has shown, at the All India Congress, held this week at Patna, that he is still a power to be reckoned with Assuming the rôle of a servant, he has scored off the Swarajists all along the line. He began by conceding the point of the yarn franchise, a rule which made membership of the Congress conditional upon the gift of a certain quantity of home-spun yarn, and in its place accepted a proposal for a money franchise. He was adamant that the ceremonial dress of Congress members should be *khadder:* and, despite the opposition which came from Pandit Motilal Nehru and Sen Gupta, he carried his point.

Perhaps the most surprising item of business which was transacted at the Conference was the pledging of the Congress to support Swaraj policy: while this is flattering to the extremists there is little doubt that their heritage will not be an unmixed blessing. The Congress purported to be a body representative of all shades of political opinion in India; it was termed a national organisation. By the adoption of the Swaraj policy it becomes little more than a branch of that movement, and ceases to exist as a Congress. Among its adherents there are many to whom the change will be distasteful: among them that veteran fighter, Pandi Malaviya: and it is safe to say that he will not take it lying down. His opinion is respected by a large section of the community who will form an opposition which will give the Swarajists trouble. The future of the extremists is not as brilliant at it might appear. Although they have captured the Congress, they have to contend with a feeling of distrust which it will take much to allay—and the elections are not very far off.

Markets.

Quiet conditions have ruled in the Jute market during the week under review, though at the close a little more interest was shown by the Mills, business being done at round about previous rates. Gunnies, in sympathy and through lack of demand, have eased slightly, buyers having apparently suspended operations in view of the Pujah holidays which commence this week.

The Tea market continues to fulfil expectations, there being a further marked improvement; the sales here show

Digitized by Google

a strong demand with an increase in rates for almost all descriptions. Piece-goods have been steady but featureless.

In the share market, there has been a fair turnover in Jutes with rather more inquiry for the higher priced denominations; rates have remained steady at about previous levels. The chief feature of interest has been the further all round improvement in Tea shares, the better position of the industry having been well reflected by a keen demand for the more popular scrip, of which there was little offering, with the result that buyers experienced great difficulty in satisfying their requirements. Cottons continue quiet with a slight marking down in rates, but a few dealings were recorded in Coal shares at previous quotations. An amount of interest still centres round the rubber market, with holders unwilling to sell at present prices. In the miscellaneous market, Railways have created considerable interest at increased rates, and the long-dated Government securities have been in good demand. The Stock Exchange here closed yesterday, and will reopen on October 12.

The trade returns for August make a satisfactory showing compared with those of the previous month; imports have increased from Rs. 580 lakhs to Rs. 681 lakhs, and export from Rs. 901 lakhs to Rs. 1,331 lakhs. In comparison with the corresponding period of last year, imports show a decline by Rs. 59 lakhs, but exports an increase by Rs. 282 lakhs.

The money market has been dull but steady, with sterling at previous rates. In this connexion it is interesting to note the opinion expressed by the Finance Member in Bombay that, pending a report of the Currency Commission, Exchange will not rise materially above the present level.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, September 24.

Cotton Prices.

In your notes on Current Topics of September 3, it is observed that the real cause of the trouble of the Bombay mills is the high price of cloth: and it is stated, no doubt with absolute accuracy, that, whereas the general income have risen by 35 per cent., the price of cloth is actually 170 per cent. higher than before the War.

This is a fact, but it is not the fault of the mill owners, nor is it peculiar to Bombay or India generally. Most commodities have now reverted to their pre-War level or something like it: and the only important markets which are now definitely on a much higher basis than in pre-War days are those of the raw materials of the textile trades. The price of cotton, which fell below 4d. for the second time in ten years in the winter of 1904-5, was, for the few years immediately preceding the War, somewhere between 6d. and 8d. It now appears to have permanently established itself between twelve and fifteen pence.

This phenomenon, whatever may be its cause, has probably more to do with unemployment and the general dislocation of business than anything else in the world to-day: and the redistribution of the geographical centres of trade, that is due to it, deserves much more consideration than it has yet had.

The high price of cotton has, to begin with, definitely enriched the cotton-growing countries of the w[illegible] notably America—at the expense of the consumers—notably England: and it is only in the last few months that England, by its virtual control of the production of rubber, has been able to hit back. Secondly, the rise in cotton—and consequently in the price of cloth—appears to have, for the time being at any rate, turned the scale very decisively against the agriculturist in Europe. The farmer, who is getting no more than pre-War prices for his produce, is harder hit than ever by the high price of cloth, which has had its effect on all manufactured articles.

But, though America is the protagonist in the advance of cotton, India's position at the present moment is no less remarkable. America's output seems to be now strictly limited: up to 1914 there was a regular increase, and there seemed no reason why it should not extend up to twenty or thirty million bales a year. But such a prospect seems to be a thing of the past: and for any serious increase in production the world's consumers must look elsewhere. Much has already been done in Africa and even Australia by the British Cotton Growing Association: but India, the second largest producer in the world, is still comparatively undeveloped. All that is possible is, no doubt, being done both to increase acreage and to improve quality; but progress is very slow, and it will be many years before any notable improvement is seen.

But even so, we have in India a total crop of something like five million bales, which is valued now at not less than £5 per bale above pre-War prices: and this influx of wealth is alone, if guided into the proper channels, sufficient to turn a poor country into a wealthy one. It is almost unnecessary to speculate on the future of a country with such possibilities: but what is needed at the moment is, first the co-operation of Government and all the various communities in the development of India's cotton-growing possibilities—and here at least, if nowhere else, there is a traditional spirit of co-operation between the various commercial communities of Bombay: secondly, a currency policy which will bring the profits into circulation and not bury them in the ground: and thirdly, a reasonably sympathetic attitude towards the mill industry, to enable it to build itself up to its proper position in the Empire.

In the redistribution of the world's trade, due to the increased price of cotton, Bombay must inevitably play a great part; but, unless that redistribution is properly appreciated, neither India nor England will gain their proper share of the enormous advantages of such a position.

The Mill Strike.

Practically all the mills in Bombay are now idle, the hands having definitely refused to accept the reduction in wages: and 140,000 employees are now out of work.

The mill hands are always a fluctuating population, and their great ambition at the present moment is to get out of Bombay to their own villages: the difficulty being to find them accommodation. A large proportion comes from the Ratnagiri district, 100 miles down the coast, which is accessible only by sea: and all the coasting steamers are being rushed by crowds of passengers.

From the mill hands' point of view, the strike could not have come at a better time. This is the season of the rice harvest all over the Presidency: and for the next six weeks there will be plenty of work and plenty of food in the villages: while the great holiday of Diwali—a sort of Christmas-cum-harvest-home festival—falls about the middle of October. It is therefore a very much more cheerful time for the mill hands to go on strike than any other time of the year: and probably, in a week from now, most of them will be dispersed over the countryside. With a season of plenty, at any rate in their own districts, it seems a little difficult to guess when it will suit them to find their way back to Bombay: and the resumption of work on full time in the Bombay mills may be a very protracted business.

The strike has not yet spread to the mills up country, few of which—catering as they do for a local demand comparatively unaffected by Japanese competition—have found it necessary to reduce wages.

PEASANT AND VICEROY.

By Janus.

One of the most interesting events of the year has been Lord Reading's public acceptance of the doctrine, not unfamiliar to readers of The Near East and India, that the peasant counts. Lord Curzon noticed the fact long ago, but it was lost to sight under his successors, and of late the interests of agriculture have had no very obvious friends in Simla. Now we are told that there is to be a change. Agriculture is, indeed, to remain a provincial subject, but the Central Government is no longer to neglect it, an "all-India" organisation is to be super-

Digitized by Google

imposed on the existing machinery, and, as a beginning, the Board of Agriculture has been asked to take over the idea of expanding its personnel and its scope in order to supply what is wanted. Discussion having thus been formally initiated, I am tempted to take a hand, but I have found the diversity of views so great that I despair of presenting them in the usual way, and so I offer a little symposium, in which the protagonists are free to state their opinions in their own words.

First, by pride of place, comes the Secretariat-Man, representing one of the oldest and strongest of the Indian breeds—men who have always been willing, and sometimes able, to rule the country at the point of the pen. "The Viceroy's speech," he says, "comes as a trumpet-call to abandon strange gods, and return to the true faith. Efficiency, co-ordination, uniformity, these are what the country really needs. In the ten years before the War, when Simla was firm in the saddle, and the provinces responded promptly to whip or spur, we built up an organisation for agricultural development which was the wonder of the bureaucratic world. Then external forces induced us to bow for the moment at the alien altars of decentralisation and popular control—and look at the result: our best men scattered over the Dominions in disgust, the Departments starved for staff and money, incompetent Ministers wasting such resources as there are on freaks and fads, the whole thing threatening to collapse. Agriculture is an interest of the whole of India, and as such far too important to be made the plaything of petty provincial politics and personalities: nothing can meet the need but a strong central organisation, competent to lead the Provinces, and to drive those which refuse to be led."

From the Secretariat-Man I turned to a representative of the other great indigenous breed, the Man on the Spot. He gave his opinion, as usual, tersely and colloquially. "Good old Simla!" he said. "She'll change her habits when leopards learn to change their spots. Reading talks glibly of co-ordination, but everyone knows what that means in Simla. They're out to centralise, just as they've always been: far better leave the Provinces to learn by their own mistakes than incubate a new lot of mistakes in a cool corner of the central Secretariat. As things are, however, let them tinker the Board of Agriculture as much as they like. It's too big already, and when it's packed with politicians, it'll be too busy with eye-wash to do much real mischief; you'll get no good out of it anyway, and the great thing is to render it impotent for harm."

Having thus heard the administrative protagonists, I sought out a Man of Science—no indigenous breed this, but a successful acclimatisation from the West. His tone was refreshingly cautious and judicial. "It's quite true," he said, "that things aren't satisfactory, and there's a clear case for experiment. It looks as if a new organism is wanted, and the idea of breeding one can't be discarded without a fair trial, but I'm not very hopeful about the actual proposals. Theoretically, it's possible that agricultural progress might result from the union of experts and politicians, but the cross is so very violent that the more probable result is sterility or else a monster, and the worst of it is that the parents may be spoilt in the attempt. Still, I say, make the experiment, but stand by with a gun, ready to shoot the offspring if it proves to be dangerous or vicious, and, if necessary, to shoot the parents too."

A Rural Economist, still a rare specimen in India, was scarcely more encouraging. "The whole plan," he said, "is upside-down, and inside-out, and utterly topsy-turvy. Bureaucracy did its proper work when it brought the Agricultural Department into being, but it failed decisively to give the lead which the peasants are waiting for, and the failure was inevitable. The transfer to popular control was a hopeful move, because it was, and it still is, possible that the right Minister of Agriculture will be found: when such a man comes up, he'll begin by leading the peasants, and presently the peasants will be driving his successor, as farmers drive their unfortunate Minister elsewhere. So far, however, the Provinces have had no luck with their Ministers of Agriculture, and when you see one man trying to grow political cotton in the rice-swamps, and another talking to his peasants through an interpreter because he doesn't speak their language, you begin to lose heart, as the Central Government seems to have done. It's possible that a week at Pusa might turn a lawyer into a competent Minister, and that would be a great gain, even if he was turned out of office on the next budget; but, short of such a piece of luck, I don't see that the Viceroy's plan offers any real hope. The thing that's wanted most is to teach the peasants their power, and show them how to use it."

Lastly, I got into communication with a very old friend called Ram Pershad Kurmi, who has a comfortable but rack-rented holding not very far from the Ganges. He was particularly busy, for heavy rain had given the weeds a start, and, whatever Simla might be talking about, the only thing that really mattered at the moment was to get the maize weeded before bedtime; but he said enough to show that the orbit of his thoughts was not intersected by the recent proceedings of the Legislature. "What's the good of anything?" he asked. "I grew Howard Sahib's wheat, and the landlord took the money for his motor. If we all grow Clarke Sahib's sugar-cane, the landlord will buy another motor, that's all. My best field's flooded, but the Brahmin curses me whenever I run the water on to his land, and there's no place else to put it. A lawyer came here two years ago, and said if I voted for him I'd get my land rent-free, but the rent has been raised, and he doesn't come here now. The banias have lowered the price of wheat, because they say the lawyers won't allow it to be exported, and they've raised the price of everything I want to buy, because they say the lawyers are taxing it. The Government tries to kill the pigs and the rats, but it leaves the real vermin alone." He broke off to cuff two of the weeders who had lagged behind the line, and went on with his business, a pathetic figure perhaps, but neither placid nor contented.

Do these partial and limited views help us towards an appreciation of the position as a whole? For one thing, they show that something is wrong, because everybody is dissatisfied: and, for another, they give us some pointers which may guide us towards the seat of the trouble. Seven years ago, Lord Chelmsford and Mr. Montagu quoted with obvious approval an anonymous dictum to the effect that "unless the political changes now in contemplation are accompanied by an educational campaign directed to awaking in all classes alike, but especially in this particular class (the peasants), a sense of citizenship, disaster will certainly result." The political changes have materialised: how about the education campaign which was to accompany them, under penalty of certain disaster? It hasn't got into the papers yet, anyway, and the real trouble is just the want of that sense of common citizenship which the Reformers postulated. The peasant sees only enemies in the classes which have taken to politics: politicians see in the peasant only the patient drudge who will certainly find the money for their fads. Both sides need to be educated, but at present the politicians need it most, for the results of their ignorance go far to justify the peasants' view, and they will cease to be his enemies when they learn that they are doomed by mere arithmetic to be his servants. Now I do not for a moment suppose that an enlarged and strengthened Board of Agriculture can cover all the ground; but it does seem possible that such an institution can attack the key-position with some hope of success, if it concentrates on ignorance in high places, particularly the Legislative Assembly and the Central Secretariat. On the strength of that possibility, I feel justified in welcoming Lord Reading's tentative proposals; but there is so much risk of their miscarrying that I must ask him to remember the warning of the Man of Science, and stand by with a gun.

THE INDIAN MAIL.

The Nationalist Amendment.

Last mail brought the full text of the Nationalist amendment to the Government resolution recommending adoption of the principle underlying the Majority Report of the Reforms Inquiry Committee: which was to the effect that

Digitized by Google

the existing form of diarchical government should continue, with certain modifications and improvements in detail. It will be remembered that the Legislative Assembly adopted the Nationalist amendment by 75 votes to 45: and that the Council of State subsequently rejected it and restored the original Government resolution by 28 votes to 7. The total strength of the Assembly is 144, consisting of 26 official and 14 non-official nominated members, and 104 elected members. The total strength of the Council is 60, 26 of whom (including 15 officials) are nominated and 34 elected. In the Council, one of the nominated non-officials, and three of the elected members, are Europeans: in the Assembly, the European non-officials are represented by two nominated members (one of whom is an Anglo-Indian) and nine elected members. Three of the Indian elected members voted with the minority in the Assembly: and, from the figures, it would appear that the number of Indian nominated non-officials, who did so, was either eight or nine. The text of the amendment was as follows:

This Assembly, while confirming and reiterating the demand contained in the resolution passed by it on the 18th February, 1924,* recommends to the Governor-General-in-Council that he be pleased to take immediate steps to move His Majesty's Government to make a declaration in Parliament embodying the following fundamental changes in the present constitutional machinery and administration of India:

(a) The revenues of India and all property vested in or arising or accruing from property or rights vested in His Majesty under the Government of India Act, 1885, or the present Act, or received by the Secretary of State in Council under any of the said Acts, shall hereafter vest in the Governor-General-in-Council for the purposes of the Government of India.

(b) The Governor-General-in-Council shall be responsible to the Indian Legislature and, subject to such responsibility shall have power to control the expenditure of the revenues of India and make such grants and appropriations of any part of those revenues or of any other property as is at present under the control or disposal of the Secretary of State for India in Council, save and except the following, which shall for a fixed term of years remain under the control of the Secretary of State for India:

(1) Expenditure on military services up to a fixed limit. (2) Expenditure classed as political and foreign. (3) Payment of all debts and liabilities hitherto lawfully contracted and incurred by the Secretary of State for India in Council on account of the Government of India.

(c) The Council of the Secretary of State for India shall be abolished, and the position and functions of the Secretary of State for India shall be assimiliated to those of the Secretary of State for the self-governing Dominions save as otherwise provided in Clause (b).

(d) The Indian Army shall be nationalised within a reasonably short and definite period of time, and Indians shall be admitted for service in all arms of defence, and for that purpose the Governor-General and Commander-in-Chief shall be assisted by a Minister responsible to the Assembly.

(e) The Central and Provincial Legislatures shall consist entirely of members elected by constituencies formed on as wide a franchise as possible.

(f) The principle of responsibility to the Legislature shall be introduced in all branches of the administration of the Central Government, subject to transitional reservation and residuary powers in the Governor-General in respect of the control of military, foreign and political affairs for a fixed term of years, provided that during the said fixed terms the proposal of the Governor-General-in-Council for the appropriation of any revenue or moneys for military or other expenditure classified as "defence" shall be submitted to the vote of the Legislature; but that the Governor-General-in-Council shall have power, notwithstanding the vote of the Assembly, to appropriate up to a fixed maximum any sum he may consider necessary for such expenditure: and, in the event of a war, to authorise such expenditure as may be considered necessary exceeding the maximum so fixed.

(g) The present system of dyarchy in the Provinces shall be abolished, and replaced by unitary and autonomous responsible Governments, subject to the general control and residuary powers of the Central Government in inter-provincial and all-India matters.

(h) The Indian legislature shall, after the expiry of the fixed terms of years referred to in Clauses (b) and (f), have full powers to make such amendments in the constitution of India from time to time as may appear to it necessary or desirable.

This Assembly further recommends to the Governor-General-in-Council that necessary steps be taken

(a) To constitute, in consultation with the Legislative Assembly, a convention, round-table conference, or other suitable agency, adequately representative of all Indian, European, and Anglo-Indian interests, to frame, with due regard to the interests of minorities, a detailed scheme based on the above principles, after making such inquiry as may be necessary in this behalf.

(b) To place the said scheme for approval before the Legislative Assembly and submit the same to the British Parliament to be embodied in a statute.

* The resolution of February 18, 1924, which was carried in the Legislative Assembly by 76 votes to 48, asked for the establishment of responsible government in India and included a request for the summoning of a representative Round Table Conference to recommend, with due regard to the protection of the rights and interests of important minorities, the scheme of a constitution for India.

Indian Coasting Trade.

It was mentioned a fortnight ago, in these notes, that the *Pioneer* had accused the elected members of the Indian Legislatures of apathy towards the interests of agriculture, though they were always ready to press for matters of minor importance—the creation of an Indian mercantile marine being instanced as one of these. This has drawn an indignant letter to the paper from one of the sponsors of a resolution in the Legislative Assembly for the reservation to Indian vessels of the coasting trade of India. The writer says that, even when compared with agriculture, this is a most important subject, and one with which the future progress of agriculture is closely allied; for the coastal trade between Indian ports, largely consisting of agricultural products, exceeds, in annual value, 200 crores of rupees (150 million pounds), while the money paid in cargo freights comes to nearly 12 crores a year, the cargo amounts to 5½ million tons, and the deadweight tonnage, employed in carrying it, to 600,000 tons. That, if India is ever to attain self-government, the development of an Indian mercantile marine is necessary in her interests: and that the reservation of the coastal trade to vessels built, owned, and manned in India is the surest means of achieving such a result.

So far, the argument is entitled to respect; but acceptance of its further development is not so easy. The writer declares that "the non-official members of the Assembly are determined to put an early end to the monetary drain resulting from the handling of this trade by non-Indian interests": and, in regard to its effect on agriculture, asks, "What will happen to the rice grown in Burma if water transport were not available to distribute it? Will not the prosperity of Karachi and Bombay, and of the hinterland behind them, be seriously affected if they have to rely only on land transport? How will Madras find an outlet for its labour if water transport between that port and Burma were abolished?"

This is an excellent example of the mentality of the present-day politician in India: of his persistent refusal to face facts, of his light-hearted desire to abolish what does not please him and to put nothing in its place. For the writer omits to say that an Indian mercantile marine, of the kind that he postulates, is non-existent: and that its creation—which he appears to think would follow on a stroke of the pen—must be undertaken before it can claim to monopolise the coasting trade. If he and his friends were able to destroy the "monetary drain" of which he complains, the result, to Indian agriculture, is

Digitized by Google

quite correctly stated in the rhetorical questions that he includes in his argument.

One may suppose that, if the writer of the letter were asked for constructive ideas, he would suggest the immediate commencement of an Indian mercantile fleet under a Government subsidy: subsidised building and subsidised working, to enable each vessel, as it came into use, to compete with the "foreign" vessels already engaged in the coasting trade; until such time as sufficient Indian tonnage was available to undertake the entire trade, when legislation would be passed reserving to it the right to continue it. Until that moment arrived—and doubtless long after it had passed—the cost of the service would be greatly increased; if for no other reason, at least by the amount of the subsidy; so that the destruction of the "monetary drain" from India would result, if the process were gradual, in an increased "drain" from Indian agriculture: and, if it were as "early" as the writer seems to hope, in complete paralysis of a large part of its activities.

The Central Khilafat Committee.

The struggle between the supporters of Ibn Saud and King Ali continues in India, though it is evident that the former are losing ground and that the latter are gaining it. It seems to be generally agreed that the damage to the tomb of the Prophet at Medina, originally reported from Jeddah and Jerusalem, was, at the worst, only technical—that the dome was hit by a few stray bullets; but the stories of vandalism in other directions, on the part of Ibn Saud's followers, have obtained practically universal acceptance. The only active adherents of Ibn Saud are now to be found in the ranks of the Central Khilafat Committee, which is now practically a one-man show, confined to its President, Shaukat Ali. The fierce antagonism exhibited by Indian Moslems against the Hashimite family—King Hussein and his sons—was entirely due to the propaganda of the Central Khilafat Committee in general and of Shaukat Ali in particular: who stigmatised the Arab revolt against the Turks as base treachery on the part of the Sherif of Mecca, who not only refused to help his Caliph in his holy war against Great Britain and her Allies, but actually helped the latter to overthrow him and his loyal supporters the Germans. The reaction in favour of King Ali, brought about by the fanaticism of the followers of Ibn Saud, has had the inevitable result of discrediting Shaukat Ali and his clique.

The Hedjaz deputation to India, who for a long time were unable to obtain a hearing owing to the denunciation of their master by Shaukat Ali and his followers, left India in mail week, receiving a sympathetic send off from prominent Bombay Moslems, among whom Shaukat Ali was not included. Presumably as a counterblast, Shaukat Ali convened a "public meeting" of the Mohammedans of Bombay, which appears to have been attended by a handful of his own adherents only: they listened to an exposition of the work of the Central Khilafat Committee, and a resolution of confidence was declared passed—as also an expression of opinion that "the formation of any other Moslem political organisation in India would be harmful to the best interests of the Mussulmans": and the proceedings were closed by the presentation to Shaukat Ali of "a purse"—of twenty rupees!

It is unlikely that Shaukat Ali has ever heard of Mr. Wemmick, though he has been, all his life, a disciple of his maxim about "portable property"; but it is a sad come down, for one who has handled so many lakhs of Moslem subscriptions, to have to accept a tip of thirty bob. It looks as if the moment is near when Shaukat Ali will become a fit subject for a repetition of the gibe that *Punch* once launched against a notorious politician: "Mr. — — was last night entertained to dinner by his admirers. Covers were laid for one."

INDIAN EXCHANGE.

London, October 12.

The past week has been featureless, with Rupee Exchange in both Indian markets absolutely unchanged at 1s. 6 5-32d. for telegraphic transfers. Off and on buyers, who have been holding back for 1s. 6 3-16d., have had to be content with 11-64ths for cash remittances. So far as we can gather, Government have not been called upon to make any purchases of sterling during the week, which may be taken as a sure indication of a quieter market.

The premium on forward quotations shows signs of disappearing, and cable advices from India state that for delivery between now and the end of February nothing better is being offered than 1s. 6 3-16d. The same conditions obtain in this market for forward delivery. Spot rupees are 1s. 6 3-16d., at which there has been a moderate inquiry with Banks disinclined to meet the demand freely unless at 1-64th higher.

Although the Imperial Bank rate is 5 per cent., the Indian Bazaars are well supplied, and there is no scarcity of money. Local loan rates are well below the Bank rate.

The monsoon is over and the lack of rain in September has had an adverse effect upon the cotton crop. We understand that the condition is only fair in most areas, but in the Deccan and Gujarat the outturn wil show a considerable shrinkage.

Little, if any, wheat is available from the Punjab, and it is more than likely that supplies will have to be drawn from Australia to supplement local stocks.

The financing of the jute crop has almost all been completed, and the next month or so should be quiet with little change in rates.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning.

Danube Navigation.

The lengthy summary that we give elsewhere in these columns of the report of Mr. Walter D. Hines on the navigation of the Danube is well worth the closest perusal, for it brings out very clearly the handicaps that at present stand in the way of the fullest advantage being taken of this great highway of South-East Europe. Under favourable conditions the Danube should be an invaluable channel for trade promotion in the regions it serves. That it has never yet been, for reasons that are well understood, and even to-day it is not in a position to render the fullest service. Commerce on land in South-Eastern Europe is hampered and restricted by a host of regulations, though the tendency, happily, has been for some time in the direction of their modification; traffic on the Danube is hampered by the tariff barriers of seven different States. Apart from difficulties of this character stretches of the river need to be improved, while port facilities require to be developed. Capital is needed by the riparian States to carry out the requisite works of development, and Mr. Hines points out that it is extremely difficult to secure this capital at reasonable rates, an important factor in this condition being the misgiving on the part of capitalists in other countries as to whether a satisfactory state of international tranquillity exists and will continue in these Danube States.

Cotton Growing in the Sudan.

Cotton growing developments in the Empire cannot be given too much prominence, for it is in the knowledge of what has been, and is being, accomplished that the incentive for future progress is to be found. It is specially satisfactory, therefore, that Sir Geoffrey Archer had an opportunity at a luncheon given by the British Cotton Growing Association in Manchester, of dealing with cotton growing in Africa. He commented on the fact that cotton production in Uganda has been more rapid and remarkable than anywhere else in the British Empire, and he declared that what has been done in Uganda can be accomplished in the Southern Provinces of the Sudan. "I believe," he added, "that were we to start over again in Uganda with the experience gained behind us, we should begin by erecting ginneries, possibly Government owned, and then proceed to encourage the native to grow his cotton in the vicinity. Baled lint will naturally stand transport charges which would kill at the outset the transportation of seed cotton. Under this arrangement the native would probably secure a better price and thus be encouraged to increase his holding. That may be the key to the situation in the Southern Sudan."

Progress in the Gezireh.

Turning to the position in the Northern Sudan, Sir Geoffrey Archer referred to the developments in connexion with the Gezireh scheme. Some 80,000 acres have been brought under immediate cultivation, and next year that holding may be increased to 100,000 acres, and Sir Geoffrey Archer expressed the hope that their water rights would admit later of an increase to 150,000 acres. Further details of the position in the Gezireh were given by Mr. Hewison, Director of Agriculture and Forests in the Sudan, who gave a most encouraging account of the outlook. He said that he had reports from Khartoum that the crop was looking extra-ordinarily well, and that insect pests were less troublesome than in the two preceding seasons. Light rainfall had hindered progress in the Central and North-West Sudan, but the American side of the Sudan crop showed a decided increase from 13,000 to 20,000 bales in spite of deficient rains. The ultimate development possible in the Gezireh was a production of half a million bales. He pointed out that it was more difficult to estimate what was possible in the production of rain-grown cotton, but there was unlimited land, a suitable climate, and in most districts a secure rainfall, and the population was between three and four millions.

The Future of Wembley.

The Exhibition draws rapidly to its close, but so far nothing has been decided with regard to the future of the buildings. It seems clear however, that nothing is likely to come of the suggestion to which I referred recently, that the Exhibition should be continued in its present form. The latest idea put forward is that the Imperial War Museum should be removed there, and that the Dominion pavilions should be maintained as permanent exhibitions of their resources. I should be inclined to think it feasible, were Wembley more accessible, but it would seem to presuppose the continuance of the Amusement Park, if people are to be attracted there in adequate numbers. And I must confess that I am dubious whether even amusements would achieve that end indefinitely.

German Enterprise.

I have on various occasions drawn attention in these columns to Germany's efforts to regain her old predominant position in the Near East. Recently her activities have been particularly in evidence in a number of directions. As might be expected she has been making a special effort to develop her relations with Turkey, and

a significant development in this connexion is the recent establishment with German and Turkish capital of a broadcasting and wireless company. Again the Deutsche Bank is interested in the enterprise, which perhaps suggests the degree of importance that is to be attached to German participation in an undertaking of this character.

Rubber Again.

A report from Colombo that the restriction scheme is to be modified by the addition on November 1 of 20 per cent. of the standard output instead of 10 per cent. caused considerable flutterings in the rubber market yesterday. The price of rubber for distant positions fell sharply, while the share market showed a number of losses on the day. As a matter of fact, there seems to be nothing in the report; at any rate it at present lacks official confirmation; and it seems extremely improbable at this late period in the scheme that the authorities would think it worth while to modify it. But if it were altered would it make much difference now? As far as the shares are concerned, I fail to see why it should be regarded as a bear point. It is one thing to relax restriction, it is another for it to have much immediate effect, and if the estates are able to produce the additional quantities of rubber, I should think it was rather in the shareholders' favour than otherwise. The consumption of rubber is continually on the increase, and if only 1s. per lb. profit is earned on the standard production (and that would presuppose rubber at about 1s. 10d. per lb, a very unlikely contingency for a long time to come) the rubber companies would earn profits sufficient to justify much higher prices than those now ruling.

Commentator.

The Egyptian Ministry of Agriculture is considering the question of sending some experts to England to study the classifying of cotton.

The revenue of Roumania up to the end of September amounted to 23 milliards of lei (says a Reuter message). It is now estimated that the end of the financial year will see a total surplus of at least 35 milliards more than the original estimates.

THE MOTOR SHOW.

(From Our Own Correspondent.)

With no exhibition in Paris this year, the Motor Show looms larger in the limelight than ever before, and if the attendance at Olympia does not reach a record it will be a matter for considerable surprise. So far all the indications point to an unusual degree of interest being taken in the Show, which is a sure sign of the rapidity with which the habit of motoring is growing in this country. America's ratio of cars per population may be, and probably is, for ever unattainable here—personally I devoutly hope that it is, as otherwise I fail to see how we shall get about the streets at all—but it is certain that the present number of cars in use in this country will be vastly increased in the course of the next few years, and the throngs at Olympia are an index of the appreciation that, thanks to the great reductions in the price of cars and to deferred payments, motoring is now within the reach of the average individual. The bulk of the crowds who throng Olympia may not be buyers at the moment, but they represent potential purchasers, and they are there because of that fact and because they know that of each Motor Show it is true that *semper aliquid novi ex Olympia*, and they want to be kept in touch with developments with a view to the time when they can buy a car.

If it is true that there is always something new, it is truer this year than ever. But I should not rank the alterations and improvements—important as they are—as providing the keynote of this year's Show. There are innovations in the bore and stroke of the engines, for instance, there are improvements in a number of other directions, while there has unquestionably been a great advance in car designing. But these things, essential as they are, seem to me of relatively minor consequence compared with the continuance of the price reductions which has brought within sight the possibility of motoring for the million. Cheapness is, in fact, the outstanding characteristic of the Show. It is now possible to get a good light car seating four persons for practically £100. Bearing in mind the changed value of money as a result of the War, that seems a marvellous achievement. And there is a vast range of light cars to choose from. They may not predominate, but they play a very important part, for the number of firms who specialise in the production of this type is large, and Britain now leads in light car production. It remains to take advantage of this fact in the foreign markets such as those of the Near East. The motor trade is now one of the vital industries of this country, but if it is to pull its full weight, it must play an adequate part in the export trade. Catering for the home market, large and growing though it is, is not enough.

I have referred above to the advance in coachbuilding. This is very noticeable throughout the Show. Indeed, it would seem that in this direction there cannot be much scope for any further advance. The outlines of many of the cars are a sheer delight to the eye, and if I cannot say as much for some of the colour contrasts, my excuse must be that I lack the artistic sense. Dark colours in a car appeal to me. Rich blues, dark clarets, and similar hues, seem to set off a car's lines to perfection, but judging by the Show, light colours appear to be very fashionable. They may give a car a beautiful appearance, but I am not one of those who think so.

The King has also approved of the appointment of Lieutenant-Colonel W. M. Craddock, D.S.O., M.C., Calcutta Scottish, Auxiliary Force, India, as Aide-de-Camp to the King (Additional).

Dr. Ugo P. Mifsud, Head of the Ministry of Malta, has left London for Malta.

The Appendices to the Report by the British Government on the administration under the Mandate of the League of Nations of Palestine and the Transjordan for 1924 have been published as a White Paper [Colonial No. 17], price one shilling.

THE IMPROVEMENT OF DANUBE NAVIGATION.

Brief reference has already been made in these columns to the report prepared by Mr. Walter D. Hines for the League of Nations Advisory Technical Committee on Communications and Transit on the navigation of the Danube. We give below extracts from the official summary of the report:—

There are no comprehensive traffic or other statistics for the Danube but the investigation indicates that the Danube freight traffic in 1923 and 1924 was only about 56 per cent. of the normal pre-War traffic. The first six months of 1925 show an increase of about 50 per cent. over the corresponding six months of 1924, the result of a special movement of Serb-Croat-Slovene maize to the sea.

No complete comparison could be made of the amount of pre-War and post-War passenger travel, but the accommodation for travellers is greater than before the War, in Austria, Czecho-Slovakia and Hungary, somewhat less in the Serb-Croat-Slovene Kingdom, very much less in Roumania, and somewhat greater in Bulgaria. There has never been any regular passenger service on the Danube in Germany.

Before the War Austria and Hungarian navigation companies carried most of the Danube traffic, except that a part of the traffic below the Iron Gates was carried by Roumanian and Greek interests. This has been greatly changed. Now the traffic is divided among German, Austrian, Czecho-Slovak, Hungarian, Serb-Croat-Slovene, Roumanian, French, and Dutch navigation companies, and the Roumanian companies have been operating above the Iron Gates more than formerly. This makes the river far more international in its actual utilisation than ever before. The Greek boats, on account of their draught, still confine themselves almost wholly to operations below the Iron Gates.

The Danube fleets, as a whole, are about 25 per cent. bigger than before the War, although the Austrian and Hungarian fleets have diminished considerably, owing to parts of them having become the property of Czecho-Slovak, Serb-Croat-Slovene, Roumanian and French interests as a result of the War. The port and shop facilities are in general as great as, or greater than, before the war, while the traffic is still much less. An important development is the growing use of self-propelled barges for certain kinds of goods. Already there is evidence of co-operation. The up-river companies are in a cartel to stabilise rates. The Bavarian Lloyd and Czecho-Slovak Company have arrangements for joint towing, joint operation of self-propelled barges and common use of some terminals.

Influence of Economic Conditions.

The post-War diminution of traffic has been largely due to the economic depression, characteristic of Europe, but intensified in the Danube countries by the breaking up of the wide free trade area which existed in the Austro-Hungarian Monarchy. At present this former free trade area is cut across by the tariff barriers of seven different States, and this has seriously diminished commerce among them and promises to do so to a still greater extent, except in so far as the situation may be ameliorated by commercial treaties among them. The conclusion of such commercial treaties would be of distinct value to Danube navigation.

Since old Roumania normally produced cereals enabling it to supply one-third of the total traffic moving on the Danube, the ability of New Roumania to produce and export cereals is of first importance to that traffic. But this outlook is unfavourable, because post-War readjustments in the enlarged Kingdom seem to have shut down production while increasing domestic consumption, leaving for Danube transport much less than before the War.

A new practice since the war is that the Serb-Croat-Slovene Kingdom and Roumania now exclude all foreign navigation companies from handling any internal traffic or "cabotage" on the Danube in their respective countries, and also from handling any traffic on certain important tributaries of the Danube, such as the Save and the Bega, which are now treated as territorial instead of international waters.

This adds to their navigation interests large volumes of traffic handled before the War by the Austrian and Hungarian companies. The latter criticise the new practice as diminishing the total traffic through affording less satisfactory service. The questions of right involved are partly conceded and partly disputed, and such disputes can be settled only in such way as may be found in the conventions among the States. But apart from questions of principle, it is a practical question as to how far Roumania and the Serb-Croat-Slovene Kingdom may not find it in their interest to grant limited permissions to foreign companies to participate in this traffic from time to time upon carefully guarded conditions. This might considerably improve local transportation service. Bulgaria enjoys for a long distance eight times as much passenger service as Roumania on account of the latter's cabotage policy. Already, as a matter of convenience, and without waiving its rights, Roumania has granted foreign companies access to its ports on the Bega.

The general conception of a minimum depth of two metres at low water frequently fails of realisation, at times for substantial proportions of the navigable season, because of obstacles which should be removed. Such removal above Vienna would be so costly that it probably could not be done except in connexion with the development of hydro-electric projects. Improvements of this character would correct the present difficulties of navigation and probably be advantageous to the general economic condition of Austria. Such a project is now nearing completion at Passau in Germany and will greatly improve the condition of the river for a considerable distance.

An important stretch of the river, where it is the frontier between Czecho-Slovakia and Hungary, can and should be improved. It is hoped that the two States can promptly co-operate to that end, because this stretch now constitutes the limiting factor in navigation between Vienna, Bratislava and Budapest. Between Budapest and Belgrade there are two points, one in Hungary and one in the Serb-Croat-Slovene Kingdom, at both of which correction of the existing conditions is desirable.

The most difficult stretch on the river is the Iron Gates section. The necessary depth of water is frequently not obtainable. Operation through this section is especially difficult, even with ample water, because the currents prevents the handling of more than one or two barges at a time through the swifter portions. Elimination of these difficulties calls for a comprehensive study of various alternatives, which are set forth in the report. The amounts of money which would be involved are so large that the co-operation of all the riparian States would probably be necessary. This should be promptly entered upon. The inadequate channel at Sulina, the mouth of the river, is now being corrected. The channel between the newly extended jetties was opened on July 25, with a depth of 20 feet, with the prospect that the depth would be restored to the old figure of 24 feet. On July 31, a depth of 22 ft had already been obtained.

It is highly desirable, in the interest of all the Danube countries, for the International Danube Commission to take prompt steps to draw up a general programme for the comprehensive improvement of the river. This involves a determination as to how far the prospective traffic will justify the cost of any particular programme. Such an investigation will take a long time and will call for the services of competent engineers.

Frontier Formalities.

Navigation could be substantially promoted by cutting down the amount of frontier formalities and the time required for them and by providing more adequate port facilities. The frontier formalities now involve a large economic waste, requiring tug boats and barges to remain idle for long periods, estimated to be about 6,000 barge days per year with corresponding loss of time for tugs. These delays are almost entirely post-War burdens, because before the War the Danube crossed no frontier between Passau and Orsova, a distance of 1,272 kms. In this same section there are now four frontiers and six frontier examinations. Hungary and the Serb-Croat-Slovene Kingdom now maintain separate stations at their common frontier, involving double delay, sometimes amounting to an entire day. Both States have indicated that they have no objection in principle to combining their stations, and the report urges that they come to an agreement upon the necessary details to accomplish that result. Much of the delay at the various frontiers is due to the attitude of the local functionaries. The report suggests that the riparian States would be jusified in concerning themselves very actively with this situation so as to stimulate greater expedition. In these matters river shipping appears to be subjected to burdens, delays, and expense which have no counterpart on the railways that compete with the river.

As to port facilities numerous specific situations are discussed. One involves the difficulty of the Czecho-Slovak Company in obtaining a satisfactory terminal in Vienna. This is closely connected with the Austrian difficulty in obtaining satisfactory assurance as to its terminal in Bratislava. The two questions should be considered together and a fair compromise arrived at. The Austrian and Hungarian companies are denied the right to use many of the port facilities which before the War they owned in the Serb-Croat-Slovene Kingdom and Roumania. This grows out of the policy of these two States that all port facilities should be owned and operated by the State; hence their reluctance to permit private companies to establish their own facilities. Nevertheless, there is at present a great shortage of State pontons in Roumania, and a great shortage of State pontons and other port facilities in the Serb-Croat-Slovene Kingdom. Until a State can itself supply ample facilities to carry out its policy, it is suggested that provisional arrangements should be made whereby private companies could provide their own pontons and other facilities. Roumania has already indicated that it has no objection to making arrangements to let the private companies use their own pontons, subject to eventual transfer to the State.

Belgrade's port authorities subject foreign vessels to double taxation, and exclude them from certain forms of international traffic because the landing facilities are on the Save, a territorial river, and not on the Danube. The great and growing business interests of Belgrade cannot afford to have their city thus advertised as a city which has not the same freedom of access to the Danube as is enjoyed by Vienna and Budapest. The future of Belgrade is too important to admit of such a limitation, especially since the State appears to feel that little if anything is gained as a result of the action of the port authorities.

It is highly desirable, in view of the extremely difficult situation of Danube navigation, for the navigation companies to do everything in their power to improve their own efficiency. The question is raised whether they cannot secure more efficient performance of their barges and tugs than is now observable. Reference is made to the extraordinary results which have been accomplished in the United States by analogous efforts on the part of the railways. There may be room for important economies in this direction. More efficient operation would be promoted by providing special telegraph facilities along all of the navigable river. The companies should also seek to co-operate more and utilise facilities in common, such as port facilities, shop facilities and also tug boats, so as to avoid the waste of capital and labour involved in needless duplication. In Austria and Hungary, especially, the existing port and shop facilities seem much in excess of the needs of their own companies. Many of the tug boats probably should be replaced by modern and more economical types. The question is raised whether there is not a great field for the building up of a profitable tourist passenger traffic.

The Danube, like any other transportation system, needs feeders. In large part these feeders should be the railways, and, therefore, there ought to be rail-and-river through rates and bills of lading. A State making through rates with foreign railways loses all benefits from the traffic at the frontier. When it makes through railway and river rates, the likelihood is that the bulk of the traffic will move in domestic boats to final destination and the State and it nationals will enjoy the entire profits of transportation. At present, in many instances, the railways seem to work against the Danube by establishing extremely low rates via other routes. Here sympathetic attention to the just needs of the river should be given by the States, and should be urged by the navigation companies.

The need of the riparian States for capital for public and private purposes is evident. It is extremely difficult to secure this capital at reasonable rates. An important factor in this condition is the misgiving on the part of capitalists in other countries as to whether a satisfactory state of international tranquillity exists and will continue in these Danube States. The Danube conditions themselves constitute an indication one way or the other in this matter. If the States succeed in removing causes of friction on the Danube, that condition will be a favourable argument to encourage foreign capital. To the extent that friction continues in Danube matters the condition will be an indication in the wrong direction.

M. Drosopoulos, pro-Governor of the National Bank of Greece, has arrived on a visit to London.

The Rev. W. G. Batty, formerly chaplain of St. Mark's, Alexandria, has been instituted by the Bishop of Norwich to the rectory of Holme Hale, Norfolk—patron, Mrs. Campbell Broke.

Viscount Chelmsford and Sir Douglas Newton having completed their investigation into the present position and future prospects of irrigation and cotton in Iraq, have left Baghdad for England, travelling by the Amman route.

The King has given Mr. Joseph Clifford, Laboratory Chemist in the Egyptian State Chemistry Department, authority to wear the Insignia of the Fourth Class of the Order of the Nile, conferred on him by the King of Egypt in recognition of valuable services.

The King has approved the appointment of Mr. John Thomas Marten, I.C.S., and Mr. Shripad Balwant Tambe to be members of the Executive Council of the Governor of the Central Provinces in succession respectively to Sir Bertram Prior Standen, K.C.I.E., C.S.I., I.C.S., and Sir Moropant Vishwanath Joshi, whose terms of office expire on December 17 next.

Motors and Motoring.

By G. B. B.

The Motor Show.

One of the things which strikes the visitor to the Motor Show at Olympia this year is the great advance which has been made by British light car manufacturers. In many respects improvements have been made, and whilst quality has in no instance been sacrificed, prices have been reduced in connection with most of the products. It is impossible, even after a lengthy survey, to say which is the cheapest car shown.

Cheapness is not only a matter of price; but for those who are studying economy most closely there are cars priced at about £100; on the other end of the scale are those for which prices in the neighbourhood of £3,000 are being asked and obtained.

A Striking Programme.

One of the exhibits of outstanding interest to overseas buyers, by reason of the fact that their requirements are closely studied by the makers, is that of Wolseley Motors, Ltd. For some years it has been the Wolseley policy to introduce improvements whenever opportunity offered, instead of waiting for the end of a season, and many innovations have recently been made in the 11-22 h.p. model. All the four-seaters now have four doors, and the two-seaters two doors, and both types are fitted with sloping screen. The radiator has been altered in shape, and the lines of the bonnet and scuttle modified, giving the cars a very handsome straightline effect, which is particularly noticeable when approaching one of them on the road. The seating accommodation has been made wider, and the battery has been removed from the running board, being now fitted under the front seat. The hood and the rigid side curtains are in black material, and the painting is in cinnamon brown or blue as selected, the upholstery being in brown rexino.

The de luxe 11-22 h.p. models have been slightly modified in that the curved form of screen base has been altered to a straight base, but the specification in other respects remains as previously, the equipment being even more comprehensive.

The 11-22 h.p. light saloon, which is rapidly attaining great popularity for touring purposes as well as for town work, is now listed in two forms. In one of these the entire body is covered in leather cloth. In the other the lower panels are in metal, finished in the usual "carriage" style. This makes a very smart car, and has the appearance of a carriage much more expensive than the price at which it is listed. Four wheel brakes are fitted to any of the 11-22 h.p. models at a small extra charge.

The 16-35 h.p. model, though similar in general design to last year, has several important modifications which not only improve its running, but render it even easier to handle. The cone clutch has been superseded by a single plate clutch, a type which provides an extremely smooth and progressive "pick-up" without requiring too much attention from the user. The three-speed gear box has been replaced by a new patented gear box giving four speeds forward and reverse, the latter being arranged to remain stationary when not in use. Balance weights are provided on the crankshaft, resulting in very smooth running of the engine, and the foot brakes are operated by cable running direct from the pedal shaft to the levers. The foot-brake pedal has been made adjustable, and snubbers are fitted to the rear suspension. Four wheel brakes are fitted as standard. This model is listed with five types of coachwork, of which the most popular is undoubtedly the five-seater touring car, which is upholstered in English leather, and beautifully finished, and its price of £485 is remarkably low for a car of its high class.

The light saloon introduced last year has also proved very popular, especially with the owner-driver. The front glass is now sloped slightly, and the inside of the door is fitted with polished wood fillets. It is also supplied in alternative form with the lower panels of metal painted and finished in "carriage" style, which gives it a very smart appearance.

The other two carriages fitted to the 16-35 h.p. model are the coach-built saloon, a handsome type of inside-drive carriage to seat four, and the landaurette, a beautiful car of town-carriage type, arranged to seat four inside.

The 24-55 h.p. six-cylinder model is a luxury car of the most modern type, in which every refinement is incorporated. It develops a high degree of power, and will carry with ease and speed the heaviest of carriages. Three types of carriage body are fitted to this model—an open car and two closed carriages. The open car is a very smart and luxurious tourer of the de luxe type, very comfortably upholstered, and is an ideal car for long journeys. It is splendid equipped and finished, and four wheel brakes are fitted as standard.

The five cars shown at Olympia are the 11-22 h.p. four-seater, the 11-22 h.p. two-seater de luxe, with four wheel brakes, the 16-35 h.p. touring car, the 16-35 h.p. light saloon with aluminium panels, and the 24-55 six-cylinder saloon limousine. A very attractive little model of the 16-35 h.p. two-seater is also on show.

Commercial Vehicles.

Very shortly Olympia will be filled with representative commercial motors, and it will be interesting to see the comparative popularity of pneumatic and solid tyres. The tendency on the Continent is strongly towards the use of pneumatic tyres, not only in the equipment of passenger-carrying vehicles, but load carriers. Of all orders for commercial motors now being received by manufacturers, between 75 and 80 per cent. are for vehicles mounted on pneumatics, whilst, as yet further evidence of the favour with which the air tyre is regarded, many lorries, coaches, and 'buses are being returned to the makers to be equipped with wheels suitable for pneumatics. On this side of the Channel, says the *Commercial Motor*, the tendency is only just emerging from the fog of doubt and suspicion in which it has been submerged by the prejudice of the commercial vehicle owner.

That prejudice will rapidly diminish as the result of the experience now being gained in the use of air-filled tyres on 'buses and light lorries now being constructed specially for that wheel equipment. Foreign motor manufacturers are taking advantage of the use of pneumatic tyres to reduce the weight of their mechanism, which, insulated from road shock, need not be so heavy or strong, and it is important that British manufacturers are not behind in the employment of resilient tyres and the adoption of any improvement in their vehicles made possible thereby.

THE BRITISH CHAMBER OF COMMERCE IN TURKEY.

An effort is to be made to strengthen the position of the British Chamber of Commerce in Turkey. For many years before the War a voluntary contribution of 1s. per vessel was regularly collected by H.B.M. Consul-General at Constantinople, and the amount so collected annually was of great material assistance to the Chamber. Since the War, with changed conditions, the contribution is no longer collected.

The British Chamber of Commerce of Turkey and the Balkan States has had to face a very heavy deficit in the past period, and but for voluntary contributions to the Chamber's funds would have been unable to carry on. In view of the many past and present services rendered to shipping and trade interests, the Shipowners' Associations recommend that all ships frequenting the port of Constantinople should consent to contribute to that body a voluntary tax of 2s. for each vessel's entry. This sum, without materially increasing the expenses of the owners, would, it is stated, be of the greatest assistance to the British Chamber of Commerce in Turkey.

Near East Markets.

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received from the Ottoman Bank:—

Teheran, September 5.—There is no change of interest to report.

The contract for the conveyance of mails, by motor lorry, between Teheran and the Iraq frontier has been given to the Banque Pehleri. This institution was recently created by the Minister of War as a military bank, to make advances of pay to officers and men, and to carry on other operations with the personnel of the army. It is not yet known whether it is intended to utilise army mechanical transport for the mail service or whether a special department will be created.

Teheran, September 12.—The bazaars are very quiet, but an improvement is looked for at the beginning of the new month (Rabiolaral). Trade usually improves here at this period of the year.

Opium prices are unchanged: there are few buyers. A small quantity was recently bought by merchants for shipment to France.

Cyprus, October 5.—There is some demand from abroad for barley. The local price for caroubs is 21s. per cantar steady (4½ cantars equal 1 ton). Exporters of cocoons have sold their goods at Marseilles at remunerative figures.

CROP CONDITIONS IN IRAQ.

The Agricultural Bulletin of Iraq for the month ended September 15 gives the following particulars:—

During the calendar month of August the mean maximum and mean minimum temperatures recorded at Hinaidi were 112.4 deg. F. and 74.9 deg. F. as compared with averages of 109.6 deg. F. and 79.1 deg. F. for the same month over a period of 36 years. No rain fell during the month, the average precipitation at Baghdad for September being .02 in. only.

The season was thus one of hotter days and cooler nights than normal and was particularly characterised by low humidity. In general the conditions were good for all crops, but the low humidity of the entire summer has rendered water demands of crops heavier than is usual.

Irrigation conditions also remain very difficult. The rivers continued to fall and the present levels of the Tigris and Diala rivers are lower than any previously recorded. Pump-owners have experienced considerable difficulty in keeping the plants at work, and water shortage is badly felt on most canals. Where crops received sufficient water, fresh vegetative growth commenced towards the end of August after the check imposed by the previous excessive heat.

Sowing of winter cereals commenced in Northern Iraq during the period under report. It is believed that the areas sown will be less than usual due to the high prices of grain for seed, and also to the lesser areas ploughed last winter. In Lower Iraq early sowings of barley for fodder were commenced.

The reports of the cotton crop continue to be good. Up to the end of August, 220 tons of new season's seed cotton were delivered at the ginnery as compared with 300 tons for the same period last year. Picking was general during the whole period under review, and in early September much new top growth was formed and flowering became profuse. In Mosul the especially early types which were sent up for late sowing (after locust depredations had ceased) are doing very well and promise to give a good yield. A certain amount of damge is now being done by the spotted boll-worm, but it is very insignificant as compared with last year.

The date market opened at Basrah during August. In spite of the good crop the prices opened high but later showed signs of weakening. Only Hallawis were being generally sold during August, but since then the market has opened for Khadrawis and Sayer. The crop has remained more than usually free from disease and the quality of the fruit is reported to be good.

Analyses of Diala river water at the Experimental Farm show the extraordinary high salt content of 285.6 parts per 100,000 of soluble salts, as compared with a content of 38.1 parts per 100,000 in the canal waters which take off above the barrage, and 30.3 parts per 100,000 for the Tigris at Baghdad. This alarmingly high salt content constitutes a record and great anxiety is being caused thereby.

During the period under report the district work of this department was wound up, and the offices at Basrah, Mosul, Hillah, and Baqubah were closed and the district inspectors attached to these offices were withdrawn.

The July-August exports of wheat from Iraq were 117.25 tons and of barley 211 tons, total 328.25 tons as compared with 7,767 tons exported during the same period last year. The August exports of dates were 3,814.5 tons, valued at Rs.4,40,992-2, as compared with 1,573 tons, valued at Rs.2,52,675 for August, 1924. The July-August exports of wool were 1,697 tons as compared with 10,238.5 tons during the corresponding period last year.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended October 3:—

Sultanas.—The arrivals since the opening of the season are estimated at 13,600 tons, and the sales to date are put at 12,000 tons. Closing prices Smyrna, per cwt. c.i.f. London/Liverpool are:—Type 12, 70s.; type 13, 61s.; type 14, 64s.; type 15, 67s.; type 16, 70s.; type 17, 74s.

With the covering of forward engagements for September shipment, the market is now lacking the support of forced purchases and shows a weakening tendency. Consuming markets abroad are not responding freely to the high level of prices established during September and the demand is relatively small. Dealers show a disposition to make concessions in prices, but foreign equivalent costs have been adversely affected by exchange rates.

Figs.—The arrivals are estimated at 123,167 bags, and the sales to date are put at 109,842 bags.

The market closes very strong. Grades suitable for packing in layers and pulled have advance during the week on a reduction of supplies and continued demand. Natural grades are firmly held and would undoubtedly advance on the receipt of favourable advices concerning the Corson, Sinala, and Kioto parcels now just arrived or about to arrive in New York.

TURKEY'S TOBACCO CROP.

From the reports received from all tobacco producing centres, (says the British Commercial Secretary at Constantinople in a recent report), it would appear that in spite of the more extensive area cultivated, the total crop will be smaller in quantity, in comparison with that of last year, in consequence of the prolonged drought. This drought was particularly felt in the Smyrna region where the output has been reduced by upwards of 40 per cent.

The estimates of the crop from all districts are (in tons):—Smyrna, 13,00; Samsoun, 5,750; Dousdja, 2,800; Ismidt, 7,270; Broussa, 5,050; Panderma, 2,800; Adrianople, 3,960; Tachova, 4,950; Trebizond, 1,550; total, 47,130 tons. The estimate of the Tobacco Monopoly for the total crop is 46,000 tons.

The quality of the new crop has every indication of being exceptionally good, big leaved tobacco being rare, and practically no cases of diseased plants have been reported.

There is already an active demand for this year's output, the Tobacco Monopoly being a prospective purchaser of 10,000 tons, whilst practically the whole of the Smyrna crop and 4,000 tons of the Samsoun crop appear likely to be bought up by American firms. It would appear, therefore, that the total quantity available for other markets will not exceed 20-23,000 tons.

British Consular Reports

VI.—GREECE.

The British Commercial Secretary at Athens, Mr. R. F. H. Duke, in his report on the industrial and economic situation in Greece for the years 1923 and 1924, comments in detail on the changes which the country has experienced and is experiencing. He says:—

The unconstitutional régime set up in November, 1922, continued until the end of 1923, and the National Assembly did not take over the reins of government until January, 1924. The Revolutionary Government, though doubtless animated by the best intentions, particularly as regards the economic re-establishment of the country, was not in all respects able to give practical effect to its ideals. The result was a condition of uncertainty in commercial and industrial circles, which naturally hampered economic development to a very serious extent. At the same time it diminished the confidence of foreign capitalists, manufacturers, and exporters in the future of Greece. The efforts of the Government to improve the exchange resulted in the most violent fluctuations of the drachma, and their apparent success in raising its value nearly three times within one month—from 360 at the beginning of May to 120 at the beginning of June—merely resulted in a general dislocation of trade and industry. At the same time their anxiety to increase the revenue of the country in order to meet in some degree their overwhelming expenses showed itself in financial measures which not only alarmed and disconcerted the inhabitants but threatened to alienate entirely the foreign capital of which they were in need. British exporters to Greece found themselves in special difficulties owing to the instability of the exchange and the reduction in business brought about by political uncertainty and the increase of customs duties, while those already established in Greece were continually harassed by the threat and application of burdensome taxation, the rise in operating expenses, administrative delays and legislative innovations.

With the establishment of parliamentary governmen, however, a remarkable change took place, and the year 1924 may almost be regarded as a milestone in the economic development of Greece. The struggle between the supporters of the royalist and revolutionary régimes respectively, which had for so long kept the attention of all Greek citizens fixed on political questions, had closed with the withdrawal both of the Royal Family and of the chief of the revolution at the end of 1923, and although disputes between the different minor political groups continued to prevail throughout the year and frequent changes of ministry took place, there was a general consensus of opinion in the successive Governments that the moment had arrived to devote their energies principally to the internal reorganisation of the country and the re-establishment of confidence among foreign nations in its economic future. In this respect the events of the past few years have, paradoxically enough, resulted in fact in a general strengthening of the economic position of Greece, the full effects of which must take some years to mature. The flight of refugees from Thrace and Asia Minor after the Smyrna débacle, followed by the expulsion of Greek subjects from Constantinople and other Turkish centres, had a twofold effect both in increasing the industrial and agricultural population of Greece by a large number of skilful and industrious elements and in depriving her nearest neighbour and commercial competitor of the backbone of her economic organisation. The influx of Greek merchants, labourers and artisans brought a new and revivifving element into Greek commercial and industrial life, which was gradually decaying under the atrophying influence of continued obsession with military and political interests. A considerable impulse was given to this movement by the decision of the League of Nations to come to the financial assistance of the country by relieving it of the greater part of the burden of supporting and installing the new population, and the confidence thus expressed by foreign countries in the ultimate ability of Greece to rehabilitate herself economically has been of inestimable value. Many years must necessarily elapse before the full fruits of this movement become visible, but at any rate a beginning has been made, and when the extravagances of the present "boom" have been modified an era of steady progress may be expected.

As regards British trade, the situation has shown some improvement. Little attempt was made in 1924 to increase or even enforce the heavy taxation which at one time threatened to make the position of foreign commercial interests intolerable. The Government are beginning to realise the desirability of facilitating the investment of foreign capital in Greece and the co-operation of British industry in the development of the country. A feature of the year has been the movement towards the industrialisation of Greece and the organisation of hitherto petty industries on broad modern lines. The desire for immediate results, however, led to an attempt to ensure for the new industries a complete monopoly of domestic consumption by imposing, in the revision of an admittedly obsolete tariff, a series of heavy protective duties on foreign goods, but the opposition with which the new tariffs were received by the mercantile community and from the point of view of the already excessive cost of living, when it came to the point of application, has ensured the postponement of these operations and the careful revision of the schedule, which will lessen the urgency of the protests which foreign countries must otherwise necessarily make if their trade with Greece is to be maintained. The financial situation of Greece has been improved by the relative stability of the exchange, thanks to the comparatively quiet political situation, the advances of money from abroad, and the direct efforts made by the Government through the National Bank to prevent undue fluctuation and suppress speculation, and repetitions of the disastrous panic of the spring of 1923 have been successfully avoided. At the same time distinct efforts have been made to control and reduce Government expenditure, and a Committee of Economy, established in July, 1924, is still pursuing its investigations with some results.

New Companies.

The general development of trade has encouraged the investment of Greek capital in Greek enterprises of an industrial and commercial value. In 1923 twenty-four new limited companies were founded with a total capital of 48½ million drachmæ, 100,000 francs, and £36,000 sterling, while existing companies increased their capital by 56 million drs. In 1924 the number of new companies was no fewer than forty-seven with a capital of 195 million drs., £145,000 and 100,000 frs., while increase of capital totalled 82 million drs. Provided care is exercised in regard to the taxation of companies, great benefit should accrue to Greece from the investment of money belonging to Greek nationals hitherto prudently kept abroad. The cost of living, as is natural in a country with few exportable resources and heavy demands on foreign exchange, continues to rise, and is out of all proportion to the standard of life in general, which is far lower than that prevailing in the more important European countries. The development of agriculture by the introduction of refugee labour and the creation of new agricultural areas by irrigation and drainage schemes and improved transport facilities should contribute to a reduction of prices in due course. The improvement in the prosperity of the country has reacted favourably upon business transactions with British firms. Complaints of failure to meet obligations are more rarely heard, and practically no additions have been made to the list of claims against defaulting purchasers, so regrettably familiar in previous years following the War. At the same time distinct progress has been made with the settlement of outstanding claims (other than general war debts) both against the Greek Government and against individual firms. The former at the end of 1922 stood at some £774,000, 11 million drs., and 2,714,000 dols. (Canadian). By the end of 1923 the list had been reduced to £670,000, 3,300,000 drs., and 2,714,000 dols. Of this amount the last figure represented

Digitized by Google

Canadian Government claims, which were settled by an agreement drawn up in December, 1923, and approximately £250,000 were claims by His Majesty's Government, which have now been included in the general arrangements for the settlement of Greek war debts to Great Britain which are being made between the two Governments. After deducting these items and adding new claims the present figures are £328,000, 4,643,000 drs., and 435,000 frs., and it is hoped that this outstanding balance will soon be satisfactorily settled. The shipping industry has made considerable progress, and has been greatly helped by the stagnation of Constantinople and other Turkish ports. The improvements now being carried out in the port of Piræus and shortly to be effected at Salonika, Cavalla, and elsewhere will greatly enhance the popularity of Greek ports, and British shipping, which already has a preponderant influence, will doubtless profit from the general development.

Industrial Enterprises.

Brief reference has been made above to the effect which the influx of refugees has had upon the development of industry in a country which formerly derived its prosperity almost solely from mercantile shipping and agricultural enterprise. The development was not so marked as might have been expected in 1923 owing to the instability of exchange and the abnormal internal situation. During 1924, however, great strides were made. In 1923 some forty-one new industrial enterprises, fourteen of which were limited companies, including twelve factories for food products and nine textile works, were founded. In 1924 the number reached seventy-seven, of which twenty-eight were limited companies, with a total capital of 120 million drs. In addition, existing industrial concerns increased their capital by 47½ million drs. This development has been assisted by the organisation for the first time in Greece of a general Conference of Industry and Navigation, as well as by the powers granted to the Government for the expropriation of buildings and land for factory establishment and extension; 697 applications were received for this latter facility against 144 only in 1923. Extensions of plant are indicated by the increase in the number of oil engines imported from thirty to 151. It is also worth noting that of the patents registered in Greece some 70 per cent. were Greek, as compared with only 30 per cent. in 1920.

Foreign Trade.

In 1924 Great Britain became the largest supplier to Greece owing to heavily decreased value of imports of foodstuffs from the United States, and Canada appeared in the list for the first time, having previously been classified under other countries, although her total trade with Greece in 1923 actually reached a higher figure. By far the greater part of the imports into Greece from Great Britain fall into two categories—minerals and raw metals and yarns and tissues. The latter alone, both in 1923 and in the first nine months of 1924, comprise more than half the value of imports from Great Britain and about 40 per cent. of the total imports of textiles into Greece from all sources. It is not possible to show the values by countries for the different classes of goods in the main categories. The most important item under minerals and raw metals is coal; the greater part of this trade was in British hands. The other important items in this category are iron, petrol and wire. In 1923 and 1924 we held a comparatively small proportion of the imports of iron and wire, the trade being mainly in Belgian hands. The most important single category of imports was agricultural produce. Wheat, which was imported to the value of 855 million drachmas in the first nine months of 1924, was obtained mainly from Canada, over 60 per cent. of the total quantity coming from this source. Imports from Great Britain in this group consisted mainly of dyes, sulphate of copper, hides, leather, machinery and other metal goods, hemp manufactures, sacks and linoleum. British trade with Greece continues, of course, to be unfavourably affected in relation to her competitors by the rate of exchange and the high cost of freight. In staple commodities, however, there is no doubt that the reputation of British goods is still high and that there will always be a steady market for them.

What is most needed is enterprise in pushing new lines, the careful selection of agents, frequent personal inquiry into the special needs and new development of the market by British travellers. These efforts must be particularly vigorous in the next few years, and British exporters must expect to have to face an increased tariff on many of their leading lines of trade apart from the general increase of about 30 per cent. which results from the classification of goods by kilos instead of by okes.

As is naturally the case in a small country like Greece, with little industry, no coal and limited supplies of cereals, imports largely exceed exports, the difference in 1924 being approximately £18,000,000. This is accounted for partly by shipping profits and remittances from Greek emigrants abroad. The former are hard to calculate, but cannot be inconsiderable, while the latter, after a setback during the years of uncertainty, have begun to come in with greater regularity, and the Bank of Athens estimates the resources thus entering the country at about eight and a half million pounds. Probably, therefore, the net trade deficit is somewhere in the neighbourhood of seven or eight millions sterling.

The country is generally becoming alive to the importance of developing her export trade. In June, 1923, the export dues on a number of local products were removed, including currants and other fruits, olive oil, marble, magnesite and other mineral ores, soap, cement, wines and spirits, silk, preserved fruits, vegetables, and at the same time the remaining duties were appreciably reduced.

(To be continued.)

INDIAN AGRICULTURE.

The following *communiqué* has been issued by the India Office:—In September the rainfall was sufficient on the west coast and the circars of Madras Presidency, in Central India, East Assam, and the greater part of Burma. Excess rain caused considerable damage to crops in the Eastern and North-Eastern districts of the United Provinces and parts of Oudh and Bundelkhand. More rain was needed in the Western and some other districts of the United Provinces, the Punjab, Rajputana, Ajmere-Merwara, Baluchistan, the North-West Frontier Province, most of the Punjab States, Bombay Presidency, Sind, Western India States, Malwa, and Bihar and Orissa.

The condition of the standing crops is generally fair; but the uneven distribution of the rainfall in many Provinces has damaged the crops to some extent. Fodder and grazing are generally available, but insufficient in parts of Baluchistan, Rajputana, and Western India States. Scarcity of fodder and water is apprehended in Rajputana and of fodder in Ajmere-Merwara.

Prices are lower than last year in Burma and most of the districts of Madras Presidency; are fluctuating in Bombay; are tending to rise, or rising, in the United Provinces, Rajputana, Ajmere-Merwara, Baluchistan, the North-West Frontier Province, and the Western India States. Prices are steady at a high level in Bihar and Orissa; are stationary in Central Provinces, Central India, and Assam. The price of rice is rising in Bengal but is lower in Burma. The price of wheat in the Punjab is slightly lower than at the corresponding period of last year. The rise in the price of jute in Bengal is apparently due to the expectation of short harvests, the estimated yield being 3½ per cent. less than last year.

The condition of cattle is generally fair, except in Rajputana, where disease prevails.

On the whole the economic conditions continue to be fair, but the agricultural outlook in Rajputana, Ajmere-Merwara, and the hilly tracts of Assam is unfavourable.

The Armstrong Construction Company, has been entrusted by the Air Ministry with the construction at Karachi of one of the largest air ship sheds in the world.

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended October 10, states:—

The American Agricultural Bureau has given another shock to the market. Its report, published on Thursday evening, regarding the total yield indicated by the state of the crop on October 1, gave the figure of 14,759,000 bales of which 7,102,000 had already been ginned. The former figures represent an increase of no less than 828,000 bales since the last report was issued a fortnight previously. The figures naturally astounded the markets both here and in America and so far as Manchester is concerned are held to confirm the adverse opinion of the Bureau's methods which has obtained here for two or three seasons past. Feeling here throughout the season has been that the crop was being under-estimated, and whilst there is still time for the total to be considerably reduced through bad weather, etc., it would appear to have been right.

Whilst the dislocation of prices which a bumper crop would cause may be very disconcerting for the time being there can be no doubt at all that cheaper American cotton and sufficient of it to enable the mills using it to run full time, which latter will in its turn lower production costs, will make a vast improvement in the outlook for Lancashire trade.

Yarn.—Trade in this section shows very little change from the previous week. Spinners both of American and Egyptian cotton find business difficult to obtain, and competition for such orders as are on offer is keen. It is hoped that the fall in raw cotton prices will bring out a larger business.

Cloth.—There seems to have been a larger inquiry for cloth, but the volume of actual transactions is probably about the same as last week. A very encouraging sign, however, has been a notable improvement in the demand from India. As has been the case in recent weeks this runs chiefly on goods for early delivery, and is taken as an indication of an urgent need for goods. Nothing special can be reported with regard to other markets, the business for the Continent which was quite a feature recently having fallen away somewhat.

Raw Cotton.—Prior to the issue of the Bureau report prices had shown a falling tendency, but on the figures becoming known there was, of course, a heavy break. Business in Liverpool has not been very active. Reports regarding the Egyptian crop continue to be favourable; prices for this description are substantially reduced in sympathy with American. Closing prices yesterday were as follows:—American Middling 11.53d. Egyptian Fully Good Fair Sakellaridis 27.cod.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended October 1, state:—

Since our last report the futures market has been rather active with wide fluctuations, but at the close prices show little change on the week. Sakellaridis 0.12 dollars down for November, 0.10 dollars down for January, unchanged for March; Ashmouni 0.10 dollars down for October, 0.02 dollars up for December, 0.20 up for February.

The erratic movements of the Sakel futures contract must be attributed to the contradictory elements to which this market has been subjected in the course of the week: on the one hand, much better inquiry from abroad and rumours of support of prices by Government purchases, on the other hand better news regarding the Sakel crop and increased daily arrivals from up country resulting in heavy depreciation of premiums. With regard to the Government intervention, nothing definite has yet been heard. Our opinion is that the Government will not embark on purchases of any size while November keeps over 40 dollars. Ashmouni has more or less followed New York fluctuations, and it looks as if the present difference between the two markets will be maintained for the time being. The demand from abroad has been conciderably better and the consequence has been an improved turnover of business on the spot market. Although the demand has been again principally for the Ashmouni qualities, the turnover has been distinctly larger than during the preceding week. The week's receipts amount to crs. 297,518 against exports crs. 61,199 the stock stands at crs. 896,333.

Spot: Minet el Bassal has only been open four days this week but a good business has been done and sales amount to about 17,900 B/s of which we estimate 7,000 B/s Sakel, 8,500 B/s Uppers, 1,900 B/s Zagora, 450 B/s Pilion and 50 B/s White. Arrivals are fairly heavy and, with a demand nothing like sufficient to absorb them, there has been generally a tendency for premiums for spot to ease in all growths.

Sakellarides: A fairly good business has been done, mainly in the better grades; the medium qualities have been only in moderate request and the low grades neglected. Spot differences are generally appreciably cheaper, especially for the higher grades and holders have offered their cotton freely.

Ashmouni and Zagora: have met with a good demand. Low grades have been neglected and the good and medium qualities have absorbed the bulk of the business. Spot differences are generally without much change but inclined to weaken.

Pilion: has been in fair request mainly for the better styles. Spot differences are generally considerably cheaper.

Brown: is neglected and no business is reported.

White: A retail business has been done. Quotations of spot have eased considerably.

Crop 1925: News on the new crop may be summed up as follows: Everything goes on well in Upper Egypt and a crop of 3 million kantars is very probable. In the Delta, varieties other than Sakel are in a satisfactory condition and it is expected that the yield per feddan will be equal or superior to last year.. With regard to Sakel, the improvement reported last week has been maintained but present indications point to a yield per feddan at least 10 per cent. inferior to that of last year.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

YUGOSLAVIA.

Motor Vehicles.—The Ministry of Posts and Telegraphs invites tenders for the supply of a number of motor vehicles of various types. October 24. (D.O.T.)

INDIA.

Various Goods.—The Director-General, India Store Department in London invites tenders for (1) Steam trawler, second-hand, 125 to 140 feet not exceeding 15 pears of age built to Lloyd's or British Corporation requirements; (2) india-rubber buffer springs, etc.; (3) division plates for india-rubber buffers, No. 66,420; (4) engine turntables, No. 4; (5) lavatory fittings, door locks, etc., for railway carriages; (6) steel work for railway erecting shops; (7) two locomotive engine, 2-8-2 type, 2 ft. 6 in. gauge; (8) steel measuring tapes and refills for linen measuring tapes, No. 4,000; (9) buffers, axleguards, etc., for railway carriages and wagons; (10) mild steel plates, tone, 170; (11) mild steel bars, round, flat, angles, etc., tons, 457; (12) bolts and nuts, tons, 85. Tenders due on October 20 for Nos. 1, 2, 3; October 23 for Nos. 4, 5, 6, 7, 8; October 27 for Nos. 9, 10, 11, and 12.

THE SUDAN.

Steamers' Stores.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply of steamers' stores, of the following general description, to the Egyptian Irrigation Service in the Sudan: oils, greases, cleaning materials, packing and jointing, hemp and wire rope and yarn, lamps, small tools, paints and enamels, brushes and brooms, bolts nuts and pins, lifebuoys, oars, piping, minor electric light spares. October 23.

Fuel and Oil.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply of the following fuel and oil for the hydraulic dredger:—(a) 3,200 tons of Welsh steam coal briquettes; (b) grease and oils. Contractors may tender for one only of above groups. October 27.

COMPANY MEETING.

SOUTH INDIAN RAILWAY COMPANY.

The ordinary general meeting of the South Indian Railway Company, Limited, was held on October 7 at the offices of the company, 91, Petty France, Westminster.

Mr. Alex. Muirhead, C.I.E. (chairman and managing director), who presided, said that the accounts and report would, he thought, be considered as showing satisfactory results under the adverse conditions that prevailed during a part of the year when as he explained at the last general meeting, the railway was seriously damaged by the unprecedented floods that occurred in July, 1924. Owing to the difficulties of travel arising from the breaches, there was a falling off in the earnings of the year of nearly 11 lakhs of rupees.

But against that fall in earnings there was a reduction in working expenses of nearly 19 lakhs of rupees, arising from two principal causes, one being the partial interruption by the breaches of their programme of renewals on which consequently expenditure was some 7 lakhs less than in the previous year; and the other being the receipt of a windfall in the shape of a refund of Indian Customs Duty, following on a decision of the Bombay High Court, confirmed by the Privy Council, that stores imported for a State Railway worked by a company, were Government stores, and not liable to Customs Duty. He must add, however, that freedom from liability had since been stopped by legislation, and duty was now payable on material and stores imported into India by railways. By that adventitious aid the net earnings worked out to Rs.8,04,646 more than in the previous year, and amounted to Rs.2,25,99,845.

While the outlook for the next few years required that too sanguine a view should not be taken of dividend prospects, the board felt justified in again recommending a final distribution for the year of the same amount as last year, namely, 4¼ per cent., less tax, making the total for the year 8 per cent., of which 3½ per cent. represented guaranteed interest, and 4½ per cent. the contribution from surplus profits.

The directors, as usual, had been informed by cable of the approximate results of working for the first half of the current year. The gross earnings for that period were higher by Rs.19½ lakhs than those of the corresponding half of last year, and had, therefore, more than made good the fall of Rs.11½ lakhs which occurred in the earlier period of last year. Working expenses were also higher by nearly Rs.14½ lakhs, partly as the cost of earning the additional revenue, and also because the company was getting on with its renewal programme work on which was hindered by last year's floods. The net earnings were therefore about Rs.5 lakhs more for the half year, and the company's estimated share of the surplus profits for that period was Rs.4,45,000, compared with Rs.3,73,872 for the corresponding period of 1924.

Working costs had greatly increased of late years. Salaries and wages which seven years ago cost 72½ lakhs of rupees, and amounted to less than 10 per cent. of gross earnings of the system, were last year Rs.140¾ lakhs, and were nearly 25 per cent. of the gross earnings produced by the higher rates and fares now in force. There was no prospect of any great reduction on the outlay, nor upon the present-day costs of stores and materials required for working, maintaining, and renewing the railway. They could not, therefore, contemplate without anxiety any proposals which might have the effect of reducing earnings even temporarily. They had a fairly heavy programme of renewals before them. Then there was a big programme in hand for the construction of new lines.

The King and Queen of the Belgians will call at Malta on November 5 to visit the Mediterranean Fleet on their way home from India. A great State ball was given at Viceregal Lodge, Simla, on October 8, in honour of their Majesties.

COMPANY NEWS IN BRIEF.

The production of Hamilton's Concessions (Roumania) for September amounted to 1,220 tons.

The production of the Dacia Romano Petroleum Syndicate for September was 1,000 tons.

The production of the Anglo-Egyptian Oilfields for the week ended October 1 was: Gemsah, 17 tons; Hurghada, 3,324 tons.

The production of the Indo Burma Oilfields for August was 3,420 barrels, being 2,344 barrels from Yenanma field and 1,076 barrels from Paduakpin field.

The production of crude oil by the British Burmah Petroleum Company and the Rangoon Oil Company for September amounted to 56,276 barrels.

The Alexandria Water Company announces a dividend of 4s. per £5 share. Coupon No. 74 is payable on October 15 instead of on December 15, 1925, as printed on the coupon.

The Indo-European Telegraph Company has declared an interim dividend at the rate of 5 per cent. per annum, free of tax, payable November 2 to shareholders registered October 16.

The directors of Furness, Withy and Co., Ltd., announce a dividend on the ordinary shares at the rate of 5 per cent. per annum for the half-year ending October 31, 1925, being 6d. per share, free of tax. Warrants will be posted on October 31 to shareholders registered October 13.

Messrs. N. M. Rothschild and Sons announce that, as the suspension of the payments by the Egyptian Government for the due service of the Ottoman 3½ Per Cent. Loan of 1894, secured by the Egyptian Tribute, still continues, the interest coupons due on October 15 cannot be paid.

The production of the Phœnix Oil and Transport Company for September was 16,393 tons gross, the throughput being 23,064 tons. (Office note.—According to telegraphic advices received from Roumania, well No. 28 in the Stavropoleos area entered the new deep sand and came into production on October 2 with an output of over 1,000 tons per day, but became temporarily stopped in the afternoon of October 4. No further announcement will be made in regard to this well.)

The Egyptian Delta Light Railways announces that coupons for accumulated arrears of dividend on the Five and a-Half per Cent. Cumulative Preference shares for the years ended March 31, 1924 and 1925, are now ready for issue. Preference shares Nos. 1 to 104,078 are entitled to the following coupons:—For 1924 coupon, "X" representing 1½ per cent. (3s. per share), less income-tax; for 1925 coupon, "Y" representing 1½ per cent. (3s. per share), less income-tax.

A Persian Mission, headed by the Persian Minister to Egypt, left Cairo last week for Jeddah in order to get first-hand information concerning the situation in the Hejaz, and to investigate the reports, which have given rise to a certain uneasiness lately in Persia, of the reported damage done to the Holy Places by the Wahhabi followers of Ibn Saoud.

COMPANY NOTES AND REPORTS.

THE NIZAM'S STATE RAILWAYS.

The report of H.E.H. The Nizam's Guaranteed State Railways Company for the year ended March 31, states that the gross earnings of the broad gauge system were Rs.1,01,58,282, the working expenses were Rs.37,76,942, and the net earnings were Rs.63,81,340. The percentage of working expenses to gross earnings was 37.18. The net earnings in sterling (excluding the Bezwada Extension) were £458,378, compered with £340,338. The sum required to meet the charges for the year in respect of debentures and loans, together with 5 per cent. on the capital stock, and provision for the estimated taxation liability, was £251,062, leaving a surplus of £207,316, divisible between the Government of H.E.H. the Nizam and the company. After adding the profit on exchange on a proportion received prior to March 31, 1925, the company's share amounts to £103,688. The gross earnings of the Hyderabad Godavery Valley Line were Rs.80,15,781, the working expenses were Rs.34,26,168, and the net earning were Rs.45,89,703. The percentage of working expenses to gross earnings was 42.74; the net earnings in sterling being £343,304. The sum required to meet the charges for the year in respect of debentures and loans, and to make provision for the estimated taxation liability, was £111,208, leaving £232,096 divisible between the Nizam and the company. The company's share amounts to £116,048. The board recommend a final dividend of 4 per cent. on the capital stock for the year, plus a bonus of 3½ per cent., less tax, making a total distribution of 11½ per cent. for the year.

BURMA RAILWAYS.

The directors of the Burma Railwys Company, Ltd., recommend a final dividend of £2 per cent., together with a bonus of £3 per cent., both subject to tax, on account of surplus profits, to be distributed with the guaranteed interest of £1 5s. per cent., less tax, payable on January 1, 1926, making in all a return of £10 per cent. for the year 1924-25.

MADRAS AND SOUTHERN MAHRATTA RAILWAY.

The directors of the Madras and Southern Mahratta Railway Company, Ltd., recommend a dividend and bonus for the half-year ending December 31, 1925, payable January 1, 1926, of £5 per cent., viz., guaranteed interest £1 15s., and surplus profits £3 5s., which will make, with the dividend and bonus of £4 per cent. paid in July last, a total of £9 per cent. for the year.

AFRICAN AND EASTERN.

The African and Eastern Trade Corporation, Limited, officially announce their decision to issue to the ordinary members on October 14, 1925, the 439,632 unissued ordinary shares, together with a similar number of 6 per cent. cumulative B. preference shares in the proportion as nearly as possible of one ordinary share of £1 each at the price of £1 5s. per share and one 6 per cent. cumulative B. preference share of £1 at par for every eight existing ordinary shares held by such shareholders on that date.

TEA COMPANIES.

The New Sylhet Tea Estates has declared an interim dividend on the ordinary shares at the rate of 10 per cent., payable October 21.

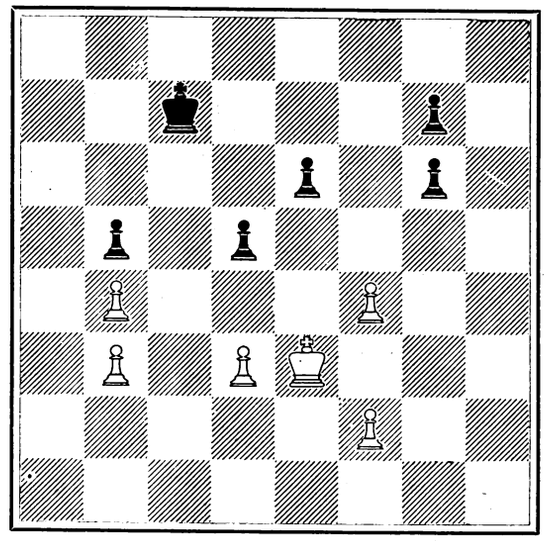
The Bogawantalawa District Tea Company has declared an interim dividend of 7½ per cent. on the ordinary shares, less tax at 4s. payable October 15.

Mr. Himbury, general manager of the British Cotton Growing Association, is leaving at the end of the month to inspect the cotton-growing areas of India, East and Central Africa, Kenya, Tanganyika, Uganda, and the Sudan.

The quantity of gold extracted from the mines in India during July amounted to 32,542 oz., valued at Rs.18,38,623.

CHESS.

By "CARO-KANN."



PROBLEM No. 17.
White to play.—What result?

Solution to Problem No. 16:—1 . . . . P—B6; 2, K—Kt3, PxP; 3, K—B2, K—B3; 4, KxP, K—K4; 5, K—B2, K—B5; 6, K—K2, K—Kt6; 7, K—K, K—B6; 8, K—Q, K—K6; 9, K—B2, K—K7; 10, P—Kt3, K—K6 and wins. It is curious to note that if Black plays 1 . . . . P—B5 he only draws. Play would continue: 2, PxP, P—B6; 3, K—Kt3, PxP; 4, K—B2, P—K6; 5, P—B5, K—B2; 6, P—Kt4 and draws.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

After Locarno—The Balkans.

Now that the seemingly impossible for the West has been achieved at Locarno, the goal of Balkan unity need not appear so unattainable as it has hitherto to most observers. What is wanted is that before the influence of the Locarno example has passed Governments and peoples in the Balkans should have their minds directed into practical channels for removing the evil results of the Great War by the introduction of genuine, that is an agreed, peace in the Peninsula. There is a tendency in some quarters to advocate a piecemeal peace, the conclusion of separate treaties between pairs of States, or a second Little Entente overlapping and so dovetailed into the other one. In these pages we have never ceased to urge the cause of a Balkan federation, believing that sooner or later, however black the outlook appeared at the moment, both the common sense of the nations themselves and economic pressure would work to this end. Nothing short of true unity will meet the case. Behind the conclusion of separate pacts lies the fallacy that a federation can be built up on things as they were left by the Paris Peace Conference. It can not. The essence of that Conference was envy, hatred, and all uncharitableness. It is possible to enforce its provisions and maintain peace; but the spirit required for a successful federation will always be missing, until some of the graver injustices have been removed. We cannot disguise from ourselves that this doctrine is unpopular in the Balkans, but this circumstance does not impugn the accuracy of the contention. The Little Entente has a purely negative value; it has—let it be granted—kept Hungary quiet; but it has not been the means of releasing a single soldier in Roumania or Yugoslavia for productive work, nor has it added directly or indirectly to the revenue of either country. A Balkan Federation will be an active agent for the building up of the internal prosperity of the Peninsula. The sense of internal security will enable individual military budgets to be reduced; the confidence engendered abroad will loosen the purse-strings of foreign capital and lead to unprecedented industrial activity. These and other advantages are well worth the minor sacrifices that are necessary for an agreed peace. The first requirement is a statesman who can inspire the confidence that Mr. Austen Chamberlain has in Western Europe.

Arabs in Palestine.

A change of High Commissioner in Palestine afforded the Arab population an excellent opportunity of reviewing the policy that that they have hitherto adopted towards British administration. Two courses were open to them; after the long trial given to non-co-operation, without any practical results from their point of view, they could have frankly abandoned their former attitude and resolved to try as an experiment straightforward co-operation with the British Government; or they could inaugurate an intensive campaign of agitation with the ideal of pressing home any advantage that they imagine comes to them by the substitution of Lord Plumer for Sir Herbert Samuel as High Commissioner. Apparently they have decided in favour of the latter course. A delegation of fifty Arab notables has waited upon Lord Plumer to submit a memorandum of Arab grievances. It was a long one, and covered all the familiar ground from Lord Balfour to Mr. Bentwich. The High Commissioner listened to the recital and undertook that the memorandum would receive his attention. It is unnecessary to state that such a document will be carefully considered, for Great Britain has the strongest possible interest in removing any source of friction in Palestine. As Arab grievances in the past have been often examined and found to be either imaginary or of such a nature that under existing conditions they could not be removed, even if they entailed the alleged hardships, the British Government would probably prefer that these grievances should be discussed by the Arabs from within the Administration rather than form the subject of a Memorandum presented from outside. From a cabled summary of the Arabs'

Digitized by Google

representations it would appear that stress was laid on alleged Jewish infringement of Arab rights; Jewish immigration, it was urged, was fatal to the economic welfare of the country; it increased the price of food, and the communistic ideas that it introduced were slowly poisoning the minds of the inhabitants; the recognition of Hebrew as an official language increased Government expenditure and the burdens of taxation; Jews were securing dominating posts in the Government Departments, and "a certain Zionist leader, acting as Attorney-General, enacted laws for the benefit of the Jews regardless of the needs and traditions of the Arabs." Finally complaint was laid against the Jewish settlements as being an *imperium in imperio*. A reasoned reply to this Memorandum will, no doubt, reach the Arabs in due course. If only they could be brought to realise that, so long as they persist in their present attitude, there can be little or no change in the administration; whereas, if they took part in that administration themselves, they would have a chance of bending it to their way of thinking or of finding that it was already bent.

The Syrian Trouble.

From a rising in the Jebel Druse, France's trouble in Syria has developed into a general effervescence over a large portion of the mandated area, which finds expression in brigandage and isolated outbreaks. Disturbances at Hama have led to the destruction of a considerable portion of the town, a railway station north of Hama has been fired, and numerous posts and villages have been sacked. Naturally the insurgents are not having it all their own way, but from the fact that the bodies of twenty-four rebels were exposed in a public square in Damascus it has to be inferred that the French regard themselves as fighting with their backs to a wall. The net result is the virtual closing of Syria to foreign traffic. Intending visitors are asked to postpone their trips to Damascus; the Desert Motor Service to Baghdad has for several weeks been deflected from Damascus to Amman. Brigandage is now the term applied to the outbreaks, but they are widespread enough to suggest that the driving out of the Druses from the Jebel Druse has scattered the insurgents in small guerilla bands over a wider tract of country, rendering France's task still more difficult. It is inevitable that the amicable relations established between Iraq and Great Britain should cause the Syrians to compare their own lot with that of the Iraqis. The mandatory system, they point out, is the same for both countries; but Syria is far from enjoying the degree of independence that Iraq has won. France is not likely to be willing to discuss the subject so long as the Druse insurrection lasts, and if the rebels regard themselves as champions of the Syrian cause, the best service that they can render the country now is to "call off" the revolt, on an assurance that France will be willing subsequently to discuss the subject of the Syrians' claims.

Roumanian Politics.

The re-opening of the Chamber of Deputies in Bucharest serves to emphasise the fact that the political situation in Roumania has undergone little change throughout the year. The Bratianu Government commands a two-thirds majority, with all the advantage of a homogeneous party over a much-divided Opposition. For the opening ceremony the bulk of the latter—the National Roumanian (Transylvanians), the Nationalist Democratic (led by Professor Yorga) and the Tsaranist (Peasant) Parties—absented themselves; presumably to record afresh the exception that they have taken all along to the manner in which the last elections are said to have been held. In view of the fact, however, that they have not only recognised Parliament by taking their seats and on occasion remaining in the Chamber while the Government Party has withdrawn, it would seem to outside observers that they would have commended themselves more to the country, if they had shown ordinary courtesy to the Crown by attending a ceremony performed by the King in person. At the beginning of the year the Transylvanians and the Democrats concluded an agreement for parliamentary co-operation in their opposition to the Liberal Government. Attempts to extend the coalition to the Tsaranists have hitherto not been successful, but their common action on the opening day may prelude the announcement of a three-party compact. Even so, they remain handicapped in any appeal to the people of Roumania by the abstention of General Averescu's followers—the People's Party—and, if the new elections are held under the Bratianu Government, it will be interesting to see to what extent the alleged dissatisfaction of the country with things as they are is confirmed by the votes of the electorate.

Minority Problems.

The Congress of European Minorities which has recently been held in Geneva passed off in an atmosphere of undisturbed tranquillity, as those responsible for the gathering had wisely prohibited anything in the way of protests by minorities. Discussions were of a general character, directed to the establishing of harmonious relations between minorities and majorities. Resolutions were adopted calling upon Governments to safeguard the free cultural and economic development of minorities over which they have jurisdiction, and the League of Nations was urged to pay special attention to this subject. Although there may be no immediate results of a practical nature, the Congress will have served a useful purpose, if it reminds a number of States that an increasing volume of public opinion in Europe is expecting to hear much less in the near future of minority grievances. It will not be overlooked that minorities have their responsibilities no less than majorities, and a Congress of European Minorities would accomplish half its purpose if it did not bring home to those whom the delegates represented the necessity of making the best of their lot and of not magnifying molehills. It does not appear that Balkan minorities were represented at the Congress; in any case, they might have been tempted to regard as wasted any time devoted to abstract considerations to the exclusion of direct indictments. Even in the Balkans, however, it is beginning to be realised that the times call for some consideration to be given to minority problems. The opening of the Greek Free Zone in Salonika, which took place last Sunday, does not come within this category, but it represents a concession to other than strictly national interests, even if it was originally prompted by a desire to offset the Yugoslav Free Zone. Another novelty is the publication by the Greek Government of a Bulgarian Primer for the instruction of the youthful Bulgarian-speaking population in Greek Macedonia. Unfortunately this praise-

THURSDAY, OCTOBER 22, 1925.

THE TUG-OF-WAR IN GREECE.

In one of his early speeches after his accession to power General Pangalos, Prime Minister of Greece, stated that he had formed the opinion that the people did not want any of their present political leaders. He did not claim, he went on to say, that they wanted him; but then he was not a politician. What he knew the people did want was order, tranquillity, security, good government and new political leaders. Nothing has happened since that speech was made to show that General Pangalos was wrong in his diagnosis of the situation or that either he or the Greek people have changed their views. There have been, it is true, some direct action, numerous alarms and several "excursions." The Constitution has been put into force by Government decree, the Assembly has been dissolved, embarrassing critics of the Cabinet have been summarily arrested, and nearly every day General Pangalos, in the language of his political opponents, proceeds from one *coup d'état* to another. The Government's version is that it has enforced order, obtained security and refuses to allow the general tranquillity to be disturbed. Whether its administration is good or bad may depend on the point of view; but a Ministry that loses no time in awarding two big contracts for such important services as the water supply of Athens and an adequate system of lighting and traction for Athens and the Piræus establishes a strong claim to be regarded as having the interests of the people at heart and being of a practical turn of mind. Such trouble as there is comes from the political leaders, who are by no means inclined to accept General Pangalos's dictum that it is time for them to retire into private life. Perhaps the Prime Minister would have been better advised to say that what the people of Greece want is new political methods rather than new political leaders. The latter cannot easily be created in a day; but there is no reason why they should not change their methods overnight. Realisation that the Greeks are tired of revolutions may be responsible for the particular kind of excursions indulged in by General Plastiras. As Colonel Plastiras, he was responsible for the revolution that dethroned King Constantine and secured the execution of his Ministers in November 1922, and for the good of his country, as well as for his own, he has withdrawn from public life. When, however, M. Papanastasiou was to be put on trial for criticising General Pangalos's Government, General Plastiras decided to come to Athens as a witness in his defence. M. Papanastasiou's trial was abandoned, and the *raison d'être* for General Plastiras's presence in the capital disappeared. He decided to leave his country retreat, however, and made his way to Athens, in spite of the Government's suggestion that he should stay where he was. On his arrival in Athens, a police officer was sent to question him, but General Plastiras preferred to go into hiding. The Government thereupon gave orders for his arrest; it arrested three people who were known to be in touch with General Plastiras, and it issued a proclamation threatening death to all who harboured the fugitive or failed to declare his whereabouts.

At a distance such measures are apt to appear unduly Draconian, and wonder may be felt that so much fuss should be made over General Plastiras. It may be that his name is synonymous in Greece with revolution, and that General Pangalos was determined at all costs to nip any attempt of that kind in the bud. Fortunately there seems no chance of the Greek people's taking much interest in General Plastiras's movements, and it is subsequently reported that the Government will be satisfied, if he removes himself out of the country. The incident tends to confirm the view that the Greeks are weary of revolution and political strife. On the other hand some sympathy will be felt with any conscientious Greek politician who holds that his position requires him to champion the cause of constitutionalism, when he sees, as he supposes, the country slipping back into a dictatorship. In these circumstances everything will depend on the methods employed in the support of constitutional procedure. M. Papanastasiou appeared to be doing the right thing when he gave his parliamentary support to General Pangalos immediately after the bloodless *coup d'état* that placed the latter in office. Something must have gone wrong somewhere for M. Papanastasiou to have no other means of bringing influence or persuasion to bear on the Government than by a violent newspaper attack which places him within the arm of the law. He will, no doubt, say that the fault lies with General Pangalos, while the latter will remain convinced that he occupies his present position primarily to insure good government and to rid the nation of the curse of "too much politician." The irony of the situation is that both the protagonists may be regarded as worthy men, actuated entirely by devotion to the country, but through lack of someone to bring them and keep them together they drift apart and the rehabilitation of Greece is retarded.

The immediate point at issue is a comparatively minor one. The sum total of General Pangalos's offence is little more than a failure to hold elections at once. The Government has declared its desire for early elections and announces that it has first to come to a decision regarding certain points connexted with the holding of the elections. Not unnaturally it is also anxious to feel the ground in regard to these coming elections. M. Papanastasiou, therefore, is probably defeating his own purpose when he selects this particular moment for fulminating against the Government; for, if General Pangalos is as black as his enemies paint him, he will be capable of postponing the elections as long as he can, in the hope of being more certain of his own chances of being returned to power. Yet, if General Pangalos should adopt such a course, he will be stepping off the high pedestal that he mounted immediately after the *coup d'état*; for he will be showing himself not only a politician, but also a politician not one whit better than those who have preceded him in Greek public life. His wiser course would seem to be to take his courage in both hands and to remain above the struggle for political spoils. He has a good enough record for four months with which to submit his case to the Greek electorate, and if it will have none of him, he will do well for his own reputation to wait until Greece decides that she wants him again.

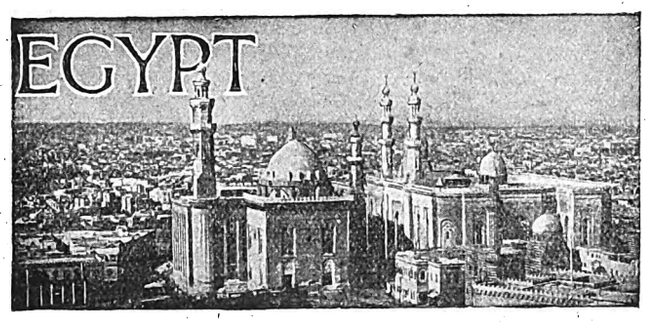
The Near and Middle East*

From Our Own Correspondents.



Cairo, October 10.

Accession Day.

As the Accession Anniversary (October 9) has fallen this year on a Friday, to-day is being celebrated throughout the country as a Government holiday, although all the official programme was carried out yesterday. There was a well-attended reception in the morning at Ras El Tin Palace, followed by a tea party given by Yehia Pasha Ibrahim, the Acting Prime Minister, in the afternoon and a banquet by Mohamed Sidky Pasha, the Governor of Alexandria in the evening. In Cairo Sherin Bey, the Acting Governor, gave a tea party in the Ezbekia Gardens, and in the evening both cities were illuminated, the celebrations in Alexandria as the present seat of Government being in the circumstances on a much more lavish scale than the capital.

The Visit of H.M.S. Queen Elizabeth.

The Accession festivities have coincided with the visit of H.M.S. Queen Elizabeth, with Admiral Sir Roger Keyes on board. The British community both in Cairo and Alexandria had organised an extensive programme so as to give the officers and crew as good a time as possible—a dinner followed by a dance at San Stefano Casino under the chairmanship of Mr. Neville Henderson, Acting High Commissioner, a regatta, an amateur dramatic performance (Alexandria) and cricket matches and boxing tournament (Cairo) figuring among the events. And from what one can hear these efforts have been eminently successful.

The New High Commissioner.

It is announced that Sir George Lloyd will arrive on October 21, and in certain circles the visit of the Queen Elizabeth so near to the arrival of the new High Commissioner is regarded as having political significance. That the two events should be linked together is not at all surprising in view of the manner in which, in this country, the obvious explanation for quite ordinary events is persistently passed over for more sensational interpretation. There is in fact not the slightest connection between the visit of the flagship of the Mediterranean Fleet and the advent of Sir George Lloyd. A perusal of the files of the local Press during past years would indeed have shown these gossip-mongers that it is a regular thing for part of the Mediterranean Fleet to make a short stay in the autumn in Egyptian waters, and that as a matter of fact the "display of strength" is very much less this year, since only one ship is now visiting Alexandria.

The Egyptian Honours List.

The honours list published on the occasion of the Accession aniversary is a somewhat uninteresting one, and the only name of considerable importance one sees in it is Taher Pasha Noor, Procureur-General of the Native Courts, who receives the Second Class of the Order of the Nile. To all who know what Taher Pasha did in the Sirdar murder case, what courage and perseverance he displayed throughout, it has been a matter for great surprise that the Egyptian Government, which had such an interest in seeing the murderers tracked down and brought to book, should not long ere this have given practical expression to its appreciation of the part Taher Pasha took in bringing about the successful conclusion to the original inquiry and the trial by securing for him some high distinction from the King. The honour now conferred on him, though a high one, can scarcely be regarded as recognition of the great services he has undoubtedly rendered his country since it is merely what in due course any Procureur-General would receive in virtue of his position. There is a definite table for the decoration of Government officials beyond which the Government cannot go except in very exceptional circumstances. The exceptional circumstances certainly exist in the case of Taher Pasha, and it is to be hoped that in due course a distinction which can be more justly regarded as a recognition of his special services in most difficult circumstances will be conferred on the able and enterprising head of the Native Parquet.

The Political Murder Inquiry.

Meanwhile the further inquiry into the political crimes that have taken place of recent years continues its course. It is reliably stated that the evidence against the two principal Egyptians still under arrest, Ahmed Effendi Maher, Wafdist ex-Minister of Education, and Nokrashi Effendi, ex-Under-Secretary of State for the Interior, is accumulating; and their repeated remands would appear to confirm this. But no information on the subject is being vouchsafed to the public by the responsible authorities, who in view of past experience in similar matters are undoubtedly well advised in preserving reticence until the indictment can be finally drafted.

PERSIA.

Teheran October 3.

Bread Riots.

Advantage was taken of discontent resulting from a shortage of bread to cause riots in Teheran at the end of September, which resulted in one or two men being shot dead, several wounded, and several hundreds temporarily arrested. Though bread was, and still is, short, there was not sufficient discontent to cause a riot, although it has always been a privilege of Teheranis to vent their feelings on such a question by a noisy demonstration against the head of the Government. In this instance, a mob collected suddenly, entered the Parliament building, broke several windows, and roughly handled several leading Deputies. The leaders were paid agents much in the background, the

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Digitized by Google

forefront consisting largely of women. News of the Shah's approaching return had been recently published, and the cries of the mob were for bread and for the Shah.

Though expelled from the Mejliss (Parliament), some of the ladies succeeded, it is said, in holding a mock Parliament in the Council Chamber.

No strong action being taken, the mob remained undispersed all day in the Main Square, but all shops were forcibly closed by it. Next day, with increasing confidence, it rioted more violently in several places, necessitating military assistance, and some firing. The mob by this time was obviously inspired by professional agitators. Propaganda was current that the Russians were prevented from their desire to import cheap flour only by arbitrary Government restrictions. The mob attempted to take refuge in the Russian Legation, the gates of which were invitingly open. A large number succeeded in pushing aside the police, and one or two hundred remained in the Legation grounds under Russian protection.

Since then a double cordon of military has been maintained round the Russian Legation to keep others from following, and stricter Government measures quickly ended the rioting.

The instigators of the trouble are still unrevealed. The Government view is obvious from the stringent measures taken against certain Persian Armenians in Russian Government service, and its notification to the public and to the Russian Legation that there never has been any hindrance to import of flour.

Suspicions were held regarding certain Court officials, who were temporarily placed under arrest.

There is also an idea prevalent that the present party in power created the unrest in hopes of its turning into a demonstration against the Shah's return, and that paid agitators from the usual source seized the opportunity for which they have long been waiting.

The Russian Government has since announced a free gift of 1,500 tons of flour, together with an offer to sell double that amount at a resonable price in Resht. Transport is always the great difficulty, and not only has to be commandeered, but also has to be specially increased by importing from abroad.

The Shah's Return.

His Majesty the Shah has wired announcing his departure from France, and he will return via Bombay and the Holy Cities in Iraq. Recent events showed that despite Republican propaganda the mass of the people want the Shah, and regard his presence as a check to the prevailing military bureaucracy. There is some chafing at the prolongation of military control, and a general idea that the necessity for it has now ceased. An increase in the cost of living is undoubtedly felt by the masses.

Sport.

Sport is now a great feature of young Persia, and the energetic secretary of the Military Club announces an International Olympic Meeting this month, at which international football, polo, swimming, racing competitions will be held.

ROUMANIA.

Bucharest, October 13.

Opening of Parliament.

The opening of Parliament on October 15 is being awaited with interest, as a stirring session is expected, the Opposition parties, especially the Coalition group, being apparently determined to make themselves heard. Their faith in themselves has been greatly strengthened by their success in the elections for the Agricultural Chambers.

Critical Commercial Situation.

At the present moment the situation of trade and commerce would appear to be very critical. It is a matter of common knowledge that one at least of the largest textile importers is on the verge of bankruptcy. Considerable sympathy is being felt for the proprietor, as his firm was one of the most respected in Bucharest, and he was known as a generous philanthropist.

A number of important Braila grain merchants are also in serious difficulties. One of these has recently disappeared, leaving liabilities, it is stated, of about £700,000. In view of the excellent harvest this year, such a state of affairs was not unexpected, and some of its causes lie beyond the control of the Roumanian Government. One of these, however, is to be found in the very high export taxes imposed on all kinds of cereals, especially wheat and rye. Last week a reduction of most of these taxes almost by half was proposed by the Economic Advisory Committee, and this proposal will in all probability be confirmed by the Council of Ministers. It is feared, however, that this measure comes too late to relieve the situation, and in any case no change is made in the taxes on wheat and rye. The other main cause is the fall in the world price of wheat, owing to the abundant harvests everywhere.

The Government Press admits the existence of a crisis, but attributes this chiefly to the outside causes already mentioned, and especially to the large wheat exports made by Russia this autumn at very reduced prices. It also contends that the high export taxes are being maintained in support of their main aim, i.e., to increase revenues and balance the Budget, which is more important from the point of view of the economic interest of the country as a whole than the prosperity of individuals.

There is, of course, much truth in these arguments, and there would probably be less ill-feeling and party excitement over the depression in trade if more confidence were felt in the equity of the present administration.

Yassy Celebrations.

Interesting celebrations are being held at Yassy this week in commemoration of the sixteen hundredth anniversary of the Council of Nicea, at which, in 325 A.D., the basis of the Orthodox Church was laid, to the exclusion of "Arianism." The King and Queen and a number of Ministers have been present at the celebrations, which are being held in connection of the meeting of the Synod. The Synod of the year 1600 was also held at Yassy, which possesses a beautiful old cathedral. During the two months' reign of Michael the Brave, when the three metropolitans of Nugro-Vlachia, Moldavia, and Transylvania were consecrated, the chief residence being at Alba Julia, another old cathedral town (in Transylvania) where the coronation of the present King took place last year. This meeting of the Synod is being held on the eleventh anniversary of the succession to the throne of King Ferdinand.

Miscellaneous News.

A plan is being considered for the construction of a mint in Roumania, under the auspices of the National

NOTICE TO READERS.

Bank. According to the *Argus*, it is intended to strike nickel coins of one, two, and perhaps five lei. The copper for this purpose wil be obtained from Roumanian mines, and the nickel will be imported. The machinery is to be adapted for striking gold coins also.

Paper money is already being printed here, and very creditable 500 lei notes of a new pattern have just been issued, the old one remaining in circulation till the end of next year.

A direct goods train service is being arranged between France, Belgium, Luxemburg, and Roumania, with transit over Germany, Switzerland, Czecho-Slovakia, Poland, Austria, and Hungary.

A regular air service for letters and parcels between Bucharest and Galatz was inaugurated on October 1, and a passenger service is to begin in the spring of next year.

The Phœnix Oil and Transport Co. has a flowing well from the same sand as that of the Romano-Americana mentioned in a former letter. It is producing 200 wagons of oil a day.

Liubliana, October 14.

The Coalition.

According to the Constitution, the Skupshtina must reassemble for the ordinary session on October 20. So it is only natural that internal politics should revive again after something like three months' stagnation, and that in all quarters all sorts of forecasts are being hazarded. Most of these forecasts are based upon reputed discord between the Radicals and the Raditch Party, who form the present Government. Of course, it would be idle to pretend that there are no differences of opinion between the two Government parties, since bickerings are of common occurrence even in one-party governments. But it would be an absolute mistake to assume that either party would even discuss the possibility of dissolving partnership. On the contrary, both consider that the understanding between Serbs and Croats—and that is, after all, what the coalition between Radicals and Raditch Party really signifies—is so necessary that it would be a sin against State and nation to undermine it. Everybody knows that nothing better can be put in place of the agreement; and therefore, there is not a politician in either Government party who could muster up the courage or the will to bear the responsibility for wrecking the present Coalition. An added reason to give pause to such schemes is that it is no secret that the King himself is definitely in favour of an understanding, and looks upon the Agreement between Serbs and Croats as a matter of State policy.

The Forthcoming Session.

Thus it is not to be expected that the forthcoming session should harbour any surprises. The only possible change in the Government is an internal reconstruction of the Pashitch Cabinet. Above all things it is certain that M. Stephen Raditch will become a member of the Government, because it is an old tradition of the Radical Party that the leader of the party in coalition with it must, by his presence in the Cabinet, share the responsibility for the joint policy. Besides this, several Radical Ministers may change places, but all these changes would bear a personal, rather than a political, significance.

Opposition Disappointment.

The Opposition Press, especially the Pribitchevitch Press, which is fairly powerful, is determined, of course, to make out discord between the Coalition parties, although so far all efforts of the kind have proved futile.

At first the Opposition hoped that some indiscreet utterance from M. Raditch would cause a breach in the alliance between his party and the Radicals. But this did not happen. Upon his first arrival in Belgrade, M. Raditch said very many things, some of them fairly daring, but nothing that might have troubled friendly relations between the Government parties.

Then came Geneva. Here, too, the Opposition experienced a disappointment. M. Raditch said much that might suitably be uttered by the leader of a young party sprung from the people and would certainly not have been said by an old hand at diplomacy; but he at no time overstepped the limit, and, on the contrary, did the State credit in his capacity of Yugoslav Delegate. His opponents tried to make out a case against him over his remark about Macedonia, but here, too, they failed.

But all the time the trump card of the Opposition has been the rumour that M. Pashitch in his heart of hearts disapproves of the Coalition and the Croats. And when, for reasons known and unknown, the Prime Minister postponed his return to Yugoslavia, the Opposition believed it had at last found grounds to speak of an approaching Government crisis—which likewise did not materialise. All possible combinations were discussed. It was suggested that on account of the forthcoming coronation of the King the Government would be enlarged by the entry of the Davidovitch Party. This argument was at least plausible, but the present position is definitely unfavourable to such a step. At the last elections the Radicals gained over one-fourth of all the Serbian mandates; wherefore they certainly have no cause to strengthen the hands of their worst opponent by inclusion in the Government. The rumour that the Davidovitch party will enter the Government is just a rumour, and not to be taken seriously.

Here and there one is told that the Bosnian Spaho Party may enter the Government. There is no foundation for this either. The Spaho Party is at present in a very precarious position. On the one side M. Raditch is voting against it with his agrarian programme and encroaching upon its peasant electorate; on the other it has to defend itself against the attacks of the Radicals whose influence upon its socially better situated adherents is steadily increasing. Now if you can defeat a party in open struggle, you do not take it into Government partnership, at least not in Yugoslavia.

Remains only the combination with the Slovene Koroshets Party. This is the least unlikely, and has the strong argument in its favour that this party represents the overwhelming majority of the Slovenes. It is only logical that one should wish that in a Government of mutual understanding the Slovenes should likewise have a party; for only then would the Government of the Kingdom of Serbs, Croats, and Slovenes be in truth a Serb-Croat-Slovene Government. All the same, even this combination is not very probable. For one thing, the Koroshets Party veered so far to the Left in its electoral programme, that it now can no longer find the way back to the Right—and, one may add, does not want to find

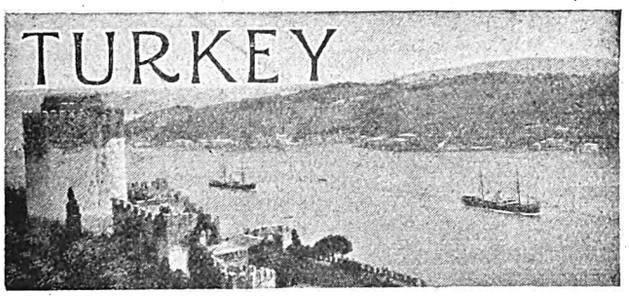
it either, for fear of the electorate. It missed the right moment, which was when M. Raditch took his momentous leap, and now conversion is a far more difficult matter. On the other hand, M. Raditch is at grips with the Koroshets Party in Slovenia itself, where he has already gained a strong position. And so it is intelligible that M. Stephen Raditch should not desire a Coalition with the Slovene People's Party.

This circumstance alone would weigh with the Radicals. But there are other reasons as well why there should be strong tendencies in that party to decline an alliance with the Koroshets Party. And so one may consider this combination ruled out also.

The remaining parties do not come into consideration. Partly because of their insignificance, and partly because, like the Independent Democrats, they are on principle opposed to the understanding.

The present internal political situation in Yugoslavia may therefore be summed up thus:

The present Government Coalition remains and no surprises are to be expected. Yugoslavia is an agrarian country, and therefore the tendency towards a conservative but not reactionary policy is increasing. For this reason, too, her internal politics are consolidating, and she is moving steadily in the direction of the two party system. The forthcoming session of the Skupshtina will surely bear this out.



Constantinople, October 7.

Head-dress.

Apart from the question of Mosul, the feature of outstanding importance here, at present, concerns the newly adopted head-dress, and the cry "off with the old fez and on with the new hat" extends daily. Yesterday, at the celebrations of the anniversary of the deliverance of Constantinople from the Allies, a striking example of the extent to which the fez has been discarded was afforded by watching the procession of the naval and military troops, school children, guilds, institutions, and so on. Not one fez was evident (unless one mentions those observed being carried in the hand) amongst the thousands who took part in the procession. Many hundreds walked bare-headed in preference to wearing the now derided fez, partly because a rag on fez-wearers had been threatened by the University students, and partly because the supply of hats and caps is far and away below that of the demand. This sudden change has certainly had some repercussion on business both favourably and unfavourably. The fez-pressing shops which have so long been conspicuous because of the lines of brass cylinders of all sizes arrayed on benches in their shop windows are now facing financial ruin, while hatters' shops have suddenly become similar to the "end of the season" bargain sales, and are simply coining money. Hats and caps of all descriptions are fetching enormous prices, and stocks which previously were sufficient for a season disappear in one day. Hat factories are being opened up in Turkey, but in the meantime, according to newspaper reports, Athens is reaping considerable profit, as establishments there are working day and night shifts in order to cope with the unexpected orders for hats and caps. Every uniformed branch of the public service now possesses its own style of head-dress which, together with the change effected in the tramway employees, hamals, cab-drivers, chauffeurs and all other unionists has been responsible for presenting Constantinople under a completely different aspect especially to visitors.

Football in Turkey.

Football is now the foremost of Turkish sports, and it is both surprising and gratifying to notice the enormous improvement which the principal teams have made during the last two years. Nearly every month some international game is played in Constantinople (football has been continued during the hot summer), and the only team which the Turks have not beaten, at least once, is that of the Poles, which is now on a visit here. At every match there is a considerable increase in the number of spectators, who are becoming as keenly critical and exacting as professional crowds at Home. During this coming winter a football federation is to be constituted, and teams are now training and practising in order to qualify for a place.

The Mosul Question.

With the exception of occasional rumours regarding the possibility of the commencement of direct *pourparlers* between Great Britain and Turkey the Mosul question is, at the moment, receiving comparatively little attention by the Press. The assurances of Tewfik Rushdi Bey on his return here that there was nothing about which to be apprehensive have, apparently, been sufficient to cause the Turkish Lira to appreciate as much as thirty points in the pound sterling. The delay in the settlement is, of course, causing many with business interests to fret, and numerous schemes with British capital behind them which have been prepared and provisionally accepted are being held up until the final undertaking, which depends entirely on the outcome of the Mosul question, is given.

CYPRUS.

Nicosia, October 6.

Settling Down for Winter.

The Governor, Sir Malcolm Stevenson, returned to Cyprus on September 24. Mr. J. Ellis will act as Chief Secretary until the arrival of Mr. Lobb, Mr. Fenn's successor. The railway service reverts to a winter time table: and the mail steamer, which has been running weekly during the summer months, resumes the very unsatisfactory sailings of three times a month. Great dissatisfaction is expressed that this retrograde arrangement is to be in force for another winter. If one looks back on the summer season one has to say that there has been no lack of complaints regarding the island hotels, which are far from being up to modern standards. Many visitors, while giving the highest praise to the climate and scenery of this mountain resort, are not likely to repeat their visit on this account. The old vicious circle is continued: hotel keepers will not do better until there is a larger assured influx of well-to-do travellers, and tourists will not come until there are better hotels. There is still

SCHOOL OF ORIENTAL STUDIES, LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

no development of systematic tourist-trade, which should advertise itself liberally on modern lines.

The Elections (Legislative Council).

There is considerable excitement in several of the electoral divisions, and in one at least the police have had some difficulty in maintaining order during the activity of rival factions. In the electors' speeches the Greek candidates have dealt for the most part with the following aims and propositions:—the abolition of tithe, the extinction of the Cyprus portion of the Turkish debt, more help for agriculture, and for the establishment of factories, further measures of relief towards the present economic situation, and greater "political liberties." As regards the candidatures, and the active support given by the ecclesiastical bodies, there are those who strongly object to the part taken by the Church, from the Archbishop downwards, especially to the canvassing of the Bishop of Kition, who will probably be elected for a Larnaca division. It is probable that the long-pending question of Church and Monastery properties will come before the Legislative Council. It has long been shelved, and it seems that there is a wide-spread desire that the whole administration of Church funds should be overhauled and placed on a new and satisfactory footing with due responsibilities to a central control; and that the revenues should be devoted to the best interests of the community instead of, as too often at present, in the uncontrolled hands of ecclesiastics.

General News.

The Fleet, which was expected about September 28, having received orders to proceed elsewhere, will not visit the island at present, which causes much disappointment. It is hoped that the visit is only postponed. Two French vessels visited the Larnaca roadstead on October 2: the Diana (Admiral de Caudrie), and the destroyer Capricieuse. The French Consul, M. Du Perrier de Larsan, entertained the Admiral and some officers.

One of the foremost Greek moneylenders of Limassol, while in the district in connexion with the sale of debtors' properties, was shot at at some disatnce. Some of the pellets just penetrated one arm, but did no further injury, and the usurer returned by car to his home.

A merchant, named Joachim Kharalambore, has been awarded a diploma of merit for his contributions to the Exhibition at Wembley.

THE NEAR AND MIDDLE EAST ASSOCIATION.

Under the auspices of the Near and Middle East Association, Admiral Sir Ernest Troubridge will, on October 27, at 8.30 p.m., speak on "Hungary and the Near East." Sir Edward and Lady Boyle are kindly lending their house at 63, Queen's Gate for the occasion.

PAVLOVA IN LONDON.

Ajanta's Frescoes.

Pavlova is in London again. That fact alone is sufficient to arouse wistful memories among those who saw her for the first time, maybe, twenty or thirty years ago. That fact alone is bringing, in her short season of four weeks, its thousands to the Opera House at Covent Garden. But the great thing about this incomparable dancer—for, though there are many better mimes, Pavlova is yet incomparable as a dancer—is that her artistry is no mere technical accomplishment, it is a progressive, increasing thing.

She has, for instance, been recently to India, and she has brought with her "Ajanta's Frescoes," a stirring representation of the scene in the Buddha's life in which he makes the great renunciation of the world. With the help of experts in Indian art and archæology (notably Mr. Gladstone Solomon, Director of the Bombay School of Art), Mme. Pavlova has beautifully re-fashioned for a Western audience the Ajanta Temple, the pilgrims' worship of the Buddha, and the interior of the Palace of the Prince Guatama, wherefrom the future Buddha makes his grand reunuciation.

It may seem heresy to say so, but the most impressive parts of these tableaux were, not the one in which Mme. Pavlova herself danced, but those in which the Buddhist pilgrims prostrated themselves before the marvellous temples and dreamed of the dance and pomp which 2,500 years ago the Buddha renounced. But alike in choreographical and archæological representation, this "Ajanta's Frescoes" was memorable. The production is, moreover, considerably helped by the apt music of the younger Tcherepnine, music which in its avoidance of harmony comes very near towards conveying the genius of the East.

Besides this artistic ensemble, the miniature but apparently more popular entertainments known as *divertissements* almost faded in the memory, although it is true that in them Pavlova is as charming as she was when she moved Flecker to write on her. K. W.

The report that a fresh revolt had broken out in Sryia is formally denied by the French Prime Minister's office.

General Sarrail, the High Commissioner of French Syria, has appointed Colonel Andrea Governor of the Jebel Druse, in succession to Captain Carbillet.

The Royal Humane Society has forwarded for presentation to Sheik Ebraim Mahomed Essak, an Indian seaman of the P. and O. steamship Ranchi, their honorary testimonial on vellum, which has been awarded him for his courage in saving the life of a British sailor who fell from a launch alongside the Ranchi at Cowes last August.

PERSONAL AND GENERAL.

TO-DAY

October 22, 1925 (New Style).
October 9, 1925 (Old Style).
Rabia II, 4, 1344 A.H., of the Moslem Calendar.
Sheshvan 4, 5686, of the Jewish Calendar.

Sir Robert Gardiner left London last week for the Hotel Meurice, Paris.

Prince Jelaleddin arrived last week at the Carlton Hotel, London, from Paris.

King Faisal, who is now staying in Nice, received the ex-Sultan of Turkey, Abdul Mejid, last Friday.

The Queen of Yugoslavia arrived in Bucharest last Friday on her way to stay with her parents at Sinaia.

Sir John and Lady Archer will leave by the P. and O. s.s. Narkunda to-morrow to spend the winter in India.

Lord and Lady Cable have returned to 44, Grosvenor Square from Lyndridge, and will remain in London until the end of the month.

The Begum of Bhopal, accompanied by her daughter-in-law and her three grandchildren, visited the Royal School of Art Needlework on October 14.

Sir Horace Rumbold, the British Ambassador in Madrid, entertained to luncheon last Sunday Ahmed Pasha Ziwar, the Prime Minister of Egypt, who is travelling in Spain.

M. Popchristoff, Director of Bulgarian Civil Aviation, accompanied by M. Bandeff and M. Panscoff, arrived in London last week to inspect aeroplanes with a view to purchase.

The Maharaja of Patiala, who represented India at the League of Nations' Conference at Geneva, left for Bombay by the Anchor liner California from Marseilles on October 20.

Mme Titulesco, wife of the Roumanian Minister, who recently returned to London, will accompany the Minister on his official mission to the United States at the end of the month.

Princess Ileana of Roumania has returned to Heathfield, Ascot, from visiting the Roumanian Minister and Madame Titulescu, at 50, Grosvenor Street. Her Royal Highness will leave England in December for Bucharest.

Mrs. Kermit Roosevelt and her four children are visiting friends at Regent's Park until Mrs. Roosevelt leaves for Kashmir to join Mr. Roosevelt and Mr. Theodore Roosevelt, who are on a scientific expedition in the Himalayas.

The Mosul Commission, headed by General Laidoner (Estonia), which has been appointed by the League of Nations to inquire into the alleged deportations of Christians in the Mosul area, sailed on October 13, from Marseilles for Beyrout.

The Greek Minister in London returned to 51, Upper Brook Street last Sunday night from Paris, where he negotiated and signed different agreements concerning Macedonian and Thracian railways controlled by the Société des Chemins de Fer Orientaux.

The seventh anniversary of the Republic of Czecho-Slovakia will be celebrated on October 25, 3.15 p.m., in an Anglo-Czech service to be held in Christ Church, Westminster Bridge Road, S.E. 1. The anniversary preacher is to be the Rev. A. B. Workman.

The Rt. Hon. Sir Herbert Samuel, G.B.E., has consented to address a public meeting, which will be held under the auspices of the English Zionist Federation on November 2, at the Kingsway Hall. Mr. Philip Guedalla will preside.

PROMOTIONS, APPOINTMENTS, ETC.

The following appointments have been sanctioned by the Commander-in-Chief in India to his Headquarter Staff:—Major W. T. Corbett, to the General Staff Branch; Lieutenant-Colonel J. T. Kirby, to the Quartermaster-General's Branch.

Lieutenant-General Sir George M. Kirkpatrick is granted five months' leave out of India on private affairs, and Colonel-Commandant F. S. Keen is vacating the command of the Small Arms School next March, and is granted eight months' furlough.

The Rev. W. W. Cash, who has been elected general secretary of the Church Missionary Society, as from January 1 next, when Dr. Lankester will resign the position, has been home secretary of the society since April, 1924, and was previously secretary of the Egypt and Palestine Missions, and his missionary experience in the Near East covers some 20 years. During the War he was a Chaplain to the Forces, and he preached at the thanksgiving service in St. George's Cathedral after the capture of Jerusalem. Mr. Cash was awarded the D.S.O. and appointed O.B.E.

The King has approved the appointment of Nawab Muhammad Ahmad Said Khan, C.I.E., M.B.E., of Chhitari, to be a Member of the Executive Council of the Governor of the United Provinces in succession to Maharaja Sir Muhammad Ali Muhammad Khan, Khan Bahadur, K.C.S.I., K.C.I.E., of Mahmudabad, whose term of office expires on January 2 next.

The Secretary of State for India has reappointed Mr. F. C. Goodenough to be a member of the Council of India for a further period of five years. Mr. Goodenough's previous term of office expired on October 15.

The King has given the following officials of the Egyptian Government authority to wear decorations conferred on them by the King of Egypt in recognition of valuable services:—

Order of Ismail.—Insignia of the Third Class: Mr. George Herbert Griffith, O.B.E., deputy general manager, State Railways; Mr. John Montague Ellis Langton, mechanical engineer, State Railways; and Mr. Horace Ardran Mayne, Inspector-General, State Telegraphs and Telephones.

M. Philandros has been appointed Minister of Public Assistance in the Greek Cabinet, and General Panayotopoulos, the Minister of the Interior, has resigned in order to become Governor-General of Macedonia, vice M. Kanavos, resigned.

ORIENTAL TYPES.*

The Petition-Writer.

By F. W. Chardin.

The *Arzihalchi*, or petition-writer, is a person who performs a very real public duty, one in whose hands rests the interpretation into words of the desires, wrongs, heartaches, and scoundrelly designs of many, and not always poor, unlettered persons. His is a trade which must decline and die with the advance of education and civilisation, and his is a body which the slowly advancing giant Progress will finally crush and fling aside as useless. But that day is not yet, and for many years to come he will continue to perform his quite humble, yet necessary task, and his end will come only after a long, gradual yet steady decline.

His work does not consist wholly of petitions, of course; private letters are also dictated to him, but by far the greater part of his work seems to come from those who have a suit to present, an *Arz-i-Hal*, "Presentation of Condition," to offer.

The *Arzihal* is the Turkish name for a petition presented to Government by a subject who has some complaint to make or request to present, and as, in Turkish days, they had to be set out in a certain form, it was obvious that even those persons who had an idea of writing were not always sure as to the form in which the petition should be written, and they had recourse to our friend in his little shop.

The petition-writer's place of business is a small cavity in the wall, scarcely big enough to contain him and his squatting client. His stock-in-trade and furniture consist of a minimum of articles, which can be enumerated as follows:—A small china pot of violet ink, a few reed pens and a small cabinet containing two or three small drawers, in which sheets of foolscap-size paper, some revenue stamps and a few other odds and ends are kept. No writing-table has he—he has no need of one; such a thing would be only in the way, for he sits on a low stool, or, crouching, on the ground, while his client, more often than not a woman, squats like a black-veiled ghost beside him. He writes with his foolscap sheet of paper held in his left hand and doubled over his left forefinger, the outer surface of that digit serving as the supporting surface of the paper under the particular word he is at any one moment writing. As the writing proceeds, by a movement of his left thumb, he moves the sheet of paper up or to the right and left, in order to keep the edge of his left forefinger under the point of his scratching pen. A European could succeed in writing only a most fearful scrawl in such a position, if he could indeed write at all, but the Oriental scribe can often only write this way, and would find a table a positive drawback. It is really surprising what beautiful script can be turned out in these circumstances. It can, moreover, be continued indefinitely: I have seen a clerk in a court of law take down the whole of the evidence of a murder trial lasting some twelve consecutive days. One would think that this method of writing would soon produce writer's cramp.

In the Succesion States which were formerly the Arabic-speaking portion of the Turkish Empire, Arabic words have been substituted for the old Turkish official titles, and so the Turkish official term *Arz-i-Hal* is now called *Istid'a*, but most of the simpler folk cling to the old term. It has been truly said that one of the Oriental's chief pastimes is that of petitioning the Authorities, and I have no doubt that it is looked upon as a form of sport, much as backing horses is regarded in this country. The sum invested is small, a rupee or two paid to the petition-writer, eight annas for the revenue stamp on the petition, and you stand a sporting chance of securing that desirable donkey, at present in the possession of your *bête noire*, Ali Ibn Muhammad, providing always that you can convince the Official that the aforesaid Ali stole it from you after the departure of the Turkish authorities at or before the Armistice. Even if you fail to pull the thing off, you get value for your money in the shape of having a conversation with the Great Man face to face; there is all the pleasurable excitement experienced on the racecourse by the gambler, and in addition to that, you have the intense satisfaction of forcibly bringing the said Ali away from his ploughing or his threshing in order to defend his case. The villagers or country people are much more addicted to petitioning than are the town dwellers. It seems that even as the Londoner is ignorant of the places of interest lying at his very doors, so is the *blasé* Oriental townee unaware of the great game, so much in favour with his country cousins, of petitioning. It would seem that, when a periodical journey to the town is undertaken by the villager, a petition on some subject or other is an integral part of the itinerary of the trip.

The petition-writer is a sort of verbal alchemist. Under his swiftly moving pen, the rough and uncouth phrases of his client are metamorphosed into what is, to him, the pure gold of formal, official terminology and flowing periods. As a matter of fact, his Arabic is usually villainous, but what more could be expected of a man who, until a few years ago, scarcely ever wrote his own sacred tongue, all his work being performed in the official Turkish of the Ottoman bureaucracy? His screed is generally headed by some such grandiloquent formula as this:—"To the Presence of the Honourable Governor of the District (or Town)." Some three or four inches below the above heading appear the words:—"To Your Presence," and here follows a long recital of the woes, requests and complaints of the humble, unfortunate petitioner, Mahmud ibn Abdullah or Najma bint Haj Ahmad, for women are great petitioners, possibly for much the same reason as their Western sisters throng to celebrated trials or fashionable weddings. The petition ends up with a line or two or honorific expressions, due reference being made to the Nobleness, Prosperity, etc., of the addressee. The last phrases are often written in the shape of a gradually narrowing, inverted triangle or cone, and under the penultimate word, "the prayer," the petitioner affixes, if he possesses one, his *Muhr*, or engraved signet.

In the fashioning of the phraseology and the description, in most humble and affecting form, of the woes and requests of the unlettered petitioner, the *Arzihalchi* is a great expert, for, if he be an artist in his profession, he will believe and tell his clients that the first impression created by a well-drafted petition goes a long way towards winning the suit. Unfortunately for him and his beliefs, however, when the control was in the hands of British officers who could speak, but seldom read, the language, the petitions were given to a clerk to interpret and to précis. A safeguard against clerkly inefficiency and dishonesty was always provided by the subsequent verbal hearing of the case. I myself, as a matter of principle, made it a practice occasionally to have a petition picked out at random and to read it through with the aid of a dictionary. Often these clerkly interpretations were phrased in terms which caused the official to roar with laughter, which fact could not but be disconcerting to the expectant suppliant. One such recurs to my memory, and is an illustration. It ran something like this:—"Badriah bint Mansur, a resident in the Brothel Quarter, states that she is sorry for her naughty life and desires to become a good girl in future. She therefore requests your Excellency to release her from said Quarter so that she may follow her Pious Resolution and marry Abd-ul-Kerim Effendi el Uwaiji, who desires to stand as surety for future good behaviour." The way in which the penitent Badriah giggled and ogled me when I heard her petition, left me

with some doubts as to the true piety of her resolution.

The petition-writer hears almost as much of the private life of his neighbours and clients as a Roman Catholic priest, though there is no evidence that he is under a vow of secrecy. If an *Arzihalchi* should ever do anything like writing his memoirs, he could doubtless retail therein more gossip and scandal than the most celebrated of hostesses in Western Society. It is to the credit of his craft, however, that I have never heard of one incurring enmity from this reason, for it must not be thought that Orientals are indifferent to the breath of scandal; they are very sensitive to it indeed, at least as sensitive as the most respectable middle-class families in our own country.

The petition-writers are persons of varying demeanour and appearance. Sometimes one may be a "grave and reverend signior" with a white turban and long, wide-sleeved, collarless coat. But more often than not, he is a down-at-heel individual, dressed, *cap-à-pie*, in some such garb as this: Ancient and battered fez, rusty frock-coat over a shirt without a collar, khaki riding-breeches, no leggings or puttees, ancient socks and more ancient native slippers. He ought to earn a quite decent livelihood by his pen, but I have never heard of one who really seemed well off. Possibly the hearing of the continual recital of other people's woes tends to drive him to drink for consolation, for I have come across several who were inveterate topers.

The craft of the petition and letter-writer is, as has been remarked, a doomed one. Sooner or later, the bespectacled old gentleman with his reed pens, pot of violet ink, and little cabinet must wither up and disappear before the rays of the light of education; and with his passing will have gone another of the honest, yet picturesque Oriental crafts. The darkness of ignorance will be succeeded by a literary standard approaching that shown in the hundreds of letters censored by many of us during the War. I am not yet convinced that the latter state is really very much to be preferred.

THE WEEK AT HOME.

London, Tuesday Morning.

The Prince's Return.

The event of the week was, to London at any rate, the return of the Prince of Wales. It is said that no Prince has ever achieved among British hearts the popularity that visibly belongs to the Prince of Wales, and after hearing and seeing the crowds who last Friday disregarded wet and dreariness in their anxiety to welcome His Royal Highness home, one can well believe it.

Probably it is not his kingly or princely qualities that chiefly appeal to Britons, but rather his unaffected humanity. However that may be, there is little doubt that he should, when his time comes, ascend the throne amid the universal blessings of his subjects.

It is curious, however, to note that, in the complete absence of anti-monarchical feeling in this country, there are those who believe that a republican system is to be the future system of England. The argument that underlies such a belief is to be found in the progressive humanisation, if one may say so, of royal families. It is felt that in a democratic age, in which monarchs have democratic desires as much as anyone else, Kings themselves will wish to escape from the responsibilities with which the nation would wish them saddled. There may be something in this, but it is difficult to see how one could abdicate in face of such universal popularity.

Arrest of Communists.

The arrest last week of a few Communists and the threat to arrest more did not appear to rouse great interest. Some observers, it is true, seem to imagine that the Home Secretary has at last made a courageous beginning to what may be the purgation of society of noxious seditionists, but the general comment refers to his making prominent of those who previously were rightly insignificant.

On the matter of principle, again, no great passion has been aroused. If the arrested Communists were actually guilty of seducing the Army and the Navy, there will be no disposition at all to question the step that Sir William Joynson-Hicks has taken; but if it be proved that these men's writings had no effect, there may be some sort of academic outcry against the Government on the grounds of interfering with the liberty of speech. On the whole, it is fair to say that there is an uneasy feeling about the possible consequences of the Home Secretary's general trend of thought. At the moment, so it is held, he is kept in decent restraint by the common-sense of the Prime Minister, but already there are rumours of how he intends to treat the vapourers in Hyde Park and elsewhere. One particularly choice rumour is to the effect that he intends to make use of next May Day as a test of the relative forces of Labour and of the Fascists and the O.M.S. But many a thing may happen before next May Day. For instance, it is conceivable (but mainly by those whose criterion of politicians is the *Daily Mail* or the *Daily Express*) that Mr. Baldwin, because or his leniency towards the Communists, will have to go: it is possible, on the other hand, that those friends of the Home Secretary who are pressing his claim to the Premiership, may be badly disappointed.

Locarno.

Abundant praise has already been bestowed on the statesmen who were responsible for the negotiations at Locarno, but it is not too easy, upon examination of what really was done, to offer much credit. For it must be remembered that a settlement of the Western frontier question was, obviously, only a matter of time: Germany had accepted the frontier in the West, and our troops were bound to evacuate Cologne some day. It was the Eastern frontier, then, the Polish and the Czecho-Slovakian frontier, the frontier which Germany had not recognised where the difficulties lay, and it is precisely here that little appears to have been done. As is known, the French position in regard to this Eastern frontier is very different from the British, so that to accept the view of, say, the *Observer*, that by Locarno Mr. Austen Chamberlain and the other European statesmen have made Europe one again, is simply impossible. One cannot think that the British Government's position will have been greatly improved in British eyes by this last attempt at settlement.

The War on the Premier.

The war upon Mr. Baldwin continues apace. He is, of course, too good a Socialist for the Labour organs to attack him, and too liberally-minded for the Liberal journals to shoot at him: the onslaught comes from a

Calcutta, Delhi, Simla, Lahore, Rawal Pindi and Murree.

Digitized by Google

quite different quarter—the pseudo-Conservative camp. Night and day, but with much more cleverness at night, Lords Beaverbrook and Rothermere instruct their scribes to undermine the Premier's position, though blithely asserting from time to time that there is nothing in their conspiracy. The climax of their campaign was reached last week when a faked telegram, from Signor Mussolini to Mr. Baldwin, was re-published. Like every other newspaper, the *Daily Express* was assured, before republishing the telegram, that no such message had been received by the Premier, yet did not allow even the chance of embroiling Italy with Great Britain to make it swerve from its anti-Baldwin path. Such conduct as this is, even in these advanced days, definitely beyond the pale. Fortunately, most observers have already estimated the Beaverbrook-Rothermere campaign at its true value, and the probability is that further attacks on the Premier will but consolidate his position, already made considerably firmer by the success which has attended the efforts of his Food Commission.

Beet Sugar.

Just as, in the seventeenth century, it was men of the Low Countries who came to show this country what could be made of East Anglia, so, again Dutchmen have come to show us how little we understand the potentialities of our land. As everyone knows, a beet sugar factory was started a year or two ago at Cantley, near Norwich, by Dutch capital, and last week a similar institution was started in a similar way at Ely. Shortly, moreover, a sugar-beet factory is to be started at Bury St. Edmunds—this time owing to Hungarian enterprise.

As a matter of fact, the high opinion that foreign sugar-beet growers have of the English climate appears to be thoroughly justified. The crops of sugar-beet in Eastern Counties, which are now being harvested, are excellent, and there seems no doubt that an increasing number of farmers will adopt this new thing. Nor is it only private farmers who are looking less askance at this importation from abroad: the Ministry of Agriculture is thoroughly awake to its possibilities.

The Gunners' Memorial.

There are War memorials—though unfortunately it has not been the rule—by artists who fought in the War, but none has so caught the public imagination as the huge Artillery Memorial of which Mr. Jagger was the sculptor and Mr. Lionel Pearson the architect, unveiled in Hyde Park Corner last Sunday. The Gunners are indeed lucky in this their memorial, for it contains reality and seeks to suggest no message that is not based on reality.

Dominated by the gun, the monument possesses the very spirit of the men of the R.A. There is the whole story of the gunners' and the gunners' horses' (and to the Artillery drivers at any rate the horse was more than the gun) endurances: an unvarnished, an unexaggerated tale. Some, it is said, are turning away from it with hearts too heavy once more to hold the anxious griefs of war; others find therein a fresh sympathy with the men, who, as it has been described, were more than anyone typical of modern warfare. And the art critics are naturally divided. It seems strange that the most glorious, most luckless, warriors of all—the P.B.I.—have not yet had their experiences and achievements perpetuated in so considerable a fashion.

The British Empire Exhibition.

The Exhibition at Wembley is now in the hands of the liquidators. What is to be its future is still uncertain, but facts have come to light which suggest that the position is even worse than had been supposed. For instance, the impression was current that this year was better in the financial sense than last year, but, on the authority of Lord Stevenson, this is not so. Last year receipts were infinitely higher, both from the money accruing from space let and from the dearer tickets. Again, the Tattoo, which had been widely supposed to have saved the Exhibition, certainly has helped, but while the Stadium has been filled, the rest of the Exhibition has been empty.

Lord Stevenson's conclusion is that there is no chance of the Exhibition's being made to pay by any continuation. He also revealed the fact that many of the Exhibition buildings will not stand up much longer: the only four permanent buildings are the Palace of Engineering, the Palace of Industry, the Palace of Fine Arts, and the Government buildings (and, of course, the Stadium)—all the other buildings are mere lath and plaster. Obviously, therefore, those responsible for the future of Wembley have even greater difficulties to face than had been commonly realised.

Sandow.

The death the other day of Eugen Sándow had a curious effect. One thought with a certain guilt of the rust that had been allowed to corrode the dumbells, the chest expanders, and the rest of the apparatus by which we once were moved to emulate the strong man. To the post-War generation he was but a name, if that; but there is hardly a pre-War athlete who will not at some time or other have dabbled in Sandow's theories.

His passion for muscular development was, of course, a passing craze, just as were those numerous "systems," all, curiously enough, deriving from foreigners) which before the War imposed themselves upon us all. Nowadays Swedish Drill has supplemented these developing systems, and our athletes' development is wider but less intense. Yet it should not be supposed that the Sandow cult was a worthless one; it was not. Anyone who can show the visible results of his system is bound in normal times, to make an appeal, and I, at any rate, have little doubt, that when the present effeminate phase of early manhood has passed, some use for the dumb-bell and the Indian club will again be found.

Ashridge Park.

Two things, both characteristic of our time, are increasingly to be noted in our newspapers: the disposition of old families to sell their historic estates to developing syndicates, and the public outcry against the iniquity of such a fate. The latest case concerns Ashridge, the glory of the Chiltern plateau. The Brownlow family, in whose hands it has fortunately been for generations, has received a proposal from a syndicate, and unless the place can be secured for the National Trust, one more link with the past will have irrevocably snapped, and one of the fairest spots on this island for ever destroyed.

I know the region well. There is no finer march than that from the Dunstable Downs, which look down on the little Bedfordshire villages, along the Icknield Way by Ivinghoe, and so through Aldbury and Ashridge, whence you may see Buckinghamshire plain, to the common and the Fulbourne River at Berkhamsted. If such places as these are lost, England, as the land our forefathers loved and our fighting men distantly dreamed of, will

Digitized by Google

indeed be at an end. Happily, and, as one may now proudly say, inevitably, the Prime Minister is interesting himself in the affair: so that Ashridge may yet be saved to the nation.

Men's Wear.

The doom of the Oxford trousers has long been known to the sincere sartorial student. Apart from the fact that this lugubrious arrangement of male attire originated in the eccentricity of a Cambridge Lawn Tennis Blue, and that Oxford's responsibility in the pathetic outbreak is in reality quite slight, it does credit to the versatility, or the spirit of rivalry, of the Isis to have invented already a new form of apparel. Details of the new garment are yet lacking, but the ground-plan is said to be formed on the highest æsthetic principles. Once more, therefore, the undergraduate is discovering his true and traditional *métier*. For, after all, it has always, until recent times, been the male who has been the revolutionary, the female who has been the evolutionary, in matters of dress. The effeminacy of man is but a modern jest; in reality it is the manifestation of one of the male's most enduring habits.

October Beauty.

Had the rest of the year been vile (which it certainly has not been), 1925 would have been remembered because of its October beauty. There were, earlier in this month, mornings all swathed in golden mist, when even commercial buildings in London became wondrous palaces, and the forenoon hours were of bewildering, fantastic loveliness. And now with the colder, wetter days have come the scents and the colours that have made of October an immemorially beautiful month: drifting, rotting leaves that have moved and still move many a lesser man than Carlyle to philosophic thoughts, the damp smell of wet earth, an "unforgettable, unforgotten" smell, and all the rich odours of crops in autumn's ingathering; and the colours—who shall describe them? All the countryside is, for those who view it rightly, now alive with beauty. Winter has not yet assumed her top-boots, nor summer quite discarded her sandals. And though the acorns may be fallen, the hedges are still fragrant with honey-suckle.

ALTER EGO.

NEWS IN BRIEF.

French losses in Syria amounted from the beginning of the campaign in 1920 up to July to 6,041.

Ghazi Mustapha Kemal Pasha, President of the Turkish Republic, arrived at Smyrna on October 11.

The Ross Institute and Hospital for Tropical Diseases has received a donation of £50 from the Maharaja of Mysore.

The King of Yugoslavia, who is at Topola, has been suffering from a slight attack of influenza and was advised by his doctors to keep his room for a few days.

Before leaving Simla the King of the Belgians, with the consent of the King-Emperor, conferred on Lord Reading, the Viceroy, the Grand Cordon of the Order of Leopold.

Unknown persons have broken off both the pen and the sword from the statue of Lord Lawrence at Lahore. The damage is to be made good at once, and the police are now guarding the statue.

The tenth anniversary of the defence of Belgrade was solemnly celebrated on October 11. The former Austro-Hungarian monitor Morava, which took part in the bombardment of Belgrade and now belongs to Yugoslavia, saluted the city.

The Turkish Ministry of Marine have informed the Straits Commission that the Ok-meidan wireless station near Constantinople and the station at Seddul Bahr are available for the reception of distress signals from merchant ships.

BOOK REVIEWS.

COELUM, NON ANIMUM MUTAT.

"MORE CHANGES MORE CHANCES." By H. W. Nevinson. (London: Nisbet. 15s. net.)

In some ways the English language is curiously poor. It is often driven to adopting a slang word in order to substitute one word for many, and too often the adopted word itself is insufficient, insomuch as it is asked to do much. Such a word is "crank." It is most frequently used to denote a person whose attitude to certain subjects is of the nature of monomania and who is generally shunned as a bore. But in another sense the crank is the salt of the earth. No one who has read the book of which this is a continuation or who is at all acquainted with Mr. Nevinson's life-work can have any hesitation in placing him in the second category, and a study of the work before us can only confirm this conclusion. Mr. Nevinson's temperament is essentially courageous, chivalrous, and persistent. He is also restless and ever anxious to see and to hear more, so that he has always been ready to proceed to any part of the world at the shortest notice, with a view to educating himself and the public. In this sense he has seen more "Changes" than most men, but through it all he himself remains unchanged. San Thomé cocoa slavery, Suffragettes, Georgian sufferings, Indian Swarajists, Irish Home-Rulers, Macedonia or the Russian Revolutionaries in 1905 all appeal to him and call forth all his powers of advocacy and, it must be admitted, of denunciation. Always we find him fighting with all his might on the side of those whom he feels to be unrighteously oppressed or to be rebelling against injustice. One cannot have everything in this imperfect world, and so we have to put up with the defects inherent in his good qualities. He has, for instance, no use for any of the group of nations usually classed as Balkan, except Bulgaria. The inhabitants of that country he describes as "the most dogged, capable, highly-educated, and silent—the only silent—nation in the Balkans." It would be difficult to construct a juster summary of the qualities of that virile race in so short a space; but it is a defect, though a characteristic one, that he refuses to see the good qualities of their neighbours. All his life he has been a doughty fighter, though never for himself. He habitually ignores danger, makes little of his sufferings, and never allows his sense of humour to be quenched. His book is crammed full of interesting matter written by a past master of the pen. To profess entire agreement with his views in all cases is, for us and probably for most, impossible. But that does not greatly matter. What matters is that we have here, talking to us, a fine specimen of those men who are almost a speciality of England, call them cranks if you will, who help to keep the world sweet.

We trust that the hints as to the possibility of yet another of these delightful volumes are not being lost sight of by the author.

COLLOQUIAL ARABIC.

"A GRAMMAR OF THE COLLOQUIAL ARABIC OF SYRIA AND PALESTINE." By G. R. Driver. (London: Probsthain und Co. 12/6 net)

The author, as well as the publishers, must be congratulated on their industry and care in the production of this book for the study of the Arabic language. It is the first correct record of colloquial Arabic in a European language, and should be found of the greatest help to European residents in Syria.

But for students on this side, it is obviously of little use. We must, moveover, deprecate the tendency to teach Arabic otherwise than on classical lines with the recognised Grammar which by itself is a treatise of logic of no mean order. Imagine the attempt to teach English with our various provincial dialects and cockney!

We must also bear in mind that colloquial is not equivalent to Modern. Modern Arabic can become classical, being concerned with words and expressions of ideas evolved from wider knowledge, experience, necessity, and contact with foreign nations. The earliest contact of the Arabs was with Hebrews, Greeks, Persians, Turks, and Italians, hence we find such modern words as Jehennam, Angil, Takht, Toubagi, and Bosta, Bolisa, Cambiala, Babor, Sicorta, and so on. Whereas colloquial is a common manner of speech based on mere hearing of the correct language and a variety of pronunciation of certain letters. Egypt, for instance, is peculiar in her accent and in giving the Arabic G the sound of the Greek gamma, Bedouins sound K and Q as gamma also, and some K as tché; Syrians mostly, with Egyptians pronounce Qaf as Af, but Beyrout cockney differs from the colloquial of Lebanon and Damascus. A Syrian, in Beyrout cockney, is shê-may, in Lebanon is shê-me, in Damascus is shâ-me. Likewise Turks, being unable to pronounce the Arabic Dad, say Zabet for Dabet, and so Zabet became the colloquial in Syria and Egypt.

I remember showing the eminent Arabic scholar, the late Sir Chas. Lyall (who did so much for the propagation of Arabic studies, both lingual and intellectual) some written colloquial Arabic. It left him nonplussed, and he would have remained so, had he studied a similar book ever so long.

On the whole, I believe the object of this author would have been better served by his giving us, from the ample store of his knowledge, some colloquial discourses, with his notes on their peculiarities and variations instead of his puzzling out a grammar where no grammar was ever meant. Of course, errors are of necessity in such irregular construction of the language this book elaborates, but they are remarkably few. I am surprised, however, at the author's misinterpretation, at the very beginning of this book, of the function of the "Lam" joined to "Alif." He says: "In print the Lam and Alif are frequently united to form one letter, the combination being called 'Lam-Alif' (class) or la (coll.)."

Apparently he does not know that the "Alif" so joined to Lam is what is called "Alharf Alhawi," which cannot be vocalised, and so cannot begin a word; hence to be able to pronounce it the Arabs joined the letter L to it and called it "La," but school children say "Lam Alif" and find it at the end of their alphabet after Waw. The vocalised Alif is called "Hamza," and in the order of the alphabet comes first.

NOTES OF THE WEEK.

(Continued from page 486.)

worthy departure is handicapped by the fact that the Bulgarian Press seeks to throw ridicule upon it: the language in which it is written, it is declared, is not Bulgarian but a jargon based mainly on a local Macedonian dialect, and, worse still, the primer is printed in Latin characters instead of Cyrillic, which alone the young people for whom it is intended will be able to read. It would certainly have been better, when the Greek Government contemplated the publication of such a primer, to have taken Bulgarian authorities into their confidence, with a view to the preparation of a work that would actually contribute to the removal of a minority grievance. In this connexion it may be pointed out that a solution of minority problems in the Balkans is rendered more difficult by the controversial methods adopted by the Press. In too many countries apparently newspaper attacks on neighbouring peoples or Governments are regarded as a safety valve and a useful diversion from home topics. No Balkan newspaper seems capable of leading public opinion in an effort to find out the best in a neighbouring State, while glossing over or ignoring shortcomings as a phase that can pass.

The new session of the Skupshtina opened at Belgrade on October 20.

General Pangalos, the Greek Prime Minister, has announced that the General Election will be held either in February or the beginning of March, 1926.

A Swarajist candidate has won a by-election in one of the Mohammedan constituencies in Calcutta with 927 votes. The second candidate polled 632 votes and the third 124 votes.

At an informal Durbar, Sir John Wood, the Resident at Srinagar, on behalf of the British and Indian Governments, on October 14, conveyed to Sir Hari Singh the formal recognition of his accession to the throne of Jammu and Kashmir.

Under the patronage of Prince Henry and of Princess Ileana of Roumania, the Young Guild of Empire are giving a ball at Grosvenor House on November 19, in aid of the Women's Guild of Empire. Tickets may be obtained from Lady Muriel Gore-Browne, 7, Kensington Square. W.8.

The Roumanian authorities have decided to reduce the export tax to £5 per head on horses and cattle and to allow the export of horses under six years old. The export of petroleum residue is now permitted, and the export tax on it is reduced from £2 to 600 lei (12s.) per 10 ton truck.

Indian Affairs.

PROPAGANDA IN INDIA.

The announcement of the intentions of the Government of India in regard to agriculture has drawn attention to the great work that has already been done in that direction: and the comment has been freely made that the Government are not good advertisers, and have much to learn in the art of publicity. That they are aware of this necessity is proved by the fact that they maintain a Bureau of Public Information, one of whose main duties is propaganda: and several of the Provinces maintain similar organisations. In the wave of economy that followed the Inchcape Committee's appointment, some of the Provincial Bureaux came under the axe: and the Government of India Bureau only escaped a like fate because it was, at the time that the Committee made its inquiries, a temporary organisation, which the Committee were tacitly allowed to assume would shortly disappear in the ordinary course of things. Had it not been for this rather ingenious manœuvre, the Bureau could hardly have escaped the headsman; for practically no session of the Legislative Assembly passed without the tabling of at least one resolution for its abolition. It is true that, owing to skilful use of the form of log-rolling which obtains in Indian Legislatures, no such resolution was actually moved—when the time came, the mover was not in his place, or declined to move the resolution standing in his name. So the Bureau survived, and is now a well recognised and permanent organisation in the Government; besides being a very useful one. This is not to say that it might not well be much more so; but pro-Government propaganda is a matter of extraordinary difficulty in India: and the man who could combine the necessary proportions of the wisdom of the serpent and the harmlessness of the dove, in order to make it effective, would, if he could be found, be a treasure beyond price. To begin with, he has to be honest: not only because transparent honesty is an axiomatic attribute of the British Government in India, and of every individual among its officers, but also because there are dozens of lynx-eyed critics on the alert for the slightest deviation from the narrow path, always ready with awkward questions. Further, he has to be interesting—even arresting; and Indian and European ideas as to what is interesting are wide as the poles asunder. Lastly, if he can contrive to produce a strictly truthful statement in a form that strikes the imagination of an Indian audience, he has to be careful that that firm is one that induces them to believe what he wishes to convey—instead, as not infrequently happens, of the exact opposite. An example of the latter difficulty occurred during the War, when the rumour was started in India that the German Emperor had become a convert to Islam, and had arranged that his subjects should follow his example. The absurdity of the rumour was exposed in a trenchant article printed in the *Fauji Akhbar* (Military News), a newspaper produced in several vernaculars, under Government auspices, for the special behoof of the men of the Indian Army. Unfortunately, the article began by quoting the rumour, which it then proceeded to demolish. A British officer of a Mohammedan regiment, going his rounds one morning, became aware of an excited crowd of soldiers surrounding one who was reading aloud. He inquired the reason for the excitement, and was told that the German Emperor and his subjects had turned Mohammedans. "Nonsense," said the officer. "But it isn't nonsense—it says so in our own newspaper—our own *Fauji Akhbar*." The officer asked to see the paper: and as, by a fortunate accident, he was able to read Urdu fluently, he induced his audience to listen to the whole article. They then explained that they had not got so far as that—the orator had only read the first paragraph, which contained the exciting news: and, after they had assimilated that, neither he nor any of his audience wished to read or hear any more. It must be added that they seemed genuinely disappointed to learn that the paper had only presented them with such a spicy tit-bit of news in order to contradict it.

This, indeed, is one of the chief troubles with which the Government propagandist has to contend: not his to spring on the Indian public some scintillating piece of news—generally it is the other fellow who has done that, and he has to toil painfully in his wake trying to get people to listen to a contradiction—which, in fact, they do not in the least desire to hear. The purveyor of sober truth becomes a sort of spoil-sport: a role that is not only uninteresting but unpopular. For some curious reason, it is always most difficult to persuade the Indian "man in the street" to believe a thing that is true; but the most outrageous fairy tale is swallowed at once. Early in the War, a Delhi "rag," published at one pice (a farthing) a copy, came out with an exclusive piece of news that made it, for one day, enjoy the wildest popularity. Its total circulation was only about 300 copies; and, by the end of the day, two rupees eight annas (3s. 4d.) was on offer for a second-hand copy. It appeared that the King had risen early in the morning and, after the custom of Kings, had gone up to walk on the flat roof of Buckingham Palace to enjoy the cool air. A German aeroplane had swooped down on him, picked him up and carried him off to Berlin, where he was held to ransom for ten crores of rupees—seven million pounds. And, with his avidity in swallowing anything untrue, the Indian "man in the street" combines a disconcerting lack of perspective. He knew that there was a war on in Mesopotamia, and that the troops taking part in it embarked at Karachi. Ergo, the Germans were somewhere beyond—probably only just beyond—Karachi: the fall of a jerry-built house at that place was reported to have been due to a bomb dropped by a German aeroplane, and this explanation obtained wide belief. Also, the Censor—an important part of whose duty was to conceal facts whose publication would be likely to create alarm in the Indian mind—was caught tripping over the long-range bombardment of Paris. He had unthinkingly allowed the various reports of that bombardment to appear: until he received an official request from the Punjab Government to do so no more—since the inhabitants of Lahore were apprehensive that it might be their turn next. After all, Karachi is only 660 miles from Lahore, according to the map: according to a timorous townsman, doubtless much nearer: and, if the Germans were outside Karachi, what was to prevent them starting a long-range bombardment of Lahore from there?

Government propaganda in India generally takes the form of a *communiqué* or an inspired article. At the best of times, a Government *communiqué* is pretty dry reading: and, as often as not, it is merely a contradiction of some untrue report that has got a good start and that it is unlikely ever to be able to catch up. In the present temper of vernacular journalism, any Government *communiqué* has only to appear in order to achieve immediate rejection as not only untrue but dishonest. With one single exception, every form of official pronouncement is disregarded—and is therefore bad propaganda: the exception is a judicial finding; which, however unpalatable may be its contents, is, in 99 cases out of a hundred, accepted not only as conclusive, but as honest. The inspired article has to be very cleverly disguised to escape detection: anything openly pro-Government shares the fate of the *communiqué*. If the author signs his name, he is a hired hack of no standing: if he does not, he is a venomous creature who dares not face publicity. The only really effective form that the inspired article can take is one whose general tenour is apparently anti-Government, and yet contrives to slip in a little propaganda of the right kind—a small dose of useful powder concealed in plenty of jam. But this is a two-edged weapon, dangerous to its wielder, and one that requires a consummate master to use it with success. That it should be necessary to use it at all shows how hard is the path of the Government propagandist in India.

CURRENT TOPICS.

Lord Birkenhead's Optimism.

Lord Birkenhead's speech at the Constitutional Club last Thursday was doubtless intended for a wider audience than that to which it was actually addressed. Indian newspapers are always eagerly on the look-out for pronouncements by the Secretary of State, if only that they may pull them to pieces. It was Homer's custom to allot a "constant epithet" to the chief characters in his drama, and the vernacular and Anglo-vernacular newspapers of India have lately taken to doing the same. Any pronouncement by a star of the first magnitude, like the Secretary of State or the Viceroy, is labelled as "insolent"; whereas, in the case of lesser lights, the epithet degrades into "impudent." Thus an important Anglo-vernacular newspaper recently complained that the Home Member of the Viceroy's Council "had the impudence to assure" the Assembly that the British Government would not yield to threats. It was only by implication that Lord Birkenhead has "had the insolence" to say the same thing—he said that he discerned signs that Indian politicians were beginning to realise the truth of it. It may be doubted whether they ever believed the contrary, except in theory: the most that they did believe was that, if they could have materialised a sufficiently daunting threat, they would have been able to compel attention; but they were perfectly well aware that this was beyond their power—they claimed to speak with the voice of India, but that was their limit: *vox et praeterea nihil.*

Lord Birkenhead also said that he discerned signs of a better and friendlier temper: presumably among the politicians, for the man in the field has never been unfriendly: and the brief period, during which the man in the street felt so, passed three or four years ago. There can be no doubt that this is so: the Nationalist politicians still live in their own queer country of make believe; but they have realised that the path, which they chose inside it, leads nowhere, and that it is necessary for them to select another—one leading on to a main road. That they are already advancing on such a path is proved by the odd lop-sided kind of co-operation that they are now giving—such as the acceptance by Pandit Moti Lal Nehru of a seat on the "Indian Sandhurst" Committee, and by him and Mr. Jinnah of the invitation to form part of that Committee's deputation to Europe and to indulge in a joy-ride at Government expense.

Lord Birkenhead's last piece of optimism was that he was "able to give a reassurance" on the matter of recruitment to the Indian Civil Service. For the first time for several years "the returns of English competitors, and of Indian competitors of the right class, had been well maintained: and, in his judgment, they were equal to the class of men recruited before 1914." It will be observed that his Lordship used the word "competitors"; but he did not say how many of the successful British candidates, who had included the Indian Civil Service among their choices, have actually declared for appointment to it. We have, seen the list of entries: what we should like to see now is the list of acceptances.

By Air to India.

It was recently stated at Simla, in the Council of State, that two proposals were in existence for the establishment of air communication between England and India. The first was for an airship, the second for an aeroplane, service from Egypt to India: Karachi being, in both cases, the Indian terminus. The Government of India had agreed to give the land required for the Karachi base, estimated to cost about 90,000 rupees, and also to give a grant in aid of four lakhs, for the airship service. As regards the aeroplane service, which it was intended should be weekly, the British Government had entered into an agreement with Imperial Airways, Limited, for the operation of the route.

It is now announced that the contract for the erection of an airship shed at Karachi, which will be one of the largest in the world, has actually been signed; though there has been, as yet, no announcement as to the period of this service, or how soon it may be expected to begin. As regards the aeroplane service, however, information is much more definite; the stages have been decided on, the route being from Cairo to Karachi via Damascus, Tadmor, Baghdad, Basra, and Bushire: a total flying distance of 2,500 miles.

In an interview given to the *Evening News*, the Air Minister said that he hoped to see the journey from London to India reduced to 100 hours. The British Empire had more to gain from long distance air communication than any other nation in the world: the longer the journey the greater the advantage of flying. But their motto must be Safety First. The whole future of flying depended on its appeal to the public, and this could only be successfully made by a combination of speed, regularity and, above all, safety.

The Indian Cotton Trade.

The *Financial News* of October 13 has an interesting article on the cotton trade in India. Before the War, India was far and away the largest of our overseas markets for cotton piece goods. She still remains so, but her net average annual importation, which, during the three years 1911-14, was 2819 million yards, has been reduced, during the period 1921-24, to 1,319 million yards—a decline of no less than 53 per cent. This, one of the most serious of the shrinkages in our overseas trade, was disguised to some extent by the rise in nominal money values, but the basic fact of real economic loss remained. The cause of it was the greatly increased cost of British cloth, due to the higher price of the raw material, of the processes of manufacture, and of transport. It was to be expected that, in the circumstances, the Indian mills would make up the difference. In fact, their average annual production has risen from 1,064 million yards during the three years 1911-14 to 1,719 million yards during the period 1921-24; but this still leaves a shrinkage of 845 million yards in the total Indian demand: about a quarter of which has been filled by an increase in hand loom production, which is now about 200 million yards greater than it was ten years ago. Apart from Mr. Gandhi's "Khaddar" campaign, the revival of the hand loom in India is due to the rise in the price of mill-made cloth, Indian as well as British, due, in both cases, to the same causes, though in varying degree.

When the Indian consumer finds the price of cloth rising beyond his means, he economises in quality—which is where Japan's opportunity has arisen—in quantity, or in both. His clothes having become more valuable, he takes more care of them, even though their inferior quality makes them less durable. It might, indeed, have been added that he even contrives to go without. Mr. Gandhi shocked a number of his followers by appearing in public clad only in a loin cloth; but, in so doing, he set a fashion that "the man in the mud hut" found it useful to follow: and who could point the finger of scorn at him, when he did so, if India's foremost saint had shown him the way? If the price of cloth can be materially reduced, no doubt the man in the mud hut will return to his previous style of clothing himself. Commentators say that the same result will be achieved if his net earnings can be increased: but this is open to doubt: it is not so much the relative as the absolute cost that frightens the Indian buyer. Our Bombay correspondent explained in his last week's letter, that the rise in the price of cloth was unavoidable, and not in any way the fault of the Indian manufacturer. Granted—but the fact remains that, unless a drastic reduction in price can be brought about, the demand of the man in the mud hut will remain as low as he can possibly contrive to make it.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 1.

The Pujahs.

During the past week the holiday spirit has prevailed throughout Calcutta and has been apparent in the political as well as in the mercantile life of the city. The *Bengalee* and *Forward* have suspended publication during the holidays, and even the *Amrita Bazar Patrika*, which has "carried on," has had nothing political with which to regale its readers with the exception of a Mohammedan meeting which was called "to consider matters of interest to the community." The deliberations referred mainly to the New Market burial and, as it was stated that "It is useless to expect anything from the Swaraj Party now," it was considered necessary to call a conference of Moslem Members of the Legislative Council, Moslem Councillors, and other leaders to devise measures "to meet the present critical situation."

There have been communal disturbances at Aligarh, in which the police were forced to use firearms to disperse a mob of Mohammedans who interfered with a Hindu "Ramlila" procession. All the facts of the case have not been disclosed; but it would appear that, on the first signs of interference by the Mohammedans, the Hindus gave a good account of themselves. The aggrieved party have telegraphed to the Governor of the United Provinces demanding an inquiry by non-Moslems, and things are quieting down. Disturbances were feared at Allahabad and Lucknow, but the Ramlila procesions were cancelled, and nothing untoward is reported. The arrangements in Calcutta, in connection with the Durga Poojah processions, have come off without a hitch, and an atmosphere of perfect peace obtains. There has been a large influx of country visitors to the city for the festivities. These, it is presumed, are the down-trodden villagers who have received the compassion, but not the money, of the Swarajists. Their sole occupation is wandering round the various sights with their eyes and mouths wide open—all as happy as they can be!

The External Capital Committee.

The recommendations of the External Capital Committee have now been published and bear the stamp of clear-headed consideration. The exploitation of internal capital in India has been a problem long awaiting a solution, and the frank common sense of the suggestions made to this end is an achievement of which the Committee may well be proud. Although it is held that, from India's point of view, it is better that capital for the use of Government or for the development of Indian industries should be raised in the country itself, if money from internal sources is not forthcoming, the utilisation of foreign capital is looked upon as a valuable factor in the development of India's resources and as in no way objectionable. In order that facilities may be given for the investment of funds which are now unproductive so far as the country is concerned, the Committee suggest that further branches of the Imperial Bank should be opened; and, realising that it is imperative that progress should be along lines immune from losses, an extension of the Public Debt Office facilities to the more important Provincial towns is recommended. This would encourage dealings in Government securities and establish more money markets of the right type throughout the country. In regard to the imposing of restriction on external capital, the Committee have, for the purposes of consideration, divided this under three heads, which are briefly, (1) Investments in which the external investor is merely entitled to a stipulated rate of interest; (2) investments in which the external capitalist enters into competitive business on equal terms with Indian enterprise; and (3) investments in which the external capitalist acquires special privileges. Bevond stating that in Government and quasi-Government loans Indian capital should have the preference, the Committee do not consider that any controlling measure is necessary in the case of the first group, neither do they find that restrictions would be of any practical use in the case of external capital invested in textile mills, mercantile houses, and the like. It is considered that, in cases where an external capitalist secures either a bounty or a concession which would enable him to develop a wasting asset, such as a mining concession, Government may rightly impose restrictions: and it is suggested that in the former case, companies should be registered in India with rupee capital and a reasonable number of Indian directors, also that facilities should be given for the technical training of Indian apprentices. In the latter case, it is recommended that concessions should only be given when it appeared improbable that Indian capital would be forthcoming, and where the project appeared to be for the good of the country. It is interesting to note that Pandit M. M. Malaviya, who had a seat on the Committee, found it so difficult to find any points of agreement that he has drawn up a note of dissent which is almost half as long as the recommendations of the Committee. This is certainly one method of getting into the limelight; but beyond that it is difficult to see what good will materialise from the Pandit's zeal.

Markets.

On account of the Poojah holidays business has been restricted this week to the last three days. The jute market continues to have a very firm appearance, and a similar remark may be made with reference to gunnies, though at the outset business was restricted in each case by sellers holding out for higher rates; at the close prices advanced to a higher level, at which a considerable amount of business has been put through. The tea market has been steady at previous levels with a tendency towards higher prices for the better descriptions.

With the Stock Exchange closed, no transactions have taken place in the Share Market. Money remains quiet with little doing; exchange continues steady at last week's level.

PROGRESS OF THE MILL STRIKE.

(By Our Bombay Correspondent.)

Bombay, October 1.

The strike still continues without any change in the situation: the only trouble being caused by the insistence of the mill hands on their right to leave Bombay without paying for their railway tickets. This has led to the rushing of one station at midnight with a certain amount of breaking of heads: and probably on several other occasions the railway staff have had to submit more quietly to intimidation. The mill hands appear to have been told that, now that the railways are under State management, they are entitled to free carriage at any time of emergency.

Meanwhile, "Pro Bono Publico" and his friends are writing to the papers to blame the mill agents; who are, as a class, accused of practices which come very near the criminal line. It is in fact suggested that they habitually buy their coal and stores, and sell their cloth and yarn, at fictitious prices, to the disadvantage of their shareholders and to the benefit of their friends and relatives. This sort of charge loses all its point by its generalisation. There may be dishonest agents, but it is the business of the auditors and the shareholders to track them down individually: and it is not apparent that anonymous letters to the papers are going to do any good.

It is also pointed out that the mill industry has been finally and for ever ruined by Japanese competition and that there is no chance of any recovery. Bombay is not the only centre of industry that is apt to go to extremes of depression and elation: but it certainly does it thoroughly. Four years ago we were infomed, publicly and for all the world to hear, that the mill industry of Bombay was safe for ever. Some doubters admitted that, in times of acute depression, mills might conceivably have to reduce their dividends to 40 per cent: but that was considered a foolish and wrong attitude of pessimism: and to-day, while many of the mill shares still stand at a premium of 200 to 300 per cent., we are told that the position of the industry is hopeless.

The outlook is unpleasantly dark, but the prosperity of

Digitized by Google

the world's great industries is measured in curves and not in a steady upward or downward gradient: and, whichever way the curve is tending, it is not advisable to assume that its direction will remain constant.

THE USE OF FIREARMS.

(By Our Simla Correspondent).

The session of the Legislative Assembly, which has just come to an end, however instructive it may have been from other points of view, was remarkable for only one debate upon a matter of military interest; when one of the members from Madras, the Province where only a few years ago martial law had to be declared in the Moplah country, introduced a motion for the consideration of his Bill for the regulation of the use of firearms in dispersing unlawful assemblies. During the past six years efforts have more than once been made to tie the hands of the magistrates, the police, and military officers who are called upon to nip in the bud any tendency to open disorder, or to deal with such disorder when it has actually begun: and this bill is the culminating point of these attempts. The mover of the bill impressed on his audience that he was a man of peace, and that all he wanted to do was to minimise the possibility of bloodshed resulting from the use of firearms against a mob. With this humanitarian attitude no one will quarrel, and indeed, several of the speakers who opposed the bill expressed their full sympathy with the motive underlying it, as stated by the mover. But the methods proposed by this man of peace, to attain his object, show a lamentable failure to realise the difficulties facing the officials responsible for law and order, when confronted with a situation in which they have to decide whether or not it is absolutely necessary to call upon the police or troops to open fire. There are three main points in the Bill which are particularly open to objection. First, it is prescribed in it that firearms are not to be used unless the assembly cannot otherwise be dispersed. It is easy to conjure up a picture of a small body of police trying with their staves to disperse an angry crowd; their futile efforts only serve to inflame its temper: the psychological moment for opening fire with any hope of effect is lost: and, when at last the first shot is fired, the mob, instead of being dispersed, is abie to overwhelm the police. Secondly, the person directing the fire has to warn the assembly by such means as are available that, unless it disperses, it will be fired upon. This proposal introduces a further element of delay and gives the crowd additional opportunity of growing in courage and violence before steps can be taken to check its activities. But most calamitous of all is a third clause which allows any person injured by firing, or the representative of any person killed, to bring a charge of grievous hurt or murder against the officer who gave the order to open fire. As the law stands at present, the sanction of Government is necessary before any officer who has ordered firearms to be used against a mob can be prosecuted: and it is laid down that any act of this nature, committed in good faith, does not constitute an offence. If the present bill were to become law, all the safeguards which an officer, who merely does his duty, possesses at present would be swept away: and he would be liable to be prosecuted in circumstances in which the whole burden would rest upon him of proving that the various steps laid down, as to trying to disperse the crowd by other means, and giving them adequate warning, had actually been taken before fire was opened. One speaker rightly describes the bill as based upon the principle of "Heads I win, tails you lose."

Cases of actual rioting in which it has been necessary for the police, and less frequently the military, to open fire, or of public excitement where the civil authorities have been forced to call for the presence of troops as a precaution, have been by no means infrequent in India of late years: and whereas, in European countries, the chances of a military officer being called upon to carry out that most hateful of all a soldier's duties, the rendering of aid to the civil power, are relatively small, in this country it is a duty which an officer may at any time be called upon to perform. At present, if on such occasions he orders fire to be opened, he bears a definite personal responsibility for doing so: and this in itself is a very effective safeguard against any possibility of overhasty or indiscriminate shooting. If, however, an officer knew, not only that his hands were tied by a series of unpractical rules to which he must conform, but also that, if he opens fire at all, he was almost certain to be prosecuted, his difficulties would be increased a thousandfold: and it is more than likely that many occasions would occur where, either through the necessity of carrying out the preliminary procedure or through over-caution due to fear of possible consequences, officers failed to prevent the spread of disorder which might have been checked by firm and timely action. The effect upon law and order of weakness upon such occasions is well known. Whether or not, in their hearts, the unpractical politicians in India who support bills of this nature accept this as a fact, they are not willing to acknowledge it in public. When serious rioting occurs, these same persons are the first to blame the authorities for not having taken proper precautions to prevent it; but they are perfectly ready to support any measure which will weaken the forces of law and order, merely because it is the Government which is responsible for them. This peculiar mentality, which disregards the practical side of every issue, finds expression in almost every debate in the Assembly; but its dangerous character is never more clearly shown than when it is applied to matters relating to the internal security of the country. Yet those "representatives of the people," who display it, are those who clamour most loudly for the grant of a further measure of self-government: and who are loudest in their indignation when they are told that they are not yet ready to receive it.

THE INDIAN MAIL.

Mr. Gandhi's Abdication.

The mail brings a detailed report of the discussions in the meeting of the All-India Congress Committee at Patna: which resulted, as already reported by cable, in Mr. Gandhi's surrender of the Congress to the Swarajists and the reversal of his previous decision in favour of a "spinning franchise" as the basis of Congress elections. On the first point, the resolution laid down that the Congress should "take up and carry on all such political work as may be necessary in the interests of the country, in accordance with the programme and policy of the Swaraj Party"—the last eleven words being added at the instance of Mr. Gandhi himself—and should, for this purpose, employ the whole of the machinery and funds of the Congress, except such funds as were already allocated to the All-India and Provincial "Khaddar" (home-spun cloth) Boards: these funds being handed over to a new body, the All-India Spinners' Association, which was to be an integral part of the Congress organisation, though with certain independent powers of its own. As regards the latter point, it was stated that only 9,197 persons had found themselves able to qualify for the spinning franchise, by the production of 2,000 yards of yarn of their own spinning: and it was decided that the franchise should, in future, be alternative: either the annual payment of four annas, or the annual production of 2,000 yards of home-spun yarn. Those who elected for the latter should send their yarn to the All-India Spinners' Association and should receive a certificate, from that body, that by doing so they had qualified for the franchise. The Congress Committee reserved the right to check the accounts, stock and vouchers of the Association, and to cancel any certificates that appeared to them, as a result of such inspection, to have been improperly granted. The only provision on which Mr. Gandhi was able to insist, for the furtherance of his "khaddar" campaign, was that no one should be allowed to vote or to take any part in any meeting connected with the Congress who does not wear hand-spun and hand-woven khadder at political and Congress functions or while engaged in Congress business.

Digitized by Google

An amendment demanding that all Congress members must wear khaddar on all occasions was passed, but was afterwards rescinded on an appeal from Mr. Gandhi, who said that such a rule would "clip the wings of the Swarajists," who had done all that could be expected of them by agreeing to wear khaddar on all ceremonial occasions.

Mr. Gandhi's dominance of the Congress has thus definitely passed into the hands of the Swaraj Party: and the tattered remnants of his khaddar campaign must pass into limbo in the immediate future. Mr. Gandhi's personality still remains an asset of great value: and it seems impossible to doubt that his rather pathetic submission to the Swarajist revolt against his domination is due to his reluctance to retire from the stage. A few years ago, he led the Congress and all its members as unquestioned Dictator: now the Swaraj Party not only lead the Congress, but drag Mr. Gandhi at their chariot wheels as the central figure in their triumph.

The "Indian Sandhurst" Committee.

The Committee presided over by Sir Andrew Skeen has now concluded its preliminary sittings, and is proceeding to take evidence in public. The presence on the Committee of the leaders of the Swarajist and Independent parties in the Legislative Assembly, and the fact that all its personnel, except the President and one member, is Indian, have not saved it from the usual attacks directed by the extremist Press at all Committees appointed by Government: except that, in this case, as it would be impolitic to attack the members, obloquy is being directed at the witnesses. They are represented to have been "tutored" by the "Die-hards of the General Staff" to give evidence in support of what is declared to be a conspiracy against the creation of an Indian Sandhurst, engineered by the military authorities.

The composition is announced of the deputation which is to visit military training institutions in England, and perhaps in other countries as well, for the assistance of the Committee is reaching its final conclusions. Five prominent Indians have been selected for this attractive joy-ride—doubtless to the deep disappointment of the rest. Pandit Motilal Nehru, the Swarajist leader: Mr. Jinnah, the Independent leader: Mr. Sethna, a Bombay member of the Council of State: Sir Abdul Qaiyum, a nominated member of the Assembly, representing the Frontier Province: and Major Zorawar Singh, representing the Indian Native States: will form the deputation. Of the representatives of British India, two will therefore be Hindus and two Mohammedans; though, as Mr. Jinnah hails from Bombay, and Pandit Motilal Nehru from the United Provinces, the Punjab—as distinct from the Frontier Province—and Madras are left out in the cold, while Bombay seems over-represented. The racial and provincial composition of the deputation is, however, not a matter of so much importance as its political composition: and it is certainly a great feather in the cap of the Government that it should have persuaded two such redoubtable critics of its military policy as Pandit Motilal and Mr. Jinnah to go and see things for themselves. In the Reforms debate in the Assembly, Mr. Jinnah denied that, if properly handled, the young intelligentsia of India would be backward in offering themselves for commissions: he himself, he declared, could provide ten thousand. He will now have an opportunity of deciding on the exact form of institution that will be needed to meet the demand, and the methods by which suitable candidates will be attracted to it: and his conclusions should be of outstanding interest.

The Dispersing of Mobs.

The letter from our Simla correspondent on the Bill, which, after being passed by the Legislative Assembly, was rejected by the Council of State, for the regulation of the use of firearms in dispersing unlawful assemblies, confines itself to comments on the provisions of the Bill and its effects if it had become law. As a matter of fact, it would have been easy to quote examples of actual happenings of a sort that would certainly recur in such circumstances: for instance, the tragedy of Chauri Chaura, a small town in the United Provinces; where, in February 1922, the officer in charge of the police post attempted to argue with a large and excited mob bent upon mischief. The answer of the mob was to attack the police post, whose defenders then, too late, opened fire in self-defence; the result being that they were overwhelmed, twenty-one of them being killed and their bodies—some possibly still alive—thrown into the burning police post, which the mob had set fire to after their successful attack. A memorial to these policemen who had died at their post was afterwards erected, and was opened by the Governor of the United Provinces: who, at the opening ceremony, spoke of the evil passions that, in India, so often animated a mob, and of "the terrifying glimpse of the fires beneath" that had been afforded at Chauri Chaura. This particular instance of mob violence was directed against the authorities responsible for the preservation of law and order, and was one of the manifestations that accompanied Mr. Gandhi's campaign of "non-violent" non-co-operation; but the usual form taken by mob violence in India is a religious one, when the excitement of communal feeling leads Hindus and Mohammedans to try to break each other's heads. If the police succeed in preventing them from doing so, both sides combine to decry their unnecessary interference: if they do not succeed, both sides complain of their failure to uphold law and order. There is, however, one point in the Bill that should receive careful attention: and that is the giving of warning before fire is opened. This is, in fact, invariably done; but in a manner that is not, and in the nature of things cannot be, effective. More than in most countries, a concomitant of all forms of emotion in India is noise—every member of the crowd is shouting at the top of his voice, and verbal warnings, if they reach the ears of any of its members at all, can only reach the front ranks at most: who, even if they should desire to profit by the warning, are probably prevented from doing so by the pressure of the ranks behind, none of whom is aware that a warning has been given. One has often thought that, if a bugler were enlisted as a member of every police post, this difficulty might be overcome—a short sharp call on the bugle, such as "The Halt," would carry much farther than the most stentorian voice: and its shrill and arresting message would be calculated to bring about the moment of hesitation that causes mob courage to evaporate.

The High Indian Official.

At a dinner in Simla in honour of Sir B. N. Sarma, the retiring member of the Viceroy's Council, the Governor of the Punjab (Sir Malcolm Hailey) made some very apposite remarks about the position of those Indian gentlemen who have consented to accept high office under the Government of India. When such an individual is an official, said Sir Malcolm, he is always declared, by his less fortunate Indian brethren, to be a reactionary who is out of sympathy with the public; when he becomes a non-official he is able to exchange his constructive activities for criticism, and then becomes one who has a true insight into the public mind and is instinct with true ideals as to the future of India. It is only recently that a high Indian official who signed the majority report of the Indian Reforms Committee explained, after his retirement from office, that he did so because his official position obliged him to take that course; had it not been for this, he would have signed the Minority Report—so that speakers in the Reforms debate in the Assembly were able to declare that the Minority Report ought really to have been that of the majority, and vice versa. The speaker did not, it is true, make any direct reference to this particular change in "the angle of vision"; but he did say that, as an official, the guest of the evening had to pronounce a definite opinion on even the most difficult question; while, as a non-official, he would always be able to evade that, and take refuge in a refusal to declare his own opinion by an emphatic announcement that Government must be wrong. As Jack Bunsby used to say, "The bearings of this remark lies in the application of it": and it must certainly have created considerable amusement in the minds of all Sir Malcolm Hailey's audience, with possibly one exception. Difficulty in pro-

Digitized by Google

nouncing a definite opinion is by no means confined to Indians—some of the highest of the European hierarchy in India are noticeably afflicted with it; but, if one were asked to particularise the one outstanding point in which the average Indian official falls short of his average British colleague, one would certainly select the point in question.

INDIAN EXCHANGE.

London, October 19.

With holidays in India fairly general throughout the week, the movements in Rupee Exchange have been unimportant. Telegraphic Transfers in Bombay and Calcutta are unchanged at 1s. 6 5-32d., with very little doing at a shade higher, although it is reported that Government have purchased at 1s. 6 3-16d. to the extent of £300,000 to £400,000.

Forward rates in India have been remarkably quiet, with good buyers for delivery December and January at anything over 1s. 6 3-16d.; but we understand that Banks have been disinclined to meet merchants' requirements in this direction.

It is reported that a fair amount of business has been done in India for so far forward as May next year at 1s. 6⅛d., but operations were confined to inter-bank, and the rate has now disappeared.

In this market the week has been singularly quiet. At times a seller has appeared at 1s. 6 3-16d. for T.T. and has had no difficulty in finding buyers. There is a fair inquiry at this rate, which banks have been disinclined to meet except at 1-64th higher, and this only to a limited extent. So far as forward business in the London market is concerned, we hear of no fixtures, except for trifling amounts.

The Government of India have announced that their purchases of sterling for the half-year ended September 30 for remittances to the Secretary of State for India here amount to £20,549,000. The last return issued by the Imperial Bank of India indicates that there have been heavier withdrawals of money for trade purposes, which showed that the trade demand had gone up 280 lakhs of rupees.

Markets on Monday are unchanged. London is quiet, but a firmer feeling is apparent in India. Banks have sold in Calcutta at 1s. 6 3-16d. for cash, but not sufficient to satisfy their requirements. They had consequently to go to Government, who are reported to have bought £500,000 further at the rate.

In our last report we indicated that it was unlikely that any wheat would be available for export from the Punjab, and we learn in shipping circles here that several shipments have already been arranged for export to India. It is highly probable that more will follow.

INDIAN COMMERCIAL NOTES.

The statistics of India's balance of trade during August were as follows, in lakhs of rupees:—

Imports of merchandise on private account	18,80
Exports and re-exports of merchandise on private account	29,24
Net imports of gold on private account ...	2,73
Net imports of silver on private account	67
Net imports of currency notes on private account...	2
Visible balance of trade in merchandise and treasure on private account ...	7,13
Net balance on transfer of funds between India and the India Office	5,29

The chief interest in these figures lies in any indications they give of progress made in India's return towards normal trade conditions. To take first the imports of merchandise. These have remained steady during the past few months at an average of Rs. 1,800 to Rs. 1,900 lakhs. Exchange has risen slightly since January from 1s. 6d. to nearly 1s. 6¼d., and the wholesale prices of manufactured goods have, in general, declined rather than advanced. This applies particularly to cotton piece-goods, which form India's staple import. On the whole, therefore, if rupee values of India's monthly imports are more or less stationary, it shows that the volume of purchases must have increased slightly in view of the fall in the world's prices and the rise of the rupee.

It is on the export side that we see traces of a return to more normal conditions. The value of India's exports was increasingly heavy during the three months, January, February and March 1925, reaching a record of over 46 crores in March. The pace could not be maintained, however, and exports have gradually fallen month by month to 28 crores in July and 29 in August. Part of the decline is due to reduced exports of wheat, of which local stocks in India are short and, therefore, prices are high. Exports of raw cotton fell off from 16¾ crores in March to less than 5½ crores in August. Exports of oil-seeds have fallen from 4¼ crores in March to 1½ crores in August. It must at once be admitted that much of this reduction in India's exports is seasonal, due to the normal falling off of her export business during the rainy months, June to September. Future developments depend largely on the monsoon now closing, which has, fortunately, given better results than were at one time anticipated.

One of the clearest indication of the return of India's trade to normal is in her imports of the precious metals, and particularly of gold. Her purchases of gold in March, 1925, stood at the record value of close on 15 crores of rupees. From that high level imports fell suddenly in April to 1⅓ crores and have since fluctuated between 2½ and 3½ crores monthly. The figure for August is 2¾ crores of rupees.

Finally, account must be taken of remittances from India to the India Office. The level of these remittances was low during the early months of 1925, but increased to 10 crores of rupees in June. The figure for August is just over 5¼ crores. If we add this amount to the imports of merchandise, bullion and notes, we get a total of 27½ crores of rupees, representing the debit side of India's trade balance for the month; and a sum not very far short of 29¼ crores, representing the value of her exports and re-exports and constituting the credit side of the same account.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning,

Locarno and After.

Among the many factors which have had a hampering effect on trade development the uncertainty with regard to the position on the Continent has been one of the most far-reaching. Indeed, it is not going too far to say that without a settlement of the European problem any great expansion of trade was out of the question. As a result of the Pact of Locarno it would seem that we are within measurable distance of the disappearance of this handicap to reconstruction. If one writes thus guardedly, it is with the memory of the long series of conferences since 1918, which were to have achieved so much but which, if they did not leave things as they were rather enhanced the difficulties of the position than otherwise. This time, however, the grounds for optimism seem well-founded, and it certainly appears that the work of Mr. Chamberlain and his colleagues only requires the ratification of the respective Parliaments concerned, for Europe to be in a position to move forward rapidly on the way that leads to something approaching pre-War conditions.

The Outlook.

Given that Locarno does in fact mean a final European settlement, it will naturally be asked what will be asked what will be the concrete results from our point of view. Briefly it may be anticipated that the flow of international trade will be stimulated, and that before long we shall find much larger outlets in Europe for our manufactures. The situation that has existed up to the present time has forced France and other countries into unnecessary expenditure, and henceforward an improved Budgetary position may be looked for with a consequent effect on the exchanges, and as these improve so the outlook of this country will grow brighter. It is to be expected also that in the immediate future there will be a move to undertake vast programmes of works development which have been held in suspense owing to the doubt as to what was going to happen. In this direction British enterprise should find great scope both in obtaining contracts to carry out works and in the supply of the materials required. Finally, a pacified Europe will need extensive loans for reconstruction purposes. Great Britain has already done much to assist in this direction, but one foresees much larger demands on her resources, and if the conditions permit of such assistance after the needs of the Empire have been fully met, it is to be hoped that the authorities will lend encouragement to the floating of foreign loans here, for no course could be conceived that would have directly and indirectly a better effect on the economic situation here.

Foreign Contracts.

The scope for British enterprise in regard to foreign contracts can be realised from the further extracts that we give from the report of Mr. R. F. H. Duke on Greece this week dealing with contracts in Greece. There the tendency has been for British enterprise to come more and more to the fore, and if British groups have failed to secure some most important contracts for works of development they have been successful in competing for others, and it is evident that there is no reason why this country should not fully hold its own in this field of commercial activity. Only at the end of last week the news came that the convention between the Greek Government and the Power and Traction Finance Company, Ltd., for electric lighting and traction, had been definitely signed. I gave some details recently of this contract, which is quite one of the most important developments as far as Great Britain is concerned in the Near East since the Armistice. Success in this instance should act as a spur to British firms to try and obtain other important contracts that are available in the Near East.

The Coming Fair.

Judging by present indications next year's British Industries Fair should be quite the most successful of the long series. For various reasons conditions have never yet been really favourable for the Fair. Now the outlook is more auspicious than it has been at any time since 1918. As I have pointed out above, a really pacified Europe means a great increase in the volume of trade, and once the wheels of commerce are really revolving again in Europe the repercussion will be felt throughout the world. That means increased buying to meet the requirements abroad, and one looks therefore for a much greater number of foreign buyers from the Continent and in all probability from the Near East, where for some time the signs have pointed to reviving trade, and where Locarno will make an enormous difference, and it will be surprising in the circumstances if a record business is not done at the Fair. That British firms are realising the possibilities of the position is clear from the demand for space at the Fair. So far over 100,000 square feet of space has been applied for, and requests for space are being received continually. The only thing that can destroy the fair promise of 1926 for Great Britain is labour trouble here, and that, one can only hope, we shall be permitted to escape.

The Cotton Position.

The cotton position at the moment is very interesting. Crop reports from America and Egypt point to a greatly increased yield; indeed in the case of America it looks as if a record crop will be forthcoming. The indications are therefore that supplies of cotton will be quite sufficient next year, which is eminently satisfactory in view of the prospects of reviving trade. The price of American cotton has reflected the position, while that of Sakellaridis has also declined, but relatively only slightly, and as will be seen from the report that we give in another column, the difference between American and Sakellaridis is quite abnormal, and is indeed double what it should be. a good Egyptian crop the tendency must be for the difference to decrease, but rumours have been prevalent that the Egyptian Government may support the market should there be a marked fall. It is difficult to see how such a step could be justified, for ultimately the commodity must find its own level, and anything likely to check demand and thus to hamper the trade revival is greatly to be deprecated.

Rubber Again.

That it is much easier to destroy confidence in rubber than to restore it is evident from what has happened in the rubber market during the past week. While it is now clear that there is no likelihood of any modification of the restriction scheme rubber remains depressed; indeed, it could scarcely be more so if it were certain that an extra 10 per cent. was to be released on November 1. The fall has been mainly this time in shares. The commodity indeed rapidly recovered at one period, but at the time of writing has fallen away again. The share market, however, has been consistent in its depression, and prices make a very different showing to what they did a brief ten days ago. And yet the position is unchanged, and if the shares really justified the prices at which they stood before the fall—and my opinion is that in many cases they were then undervalued—it is certain that they still do to-day. But then the rubber market is traditionally only consistent in its inconsistency. I imagine that nothing much will happen now until November 1, and then if there is no change there will be an upward move to a level somewhat in advance of that hitherto reached, and then profit taking indulged in on some pretext or other will send the shares down again for another brief period. It will be interesting to see how this forecast coincides with what happens. Certain it is that in view of the huge dividends that will be declared next year the shares will not long remain at their present level.

Commentator.

SUDAN CONTRACT.

Sir W. G. Armstrong Whitworth and Co., Ltd., have received an order from the Crown Agents for the Colonies for a 140 h.p. Vertical Francis Water Turbine coupled to a 120 K.V.A. Generator. This small hydro-electric set will be installed at the Sennar Dam and the power will be used for lighting and pumping.

VICKERS BOILER COMPANY.

The Vickers Spearing Boiler Company, of which Vickers Ltd., are the sole proprietors, will in future be known as the Vickers Boiler Company, Ltd. The management of the company will be as follows:—Mr. Douglas Vickers, chairman (chairman of Vickers Ltd.), Sir Vincent Caillard, D.L., director (director of Vickers Ltd.), Commander C. W. Craven, R.N., director (director of Vickers, Ltd.), Mr. W. F. Sadler and Mr. J. Kerr Bock, joint managing directors, Mr. G. T. Williamson, general manager, Mr. Harold B. Clark, secretary. The address of the new company will be the same as before:—20, Kingsway, London, W.C.2.

John Allen and Sons (Oxford), Ltd., have received an order for 100 scarifiers for attaching to rollers to be supplied by Marshall, Sons, and Co., Gainsborough, to the Greek Government.

The directors of Lloyds Bank announce that Sir George Lloyd has resigned his seat on the board on leaving England to take up his appointment as High Commissioner for Egypt. They also announce that Mr. Cyril E. Lloyd, M.P., of Church House, Broome, Stourbridge, has been elected to a seat on the board. Mr. Lloyd is a director of the Great Western Railway and other companies.

NEAR EAST MARKETS

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Ottoman Bank:—

Teheran, September 19.—The situation in the bazaars is unchanged. The provisioning of the town is giving rise to some anxiety. There is not an actual shortage of bread at present, but the stocks of wheat held by the Government (in Teheran) are running very low. Fresh stocks are expected shortly, and the authorities are taking energetic measures. Private stores of wheat are being sealed by the officials of the alimentation service.

Basrah, September 19.—Prices of dates still rule high, Hellawis being quoted at Rs. 540-560 with Sayers at Rs. 220. Packers who had been holding off the previous week in the hope of better prices were obliged to come into the market again, and packing which had been quiet became active. An advance in prices on the London market is reported, and was welcomed by packers. It had the effect of hardening prices locally. Two more sailings for the United States are reported this week, which will bring the estimated total export to date to 15-20,000 tons.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, in their report for the week ending October 10, state:—

Sultanas.—The arrivals since the opening of the season are estimated at 14,850 tons, and the sales to date are put at 13,450 tons. Closing prices, Smyrna: per cwt. c.i.f. London-Liverpool: Type 12, 59s.; type 13, 61s.; type 14, 64s.; type 15, 67s.; type 16, 70s.; type 17, 74s.

The market closed with a firm undertone but with no material change in prices from the preceding week's level. Notwithstanding the limited demand weakness is not apparent owing to limited supplies.

Figs.—The arrivals since the opening of the season are estimated at 142,676 bags and sales to date are put at 131,344 bags.

The market closed very strong. Demand continues in excess of supplies. All grades have further advanced during the week on favourable advices re the Corson and Sinaia shipments. The tendency is for still higher prices.

THE GROUND NUT OR MONKEY-NUT.

There are comparatively few people who realise the world-wide importance of the humble ground-nut, or "monkey-nut," as it is commonly called. It is cultivated in almost all the warmer countries of the world, especially India, China, West Africa and the United States, and apart from the huge quantities that are consumed in these countries, no less than 800,000 tons are exported to Europe alone. The nuts are largely eaten either in the raw state or roasted, but by far the greater quantity are used as a source of oil. For a great many years Marseilles has been the chief centre in Europe for the production of ground-nut oil, but considerable quantities are now prepared in Great Britain, where the industry was started during the War. Ground-nut oil is used for a variety of purposes. It is largely employed as a salad oil in place of olive oil, and in the manufacture of margarine and other edible fats. It also finds use as an illuminant and lubricant, whilst the lower qualities are employed for soap-making. The cake left after the oil has been expressed from the nuts forms a valuable feeding-stuff for cattle and other farm animals.

The current issue of the quarterly "Bulletin of the Imperial Institute" (John Murray, price 3s. 6d.) contains a detailed article on the cultivation and utilisation of the ground-nut. It gives particulars of value to the producer regarding methods of growing the plant, and harvesting and marketing the crop, as well as information on the preparation and uses of the oil. An interesting account is given of the position of ground-nut cultivation within the British Empire. This shows that in addition to India, the Gambia and Nigeria, where the crop is already largely grown for export, many other parts of the Empire are suitable for its production on a large scale. The present contributions from the latter, however, are relatively small, although Tanganyika, the Sudan, and Kenya show a steady increase in exports in recent years.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at August 31, 1925, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities.—Share capital (300,000 fully paid shares of £10 each), £E2,925,000; Reserve fund: statutory reserve, £E1,462,500; special reserve, £E901,875; current, deposit and other accounts, £E14,014,142; Egyptian Government, £E19,954,966; Sudan Government, £E234,639; Mixed Tribunals, £E1,588,147; bankers' accounts, £E380,222; cheques and bills payable, £E439,173; sundry other accounts, £E802,856; £E42,703,520. Assets.—Government securities and securities guaranteed by the Egyptian Government, £E27,346,962; sundry securities, £E317,548; advances on merchandise, £E576,936; advances on securities, £E2,732,995; advances otherwise secured, £E449,012; sundry other advances, £E1,441,684; bills of exchange, £E1,629,739; local bills discounted, £E416,981; buildings and furniture, £E231,634; money at call and at short notice, £E789,750; bankers' accounts, £E4,574,456; sundry other accounts, £E217,398. Cash: Notes, £E1,404,956; gold, £E40,319; silver, nickel, etc., £E533,150—£E1,978,425—£E42,703,520. Issue Department.—Notes issued, £E29,600,000—£E29,600,000. Gold, £E3,339,576; *British Treasury Bills, £11,460,424—£E14,800,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E420,105; British Treasury Bills and National War Bonds, £E14,379,895—£E14,800,000—£E29,600,000.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

EGYPTIAN CONSOLIDATED LANDS.

The report to June 30, 1925, states that during the year approximately 160 feddans of the Kom-el-Akhdar Estate reverted to the company by voluntary retrocession and foreclosure. Sales totalling 111 feddans of land realised an average net price of £E39.973 per feddan, leaving 1,582 feddans unsold at June 30 last. Of this area about 720 feddans were under cultivation. Deir Ams property, having an area of approximately 116½ feddans, reverted to the company, and 29½ feddans were sold subsequently at £E53.657 (net) per feddan. Sales of plots on Rodah Island estate have continued at improving prices, and 28,679 square metres were sold for £E39,725, at an average price of approximately £E1.385 per square metre. The area of building land unsold at June 30, 1925, was 72,758 square metres, exclusive of roads. Further expenditure has been incurred in the development of the estate, including the erection of six shops. Principal sum due to Mortgage Co. of Egypt, Ltd., and secured by mortgage on properties, has been reduced by £E40,927, to £E25,000.

TEA COMPANIES.

Parambe Rubber and Tea.—Interim dividend of 10 per cent., less tax, on account of 1925, payable October 30 to holders registered October 16.

Hunasgeria Tea.—Interim dividend on ordinary and preference of 7½ per cent., less income-tax, payable November 11.

The Lindoola Tea Company has declared an interim dividend of 10 per cent., less tax at 4s. 1½d., payable forthwith.

The Vellikellie Tea Company of Ceylon has declared an interim dividend of 10 per cent. (less tax at 4s. 1½d.), payable forthwith.

Shipping Intelligence.

GREECE'S MERCANTILE MARINE.

At the end of 1923 the Greek mercantile marine consisted (says Mr. R. F. H. Duke in his report on Greece) of:—432 steamships of a tonnage of 762,358, 1,060 sailing vessels of a tonnage of 122,354; total tonnage, 884,712. In 1924 the fleet increased to: 437 steamships of a tonnage of 828,634, 1,018 sailing vessels of a tonnage of 113,707; total tonnage, 942,341. This figure is not far short of the pre-War total of just over a million tons. The value of the fleet is about four million pounds sterling, of which some two millions are mortgaged to foreign mortgagees: 43 per cent. of the vessels, however, are over ten years old and 38 per cent. are over twenty years old, very few new ships have been acquired in recent years, and insurance is accordingly costly. Many of the vessels have been premanently idle during the last year, largely owing to the general surplus of tonnage throughout the world.

The entries of shipping into the port of Piræus during the last three years have been as follows:—

	Steamships.			1924. Excluding coasting trade.
	1922.	1923.	1924.	
Greek	4,419	4,862	5,487	417
Italian	482	459	505	347
British	450	444	492	370
French	123	105	90	78
German	61	94	231	98
Dutch	55	64	95	77
Roumanian	26	58	67	66
Total	5,789	6,277	7,142	1,511
Sailing ships	5,792	6,907	7,751	—

The remarkable increase in German entries will be noted, particularly during the past year. The total net tonnage of British steamships entering Piræus during the last three years was 1922, 137,873 tons; 1923, 686,362 tons; 1924, 1,078,782 tons.

From the point of view of fast passenger and goods traffic to Piræus, an interesting development during the year 1924 was the introduction of a weekly express service direct direct from Trieste to Piræus in three days, which will be reduced to two days as soon as the Corinth Canal is open to large vessels. The Lloyd-Triestino steamers serving this line reach Constantinople in 24 hours after leaving Athens.

Constant complaints have been received during the past two years of congestion both in the harbour itself and in the quays and warehouses of Piræus. There have been frequent cases of delay and damage to vessels owing to careless and overcrowded berthing and the unnecessary occupation of the harbour by idle ships. The shortage of warehouses and cranes has involved the necessity of leaving goods in lighters for long periods with resultant loss. It is hoped, however, that with the completion of the new harbour works, many of these complaints will disappear.

Some idea of the relative importance of the various ports in Greece for (a) import and (b) export purposes may be gained from the following comparison:—

Imports (in millions of drachmæ).

	1923.	1924. (first 9 months).
Piræus	3,233 ...	2,795
Salonika	1,215 ...	1,072
Patras	421 ...	358
Volo	251 ...	319
Corfu	104 ...	84

Exports (in millions of drachmæ.)

	1923.	1924. (first 9 months).
Kavalla (tobacco)	552 ...	484
Patras (currants)	516 ...	328
Salonika (tobacco and general)	275 ...	201
Volo (tobacco, olives and fruit	178 ...	164
Calamata (currants, fruit, olives) ...	151 ...	69
Piræus (general)	150 ...	144
Candia (raisins, etc.)	98 ...	77

The works on the improvement and enlargement of Piræus Harbour have been proceeding actively during the past year, and the Government have taken steps, the result of which will, it is hoped, soon become apparent, to relieve the congestion of berths and warehouses in the port, of which numerous complaints have been made by British and other shipping companies and commercial organisations. Harbour works are shortly to be undertaken at Salonika and Volo, Samos (Vathy) and Andros.

DISTRESS SIGNALS IN TURKISH WATERS.

The Chamber of Shipping has been informed by the Board of Trade that H.M. Ambassador at Constantinople has reported that the Turkish Ministry of Marine has now informed the Straits Commission that they have given instructions to the Ok-meidan wireless station near Constantinople to receive distress signals from merchant ships. The call-sign of the Ok-meidan station is T.D.S.

The Straits Commission have also been informed that the wireless telegraphy station at Beddul Bahr is also available for the reception of such signals. Its call-sign is T.A.Q.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Liverpool, October 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (London, October 31).

Bibby Line.—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, November 4).

British India Line.—S.s. Margha for Bombay and Karachi (London, October 23); s.s. Dumana for Colombo, Madras, and Calcutta (London, October 24).

Cunard Line.—S.s. Cypria for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, November 14).

Ellerman "City" Line.—S.s. City of Exeter for Calcutta (Birkenhead, November 5).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 6). (The last steamer of the season for Sulina, Galatz, and Braila); m.v. Sycamore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 21).

P. and O. Line.—S.s. Ranpura for Bombay (London, October 30); s.s. Nore for Colombo, Madras, and Calcutta (London, October 31).

Prince Line.—S.s. Egyptian Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (London, October 23).

M. Pashitch, the Yugoslav Prime Minister, who has been absent from office for some time owing to illness, returned to Belgrade on October 14.

ANCHOR LINE
LIVERPOOL TO BOMBAY.

Motors and Motoring.

By G. B. B.

Sir William Letts, at the banquet on the eve of the opening of the Motor Show, struck an optimistic note which, in the opinion of the trade generally, was justified. He protested against the practice of some sections of the daily Press, in continually stating that this country was losing both its home and its export trade, considered that the reason these statements were made was to "ginger up" the Government, and pointed out that the mere statement that we could not compete overseas with foreign manufacturers was in itself sufficient to destroy a good deal of the confidence which previously existed.

There was a very large volume of business done at the Show; of that there is no question. But there was not the amount that many newspapers stated, and a great disservice has actually been done to trade by irresponsible statements as to booking up the entire outputs of this, that, and the other firm. The effect is that prospective buyers, in a large number of instances, have been led to believe that there is no chance of buying a British car, and so have turned their attention to trans-Atlantic and Continental products. I have no hesitation in saying that there will be no difficulty in buying a British 1925-6 car of any make, whether for home or overseas service. In fact, it wil be easier to buy a high grade British light car at a cheap rate than to buy a similar powered American car of equal quality.

The Light Car.

Some time ago I expressed, emphatically, the opinion that Great Britain was about to lead the world in the design and manufacture of light cars, and to-day no reasonably minded person can deny that my opinion was well founded. There is no American car on the market to-day that is is any way superior to a similar powered British car. This is true of engine power and finish, of road-worthiness, of design, and of price, and even in regard to mass production work. It is a great pity so much has been said regarding one or two foreign makes, as the continued use of the name alone has been a magnificent advertisement, an advertisement which in itself has helped enormously in the sale of the cars. There need be no hesitation on the part of overseas buyers as to where they should place their orders. There is no need to utter flamboyant remarks about British light cars; the sales, the cheapness of running, the freedom from necessity for repairs, the low maintenance costs, and the sterling performances of the British products speak for themselves.

The Little Austin.

I have tried out the Austin "seven" on a number of occasions, over all kinds of rough roads and under all weather conditions, and have nothing but praise for that excellent little car. I have spoken to hundreds, literally, of Austin users, and have not found one who has been anything but completely satisfied with the sweetness of running, the ability to hang on to a steep gradient, the remarkable turn of speed, and the low running cost. Indian buyers will find this car not only a cheap, but a thoroughly good little vehicle, and for their benefit I would mention that although the engine is but of seven nominal horse-power, the car is as fast as any car of twice its power on the road and is more easily driven and managed. It has a four-speed gear box with an easily operated central gear change, and has steel wheels, each of which is fitted with a brake. The rear springs are exceptionally long, and as they are fitted with shock absorbers, the car is most comfortable to ride in even on the roughest road, and the comparative absence of vibration ensures a long life to the bodywork. The seating accommodation is ample, and the front seats are adjustable. The body, which is handsomely upholstered, has four doors, which greatly adds to the comfort and convenience of the passengers, and there is a rear screen and complete all-weather protection for all occupants. As regards the engineering details, I may say that I have had some experience in such matters and can honestly say that the Austin engine, transmission, and other details are made with scrupulous care. There is pump cooling, pump lubrication, grease gun chassis lubrication, ample valve openings, substantial valve seatings, and a host of other requirements and other minutiæ which together make the little British Austin "seven" one of the finest light cars obtainable.

The A.C.

The A.C. car is another British proposition which has "made good." I saw, at the Show, some splendidly finished examples of 12 and 16 h.p. cars, the one having a four-cylindered and the other a six-cylindered engine. There is no need here to go closely into details of the finish; after all, one can have practically any kind of body fitted on a chassis that one desires. But the A.C. chassis and engine is the thing that has made the name of this car; these, and the great attention to detail which the makers pay to every part. The patent steering gear is exceptionally smooth and easily operated; the gear change is simple and easily managed; the engine has a wonderful acceleration, a fact which accounts for the car holding so many dozens—I had almost said hundreds—of records, and the chain-driven overhead camshaft is perfectly silent. Five main engine bearings, forced lubrication, centrifugal cooling, automatic carburetter, magneto ignition, large plate clutch, detachable wheels with one spare wheel, Dunlop types, and a three-speed gear integral with the back axle are all features of this particular British car. There is, in my opinion, no American car of the same horse power that possesses anything like the good points that are to be found in the "A.C."

Morris Cars.

I have been asked to mention, on the authority of Mr. W. R. Morris, managing director of Morris Motors, Ltd., makers of the "Morris-Oxford" and "Morris-Cowley" cars, that authorised Morris dealers, at home and overseas, had up to October 7 definitely contracted with the firm to take 70,000 cars during the 1925-6 season. When I say that an exceptionally large proportion of these orders is for abroad, one realises that the overseas buyer is at last beginning to recognise the superiority of the British light car.

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended October 17, states:—

American raw cotton has fluctuated somewhat during the past week but a fall on one day has generally been followed by a rise on the next, so that, on balance, the lower price level reached last week has been fully maintained. Egyptian cotton has, however, continued to depreciate in value. This lower range of prices has probably been responsible for an increase which has manifested itself in the inquiry for all classes of goods. Whilst much of this inquiry must obviously have been made with a view to keeping in touch with the market some of it has been inspired by definite desires to purchase, and the result has been a fair increase in the turnover.

Yarn.—The position in this section seems to be gradually improving, and in certain counts surplus stocks have been taken off the market. Lower prices seem to be attracting an increased volume of business. Negotiations remain difficult but the outlook is more encouraging. In Egyptian spinnings the wide fluctuations which have taken place in the raw material have been a disturbing factor. Shipments of yarn in September amounted to 13,923,400 lbs. as compared with 15,037,900 lbs. in August and 11,316,200 lbs. in September last year.

Cloth.—A welcome improvement in business for India has shown itself, and in many classes of goods quite a good turnover has been attained. As stocks in that country are believed to be low and this is the buying season, further developments are awaited. There is nothing fresh to report with regard to China, but South America appears to have improved on recent weeks. Other outlets show little animation.

Shipments of cloth in September amounted to 359,810,400 square yards as compared with 344,277,300 square yards in August and 359,871,300 square yards in September of last year. The returns bear out the reports of the very large business done for Germany recently.

Raw cotton.—Reports from the United States during the past week have not been favourable, heavy rains having done a certain amount of damage. The movement of the crop continues on a very large scale for the time of the year and the taking of spinners all over the world seem to be much larger than the average of recent years. Rumours of Government intervention in Egypt with a view to supporting prices are numerous. Even at the lower rates now ruling spinners show no special eagerness to purchase this class of cotton. Closing quotations yesterday were as follows: — American Middling 11.54d., Egyptian Fully Good Fair 27.00d.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended October 8, state:—

Since our last report the futures market has been active but prices have receded somewhat; the net changes on the week are the following: Sakellaridis 1.58 dollars down for November, 1.50 dollars down for January, 1.48 dollars down for March; Ashmouni 1.25 dollars down for October, 1.32 dollars down for December, 1.40 dollars down for February. Although commercial houses have taken more interest in the market than during recent weeks, nevertheless the greater part of the activity displayed must be attributed to speculative dealings.

Nothing official has been published regarding Government intervention; as a matter of fact, from the little which has transpired it does not look as if this intervention is imminent. The grower, in view of the success of the crop, is not losing money in selling at present prices: on the other hand, the Government cannot be very optimistic of purchases in view of the fact that this year's Sakel production will be larger than that of last year whilst reports received from all the consuming countries point to a much reduced consumption during the coming season, the principal reason for this reduction being the abandonment of the use of Sakel by many spinners owing to its high price and to the fact that considerable success has attended the substitution of much cheaper outside growths. Ashmounis have been somewhat dull, due to the weakness of New York and to the weight of the heavy daily arrivals; these heavy arrivals have not found a ready sale and holders have been selling December contracts against same. Our opinion is that the Sakel market may become heavier as the season advances and the weight of arrivals is more felt; we also look for a narrowing of the difference between Sakel and Ashmouni. With regard to Ashmouni, we maintain our opinion that it will, in all probability, for some time yet continue to follow New York fluctuations. The week's receipts amount to 356,660 crs. against 111,042 crs.; the stock stands at 1,141,951 crs.

Spot: Minet-el-Bassal has been fairly active this week and sales amount to about 24,000 B/s of which we estimate 9,600 B/s Sakel, 11,200 B/s Uppers, 2,400 B/s Zagora, 700 B/s Pilion and 100 B/s White. The crop movement is free and arrivals considerable and Sakel premiums for the better grades have given away still further under the weight of offerings. There has been sufficient offtake to keep Upper Egypt premiums steady and holders are not so ready to meet the market as are those of the Lower Egyptian growths.

Sakellarides: A fair business has been done mainly in the better qualities. There has been some inquiry for the lower medium qualities but they are not yet offering on the market. Spot differences are appreciably easier for Fully Good Fair and Good and unchanged for Fully Good and the grades below Fully Good Fair. High premiums have been paid for extra class cotton.

Ashmouni and Zagora continue in fairly good demand for all grades from Good Fair upwards, the lower qualities not having been in much favour. Spot differences are steady and unchanged from last week.

Pilion: has been in fair request for the good grades. With the exception of Fully Good which maintains its parity, spot differences have eased somewhat.

Brown: is neglected and no business has been reported.

White: A small business has been done in good grades. Spot differences has again eased considerably.

Crop 1925: Climatic conditions have been favourable to the opening of the bolls still green, which will favourably affect the yield per feddan for Sakellarides. The report published by the Alexandria General Produce Association, which we give below, more or less confirms, with one exception, our own opinion on the present state of the crop. The one exception is the yield per feddan for Sakellarides: our opinion is that it will be slightly inferior whilst the Association looks for results about equal to that of last year. On present indications and on an acreage under cotton for the whole of Egypt of just under 2,000,000 feddans our preliminary estimate of the crop is about 7¾ million kantars of which Sakel about 3,500,000 kantars, Uppers and Zagora 3,600,000 kantars and other varieties 650,000 kantars.

The report of the Alexandria General Produce Association states:—

Lower Egypt.—The temperature during September, with the exception of a few days, was on the whole, favourable to the cotton plants. Pinkworm and bollworm have caused fresh damage which appears, however, to be less than that of the preceding years. The few mists reported have not had any bad effect on the crop. Picking has become general, 7 to 15 days late according to the

Digitized by Google

district. The first picking of Sakellarides gives, practically, the same results as last year according to the district; as regard Zagora and Pilion varieties, the results are decidedly superior. Prospects for the second picking are good; the final result is, naturally, subject to the temperature during October. The ginning yield is superior to that obtained last year.

Upper Egypt and Fayoum.—Pink worm and bollworm have caused fresh damage of small importance. In several districts the picking has been delayed by the lack of labour. Results obtained from the first picking are satisfactory. The second picking will not be of much importance, but on the whole the crop of Upper Egypt will be about 20 per cent. more than that of last year.

The report of the Ministry of Agriculture for September reads:—Weather was favourable during the first half of the month, later it was as good as, if not better, than can be expected at this period of the season. The attack of the boll-worms (Gelechia Gossypiella and Earias Insulana) is general but less than last year. Boll-rot and cotton seed bug, reported from many provinces, did not cause appreciable damage. The ripening of the crop has proceeded satisfactorily in all parts of Egypt. Although picking is reported as being a few days later than last year it is nevertheless quite early, as last year was an exceptionally early crop. The first picking is general in Lower Egypt, picking is practically completed in basin lands. In many districts of Upper Egypt and some of Lower Egypt there has been much difficulty in getting sufficient pickers to pick the cotton in good time. The general quality of the cotton is reported as being distinctly superior to that of 1924.

WINTER SPORTS.

Each year the number of people who leave this country at Christmas time for winter sports abroad increases, and we are reminded that this period is again approaching by a little booklet issued by Dean and Dawson, Ltd., the passenger agents, announcing the facilities which they are placing in operation in connexion with winter sports for the coming season. The booklet gives details of arrangements for visiting the winter sports centres in Switzerland, France, Italy, Austria, and Norway, and briefly describes the facilities that these centres offer the tourist and the attractions that they hold out. To read it is to be tempted to take advantage of one of the trips to Grindelwald or one of the many other winter sports resorts of which details are given.

The directors of the Burmah Oil Company have declared an interim dividend at the rate of 12½ per cent. (2s. 6d. per share), less tax, payable November 11, to ordinary shareholders registered at October 15. Tax will be deducted at 2s. 5d. in the £, being British tax, less relief in respect of Dominion tax.

British Consular Reports

VI.—GREECE.

(*Concluded.*)

Public Works.*

The numerous public works schemes which were contemplated in 1921 and 1922 and referred to in the last report on Greece, did not make much progress in 1923. The proposal of the American group for irrigation drainage, hydraulic power and railway development did not reach a concrete stage. The Piræus harbour works, which had been promised to a British firm, were suddenly put up to international tender, and the contract awarded to a French group in spite of the protests of His Majesty's Governments. Tenders were invited for the exploitation of the Vladovo Falls on the river Vodo for the supply of electric power to Salonika, but the scheme did not come to fruition. The question of the Athens-Piræus water-supply was settled in principle, it being decided, out of the numerous projects which had been discussed during the past forty years, to create a barrage near Marathon and bring the water by pipes to Athens.

The project for the reclamation of the Vardar Valley again came into public view and British firms were invited in September to submit plans for this work during the early part of 1925. It is hoped that an Anglo-American group will be successful. The irrigation of the Struma Valley is also under consideration. Proposals were also put forward for the improvement of the harbours at Salonika, Kavalla, and Volo. In the case of the former, the Greek Government offered the contract to British firms in compensation for the loss of the Piræus Harbour contract which had previously been promised to British enterprise. It was subsequently discovered that all the rights over the development of Salonika harbour belonged to a French firm under a long outstanding concession originally granted by the Turks. A British firm who had offered to undertake this contract, then appealed for the ratification on the original terms of their contract for the drainage of Salonika which had been signed with the Municipality under Government approval in 1921, but had since been submitted to certain modifications which the firm had not seen their way to accept. Official representations were made to the Greek Government but without effect, and eventually the British firm agreed to withdraw their claim on payment of compensation.

In July, proposals were submitted by a British group for the re-organisation of the electric light and power system of Athens and Piræus, including the extension of the Athens-Kephissia and Athens-Piræus railways, and of the Athens and Piræus tramway systems. This scheme, which involves an outlay of some three million pounds and a complicated re-arrangement of the various Greek, Belgian, and French interests concerned in the existing systems, should not only be extremely beneficial to the metropolis, but, if the British firm are successful in carrying it through, should add very largely to British industrial prestige in Greece and bring considerable employment to the engineering and electrical industries in Great Britain.

A number of British building firms have shown an interest in building projects in Greece, which included the construction on a wholesale scale of cheap houses for refugees, the building of villages and settlements for co-operative societies, and general schemes of high-class building of Government offices, hotels, etc., in Athens and elsewhere. As regards the first, the International Commission for the Establishment of Refugees have preferred German and Austrian firms, who have quoted extremely low prices for the wooden framework of houses which are to be completed by refugee labour. While this policy may seem to be one of false economy, the limited funds at the disposal of the Commission, as well as the urgency of getting the refugees under some form of shelter, however temporary, must be taken into consideration. At any rate, it is obviously a waste of time for British builders to compete in this sphere, although some disappointment has naturally been felt that a proportion of the funds subscribed by British investors in the Refugee Loan has not come back to British labour.

Other building schemes are more attractive: there is a great demand in Athens and the big towns for more and better houses, hotel and office accommodation, as well as for new Government offices, prisons, and the like. Salonika is in process of being entirely rebuilt. Rents everywhere are extremely high and land is increasing in value, and the investment of capital by British contractors in work of this kind can hardly fail to be profitable, provided their money is well secured and they remain on their guard against a possible slump in land and building values, which is sure, sooner or later, to follow the present boom.

Progress in the improvement and extension of railways has been slow. A number of small orders have been given for locomotives and railway accessories, and bills have passed the Chamber for the reconstruction of numerous branch lines. A general reconstruction of the main lines is absolutely essential to the maintenance of proper transport facilities in Greece and the development of tourist and business traffic, and, as soon as financial conditions permit, opportunities are sure to occur for the participation of British firms in important railway contracts. They will, however, probably have to meet keen competition from central European firms, who have the advantage of rail transport direct to the Greek delivery centre.

* This report covers the period down to the early part of this year. Since then there have been a number of developments, notably the award, already referred to in these columns, of the contract for an electrical scheme for Athens and district, to a British firm.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

Digitized by Google

The construction of the new port at Candia, begun by a British firm in 1922, is making good progress. The breakwater already extends for a distance of 140 metres from the old Venetian castle, and it is hoped that by the end of 1925 a sufficient length will be completed to afford shelter to vessels loading or discharging. The completion of this harbour should inaugurate a new era of progress in Crete; in addition to affording better shipping facilities for Cretan exports, it will increase the number of tourists who visit the island for the sake of the antiquities of Cnossos and Phaestis.

The installation of a Marconi radio-station at Koukounara, near Canea, has been completed and the station has been working since September, 1924. The tender for the electrical distribution and the construction of tramways at Canea has been constantly postponed, and no decision has yet been taken. No progress has been made with the harbour works.

With the increase of heavy motor traffic, the necessity of developing the roads of Greece has lately been more generally recognised. A number of main roads in Athens were relaid and asphalted, during 1923 and 1924, including the important main road from Athens to Piræus, which had been out of commission for several years. This is now nearing completion and will be of great benefit to the clearance of traffic from the port to the capital. Most of the work on the Athens roads has been done by local contractors operating with imported materials and machinery, but there is a good opening for British enterprise in this direction, especially if measures are taken, as must shortly be done, to develop the main provincial roads, now in an appalling state of disrepair.

In this connection it may not be out of place to recommend British firms to co-operate with merchants or capitalists of high standing in Greece. The complications of contract work, especially with the Greek Government, are such that without the assistance and advice of experienced Greek collaborators foreign firms can hardly expect either to carry through negotiations or carry out contracts with success. It should be noticed that under the auspices of the National Bank a syndicate of Greek banks has recently been formed to co-operate in the financing and management of public works contracts. By this means a guarantee of continuity and smooth administration, the absence of which in negotiations with constantly changing and unstable governments has caused so many difficulties in the past, is now secured.

Naval and Military Contracts.

Towards the end of 1923 the Greek Minister of Marine notified British and French firms of an extensive programme of naval construction. Owing, however, to the stringent conditions regarding the use of external credit laid down in connection with the Bank of England against the Refugee Loan, the Greek Government had to content themselves with carrying out such urgent repairs and purchases as could be met out of the 1924-25 budget, and were forced to abandon, at any rate for the moment, their very ambitious programme. Under these restricted conditions, British firms were able to secure orders for repairing and fitting new boilers to four destroyers, for 50 torpedoes, for anti-aircraft guns and ammunition, torpedo tubes, fire-control apparatus and mines, and the refitting of the "Chios" as a repair ship, amounting in all to some £680,000, payments being made in cash concurrently with the advance of the work.

Large contracts for field guns for the Greek Army were placed at the end of 1923, and it became known that further orders for heavy guns and for the supply of a large number of new rifles was contemplated. It was also proposed, in view of the difficult credit situation, to make these purchases out of annual budgets, though it is difficult to see how the Greek Government contemplated that they would stand the strain. Offers of second-hand rifles of various types were received from British and other firms. It was also proposed that a British firm should construct and operate a factory in Greece for the manufacture of the rifles to Greek specification, which was a special form of Mannlicher-Schonauer. Towards the end of 1924, various British firms were invited by the Greek Government to submit tenders for the supply of 50,000 to 100,000 rifles of this type, and negotiations are still in progress. The proposal to manufacture rifles in Greece has not been finally dismissed from consideration, a Greek group having purchased certain plant for this purpose, but they are unlikely to become effective for some time owing to the unfamiliarity of this type of work to Greek labour and the high cost of importing the raw materials from abroad.

A British company were successful in 1924 in obtaining a contract from the Greek Government to re-instal and operate the naval aircraft factories at Phaleron, and to construct there aeroplanes and parts for the Greek naval and military forces.

The recommendation by a special British naval mission of a new programme of naval construction and repair has been expected to result in increased orders for British firms. Though conceived on the most economical basis, however, it involves a total expenditure during the next few years of some 4 to 6 million pounds, a sum which is beyond the capacities of the Greek financial resources unless either substantial credit can be obtained abroad or such sums inscribed in the budgets for annual cash payments as will seriously augment their already growing deficits. Both solutions contravene the undertakings given by the Greek Government in connection with the Refugee Loan issued in December, 1924-25; and it is accordingly likely that this restricted programme will have to be further cut down.

It will be seen from the foregoing that British firms have shown a greater interest than was the case during the previous few years in Government contracts, both of a military and civil nature, and in public enterprises generally in Greece. The peaceful administration of the Government, comparative stability of the exchange, and the confidence expressed in Greek financial elasticity by the final issue of the Refugee Loan, have given encouragement to British manufacturrs who had for some time looked askance, as a result of their unfortunate experiences with Greek Government contracts, at enterprises of this nature. Conditions have also been made more attractive by some relaxation of the rigorous taxation measures introduced by the revolutionary Government in 1922-23, and the facilities in respect of exemption from import duties and taxation offered by the Greek Government to prospective concessionaires.

There is no doubt that the Greek Government are most anxious to develop the country, and that many schemes of a productive nature can be undertaken with profit. At the same time the keen rivalry of our foreign competitors can only be met by the offer of exceptionally favourable facilities, willingness to take a certain amount of speculative risk, and a readiness to accept small profits in order to obtain a footing in Greece.

His Majesty's Representative at Sofia reports that the quarantine measures imposed in ships arriving at Bulgarian ports from Constantinople have been withdrawn.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Corfu Curse.

The Balkans have made a poor response to Europe's Locarno spirit. An exchange of shots between two sentries on the Greco-Bulgarian frontier, which resulted in the death of the Greek soldier, has led the country, whose Foreign Minister recently proposed an Arbitration Pact for the Balkan Peninsula, to invade a neighbouring State without warning and without a thought for arbitration, as stipulated by the Covenant of the League of Nations. It is the Corfu curse reacting on its original victim, and it remains to be seen whether the Greek Government will be able to make out a better case for its action than Italy did for hers. When Corfu was shelled and occupied by an Italian squadron, the sympathy of the whole world went out to Greece; she must, therefore, not be surprised to-day, if that sympathy is again extended to the weaker country. It is not a question of where the original mistake lies. When a Greek soldier is shot by a Bulgarian, the first and obvious inference is that Bulgaria is at fault for her national's act, and it is up to her to clear herself or to take the consequences. With the invasion of Bulgaria, defendant and plaintiff change places. Europe is as anxious to exorcise the Corfu spirit as much as ever it was to put an end to Prussianism, and for that reason it cannot condone an exhibition of that spirit even when one of her favourites indulges in it. Greece as a whole, we are confident, is not behind this Corfu action, and will see in it an excess of militarism in Greek politics. If "Corfuism" is to be recognised as a permanent factor in European affairs, a Greek rifle need only go off by mistake on another sector of Greece's northern frontier to justify a Yugoslav occupation of Salonika.

The League of Nations Acts.

With exemplary promptitude the Council of the League of Nations has responded to the Bulgarian appeal against the Greek invasion, and a meeting was held in Paris on Monday, October 26. Greece and Bulgaria were invited to attend, and were called upon in the meantime to suspend hostilities. When the Council had considered the statements made by both parties it came to the conclusion that it was not satisfied that the request made to Greece and Bulgaria to cease hostilities and withdraw their troops behind their respective frontiers had been carried out. In these circumstances the Council requested both Governments to inform it within twenty-four hours that unconditional orders had been issued to their troops to retire within their frontiers, and within sixty hours (i.e., by to-day) that the troops had actually been withdrawn as required. The Governments of France, Great Britain and Italy were requested to send officers within reach to report to the Council as soon as its request had been fulfilled. This resolution is certainly an improvement on the Council's action in the Corfu case, when it shirked all responsibility and left the matter to the Council of Ambassadors. As it is clear that the Greeks alone are across the frontier, the decision of the Council amounts to a demand addressed to the Greek Government to recall its troops before the Council begins to consider the rights and wrongs of the incident. The statements of the two parties, as was to be expected, were entirely contradictory, and in these circumstances the presence of *The Times'* Correspondent on the Bulgarian front may be of some advantage to the Council in arriving at its verdict. From the fact that Greek artillery was firing during Sunday night, it has to be inferred that the Greek commanders ignored any instructions that may have reached them from Athens.

The Greek Invasion.

At the moment of writing the Greek advance is stated to have been stopped, with the occupation of Petritch, an important frontier station ten miles within Bulgarian territory, and of a line extending some twenty miles east and west of it. Spasmodic shelling, however, of other points beyond Petritch is reported by the Sofia Correspondent of *The Times*, who is with the Bulgarian forces falling back before the Greeks. According to a telegram

Digitized by Google

from Athens the invasion of Bulgaria was undertaken with a view to turning a position held by Bulgarians on Greek territory in the vicinity of Demirhissar. This "position" is now stated in Athens to have been "from five to fifty yards wide." The Bulgarian protest to the League of Nations states that orders were given to the Bulgarian frontier posts not to oppose the invasion by force, and apart from the Bulgarians said to have been near Demirhissar, the Greek *communiqué* makes no mention of any opposition encountered by the advancing Greek troops over their twenty-mile front. In spite of this fact Petritch, an open town, has been shelled by Greek artillery and Greek aeroplanes are said to have dropped bombs on a bridge.

The Balkan Bogey.

In judging Greece's conduct in the frontier incident, the determing factor in all such matters must not be overlooked. The Bulgarian bogey is still a thing to conjure with in the Balkan Peninsula, and not a single State can bring itself to regard Bulgaria as to all intents and purposes, when compared with her neighbours, a defenceless country. Consequently a report to the effect that Bulgarians are attacking Greek frontier posts is sufficient to cause intense excitement in Athens, where, with a military element predominating in the Cabinet, the first consideration will be the necessary military measures, as though war had actually broken out. It appears to be necessary to travel a long way from the Balkans to see Bulgaria as she in fact is, and to appreciate the folly of imagining that a country in her position, and possessing the military instinct shared by all the Balkan peoples, would in present circumstances seek a quarrel with one of her neighbours, much less indulge in an unprovoked attack. It is because this side of the question is so obvious in Western Europe, that the action of the Greek Government in ordering an immediate invasion of Bulgarian territory on a war footing as a result of a petty frontier episode is regarded as so inexplicable. Greece, having appealed to the League of Nations over the Corfu affair, might be expected to be more familiar than any other member of the League with Article 12 of the Covenant, by which she bound herself to submit any dispute likely to lead to a rupture to arbitration or to inquiry by the Council. Yet neither the Covenant nor the state of the drachma appears to have prompted the non-military section of the Government to warn its colleagues of the danger of spoiling a good case by mistaken action.

Politics in Greece.

Apart from the Macedonian complications the situation in Greece would show considerable improvement at the present time. The date of the elections has been fixed for March 7, and, although this is more than four months ahead, the objections raised by the Opposition to the dissolution of the Constituent Assembly without any reference to the date of the general election have been met. The Government has also shown strength in dealing with General Plastiras, who came to Athens, it is alleged, with the intention or in the hope of organising a movement in the Army against the Government. On his arrival in the capital he went into hiding and succeeded in eluding the authorities for a fortnight. He was, however, eventually run to earth, placed on board a destroyer, which at once sailed for Brindisi, and is now an exile. A more important development for Greece is the inclusion in the Pangalos Government of M. Kanakaris Roufos as Minister of Education. M. Roufos has always been a level-headed Royalist; he has suffered in his own person at the hands of his political opponents, but he is too loyal a son of Greece to allow personal feeling to tinge his policy for the promotion of his country's interests as a whole. His presence in the Cabinet should prove of advantage to Greece at this time, as his influence is not likely to be exercised in support of military adventures. It is rumoured that M. Rentis resigned his post of Foreign Minister because he found himself out of sympathy with the Government's action in Macedonia. The statement is vague, but it is to be hoped that it is not meant to imply that a more vigorous frontier policy was in contemplation before a Greek soldier was shot by a Bulgarian.

The Yugoslav Coalition.

In the letter from Yugoslavia that we published last week an interesting account was given of the attempts made in that country to exploit alleged differences between the two parties of the new Coalition Government. The ground has now been cut away from under the feet of the Opposition by an outspoken declaration on the part of M. Pashitch, who has hitherto maintained a baffling silence on the alliance concluded by his representatives with the Croat Peasant Party. Addressing his followers in the Radical Club last week, the Yugoslav Prime Minister put the seal on the Radical-Raditch coalition by effectually destroying the bridge which might have been regarded, from the attitude of the Opposition, as still keeping open for him communication with his former allies of the Democratic Party. He stated that, after having won over the Croat Peasant Party to the Serbian view of the Monarchy and the Vidovdan Constitution, he had tried to keep M. Pribitchevitch's Dissident Democrats in the Government; but, that, owing to the refusal of the Raditchists to work with them, he had had to choose between the two parties. He chose, therefore, a coalition with the Croats as offering a broader basis and one of greater importance for the country, and he had subsequently satisfied himself that any other course on his part would have been wrong. The session of the Skupshtina, which opened last week, thus begins under satisfactory auspices as far as the understanding between the two parties forming the Government is concerned, to the obvious advantage of the country.

The Syrian Rising.

Memories of the Iraq rising in 1920 will bespeak a large measure of sympathy for the French in their difficulties in Syria. Their first concern must be to restore peace and order, and until that has been done, their future policy has little chance of being considered. It should, however, be possible to let the Syrians know, if it is the case, that a more generous and effective measure of independence is in store for them, possibly on the lines of the new order in Iraq, as soon as normal conditions are re-established in the mandated territory. The extreme measure of exposing in a square in Damascus the dead bodies of insurgents—hardly worthy, it seemed at the time, of a mandatory Power—had an immediate and ugly sequel, when a revolt broke out in that city itself. Order was not restored until the southern quarter had been shelled by French artillery, and considerable damage, it is to be feared, will have been done to the historic city. Since then there has been an improvement in the general situation, and reports speak of an increasing number of surrenders. The system of inflicting fines immediately on the heels of the re-establishment of order in any town or village appears at first sight almost as unwise as the exposure of dead bodies. It suggests vindictiveness and a desire to impose penalties regardless of the circumstances of the rising in any given place. Such a policy, it would be thought, is calculated to prolong the insurrection rather than to assist the quelling of it.

THURSDAY, OCTOBER 29, 1925.

A FRONTIER INCIDENT.

The development of what ought to have been a relatively unimportant frontier incident into a matter of grave international concern is, it has to be regretfully admitted, possible only in the Balkans and Central America. As is invariably the case in these disputes, it is difficult, if not impossible, to arrive at the truth regarding the earliest stages in the conflict. All that is clear at the present moment is that a Bulgarian and a Greek sentry came within rifle shot of one another, and that the Greek was killed. The Greek versions have suffered from not having been more carefully "edited." The first announcement from Athens, which came through before any statement from Sofia, was to the effect that a Greek sentry had been killed in a general attack by Bulgarians on Greek outposts, and that a Greek captain, who advanced under a white flag to negotiate, was fired upon and killed. Now anyone familiar with frontier conditions and military usages was at once at a loss to understand how a Greek captain, probably the officer in command on the spot, came to advance in person with a white flag in order to parley with an invading force. Immediately afterwards came a Greek *communiqué* stating that it had been "established beyond doubt" that Bulgarian outposts opened fire without the slightest provocation against the Greek posts facing them, that the Bulgarians had premeditatedly concentrated disproportionate forces, and that they continued to fire after the Greeks had ceased fire, "killing the Greek captain in charge." This latter version clearly disposes of the alleged killing of the officer when advancing to parley with a white flag, and inferentially renders the whole of the first announcement suspect. Athens, no doubt, has done its best with a multiplicity of "jumpy" messages from the frontier, but beyond the reference to a general attack without provocation no attempt is made to carry the trouble back to the first beginnings. Now comes the Bulgarian version of a much more circumstantial nature. It states that in the afternoon of October 19, a Greek soldier crossed the frontier and fired on the Bulgarian sentry at the Demirkapu post; the sentry returned the fire and killed the Greek, who fell on Bulgarian territory. A Greek detachment thereupon advanced into Bulgarian territory to recover the body, and the Bulgarians opened fire upon them. From this point it is quite easy to accept the Greek evidence. Fighting became general in that particular section; the Bulgarians would have no difficulty in driving back the Greeks, and in doing so would inevitably cross the frontier. They would immediately be up against a superior force, which turned the tables on them and at once began an invasion of Bulgaria with proper military dispositions. In the mean time official communications were passing between Athens and Sofia, something like a "Corfu" demand was made by the Greek Government and the Greek troops were ordered to seize and hold Bulgarian territory until the demand should be satisfied.

One effect of Greece's action has in all probability been overlooked by the Greek Government. With the death of a Greek soldier, killed by a Bulgarian, whether on Bulgarian or Greek soil, it was a *prima facie* case against Bulgaria, who would have to clear herself of the charge of provocative action. As things now are, it is Greece who stands arraigned before the public opinion of Europe for a military invasion, in force with artillery, without a declaration of war. If by any chance it should be proved that the Greek soldier who was killed was the original aggressor, Greece may experience some difficulty in justifying her subsequent measures. From her own point of view it would have been so much more satisfactory to be able to produce an instance of unprovoked Bulgarian aggression and thereby to establish before the League of Nations the necessity—as she would have been able to put it—of still keeping a close watch on Bulgaria. What she has done, however, is to call attention to the powerlessness of Bulgaria, to the ease with which the weakest of her neighbours can march through the country virtually without encountering any real opposition, and to the hollowness of any protests from other Balkan States regarding "the Bulgarian danger." From a military point of view the Greek Government has provided an example of preparedness and staff efficiency; from the point of view of statesmanship it may find that it has failed conspicuously.

Judgment on the details of the incident, however, must be withheld until the Council of the League of Nations has disentangled the conflicting evidence. It will be strange indeed, if that body can show that the death of a single soldier was sufficient justification for all that has happened since. If the Council cannot show this, it follows that blame attaches to those on either side of the frontier who allowed a minor incident to develop to such tragic lengths. We are disinclined to accept either version of the first beginnings of the trouble, if only for the reason that it is difficult to understand how a Greek soldier —unless other incidents have preceded his action—can, singlehanded, advance into Bulgarian territory and court immediate death by opening fire, without rhyme or reason, on a Bulgarian post. If, however, he does, then provided that, as seems to have been the case, he was an indifferent marksman, it must always be better for Bulgarians, in their present circumstances to withold their own more accurate fire and to allow the aggressor, having exhausted his ammunition, to withdraw across the frontier. In this Belishitza incident it was foolish on the part of the Bulgarians to oppose by force the Greek attempt to recover the body of the soldier who had been killed, if that is what actually happened. The Bulgarian Government knows, or ought to know, that nothing is more to be avoided by Bulgaria to-day than the risk of friction with any of her neighbours, and very definite orders on this point ought to be given to all frontier posts. Even if the Council of the League of Nations finds in the main in favour of Bulgaria, it would be well if strong disciplinary measures were taken by the Sofia Government against those in authority along the frontier who were the means of exposing their country to inevitable reprisals. Whatever the Council's verdict on the score of responsibility may be, it is to be hoped that it will be able to establish that the incident was nothing more than a petty frontier affray that was allowed to develop into military operations. Thereby it will dispose of the various attempts made to exaggerate the importance of the incident by representing it as having nefarious designs behind it. On the one hand it has been alleged that the frontier conflict, following on the heels of the resignation of M. Rentis, who as Foreign Minister, was credited with a desire to improve Greco-Bulgarian relations, was part of a deep-laid scheme to embroil the two countries; in other quarters, the usual hint at Bolshevist intrigue is hazarded. Those acquainted with conditions in Macedonia will require to have very clear evidence of other forces at work before they abandon the simple explanation of frontier nerves and the absence of level-headed and experienced officers.

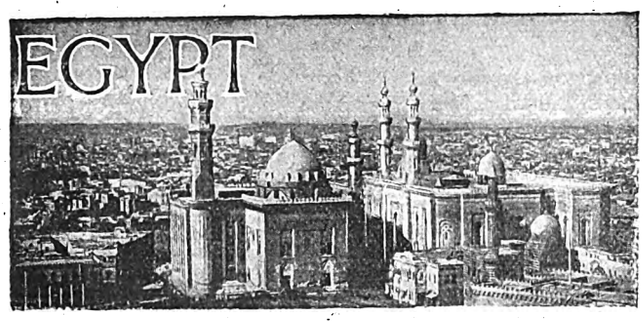
The Near and Middle East*

From Our Own Correspondents.



Cairo, October 17.

Government Officials as Political Agents.

The Opposition Press, by which I mean the non-Ittehadist Press, are making much political capital out of the report which the Controller General of the Ittehadist Party submitted to its President on the subject of increasing the assistance which the administrative machinery is giving in the furtherance of the interests of the Party. Obviously an "indiscretion" has been committed by someone in the inner circles of the Ittehadist Party, for the report was certainly never intended for publication.

But although it confirms the complaints reiterated for some time by the Opposition Press at the manner in which Ittehadist adherents are beaten up, the other parties have really no just ground for complaining at the Ittehadists' making use of the administrative machinery, since the latter are merely following the illustrious example set them in this respect by their various predecessors in office. Where the Opposition might arouse sympathy is in regard to the extent to which administrative pressure is being brought to bear, for if only half what one hears is true the situation in the provinces in this respect is even worse than under the Wafd régime.

Egypt and the Hejaz.

A very interesting report has been published this week by the Mission under the Grand Cadi, which King Fuad sent to the Hejaz for the purpose of effecting a settlement between Sultan Ibn Saoud and King Ali. The Mission confirms that several buildings regarded as sacred have been destroyed or damaged by the Wahhabis, that the population of the Hejaz, particularly that of Jeddah, has become much reduced in numbers and its condition very precarious, and Ibn Saoud, while abstaining from attacking Jeddah since he believes it will fall into his hands without a fight and he does not, moreover, want to harm the European residents, categorically refuses to withdraw from the Holy Cities so long as King Ali or any of his family remain in the Hejaz.

The report contains an interesting proposal said to have been made by Ibn Saoud that King Fuad should summon a Conference of delegates from the Moslem countries interested in the Hejaz which would arrange for the evacuation of that country by both Ibn Saoud and the Hashimite family and for the holding of a plebiscite among the Hejaz people for the election of a non-Hashimite guardian for the Holy Places who would administer them under the direction of what would be a League of Moslem Nations. This proposal has so far not aroused much comment in the local Press, but it is interesting to note that in certain Moslem circles it is regarded as a step in the propaganda in favour of King Fuad as Caliph.

The Fall in Cotton.

The fall in cotton prices has considerably perturbed the land-owning element, and pressure is being brought to bear on the Government to intervene on the local cotton market in manner similar to its actions in previous years. If this year the Government does intervene it will once again be because it has had to bow to political pressure, for in face of the present condition of the world's cotton supply no economic considerations whatever could possibly justify such intervention.

The Egyptian Tribute Loans.

The appeal from the decision of the Cairo Mixed Court of First Instance in the case brought against the Egyptian Government by Messrs. Rothschild on behalf of the Egyptian Tribute bondholders will come before the Alexandria Mixed Court of Appeal at the end of this month. It will be remembered that the Cairo Court, considering that the Egyptian Government had received consideration for its engagement to pay the annual Tribute service, decided the case in favour of the bondholders, and it is the Egyptian Government who have appealed against this decision. It has been stated in certain usually well-informed quarters that the Government lawyers intend as a last resort to argue that the decision to cease payment was an act of sovereignty which the Mixed Courts are not competent to deal with. This would appear to be an ill-considered line of defence, since it is calculated yet further to damage the moral position in the eyes of the world of the Egyptian Government, which still has a public debt of some eighty to ninety millions.

PICTURES OF THE EAST.

The exhibition of water-colours which Mr. R. H. Kitson is now holding at the Galleries of the Fine Art Society, Bond Street, W., is entitled: "India and Elsewhere," the "elsewhere" being for the most part North Africa and Italy. From the traveller's point of view there is considerable interest in this gay show; one is switched in an instant from typical scenes in Benares, Jodhpur, or Madura, to equally typical scenes in Luxor, Kairouan, or Meknes. Mr. Kitson's colours are lively yet not overdone, and his works in general wear a cultured aspect.

But from the artistic point of view, everything is not so satisfactory. An objective attitude towards things Indian and African has been indulged not, as one feels, because it is more correct, but because of the artist's inability to "get inside" the subjects of his drawing. Thus there is a certain monotony both in detail and in sum, which inhibits our realising, for instance, the heat of his sketch of Aden, the quiet of his Moroccan mosques, the silence of his deserted Jodhpur palace. It is as if he has but touched and represented the edge of things; but should not an artist be a seer as well as a spectator? To visit and to represent India and Africa is, however, what Mr. Kitson sets out to do, and it is impossible to deny him this success.

PERSONAL AND GENERAL.

TO-DAY

October 29, 1925 (New Style).
October 16, 1925 (Old Style).
Rabia II, 11, 1344 A.H., of the Moslem Calendar.
Sheshvan 11, 5686, of the Jewish Calendar.

Mr. Ronald Firbank has left Arcachon for Cairo.

Sir Oswald Bosanquet will leave for India in December, instead of this month.

Sir Archibald and Lady Weigall have returned to 41, Berkeley Square to-day from Petwood.

The Afghan Minister, who has recently been on the Continent, has returned to London.

Viscountess Inchcape is due to return to London to-morrow from Glenapp Castle, Ballantrae.

Lady Vaughan has left Marseilles for India to join Major-General Sir Louis Vaughan at Rawal Pindi.

Colonel Bertram Romilly sailed in the Narkunda last Friday for Egypt, to take up an appointment under the Egyptian Government.

The Prince of Wales received at St. James's Palace on October 23, Sir Hugh Clifford (Governor and Commander-in-Chief of Ceylon).

The Roumanian Minister will leave London for the United States on October 31 on an official mission. He will be accompanied by Mme. Titulesco.

M. Nicolas Mishu, Second Secretary to the Roumanian Legation, will leave London on December 1 for the Continent, on relinguishing his post at the Legation.

Colonel and Mrs. Selby Lowndes and Miss Greenlees have left Laggan House, Speyside, and have arrived at Whaddon Hall, Bucks, till the end of January, when they leave for Egypt.

Mr. M. Dizengoff, the first Mayor of the Jewish township of Tel-Aviv, Palestine, who is on a visit to London, called on the Lord Mayor at the Mansion House last Friday to offer a tribute of friendship.

Sir Richard and Lady Gull left London last Friday for Colombo. They sailed in the Narkunda, in which Sir Frederick and Lady Jackson were passengers to Port Said.

The Indian Empire Club will hold dances at the Hyde Park Hotel on November 7, and 21, and December 5 and 19, and a children's party, also at the Hyde Park Hotel, on December 30.

Mrs. P. A. F. Stephenson, whose paintings of Palestine were exhibited two years ago in London, is now showing, at the Alpine Gallery, Conduit Street, W., some fresh works which she did in the Holy Land this year.

General Sir Walter Congreve, V.C., and Lady Congreve left London last Saturday for Malta. They are sailing in the British India Company's motor-ship Dumana, in which the Hon. Mrs. McClintock is also a passenger.

Sesostris Sidarouss Bey, the Egyptian Chargé d'Affaires in London, left on Sunday for Paris, where he is representing the Egyptian Government at the Central Council of International Travel, which met on October 27, and the days following.

Field-Marshal Lord Allenby was given a civic welcome at Deal Town Hall on October 20, and was presented with an illuminated address by the Mayor and Corporation, to mark his new appointment as Captain of Deal Castle. He and Viscountess Allenby have taken up their residence at Deal Castle.

THE WEEK AT HOME.

London, Tuesday Morning.

The Income-Tax.

The words of politicians again occupy a considerable space in the newspapers, and, it must be confessed, in the thoughts of normal citizens, but of the speeches delivered last week, none was read with greater attention than that of Mr. Churchill, at the Colchester Oyster Feast. Without doubt, the interpretation placed by most people upon the speech of the Chancellor of the Exchequer is that next year we shall be re-burdened with that sixpence in the income-tax which this year we had been mercifully, but, as it may appear, prematurely, spared. Whereat there are much shaking of heads and gnashing of teeth.

The only hope of an averting of this evil seems to lie in the accomplishment of the Prime Minister's Economy Committee, but the difficulty in this matter comes from the fact that armaments, on which alone most observers see the possibility of a reduction in expenditure, are expressly excluded from the Committee. It is a curious and almost unique sense of humour that enables Mr. Winston Churchill, whose optimism in regard to general trade conditions is almost unbounded and is even dogmatically stated, to speak jestingly about the future of the income-tax: for it is the last thing in which the Englishman will see any fun.

The Party-System.

Of less immediate, but possibly of more lasting, importance, with the Rectorial Address on the Party-System by Viscount Cecil of Chelwood last week to Aberdeen University. As is well known, Lord Cecil has a much more independent mind than most politicians, and it might have been thought that he, who is alive to most modern movements, would have something profound to say in exposing the abuses and in explaining the uses of the British party-system. And yet it is difficult to recognise, at any rate from the newspaper reports of his speech, that he is aware of the deep contempt in which the party-system is now held by many thinking men. It is, in fact, precisely because of the contempt in which the party-system and parliamentarism generally have fallen that students have turned with unusual eagerness to the anti-partliamentary endeavours that have since the War been made in Russia and in Italy —students, that is, to whom the excesses of Sovietism and of Fascism imply condemnation but not utter condemnation.

However, Viscount Cecil did express, with admirable clearness, the menace to the future of popular government which was inherent in the modern habit of the Member of Parliament of voting, not always in accordance with his private conviction, but always in accordance with the dictates of the party. (Incidentally, he seems to have made no reference to the suppliers of the party funds—those men who are now commonly assumed to be the "dictators" of the Party.) To this objection he replied, in characteristic English fashion, that a certain self-abnegation and practice of compromise are necessary to secure stability in Government. And then he came to the core of his speech: how much freedom could be conceded to the supporters of a Government without seriously impairing its efficiency?

Partial answer was made in a plea for the restoration of reality in parliamentary debates. Viscount Cecil obviously does not like the way in which, through the dictates of the party in unessential matters, the whole authority of Parliament is being undermined. "In a few years' time," he said—and his words are worth remembering not only by members of his own party, but by all—"independence in Opposition may be as difficult as it is now for a Ministerialist. I wish I could think that the change will make for a better and more public-spirited House of Commons. I am afraid the opposite result is far more probable."

It is to be remembered that the ills and the dangers of parliamentary rottenness and corruption of which Viscount Cecil spoke are mostly the product of this century. Before the War they were to be seen, for example, in the Marconi affair (in the making public of which Viscount Cecil played no mean part); and since the War, though corruption may have decreased, it is impossible to say that public confidence in the honour of our statesmen and politicians has been complete. And, as the Rector said, "without that confidence Parliamentary government cannot be carried on. Nay, the party-system itself must become rotten and decayed."

Liberal Hopes.

I was talking the other day to a lifelong and informed Liberal about the impossibility of ever really healing the Asquith-Lloyd George breach. He agreed, as I, who knew him immensely to admire Lord Oxford, was certain he would. But, he added to my surprise, "the only thing for Liberals to do now is to get behind Lloyd George and shove as hard as they can. Asquith doesn't count; the Radical Group doesn't count; L. G. is the only one who cuts any ice."

That I give for what it is worth: it certainly is not my view. There is, however, unquestionably a revival of hopes in Liberal quarters, hopes inspired not only by the return to form of Lord Oxford and of Mr. Lloyd George, but by a belief in a general return by the country to a broad kind of liberalism—not a definite political Liberalism, but a wider feeling that stands in a centre position midway, say, between the anti-Communism of the less constructive Tories and the Socialism of the more thorough-going Labours.

In London it is true that, compared with the Liberals, the Tories are tranquillity itself. The London Liberal Candidates' Association is holding lectures this winter to explain the Liberal point of view, whereas the Tories here appear to rely almost wholly on their not too reliable newspapers. If one's political beliefs were merely a matter of political intelligence——!

According to Lord Oxford, who a few days ago reviewed the whole political situation, the Liberal Party is in a good way. On foreign matters he did, it is true, shower praise upon the present Government—Mr. Austen Chamberlain is in disfavour in extremely few quarters at the moment—but on home affairs he had little of encouragement to say to the other two Parties. Of the Labour Party he significantly said that Mr. Ramsay MacDonald's formal excommunication of the Communists from the Labour Party was by no means the end of the matter, and, turning to the Conservative Party, he amused his hearers by referring to its relations with Communism as "pathological." Nor did this Party's relations with the Political Levy and Protection afford any encouraging thought for its future. And in a finely-worded peroration he confessed himself in regard to England generally, an incorrigible (not, as Mr. Churchill, a rollicking) optimist.

The trouble is, however, that Lord Oxford is not the Liberal Party . . . .

Prayer-Book Revision.

The Bishops were in session last week for the purpose of considering the revision of the Prayer-Book, but on the only day upon which their deliberations were open to the public it could be seen at once that a long time must elapse before anything can be done. And, in fact, it is desirable that it should be so; for very large doctrinal issues are involved. The importance of the subject can be gauged from the fact that the Archbishop of Canterbury had received over 800 memorials on the subject, most of which have been assumed to favour the keeping of the Prayer-Book inviolate.

The truth of it now is that the ordinary member of the Church, looking upwards for authority, cannot find it. The Bishops are sadly at variance, and the difficulty of their ever arriving at a unanimous decision is reflected in the compromise, made last week, by which parish committees are given the option of making use of the new provisions. It is largely this lack of authority which is making an increasing number of Anglicans turn for authority to a wider Catholicism than they can find in the National Church. Such hunters for truth are dissatisfied, and turn bewilderedly to diocesan eccentricities and individual extravangances or indulgences, and, indeed, the absence of order and of constitutional government in the Church is patent even to the outside observer.
